Mr. COLLIER. I will explain it. Mr. Chairman and gentlemen, the purpose of this amendment is to clear up a difference in construction. For the benefit of those Members who were not here during the last Congress, I will state that some years ago there was a canal constructed in front of the city of Vicksburg. On the west bank of that canal a levee was erected not for the purpose of protection but the useful purpose of impounding the water of that canal and to make a scouring so that they would have a proper channel. Well, according to the report of the engineers, the amount of water coming through that canal from 800 miles of navigable streams—the Yazoo, the Sunflower, the Tallahatchie, and others, together with two crevasses in the levees in 1911 and 1912—brought an immense volume of water through that canal, much more than the engineers expected at the time, and the consequence was that the harbor at Vicksburg, upon which was situated railroad tracks, compresses, and warehouses, commenced rapidly to crumble into the canal, and it soon looked as though most of the harbor would be destroyed. I went before the Committee on Rivers and Harbors and they gave me a survey. The district engineers passed favorably upon that survey, the board of engineers for Rivers and Harbors passed favorably upon it, the Mississippi River Commission passed upon the survey, and made a favorable report that the Government appropriate $125,000 for revetment, provided that the city of Vicksburg appropriated $32,500 to build a levee and give them the right of way.

By reason of a rule and custom of the Rivers and Harbors Committee, which does not instruct the Mississippi River Commission to do any particular work in any particular place, but leaving it to the discretion of the commission, it refused to put a direct appropriation in the bill. Some of the older Members will remember that this proposition came up in this House, and that on two separate occasions the House voted to put it in. The Rivers and Harbors Committee already have put in the bill instructions which they considered sufficient authority for the Mississippi River Commission to do this work. But the commission thinks otherwise.

Now we are coming to the matter in point. Col. Townsend, the chairman of the Mississippi River Commission, has construed that when there is a survey on a special project, and a report has been made on that survey to Congress, that the commission is helpless to carry out the acts and purposes of the report unless specifically directed by Congress to do so. Now, this amendment simply gives the Mississippi River Commission authority and permission to do this work if, in their judgment, they so desire.

In other words, we are not asking for any more privilege than is given to any other piece of work on the Mississippi River over which the Mississippi River Commsson has jurisdiction. We are simply asking Congress not to estop the Mississippi River Commission from attempting to do this work by reason of a survey, if the work is meritorious in the opinion of the commission and should be done.

Mr. TREADWAY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Mississippi yield to the gentleman from Massachusetts?

Mr. COLLIER. Yes; I yield to the gentleman from Massachusetts.

Mr. TREADWAY. There is a reference on page 27, lines 20 and 21, to having the Mississippi River Commission take control of the harbor of Vicksburg. Is not that practically what the gentleman desires to have accomplished, and is not that what this amendment would accomplish, except that it goes up another stream? Is not that what the gentleman desires to have accomplished by lines 19 and 20, where we specifically say that the Mississippi River Commission shall take control of the harbor at Vicksburg? That is what the gentleman desires, is it not?

Mr. COLLIER. Yes.

Mr. TREADWAY. Then, why the need of this amendment?

Mr. COLLIER. Because the man in accordance with whose opinion this work is to be done takes a different construction from that of the Committee on Rivers and Harbors.

Gentlemen, we are confronted with this proposition: The Chief of Engineers says the work ought to be done; the Committee on Rivers and Harbors says the work ought to be done; the Mississippi River Commission says the work ought to be done; and a vote of this House, by tellers, said that the House believed the work ought to be done. Afterwards, on a separate amendment, the House declared, when the roll was called, that it believed the work ought to be done. Still later, when the rivers and harbors bill was in the Senate, when they made it a lump sum, one of the Senators whose name has been so often brought up on this floor stated that he was willing to let the Vicksburg amendment go in, and another Senator from the West, who was attacking river and harbor legislation, stated that that amendment so appealed to him that he would not object to it.

Now we are confronted with this situation: The commission and the engineers and Congress are willing that the work shall be done, but there is a difference of construction which must be cleared up. Col. Townsend contends that the construction that he places on the language in the bill will not permit him to do this work. The Committee on Rivers and Harbors claims that it will.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. DUPRÉ. Mr. Chairman, I ask unanimous consent that the gentleman from Mississippi may proceed for five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. COLLIER. Unfortunately for this work, the last word in this matter belongs to Col. Townsend, and he makes a different construction.

Now, Mr. Chairman and gentlemen, I want to say that we have heard a great deal about commerce and navigation during the discussion of this bill. It is true that there is a commerce of $33,000,000 at the city of Vicksburg. But we are not coming here to ask you to improve our harbor or to increase our navigation. A great deal of our harbor is now in the sea. We are not asking for damages for that, although we have suffered greatly. Warehouses, railroad tracks, and a great deal of our harbor have slumped off into the canal, and when I say to you that Vicksburg is situated upon high bluffs and there is only a small amount of level lands sufficient for harbor purposes there, which is being attacked and washed away, you will realize the importance of this amendment. We are simply asking you to stop the damage which is continually going on. Damage created by whom? By the Government. I say without fear of any kind of successful contradiction that a civil suit not only to stop the damages but to get damages for what has been

done would lie against anybody except the Government, which can not be sued.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. COLLIER. Yes; I yield to the gentleman from Illinois.

Mr. MANN. The item on page 16 of the bill, for the improvement of the mouth of the Yazoo, places that project under the Engineers rather than under the Mississippi River Commission. I take it that is not in conflict with this item on page 27, although it would appear to be.

Mr. COLLIER. I did not catch the last word.

Mr. MANN. Under the heading of Mississippi River we provide that the improvement of the mouth of the Yazoo River should be under the control of the Secretary of War, and not under the control of the Mississippi River Commission. Under the item in the appropriation we apparently provide that it shall be under the control of the Mississippi River Commission. Now, which is it?

Mr. COLLIER. The Vicksburg Harbor and the mouth of the Yazoo River are two different propositions.

Mr. MANN. I supposed they were the same.

Mr. COLLIER. No. They are two different propositions in this: The Yazoo River was deflected by a canal which came down about 6 miles, passing in front of the city of Vicksburg. The city of Vicksburg is about half a mile, or a little more perhaps, from the Mississippi River. Those are two different propositions.

Mr. MANN. Then I was mistaken about that. But is not the harbor the mouth of the Yazoo River?

Mr. COLLIER. I say no; although it is one stream. There is a distinction there.

Mr. HUMPHREYS of Mississippi. The mouth of the Yazoo empties into Lake Centennial, above the city of Vicksburg, 2 or 3 miles from the canal emptying into the river. There is a big lake. It is proposed to leave the mouth of the Yazoo several miles above there under the jurisdiction of the War Department, and to put the harbor at Vicksburg under the jurisdiction of the Mississippi River Commission.

Mr. MANN. The Yazoo does not flow, then, into the Mississippi River?

Mr. COLLIER. It is brought by a canal to Lake Centennial. Lake Centennial was caused by the cut-off at Vicksburg in 1876, when the river left Vicksburg half a mile to the north.

This is simply a matter of construction. The engineers and different Members of Congress seemed to want this work done, but there is a difference in the construction of the language which prevents it from being done.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, I would like to make a brief explanation to show the difference between this proposition and the one that was urged here last year and the year before. The construction which the Mississippi River Commission puts upon this matter, I think, is the correct one. I think they put exactly the construction on the law that ought to be put on it. Vicksburg is not now under the jurisdiction of the Mississippi River Commission. It was taken out from under the jurisdiction of the Mississippi River Commission a number of years ago, and it was decided to put it back under the Mississippi River Commission.

Now, in that same bill a survey was asked for the harbor at Vicksburg. Here is the general law that the Mississippi River Commission was bound to go by:

> The Government shall not be deemed to have entered upon any project for the improvement of any waterway or harbor mentioned in this act until funds for the commencement of the proposed work shall have been actually appropriated by law.

So that, although they recommended the appropriation of $125,000 in their report, they could not spend that $125,000 until the project was actually adopted. Last year and the year before, at the suggestion of my colleague [Mr. COLLIER], the House adopted this project specifically, and authorized the expenditure of $125,000 on it. That is not proposed to-day at all. It is now proposed simply to pass a resolution declaring that this survey heretofore ordered shall not be regarded as a project requiring special congressional action; so that out of the general fund appropriated for the Mississippi River Commission which is carried in this bill that commission may, if it chooses to do so, make allotments to the harbor at Vicksburg, thereby placing Vicksburg exactly in the same status as every other harbor on the river. We do not direct them to do it and we do not say they shall not do it. As the law stands to-day, it says they shall not do anything at Vicksburg, because there has been a survey of it and the survey has not been acted upon. We propose simply to annul that and to say that that survey shall not be construed as a project requiring special congressional action, and to leave it thereafter to the judgment of the commission—not out of any additional $125,000 appropriated, as was done heretofore, but out of the lump sum which is appropriated for the river. If they see fit to do it, they can take care of the harbor at Vicksburg.

Mr. HUMPHREY of Washington. Will the gentleman yield for a question?

Mr. HUMPHREYS of Mississippi. I yield to the gentleman.

Mr. HUMPHREY of Washington. This amendment would simply transfer the jurisdiction to the Mississippi River Commission, and then the Mississippi River Commission would proceed to make the improvement, and therefore they would get a project into this bill that is a new project, and that we have not put in heretofore.

Mr. HUMPHREYS of Mississippi. No; the Mississippi River Commission could proceed. That is, it puts Vicksburg back under the jurisdiction of the Mississippi River Commission. Now, this survey that was put in there a few years ago was a mistake.

Mr. COLLIER. And that made the whole trouble.

Mr. HUMPHREYS of Mississippi. The House adopted the provision for the survey. When the bill went over to the Senate, the Senate said, "We will transfer Vicksburg back to the commission," but it did not take out the order for the survey, by some piece of bad luck, and there it stands.

Mr. COLLIER. And that has been the whole trouble.

Mr. HUMPHREYS of Mississippi. That left it with Vicksburg put under the Mississippi River Commission, but with the law saying, "Although Vicksburg is under the Mississippi River Commission, you shall not do anything for it." Now, we want to do away with that discrimination, and put Vicksburg on the same footing as every other harbor on the river.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. COLLIER. Mr. Chairman, I believe that if we had never had the survey there would be no necessity at all for this amendment, because then the Mississippi River Commission would have had the power to do the work there the same as at any other harbor; but this survey acts as a bar, which prevents the Mississippi River Commission from doing that work.

Mr. HUMPHREY of Washington. Mr. Chairman, the situation in regard to this item is this: The report of the engineers showed that this proposed improvement was not in the interest of navigation, and the committee refused to put it in the bill. Here upon the floor of the House it was inserted on at least one occasion. I think probably the second time it was voted down, but at one time it was put in.

Mr. HUMPHREYS of Mississippi. Carrying a specific appropriation.

Mr. HUMPHREY of Washington. Carrying a specific appropriation. Now, that would come under a new project if we had to appropriate for it at this time, so that this is simply an ingenius way of putting another new project into the bill. That is all it means, because if we make the transfer now over to the Mississippi River Commission then it goes into the bill and becomes a new project and they can reach it, when if the proposition came up directly we would not put it in because it is a new project.

Mr. CLINE. I understand that this bill carries about $6,000,000 for Mississippi River improvements.

Mr. HUMPHREY of Washington. I do not know the total amount.

Mr. MADDEN. Six million dollars.

Mr. CLINE. Suppose that the Flood Prevention Committee should report a bill carrying $5,000,000 or $6,000,000, or any other amount, would not that constitute a dislocation of the plan of improvements of the Mississippi River?

Mr. HUMPHREY of Washington. Of course, we can not tell. This is a flood provision to some extent, because this is to prevent the destruction of that bank, but what I wish to call specially to the attention of the committee is that this is not only a new project, but a project that ought not to be appropriated for, anyway, because while there is damage done, this is not in the interest of navigation, and the proposition to appropriate this money is very largely to take care of the railroads that cross at that particular point, their property, and their bridges and their levees.

Mr. HUMPHREYS of Mississippi. Will the gentleman yield to me?

Mr. HUMPHREY of Washington. Certainly.

Mr. HUMPHREYS of Mississippi. Does the gentleman believe that the language carried in the provision which transfers the harbor at Vicksburg back to the Mississippi River Commission ought to remain in the bill?

Mr. HUMPHREY of Washington. I am inclined to think it ought to be transferred back there, probably.

Mr. HUMPHREYS of Mississippi. If it ought to be transferred back, ought the law to be permitted to stand as it does now, to wit, that it is hereby transferred back to the Mississippi River Commission, but that they shall not be allowed to do any work on it?

Mr. HUMPHREY of Washington. I do not think there ought to be any work done on it. I do not think it is a meritorious project. I do not think it ought to be improved. I think, as I said before, that this is simply an indirect way of getting another new project into this bill; and, in addition to that, it is a project that ought not to go into the bill. It is true there is some damage shown there, but we have not elsewhere appropriated for such projects. The gentleman from Michigan [Mr. McLAUGHLIN] had a great deal to say about his project, and, as I recall it, it was of the same character, where there was some damage occasioned by what the Government had done; and in equity I suppose the Government ought to pay, but we never established that rule. In this case it is a railroad, and I think they ought to be able to take care of it themselves.

Mr. SWITZER. Mr. Chairman, I differ from my colleague from Washington. So far as the merits are concerned in the harbor at Vicksburg, if this is adopted it will be a matter for the Mississippi River Commission. If it is not meritorious I do not suppose they will do any work. All this does, as I understand, is to put back under the jurisdiction of the Mississippi River Commission what was formerly taken away from it by reason of a survey which has been construed by the commission as taking it out of their jurisdiction.

I think, as the gentleman from Mississippi says, if there had been no special survey made the commission would hold that they were not barred from doing the work.

But what I rose specially for was to say that in my opinion this is about the only real urgent proposition in the bill. You talk about the emergency at New York City, but here is a harbor that is actually washing away. Photographs were brought before the committee showing that the land and the tracks of a railway were going into the river, and cotton compresses also. I, for one, am not afraid to vote for a proposition that will protect land on which some railroad track is located, or upon which some cotton compresses are situated. There would be no necessity for the harbor for Vicksburg if it were not for the cotton compresses and the railroads that bring the cotton in from the back country towns.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. SWITZER. I will.

Mr. HUMPHREY of Washington. The gentleman talks about an emergency. These photographs were brought in five years ago, and it has not fallen into the river yet.

Mr. HUMPHREYS of Mississippi. They absolutely went in this year.

Mr. SWITZER. The argument of the gentleman from Washington is that nothing should be done until the land is all washed into the harbor.

Mr. HUMPHREYS of Mississippi. This was a double track, and both tracks went in.

Mr. SWITZER. The committee put this in, but the trouble is Col. Townsend construes the language that we used in putting this in as a recommendation, as not accomplishing what we intended. All this provision seeks to do is to carry out the intent of the majority of the committee.

Mr. SPARKMAN. Mr. Chairman, I would like to ascertain if we can not agree on some limit of time for the discussion. I ask unanimous consent that all debate on the paragraph and amendments thereto end in 10 minutes, 5 to be given to the gentleman from Massachusetts and 5 to be controlled by myself.

The CHAIRMAN. Is there objection?

Mr. HUMPHREYS of Mississippi. Mr. Chairman, reserving the right to object, this amendment relates only to the harbor at Vicksburg. I am advised that other amendments will be offered, and if they are offered I would like to discuss them. I hope the gentleman will confine his request to debate on this amendment.

Mr. SPARKMAN. Very well, Mr. Chairman; I will withhold the request for the present.

Mr. TREADWAY. Mr. Chairman, I think it is best that we should understand the situation as regards the amendment offered by the chairman of the committee. We recognize the situation as it exists at Vicksburg. Gentlemen have appeared before the Committee on Rivers and Harbors in good faith and shown what the condition actually was. It is one that I for one feel deserves attention. In lines 19 and 20 we direct the Mississippi River Commission to take over the harbor at Vicksburg. There is nothing plainer than that. On top of that, the chairman offers an amendment that we adopt a project in Document No. 667, Sixty-third Congress, second session. There is nothing else to that but a vote to adopt another new project. It is in the nature of an instruction to the Mississippi River Commission to undertake a new project without even having this House pass upon the merits of the project. They have general authority over the Mississippi River, and we are instructing them to look after the harbor at Vicksburg.

Mr. DUPRÉ. Will the gentleman yield?

Mr. TREADWAY. Yes.

Mr. DUPRÉ. Has not the Mississippi River Commission declared that it had no jurisdiction over the harbor at Vicksburg?

Mr. TREADWAY. But we are giving them absolute jurisdiction in this bill.

Mr. DUPRÉ. And have they not said that that language was not sufficient to carry out the purpose?

Mr. TREADWAY. Well, if the House desires to adopt that project as another new project and have another way to get in new projects into this bill, all well and good. I discussed the method previously as to how new projects are coming into the bill, and now we are having an illustration this morning of another new method of getting them into the bill. I compliment the men who were against the adoption of new projects on their capacity and skill in getting this one in. I was one of those who voted against the rule not to adopt any new projects, and I am more than glad that I did so vote when I see the methods used now to adopt new projects.

Mr. HUMPHREYS of Mississippi. Will the gentleman yield?

Mr. TREADWAY. I will.

Mr. HUMPHREYS of Mississippi. The gentleman thinks that Vicksburg ought to be transferred to the jurisdiction of the Mississippi River Commission?

Mr. TREADWAY. On the representations made before the Committee on Rivers and Harbors, I do.

Mr. HUMPHREYS of Mississippi. Does the gentleman think that it ought to be transferred to the Mississippi River Commission with the proviso that they shall not spend any money on it?

Mr. TREADWAY. Mr. Chairman, I think there is no more reason for instructing the Mississippi River Commission what they should do in this particular than in any other portion of their work. The phraseology in the bill simply puts under their general control the harbor of Vicksburg, and that is as far as this House ought to go, unless it is ready once more to stultify itself by the adoption of another new project. [Applause.]

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, this is not a new project; it is not an attempt by any circumlocution or legerdemain to put a new project on this bill, and I hope that the gentleman from Massachusetts [Mr. TREADWAY] will give me his attention for a moment. I, as a member of the Committee on Rivers and Harbors, although this was in my own State, was opposed to putting this project in, and was opposed to directing the commission to spend any money, and voted against that proposition here on the floor of the House when it came up. That proposition was to adopt the project and direct the Mississippi River Commission to expend $125,000 at Vicksburg. I was unwilling to do that. I was willing to do this, to put the Vicksburg Harbor under the Mississippi River Commission, leaving it to their judgment whether they should spend money for that harbor, putting it exactly upon the same status as every other harbor along that river.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREYS of Mississippi. Yes.

Mr. MANN. Suppose this item were not in the bill at all—to transfer the harbor to the Mississippi River Commission—would an item to make a direct appropriation directing the Chief of Engineers to do this work be a new project?

Mr. HUMPHREYS of Mississippi. It would.

Mr. MANN. So that it is beating the devil around the stump in another way.

Mr. HUMPHREYS of Mississippi. I think not, and for this reason——

Mr. MANN. The original item was a new project.

Mr. HUMPHREYS of Mississippi. Will the gentleman give me his attention?

Mr. MANN. I always do.

Mr. HUMPHREYS of Mississippi. I think I will convince him, if he does listen to me.

Mr. MANN. The gentleman has not begun yet to convince me.

Mr. HUMPHREYS of Mississippi. I will convince the gentleman now, if he will listen. We transfer this to the Mississippi River Commission and say nothing more. Very well. What is the law on the subject to-day? A survey has been hereto-

fore ordered for the specific project at Vicksburg, and what is the law:

The Government shall not be deemed to have entered upon any project for the improvement of any waterway or harbor mentioned in this act until funds for the commencement of the proposed work shall have been actually appropriated by law.

What does the engineer say under that, and I think he properly construes the law? He concludes that until Congress acts upon this particular survey his hands are tied, and he will do nothing.

Mr. MANN. I agree with the engineer.

Mr. HUMPHREYS of Mississippi. Very well.

Mr. MANN. That is evidence that it is a new project.

Mr. HUMPHREYS of Mississippi. That it is a separate project, absolutely—that that was a new and separate and distinct project, and Congress refused to adopt it and the Committee on Rivers and Harbors refused to adopt it, but they now say, "We will transfer this harbor back under the Mississippi River Commission."

Mr. MANN. That of itself is a new project.

Mr. HUMPHREYS of Mississippi. Oh, listen to me. If the gentleman will, I can convince him, I think, and not against his will. The law as it stands to-day, even if we transfer it back to the Mississippi River Commission, as construed by the Mississippi River Commission, and properly construed, is that, although it is transferred they have no power to act. We propose to say, not that this new project directing the commission to spend $125,000 shall be adopted, but that it shall not be considered as a project requiring special congressional action. In other words, we repeal the law that ordered the survey and now say, "We will transfer the harbor to you; treat it as you would any other harbor upon the river, and if you think it ought to have money, give it to it, and if you do not, do not give it to it." To simply transfer the harbor back to the Mississippi River Commission with the law as it stands would be to say, "Hang your clothes on a hickory limb, but don't go near the water."

Mr. MANN. Absolutely. The gentleman has convinced me that it is a new project.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. SPARKMAN. Mr. Chairman, only a few words. As I stated a while ago, it is not a new project in any sense of the word. When we adopt a project we appropriate and direct the engineers to spend money upon it. In this case we do not direct them to spend any money at all. The only thing we do—and we do it independently of the project to which reference is made in the amendment—is to place Vicksburg under the jurisdiction of the Mississippi River Commission, just like every other portion of the river from the mouth of the Ohio down to the mouth of the Mississippi. We place it under the jurisdiction of the Mississippi River Commission, leaving it to that body to say whether it will expend any money there and how much. We do not direct them to expend any, as we do when we adopt a project. When we adopt a project we name the project, and thus designate the place where the work is to be done. We give the number of the report and make the appropriation, which is equivalent to a direction to the engineers to spend the money on the project. But there is no direction here. The language leaves it within their discretion to say whether they will expend any money there or not. If they follow the course they have heretofore, if they continue to entertain the opinion they have entertained heretofore, as I have interpreted that opinion they will expend no money whatever at that place. In the course of time they may do it, but I doubt very much whether they will expend any money there within the next few years. I think that is all I care to say. If I thought we were adopting a new project, I would not offer the amendment.

Mr. MANN. Mr. Chairman, we have seen quite a number of efforts at this session in the consideration of this bill to insert or strike out items contrary to the wish of the gentleman from Florida [Mr. SPARKMAN], the chairman of the committee, and most of the Members of the House probably will not remember when anything of the kind was ever done. I take off my hat to the genial gentleman from Mississippi, Mr. COLLIER, who is getting his way about this item now, and I compliment the Committee on Rivers and Harbors that they know when they are licked. They do not want to run up against a stone wall too many times in succession. The gentleman from Mississippi [Mr. COLLIER] turned the Committee on Rivers and Harbors upside down across his knee a few days ago and treated it like a naughty child, and I aided him, thinking his cause was worthy, and he said to the Committee on Rivers and Harbors, in effect, "As to Vicksburg, before you determine what you will do, see me." [Laughter.]

Now, I think the Committee on Rivers and Harbors is right now, though doubtless this is a new project, but an urgent one.

Mr. COLLIER. Will the gentleman yield right there?

Mr. MANN. I am glad the gentleman from Mississippi [Mr. COLLIER] is going to get his way this time without spanking the Committee on Rivers and Harbors. I am glad that he has them properly under subjection. It is a good thing, and shows that once in a while in the House a real meritorious project, backed by a very able and congenial gentleman, can win, notwithstanding the Committee on Rivers and Harbors. [Applause.]

The CHAIRMAN (Mr. HOWARD). The question is on the amendment of the gentleman from Florida [Mr. SPARKMAN].

The question was taken, and the amendment was agreed to.

Mr. FREAR and Mr. MOORE of Pennsylvania rose.

The CHAIRMAN. The gentleman from Wisconsin [Mr. FREAR], a member of the committee, will be recognized first and then the gentleman from Pennsylvania.

Mr. FREAR. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Wisconsin offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. FREAR: Page 27, line 1, after the word "feet," strike out "$6,000,000" and insert in lieu thereof "$1,000,000."

Mr. FREAR. The appropriation proposed will give $1,000 a mile to the Mississippi River which, under the circumstances, ought to be sufficient for purposes of navigation. The Flood Committee, which has recently been organized, according to press report expects to receive an appropriation from the Government in the neighborhood of $45,000,000. I do not know whether that is correct or not, but I state it just as reported, with an understanding that it is to be distributed over five years, which, if this remains in the bill in its present form, and $9,000,000 more is inserted, will bring the appropriations this year up to $15,000,000 for the lower Mississippi.

The purpose of these appropriations for the lower Mississippi has always been known, although it has not been frankly stated sometimes, to be for reclamation purposes largely and not for navigation, because the commerce on the lower Mississippi River has very largely disappeared. And as an evidence of that I quote from the Mississippi River Commission's report of 1912, wherein the commission says:

While the levees have a certain degree of utility in the improvement of the channel and are necessary to "promote the interests of commerce" by providing landing places for the interchange of traffic in times of flood and protecting the lines of railway behind them, their immediate and main value is the protection of the alluvial lands for the benefit of their owners.

What need be added to this unqualified admission by an official agent of the parties in interest?

Quoting from the comprehensive brief of Hon. B. E. Moses, of Memphis, he says in this connection:

This so-called protection of the alluvial lands along the Mississippi River is primarily and fundamentally a work of "reclamation," as that term is generally understood. * * * The history of the levee system along the Mississippi River is merely a repetition of the fight of mankind from time immemorial to reclaim for cultivation the fertile alluvial plains of the rivers of the world. The futility of the fight under the past method of "levees only" is apparent and real and has been impressed upon the people of the valley during the floods of the last two years by ruin, starvation, and death, incident to the breaks in the levee system.

The Government is reclaiming lands that were never before used, and for the benefit of private interests. This purpose is not disputed by any recognized authority, so far as I can ascertain.

THE GOVERNMENT'S DUTY AND LIMITATIONS.

Several years ago Congress commissioned some of her ablest men to make a thorough study of the waterway question and to make recommendations. These men, composing the United States National Waterways Commission, did make a careful investigation of waterways, both in this country and Europe. Fresh from that investigation they laid down certain principles of governmental action that condemn the expenditures now being made on the Mississippi land-reclamation scheme. I quote from the report on this question, as follows:

It should always be borne in mind that the waterway improvements made by the Federal Government under the exercise of its authority should be restricted to navigation. Whenever bank protection or flood prevention or the clarification of water is the sole object of improvements the question presents little difficulty in its solution. Such projects are not a proper charge upon the Federal Treasury. * * * In many instances proposed improvements have as their main object the protection or benefit of private property. In such cases there is a distinct benefit conferred upon individuals or localities which is only of a remote or very indirect benefit to the country as a whole. Lands subject to periodical overflow or lands of uncertain value because of the danger of erosion, when improved, are multiplied many times in value, and there is a constant danger that such improvements will be advocated under the guise of river and harbor legislation framed to benefit

navigation when the real object is the benefit which will accrue to individuals or localities. * * * The line should be carefully drawn between improvements which, in whole or in part, are for the protection or development of private property and those which are made in the sole interest of navigation.

This report from which the foregoing is quoted was signed by Theodore E. Burton, chairman; J. H. Gallinger, vice chairman; S. H. Piles, William Alden Smith, F. M. Simmons, James P. Clarke, William Lorimer, D. S. Alexander, Frederick C. Stevens, Irving P. Wanger, Stephen M. Sparkman, and John A. Moon.

The statement from the Mississippi River Commission is comprehensive, and I have inserted in the RECORD, in addition to that, the statement of one or two other authorities who live in the Mississippi Valley.

Now, Mr. Chairman, if that be for reclamation it is practically part of the duties of the new flood commission to undertake. When that is done I understand there is to be some determination of what proportion will be paid by the people who own these alluvial lands. That is to say, a basis will be established for the purpose of aiding people who are to have their lands reclaimed.

Mr. DUPRÉ. Will the gentleman yield?

Mr. FREAR. In a moment. That is the situation as I now understand it. There can be no justification for such a large amount for purposes of commerce. The River and Harbor Committee is to-day discussing these questions from the standpoint of navigation. Now, this has been taken away from them. It ought no longer to stand in the way, because we have a Flood Committee prepared to act, and when it does act I assume it will determine what will be a fair proportion of the money to be paid by the various landowners along the Mississippi Valley.

Now, Mr. Chairman, I am not going to ask for any further time in explanation, but I will yield to the gentleman from Louisiana [Mr. DUPRÉ].

Mr. DUPRÉ. Do you make any distinction, in your mind, between the reclamation of uncultivatable lands and the devastation of lands that are already under cultivation?

Mr. FREAR. It is given out as for the reclamation of lands. They unite that question with flood conditions. But here is a condition explained by the commission itself, that has been for reclaiming land all of these years, instead of for navigation, the purpose over which we are supposed to have jurisdiction.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SMALL. Mr. Chairman, something has been said by the gentleman from Wisconsin about the commerce of the Mississippi River, and in the minority report filed by the gentleman he uses this language:

The greatest river, the Mississippi, has lost over 90 per cent of its commerce during the past 40 years. Good authorities estimate the loss at 95 per cent. Approximately $150,000,000 has been expended on the river, and about one-half of that amount within the past dozen years, without adding anything to its commerce. From 16,000,000 to 20,000,000 acres of land belonging to private parties, valued at over $100 per acre on the average, is being reclaimed by the Government, and yet experts and reputable residents along the river declare the entire levee system is wasteful, and so-called river improvements are a makeshsift and sure to be disappointing. From the viewpoint of navigation the Mississippi has only a slight local commerce, justifying no more than nominal expenditures. Experimental and political methods of extending flood relief have become notoriously extravagant and unsatisfactory.

The Bureau of Corporations of the Department of Commerce published several years ago several volumes—four, I think—on the question of water transportation, and in the second volume, entitled "Transportation by Water in the United States," I obtain this data:

The principal traffic on the river in the early days consisted of shipment of grain from St. Louis to New Orleans, and in 1875, just 40 years ago, the tonnage of such shipments amounted to 187,520 tons. The receipts of cotton at New Orleans for the same year amounted to 8,640 tons, or a total of 196,160 tons.

That was 40 years ago. The grain shipments on the river reached their highest point in 1880, when they amounted to 441,354 tons, and the receipts of cotton that year at New Orleans by river amounted to 170,094 tons, a total of 611,448 tons.

Now, I would like gentlemen to keep those figures in mind a moment. The reports of the Chief of Engineers for 1915 show the commerce passing between St. Louis and Cairo for the year 1914 as having been 325,164 tons; between Cairo and Memphis, 1,321,081 tons; and between Memphis and Vicksburg, 1,880,394 tons; between Vicksburg and New Orleans, 2,343,623 tons.

Now, without attempting to get the aggregate of that tonnage, upon the theory that much of it is duplicated, simply take, if you please, the commerce between Vicksburg and New Orleans for the year 1914 at 2,243,623 tons, while the commerce 40 years ago amounted to 196,160 tons, and in the greatest year, 1880, a total of 611,448 tons. I submit this data as a contribution from an official publication by the Department of Commerce in comparison with the statement contained in the minority report of the gentleman from Wisconsin [Mr. FREAR].

Has my time expired, Mr. Chairman?

The CHAIRMAN. The gentleman has two minutes remaining.

Mr. SMALL. Now the gentleman stated further—and I use this language, quoting from his report:

Approximately $150,000,000 had been expended on the river, and about one-half of that amount within the past dozen years, without adding anything to its commerce.

These are the facts: The total amount appropriated for the whole river down to the Passes from 1903 to 1914 was $58,366,575. So it is not $75,000,000 or one-half of $150,000,000, as stated in the gentleman's report.

Now, of that $58,000,000, a portion—how large I do not know—was expended on that reach of the river, about 100 miles, between New Orleans and the Passes. I submit that when minority reports are filed, when statements are made which are given credence by the press and by the country, more care should be taken as to accuracy than is displayed in this particular report upon the Mississippi River.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. FREAR. Mr. Chairman, I ask unanimous consent to proceed for two minutes.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to proceed for two minutes. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, I will say this, that in the bill itself South Pass is called a part of the Mississippi River. It has always been that. The gentleman deducts the appropriation, takes it away. I am not going to discuss the question of commerce on the river in a few moments remaining, because that is confusing, and I have endeavored to get the true figures from the analysis made in the past after considering duplication and quadruplication excluding coal and because coal was repeatedly counted on the river at different points. I wish to say this, that if gentlemen of the House will look into the RECORD tomorrow they will see a comparison as to the Tennessee River between the statement made by the gentleman from North Carolina and the statement I have made based upon the official reports, and I am sure that in this case as in others the figures will show that he has given a wrong understanding of the statistics of that river.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. SMALL. Mr. Chairman, I ask unanimous consent to proceed for three minutes to correct the gentleman's statement.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. SMALL. The gentleman from Wisconsin is mistaken about the Passes being a part of the Mississippi River project. They have always been considered separate and apart from it, and have been appropriated for separately. The commerce passing in and out of the Passes at the mouth of the Mississippi River is always given separately from that on the Mississippi River proper. If I had the memorandum here that I just handed to the reporter I would be able to give the commerce for 1914, but I can say, approximately, that there was a total in that year of over 6,000,000 tons of commerce passing through the South and Southwest Passes, independent of that commerce on the Mississippi River to which I referred.

The CHAIRMAN. The time of the gentleman from North Carolina has expired. All time on the paragraph has expired.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. HUMPHREYS of Mississippi. I have asked for this time, Mr. Chairman, for the purpose of making an explanation to the gentleman from Wisconsin [Mr. FREAR] and several other gentlemen who have made inquiries of me. If the Committee on Flood Control succeeds in passing a bill that will take care of the Mississippi River hereafter, the appropriations that will be made in pursuance of that bill will come in the sundry civil bill next year. The only appropriation for the Mississippi River that will be made for the fiscal year ending June 30, 1917, will be carried in the river and harbor bill, whatever that may be.

The Committee on Flood Control has no power to appropriate, only to authorize; and whatever may be authorized in that bill will be carried in the sundry civil bill that will be adopted next winter, so that the gentleman is in error in supposing that what-

ever the Committee on Flood Control may provide for the Mississippi River will be in addition to what is carried in this bill. There will be nothing carried in that bill and nothing authorized in that bill for the year which will be taken care of by the six millions in this bill.

Mr. DUPRÉ. Mr. Chairman, will the gentleman yield there?

Mr. HUMPHREYS of Mississippi. Yes.

Mr. DUPRÉ. Will there be any cessation in the meantime of the local contributions that will be made on the part of the people down there?

Mr. HUMPHREYS of Mississippi. No. As to those local contributions, the law has never required any local contributions. Heretofore the figures have been estimated and stated loosely, but now the commission has at last gathered this information together under the direction of Congress, and their report shows that on the Mississippi River proper the local interests have contributed since 1882 more than $80,000,000 for the construction of levees, whereas the Federal Government during that same time has contributed $32,000,000. But there has been no law compelling that.

Mr. FREAR. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREYS of Mississippi. Yes.

Mr. FREAR. This appropriation—the larger portion of it—is to be used, is it not, for the reclamation of the alluvial lands, as stated by the Mississippi River Commission, as it has been done in the past?

Mr. HUMPHREYS of Mississippi. No. The Mississippi River Commission, with all due respect to the gentleman, although he read it only five minutes ago, never did state that. It is not stated in what the gentleman just read, and it is not a fact. What he read was that the main purpose of the levee is to protect the country from overflow. Now, he states that the principal part of the sum appropriated will be expended for reclamation.

Mr. FREAR. Oh, no.

Mr. HUMPHREYS of Mississippi. The principal part of the sum appropriated will never go into levees, and never has gone into them. It will go for other work.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. GARRETT. Mr. Chairman, I ask unanimous consent that the gentleman from Mississippi may proceed for five minutes.

The CHAIRMAN. The gentleman from Tennessee [Mr. GARRETT] asks unanimous consent that the gentleman from Mississippi [Mr. HUMPHREYS] may proceed for five minutes. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, will the gentleman allow me to ask him a question, so long as he has an extention of time?

Mr. HUMPHREYS of Mississippi. Yes.

Mr. FREAR. What is the basis for the contributions to-day for those people to have their lands reclaimed?

Mr. HUMPHREYS of Mississippi. As I said, it has been stated to be about 3 to 1 for levee construction.

Mr. FREAR. Has that any determinate basis that you have to work upon?

Mr. HUMPHREYS of Mississippi. None at all. The law has never required any of it at all, but Congress has appropriated so little money for the construction of levees that the people there have taxed themselves to the utmost extent to raise all they could, and whether Congress gave much or little, they contributed all that they could raise by the most onerous system of taxation.

Mr. FREAR. Were not those contributions largely at an early day? Have they been recently?

Mr. HUMPHREYS of Mississippi. No; they have been made since 1882. Prior to 1882 the Government contributed nothing whatever, and there were vast sums spent then, I do not know how much. But you understand we could not proceed rapidly; we would get the levees up to a reasonable height, and a flood would come and wash them down, and we would have to do it over again. Then as the reclamation of the upper valley proceeded, the waters were precipitated into the lower valley so rapidly that the rush of the waters began to wash down the banks of the river and cave the levees into the river. I will give the gentleman one illustration of that——

Mr. FREAR. About how many acres are included in the lands which it is proposed to reclaim?

Mr. HUMPHREYS of Mississippi. There are 20,000,000 acres in the Delta. Of course, the gentleman understands that all that reclamation is to be done by the people. Congress is not expected to do anything in the way of reclamation.

Mr. FREAR. I understand there are about 2,000,000 acres which it is proposed to reclaim.

Mr. HUMPHREYS of Mississippi. There are 20,000,000 acres.

Mr. COOPER of Wisconsin. Will the gentleman yield?

Mr. HUMPHREYS of Mississippi. Certainly.

Mr. COOPER of Wisconsin. As the gentleman has put the question, and as the answer reads, it would appear that this money is appropriated to reclaim 20,000,000 acres of land.

Mr. HUMPHREYS of Mississippi. That is not the case at all.

Mr. FREAR. Each year that contribution is directed toward that purpose, is it not?

Mr. HUMPHREYS of Mississippi. Not at all. It never has been. It is directed toward the construction of levees. The Government has contributed a very small portion of that, and for many years it was limited by act of Congress, so that no levees could be built for the purpose of preventing overflow, but that levees should be constructed only in the interest of navigation. After the floods have been controlled the reclamation of the land is left entirely to the people. That costs them from $30 to $40 an acre, which they themselves pay. It has never been in their contemplation and never in their hope that the Federal Government would contribute anything toward reclamation of the land.

But I was telling you about these waters that rush down on us and cave the levees into the river after we build them. I have two levee districts in my congressional district, one with a levee line 189 miles long. Since 1882 we have abandoned 180 miles out of 189 miles on account of the caving of the banks. In other words, we have practically built that line of levees twice. And that occurs all along. By the time we get them half built, this great volume of water comes along and caves them into the river, and we have to start all over again.

Mr. COOPER of Wisconsin. Who paid for that?

Mr. HUMPHREYS of Mississippi. The people in my district paid for it.

Mr. COOPER of Wisconsin. That did not come out of the Federal Treasury.

Mr. HUMPHREYS of Mississippi. Not a nickel of it.

Mr. COOPER of Wisconsin. How much has the Government contributed, and how much have private interests contributed?

Mr. HUMPHREYS of Mississippi. So far as the construction of the levees on the river itself is concerned, private individuals have contributed some $80,000,000. Of course they have built some levees up the tributaries, and counting in those levees on tributaries the private owners have contributed $91,000,000 since 1882. During that time the Federal Government has contributed $32,000,000.

Mr. FREAR. The gentleman has stated that three times.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. DUPRÉ. I ask unanimous consent that the gentleman's time may be extended five minutes, to allow him to answer a question.

Mr. SPARKMAN. Let us see if we can not agree on the length of time. How much time does the gentleman from Mississippi desire?

Mr. FREAR. I ask that the gentleman from Mississippi have five minutes more.

Mr. HUMPHREYS of Mississippi. All I want is time to answer my friend's question.

Mr. DUPRÉ. I want time enough to ask the gentleman from Mississippi a question.

Mr. SPARKMAN. I ask unanimous consent that debate on this paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida [Mr. SPARKMAN] asks unanimous consent that all debate on this paragraph and amendments thereto close in five minutes. Is there objection?

Mr. MANN. Reserving the right to object, the gentleman from Pennsylvania [Mr. MOORE] desires to offer an amendment, and would like to have five minutes on it.

Mr. HUMPHREYS of Mississippi. What is the gentleman's amendment?

Mr. SPARKMAN. I will confine my request to this particular amendment then.

Mr. MANN. Oh, the gentleman had better make it cover the paragraph.

Mr. SPARKMAN. Then I will ask unanimous consent that all debate on this paragraph and amendments thereto close in 10 minutes.

The CHAIRMAN. The gentleman asks unanimous consent that debate on this paragraph and amendments thereto close in 10 minutes. Is there objection?

There was no objection.

Mr. FREAR. I wish to ask the gentleman a question. He says the Government has made no contribution toward these levees which have been washed out.

Mr. HUMPHREYS of Mississippi. Oh, no; I did not say that. At least I did not intend to.

Mr. FREAR. I did not think the gentleman intended to be so understood. The Government has engaged in building these levees, has it not?

Mr. HUMPHREYS of Mississippi. Yes.

Mr. FREAR. And some of these levees have been washed out.

Mr. HUMPHREYS of Mississippi. Yes.

Mr. FREAR. Very largely so in the case mentioned.

Mr. HUMPHREYS of Mississippi. Yes.

Mr. FREAR. And the Government is replacing those levees.

Mr. HUMPHREYS of Mississippi. The Government is contributing a very little toward it, but has contributed something; but the vast amount of the Federal money is spent for other purposes, purposes which the engineer says are in the interest of navigation. The bulk of this money goes for revetment and channel improvements and for the administration of the commission.

Mr. FREAR. But that all aids in this matter of reclamation, does it not, supporting the levees?

Mr. HUMPHREYS of Mississippi. It does aid by keeping the floods off the land, undoubtedly.

Mr. DUPRÉ. Will the gentleman yield?

Mr. HUMPHREYS of Mississippi. Yes.

Mr. DUPRÉ. Was it not testified before the committee that Louisiana had spent $45,000,000 since 1870 on the Mississippi River?

Mr. HUMPHREYS of Mississippi. It was a large amount; I do not recollect the figures.

Mr. DUPRÉ. And was it not stated also that the city of New Orleans was taxed $700,000 annually for levee purposes?

Mr. HUMPHREYS of Mississippi. I do not recollect the figures. Everything is taxed in my district; the land is taxed 17½ mills, and 5 cents an acre in addition, a dollar a bale on all cotton in addition, and a tax on every privilege. For instance, a man who does any business whatever for profit, whether he drives a wagon, practices law, or runs a store, or what not, is taxed for the privilege, and that goes into the levees. In other districts they tax potatoes, rice, sugar, molasses, every ton of hay, and every barrel of oysters that are gathered, because the muddy water that overflows and goes into the ocean injures the oysters.

Mr. MANN. That is done wherever the Democrats have full control. [Laughter.]

Mr. HUMPHREYS of Mississippi. Well, we have full control down there, and the story that Adam Bede used to tell when he was a Member of Congress always struck me as if he had our people in view. It was a hard-luck story, and ran this way:

His horse went dead and his mule went lame,
And he lost his cow in a poker game;
Then a cyclone came on a summer's day
And blew the house, where he lived, away;
Then an earthquake came, and when that was gone,
And swallowed the ground that the house stood on,
Then the tax collector came around
And charged him up with the hole in the ground.

[Laughter.]

The CHAIRMAN. The question is on the amendment.

The question was taken, and the amendment was rejected.

Mr. MOORE of Pennsylvania. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Page 28, line 2, after the word "appropriated," insert as a new paragraph the following:

"And the Mississippi River Commission shall report to Congress before December 1, 1916, an estimate of the cost of levee construction necessary to be done to complete the project."

Mr. MOORE of Pennsylvania. Mr. Chairman, this is the largest and most important item in the bill, but it is not criticized on the ground that is usually used in criticizing smaller items. Six million dollars is here to be appropriated for this particular part of the Mississippi River. In view of previous legislation and the interests to be served, I am in favor of the appropriation as it stands. I remember that it came in at one time as an emergency appropriation, because of floods. I have looked into the question of cooperation of the States along the line, and while the States frequently complained that the floods come down from the North, due to erosion and other causes, I found it true that Mississippi and Louisiana especially were contributing very largely of their own means, by way of cooperation, and that, it seemed to me, was commendable. But there are some things about the authority given the Mississippi River Commission that are so different from work in other sections of the country that it occasions wonder why some of our newspaper critics and others who are influenced by newspaper criticism on the floor of the House do not comment upon them. The Mississippi River Commission is given power to build dredges——

Mr. HUMPHREYS of Mississippi. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. HUMPHREYS of Mississippi. The Mississippi River Commission was directed to make this report, and has made it, and we have it.

Mr. MOORE of Pennsylvania. To complete the work?

Mr. HUMPHREYS of Mississippi. Yes.

Mr. MOORE of Pennsylvania. How much did it amount to?

Mr. HUMPHREYS of Mississippi. It was three or four years ago, and they estimated that to complete the system of levees would cost $57,000,000; and since that quite a lot of work has been done, and they now estimate that it can be completed for about $40,000,000.

Mr. MOORE of Pennsylvania. That takes into account the appropriations made since the report was made?

Mr. HUMPHREYS of Mississippi. And the contributions by the local interests.

Mr. MOORE of Pennsylvania. I am frank to say that I offered this amendment for the purpose of having some discussion on the subject. I am glad the gentleman from Mississippi responds. But I wish to say that this is a $6,000,000 item we are voting into the bill, without scarcely a word as to the manner in which it is spent, for the construction of dredges and providing devices that do not apply to other improvements apart from the Mississippi. The gentleman from Iowa has not commented upon the appropriation for dredges, and I suppose they overlook it because Iowa is bounded by the Mississippi River——

Mr. HUMPHREYS of Mississippi. These dredges are operated and owned by the United States Government.

Mr. MOORE of Pennsylvania. That is true, but it might be criticized if applied to the country where they are doing the work by private contract.

Mr. DUPRÉ. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I have not the time.

Mr. DUPRÉ. I only wanted to say that levee construction has been greatly cheapened within the last few years.

Mr. MOORE of Pennsylvania. By the construction of Government dredges that may all be. But here we are appropriating $6,000,000 in one item and little or nothing is said about it. If some poor little creek was to be taken care of at an expense of $1,000 or so it would be criticized to the limit.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Any funds which are herein, or may hereafter be, appropriated by Congress for improving the Mississippi River between Head of Passes and the mouth of the Ohio River, and which may be allotted to levees, may be expended, under the direction of the Secretary of War, in accordance with the plans, specifications, and recommendations of the Mississippi River Commission, as approved by the Chief of Engineers, for levees upon any part of said river between Head of Passes and Rock Island, Ill., in such manner as, in their opinion, shall best improve navigation and promote the interest of commerce at all stages of the river.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. It was impossible in the five minutes I had to say what I desired to say with reference to the enthusiasts who criticize river and harbor bills because, perchance, $1,000 happens to be appropriated for the improvement of a stream. When we get to a six-million-dollar item they have nothing to say. It is the small stream pouring into the big one that makes the flood that causes the trouble in the Mississippi Valley; but it is just as we find it sometimes in ordinary financial affairs. If a man steals a million dollars he invites public attention, but if he steals a loaf of bread he goes to jail. Why do not some of the gentlemen from Iowa who have been opposing this bill, and along whose territory we are now passing, rise and make some observations? Rock Island is in the vicinity of the Mississippi at this point, and yet I observe there is not a single gentleman from the Iowa delegation here to say a word of criticism.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. I beg the gentleman not to interrupt me at this point. Oh, I see the gentleman from Iowa [Mr. GREEN] is here. I beg his pardon.

Mr. GREEN of Iowa. Mr. Chairman, will the gentleman state what benefit Iowa is to get out of this?

Mr. MOORE of Pennsylvania. Why, Iowa gets to the Gulf and the Panama Canal through the Mississippi River.

Mr. GREEN of Iowa. But what portion of this fund is to be expended for the benefit of Iowa?

Mr. MOORE of Pennsylvania. It is improving the Mississippi River along the borders of Iowa.

Mr. GREEN of Iowa. But that is the part that does not need improvement.

Mr. MANN. Does not the gentleman from Pennsylvania know that Iowa is north of Missouri and not south?

Mr. MOORE of Pennsylvania. Certainly.

Mr. MANN. But this only goes to the Missouri.

Mr. MOORE of Pennsylvania. Then we will apply it to the next item.

Mr. GOOD. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. GOOD. Of course, we could not expect the editor or the president of the bulletin of the Inland Deep Waterways Association, which placed Minneapolis halfway up Minnehaha Falls, to know just exactly where on the map Iowa would be located.

Mr. MANN. He evidently did not.

Mr. MOORE of Pennsylvania. Mr. Chairman, the gentleman from Iowa [Mr. GOOD] misread the article to which he refers. I did not write it, however. It is pleasing to get a rise out of our Iowa friends. I have brought them to book on a $6,000,000 appropriation, passing up to their own State, about which they have nothing to say.

Mr. GOOD. Mr. Chairman, I move to strike out the last word.

Mr. SPARKMAN. Mr. Chairman, can we not agree upon some time? How much time does the gentleman want?

Mr. GOOD. Five minutes.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate upon this paragraph and all amendments thereto close in seven minutes—two minutes to be controlled by myself.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. GOOD. Mr. Chairman, there are certain rivers and harbors in the United States well recognized as needing improvement. One of them is the Delaware, one of them is the Mississippi, and another of them is the Ohio. We are all agreed about that, but I want to say to the Committee on Rivers and Harbors that, if it has brought in a bill carrying five or six millions of dollars for the Mississippi in order to get the vote of the Members of the House from Iowa, that committee will be disappointed. I object to this bill because of the principle upon which it was apparently drawn. I object to it not because it has some worthy items in it, but because it is loaded with so many items that are not worthy. Gentlemen say there is no politics in the bill, but before election day comes in November those who vote for it will find that it is loaded with politics. Take the hearings, for instance. I have here the hearings on the Galveston Harbor project, and that is but illustrative of what was done in other items. The chairman says:

Col. Taylor has nothing in his report to say that any bad effects came from the failure of the Government to finish the sea wall.

Again the chairman says:

Nothing has happened so far to show that this—

The sea wall appropriated for—

is immediately necessary.

Speaking again about the sea wall, the chairman says:

We have a report to the effect that $475,000 will be necessary to restore the conditions that existed before the storm. Now, regarding the sea wall, the engineers first report that while it was a convenience and might in time prove of use in arresting wave action in case of severe storms, yet they did not think it urgent, because the danger was rather remote.

Again, the chairman asked Mr. Gresham:

Now, which would you prefer having done—the sea wall, which the engineers say is not urgent, or the other, which they say is?

Mr. Gresham, who says that he has spent the flower of his life lobbying for this provision, says:

By all means we would prefer the sea wall.

And the sea wall goes into the bill.

Yet they say this is a meritorious bill, every item of it is a meritorious item. Why, one gentleman, talking about the river in his district for which we made an appropriation, says that it has no well-defined banks, and that if you are not careful when you go down to the river you will cross it before you know you have reached it. Yet we propose to make it navigable by appropriation. And there is the Wateree River, in which nobody has discovered any water. We are irrigating some of these southern streams in order to get appropriations to make them navigable. Do you think for one moment that with an empty Treasury the people would approve of these outlandish appropriations? You will be deceived in that. You argue that, because Senator Burton was at one time in favor of some of these projects. So he was. But it is passing strange that now after an experience of 10 or 15 years had demonstrated that they were valueless for navigation purposes you should keep on voting for them. You vote for them after Burton repudiated them. That is just the difference between the Republican Party and the Democratic Party. We discover our mistakes and try to rectify them. You refuse to follow our successes, but take up our failures and follow them, even in the face on an empty Treasury. That is what you have done in this bill.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SPARKMAN. Mr. Chairman, so far as the Rivers and Harbors Committee is concerned, there is no politics in this bill. And I wish to say, further, that if anyone here or elsewhere thinks the people of this country are going to vote against anybody because he favors, or any party because it passes, a river and harbor bill, he will wake up on the morning after the next election and find himself very much deceived. There is, in my judgment, in this country no more popular measure than those annual river and harbor bills. The people want this great work to go on, and they are going to have it go on.

Now, we may have made some mistakes in the bill, as I said at the outset, but we have asked this House to correct us where it thinks we are wrong, to strike out what is not right. Has there been anything stricken out yet? The membership here has stood by the committee up to date, a majority at least, and it has not done so because there is any politics in the bill, but because they think that, in the main, it is a good bill and ought to become a law.

The CHAIRMAN. All time has expired. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

Mr. SMALL. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The motion is not in order. The Clerk will read.

The Clerk read as follows:

Mississippi River, from the mouth of the Ohio River to and including the mouth of the Missouri River: Continuing improvement and for maintenance, $350,000.

Mr. SMALL. Mr. Chairman, if I may have the attention of the gentleman from Iowa [Mr. GOOD] a moment, I would like to put this thought to him. With the construction of the Panama Canal and the reduction of rates between the two coasts, there is a section lying between the Appalachian and the Rocky Mountains which will be placed at a disadvantage in rates as compared with the two coasts not so favorable as heretofore enjoyed. The Interstate Commerce Commission in the adjustment of rates by rail will not be able to give to the Mississippi Valley that relief to which it may think itself entitled and to which perhaps it is justly entitled. That great section, including the great agricultural State of Iowa, must look to some source in order that by an equalization and adjustment of rates the agricultural products and the manufactured products of the State of Iowa may find their way to market. The only relief which will be open to them will be the great Mississsippi River and its tributaries, and it will be up to the producers, agricultural and manufacturing, of his great State and others of those great Central States similarly situated to utilize these waterways by the establishment of water traffic, and their outlet, their gateway to the commerce of the world, will be the city of New Orleans. And the time will come, and these gentlemen from the great State of Iowa will realize it, that States which now think, by reason of their interior location, they are not interested in the improvement of our interior waterways, will turn to them as the only source of relief in the distribution of their products to their natural market, which they must find if they would maintain their present degree of prosperity.

Mr. MILLER of Minnesota. Mr. Chairman, a few moments ago when I had the floor the gentleman from New York [Mr. HULBERT] was making a short statement, and I would like if he will kindly complete that statement, as I understand he can do so in a moment.

Mr. HULBERT. Mr. Chairman, that part of the statement, which time did not permit me to put in the RECORD, is as follows:

Our national exports were valued at $2,431,004,047, of which $1,785,101,131 were sent out through the port of New York. Of a total foreign commerce, valued at $3,711,073,713, the share falling to the port of New York amounted to $2,772,548,473. In other words, New York's export and import trade amounted to more than 74 per cent of the country's total. I am speaking of foreign commerce only.

I do not know whether the gentleman referred to tonnage of ships or merchandise, but I hold in my hand an extract from the Statistical Record, issued by the Department of Commerce, in which it is stated that during the year 1913 the total tonnage on vessels which entered and cleared the port of New York was 28,834,780 tons, and for the improvement of that portion of New York Harbor which the tonnage represented by those ves-

sels used the Federal Government has appropriated in total only $13,538,840.

Mr. MILLER of Minnesota. Will the gentleman state the year for which those figures were given?

Mr. HULBERT. For 1913. For 1914 it was 27,445,963 tons, and for 1915 it was 26,056,658. Of course since the European war broke out there are three trans-Atlantic steamship lines, formerly operating out of New York, which have been compelled to discontinue, and others are paralyzed by destruction of ships or their appropriation by the British Government. But I will offer a statement from the New York Journal of Commerce of January 3, 1916, showing improved conditions nevertheless:

FOUR THOUSAND NINE HUNDRED AND FIFTEEN SHIPS SAILED FOR FOREIGN PORTS—YEAR'S CLEARANCES GREATER THAN IN 1914 AND 1913—WHILE THE VESSELS IN FOREIGN COMMERCE INCREASED IN NUMBER, THEIR AGGREGATE TONNAGE WAS SMALLER, DUE TO THE ELIMINATION OF LARGE PASSENGER STEAMERS FROM OCEAN TRAFFIC—COMPARATIVE FIGURES FOR THREE YEARS.

Despite the European war and the elimination of German and Austrian steamships from the foreign commerce, the number of vessels entering the port of New York during the past calendar year was larger than the total for 1914 and the total for 1913. On the other hand, the tonnage of the vessels entering and clearing from this port was considerably smaller than in the two previous years.

Following is a summary of the tonnage of vessels in New York's foreign commerce for the past three years, compiled by the customhouse authorities:

	1913	1914	1915
Number of vessels entered	4,448	4,206	4,890
Number of vessels cleared	4,203	4,042	4,915
Tonnage of vessels entered	15,410,977	18,894,486	12,962,428
Tonnage of vessels cleared	15,167,801	13,551,477	13,094,230

The increase in the past year in the number of ships sailing from New York for foreign ports is largely due to the tremendous increase in merchandise exports, the total value of which amounted to $1,783,372,810, which is greater by $25,000,000 than the combined exports of 1913 and 1914.

The decrease in the aggregate tonnage is due to the fact that ocean steamers of the type of the *Olympic*, *Mauretania*, and *Vaterland* have not been engaged in the regular service owing to the war, many of the steamers of this class having been requisitioned by foreign Governments.

It is also to be noted that there has been a considerable increase in the number of vessels in our foreign commerce despite the fact that German and Austrian vessels have not entered or cleared at this port since the outbreak of the European war, about 17 months ago.

Following table gives the detailed figures, by months, of the entrance and clearance of vessels for the past three years:

1913.

Month.	Entered.		Cleared.	
	Number of vessels.	Tonnage.	Number of vessels.	Tonnage.
January	317	1,096,105	319	1,199,997
February	288	1,048,225	277	1,062,375
March	313	1,189,732	314	1,232,040
April	368	1,365,344	321	1,240,665
May	377	1,280,043	361	1,332,597
June	402	1,341,416	342	1,262,882
July	431	1,358,475	408	1,317,628
August	437	1,360,781	425	1,378,232
September	432	1,449,209	383	1,303,366
October	373	1,403,158	377	1,440,913
November	330	1,156,666	320	1,143,471
December	380	1,361,923	356	1,253,135
Total	4,448	15,410,977	4,203	15,167,301

1914.

Month.	Entered.		Cleared.	
	Number of vessels.	Tonnage.	Number of vessels.	Tonnage.
January	294	1,106,633	305	1,188,646

December	377	1,000,292	445	1,233,529
Total	4,890	12,962,428	4,915	13,094,230

[1] Estimated.

The total tonnage of the vessels engaged in foreign trade with the United States for the fiscal year ended June 30, 1915, was 46,710,466 for all ports. In 1914 the total for the country was 53,388,577.

The total exports from the port of New York for the week ending March 11, 1916, were $60,204,165. For the corresponding week for 1915 the total exports were only $40,864,337 and for the corresponding week in the year 1914 the total was only $20,945,607. Now, we do not claim that because of these figures——

Mr. MILLER of Minnesota. The gentleman did not give the freight tonnage for the year 1915.

Mr. HULBERT. I can not give it to you accurately, but it is approximately 100,000,000 tons, having a value of $6,000,000,000 per annum.

Mr. MILLER of Minnesota. The gentleman can not cite us to any authoritative record showing 100,000,000 tons of freight.

Mr. HULBERT. The only authority I can cite is the report of the Chief of Engineers, United States Army, as to the tonnage of the whole port of New York. I can cite the gentleman the figures in regard to the foreign commerce in tons at New York, because that information is obtainable from the customhouse.

Mr. MILLER of Minnesota. What are those figures?

Mr. HULBERT. I have not got them at hand, but I will be very glad to produce them and put them into the RECORD. But the total domestic or coastwise trade I can not give the gentleman, because there is no provision of law by which it can be collected, analyzed, and published. I now have such a bill in course of preparation and intend to introduce it.

Mr. MILLER of Minnesota. I would like to have some of my time left.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. HULBERT. Mr. Chairman, I move to strike out the last three words; and I will yield to the gentleman from Minnesota for the purpose of an inquiry.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that the debate on this paragraph and amendments close in five minutes.

Mr. MILLER of Minnesota. That would be sufficient, so far as I am concerned.

Mr. HUMPHREY of Washington. Mr. Chairman, I would like to have five minutes, following the gentleman from Minnesota [Mr. MILLER].

Mr. SPARKMAN. Then I will ask to extend it to 10 minutes, Mr. Chairman.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that the debate on the paragraph and amendments thereto close in 10 minutes. Is there objection?

There was no objection.

The CHAIRMAN. Does the gentleman from New York [Mr. HULBERT] desire recognition?

Mr. HULBERT. I will ask recognition in order that my colleague [Mr. MILLER] may ask me a question, if he desires to do so.

The CHAIRMAN. The gentleman from New York is recognized.

Mr. MILLER of Minnesota. Will the gentleman permit me in his time to make a brief statement, completing the statement he made?

Mr. HULBERT. If it relates to the statement I made, I have no objection.

Mr. MILLER of Minnesota. I wish in addition, Mr. Chairman, to call attention to the position taken by the gentleman from Pennsylvania [Mr. MOORE]. Unquestionably the greatest

commercial port in the world is the city of New York; the greatest in the world. Unquestionably the second greatest port in the world, so far as tonnage is concerned, is the Duluth-Superior Harbor, at the western extremity of Lake Superior.

Oh, I see some gentlemen smile. That smiling on their part does not do themselves very much credit. It indicates that they have not kept abreast of the times. The gentleman from New York [Mr. HULBERT] has cited the fact that the tonnage of the ships that carried the imperial commerce of New York in 1913 was 28,000,000 tons. The tonnage of the ships that carried the tonnage of Duluth-Superior Harbor in 1913 was 28,000,000 tons. That does not represent the freight tonnage carried, however. The freight tonnage for the year 1914, as was given by the gentleman from Wisconsin [Mr. LENROOT], for the Duluth-Superior Harbor, is about 33,000,000 tons. The gentleman might, if he had chosen, have stated that that was the low year for many years, and that in the preceding year of 1913 the total tonnage was 46,000,000. I see, also, that its value was $352,595,577.

Mr. HULBERT. Will the gentleman yield for a question?

Mr. MILLER of Minnesota. In a minute. The total tonnage for London that year was but 41,000,000. The tonnage for Liverpool was but 35,000,000. The tonnage of Chicago, imperial city as it was, was but 14,000,000. When we come to make comparisons as to freight and the tonnage, the Duluth-Superior Harbor ranks second to New York in the world.

Now, in harmony with what the gentleman from Pennsylvania [Mr. MOORE] said a short time ago——

Mr. HULBERT. Mr. Chairman, will the gentleman permit an inquiry there?

Mr. MILLER of Minnesota. In a second. We do not maintain that the appropriations for the Duluth-Superior Harbor are of exclusive benefit to Duluth and Superior any more than that the appropriations for the improvement of the Delaware River are for the exclusive benefit of the splendid city of Philadelphia. An appropriation for the harbor of Duluth-Superior is a benefit to every man in the United States who either sends something through that harbor or buys something that is sent through it. In fact, that is the great gateway to the interior of the continent, and its commerce will continue to grow with tremendous rapidity as the commerce of the country develops. Manufactured products and foreign products coming down the Great Lakes there meet the rails, and are thence transported into the interior.

A few years ago I was interested to hear a gentleman who was engaged in the Lake transportation business for 40 years, after spending a whole winter in the work, finally come to a fairly reasonable estimate as to what had been saved to the producers and consumers of America in cheapened freight by the improvements made upon the Great Lakes, and the figures that were produced by him staggered one. Men on this floor can remember distinctly when it cost 10 or 12 cents to send a bushel of wheat from Duluth to Buffalo. Now you can send that bushel of wheat anywhere for from three-quarters to one and one-half cents.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. MANN. Mr. Chairman, the gentleman from Minnesota [Mr. MILLER] falls into an error which a great many people of the country in the inland districts have fallen into. They make a comparison between all of the commerce at their local ports and the foreign commerce at one of the seaports.

Mr. MILLER of Minnesota. I did nothing of the kind.

Mr. MANN. That is exactly what the gentleman did. The gentleman compares commerce of the Duluth-Superior port with the foreign commerce of New York City.

Mr. MILLER of Minnesota. I did nothing of the kind.

Mr. MANN. I make the statement, and I am correct. If all the commerce of New York City was taken into consideration, it would amount to hundreds of millions of tons, computed in the same way that they compute the commerce at Chicago and through the Duluth & Superior Canal or Milwaukee or any of those places of that sort. They do not pretend to gather statistics of all the domestic commerce at New York City.

Mr. HULBERT. Mr. Chairman, will the gentleman yield?

Mr. MANN. No; I have made a correct statement, and I do not care to yield.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. HUMPHREY of Washington. Mr. Chairman, I listened to my friend from Minnesota [Mr. MILLER] make his statement a little while ago, and I also heard him a little earlier in the day. I simply wanted to dispel any impression that the House might have that the gentleman from Minnesota is any different from the most of us, that he is any more altruistic than other Members of this House.

I remember distinctly that when the Panama Canal was up for consideration the distinguished gentleman joined hands with the other side of the aisle to impose tolls upon American coastwise shipping going through that canal.

Yet the products from my portion of the country, the wheat and the lumber and the other products from the Pacific coast, go to the Atlantic coast and there compete with those from his State. The Government furnishes him a canal for his products free, and he was not so altruistic at that time but that he voted to impose a tariff upon the products coming from my portion of the country that competed with his, already handicapped by having to come a good many thousand miles farther. So I thought it might be well to state that my good friend from Minnesota, just like the rest of us, can see good in his own products. He can stand up here and praise them, and he can see faults in the others, just the same as anybody else.

Mr. MILLER of Minnesota. Mr. Chairman, will the gentleman yield for an inquiry?

Mr. HUMPHREY of Washington. Yes.

Mr. MILLER of Minnesota. Does the gentleman think there is no difference between an interoceanic canal at Panama and the Sault Ste. Marie Canal connecting two bodies of water within the United States?

Mr. HUMPHREY of Washington. Not a bit of difference. They were both built on American soil; the American people own both and the American flag floats over both.

Mr. MILLER of Minnesota. If the gentleman can not see any difference, I think he is the only Member of the House who can not.

Mr. HUMPHREY of Washington. At least, I am not like some Members who first saw the thing one way and then changed their minds, and so, having been on both sides, must have been right at least once. [Laughter.]

Mr. GOOD. Would not the gentleman expect one side of the House at least to follow the President when he flops?

Mr. HUMPHREY of Washington. Yes; but I would hardly expect the gentleman from Minnesota to follow him.

Mr. MILLER of Minnesota. I will say to the gentleman from Washington that the President followed me. When he found he differed with me, he flopped. [Laughter.] When the bill was originally before the House I followed the lead of the distinguished committee and its chairman, and the ranking member on the Republican side, and voted for tolls, because I believed then and believe now that we ought to have tolls for going through the Panama Canal. When the President looked and found that he had had the temerity to differ with me, he promptly and expeditiously changed his views. [Laughter.]

Mr. HUMPHREY of Washington. The gentleman enjoys it when he is wrong, and the President is wrong with him. It might be well for the gentleman sometimes to be right, even if the President differs with him.

Mr. MILLER of Minnesota. I will state that if I did, the President never would be on my side. [Laughter.]

The CHAIRMAN. The gentleman's time has expired. All time has expired.

The Clerk read as follows:

Mississippi River from the mouth of the Missouri River to Minneapolis, Minn.: Continuing improvement and for maintenance, $1,200,000.

Mr. FREAR. Mr. Chairman, I ask unanimous consent to speak for 15 minutes. This is the only project on which I desire to speak longer than 5 minutes.

Mr. HUMPHREY of Washington. What project is it?

Mr. FREAR. It is my own, the upper Mississippi.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent that he may proceed for 15 minutes. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, I move to strike out the last word.

Mr. HUMPHREY of Washington. I thought the gentleman was going to move to strike out the item.

Mr. FREAR. Leave that to me.

Mr. Chairman, for many days I have pressed on the attention of the House and through the RECORD on the country the startling fact that while this Government has been aimlessly squandering some four hundred million dollars on its creeks, canals, and rivers, while our population has increased over 200 per cent, and our country's total commerce has been quadrupled and again quadrupled, these same rivers, canals, and creeks on which hundreds of millions have been spent did not gain a ton of commerce on the average. I do not refer to several deep waterways which are in a separate class. More striking, with

rare exceptions, the rivers have lost from 50 per cent to 100 per cent of their boasted waterway commerce, and the greatest river of all, the Mississippi, on which nearly $150,000,000 has been spent, now shows a loss estimated at 90 per cent of its once great commerce.

During several days I have presented to this committee the opinions of able economists, statesmen, waterway experts, and consciencious engineers, who unanimously agree it is folly to spend hundreds of millions more without definite purpose. Moulton, Fisher, Reid, Burton, and Col. Townsend, men familiar with waterways all over the world, have been quoted. Not one of the many experts on the subject has been answered. They are among the highest authorities in the country and are impartial students. They say we are trying to turn back the hands of time and to plow with a stick in this twentieth century.

This bill carries $39,600,000, over half of which goes to a dozen largely deserted rivers and hopeless waterway projects, as I have pointed out in my report. It wastes other millions on a hundred and fifty other rivers and creeks contained in the bill. We have spent $150,000,000 on the Mississippi, largely for reclamation of private lands, and all these enormous expenditures have been required in order to secure for a few actual commercial waterways needed improvements.

Mr. Chairman, for three years I have tried to present to the House the character of river and harbor bills brought before it. I do not take any credit for what has been accomplished. If my work has been of any service to the country, that is sufficient reward for the effort.

The last two river bills defeated carried over $92,000,000. The substitutes carried $50,000,000, or a saving of $42,000,000. I believe far more than that amount has been saved, because the last item read in this bill is a reduction of over a half million dollars from the amount contained in the first bill defeated, an illustration of what has occurred with many other items.

Because of the demand of others that I be consistent and show good faith, I asked to go on the River and Harbor Committee for the purpose of trying to prevent waste and to suggest a better system. Needless to say, the work was not agreeable, but I wish to express my grateful acknowledgments to the chairman and members of the committee, who have treated me with every courtesy. If I have done aught to offend, personally, I trust it will be pardoned.

For three years I have been criticized and lampooned by different Members of the House because of my efforts. Believing there is no half-way course, I have refused to become involved in personalities. My motives for remaining silent, for not replying, may have been misconstrued, but I have accepted hard blows without any return because the subject is too important to be clouded by personalities. Within the past day or so the gentleman from Alabama [Mr. HEFLIN] insisted my course was political and sectional; the gentleman from Florida [Mr. CLARK] has insisted I am inconsistent and ask for myself what I criticize in others. My friend from Pennsylvania Mr. MOORE charges me with lack of interest in waterways generally.

These gentlemen are among their party leaders on this floor. Many others have joined them in criticisms, but I will not reply in kind nor seek to explain. Explanations are of little avail to those who fail to comprehend that a man may stand for what he believes to be right because of honest convictions. That it has become a national disgrace, to use the words of Senator Toombs, for Congress to engage in a "miserable scramble for a slice from the Public Treasury."

I do not care to explain motives nor do I care to offer any defense for my course.

The gentleman from Alabama says it is political and sectional. Yet I denounced wasteful waterway projects in the North from Cold Spring Inlet to a dozen smaller items, and the one under discussion is equally wasteful. He says it is political. Yet my colleague from Wisconsin [Mr. KONOP] will tell you that although an entire stranger to him, and a friend of his Republican opponent, Mr. Kusterman, it was my vote that gave him his seat here when the State election commission, of which I was chairman, divided two and one with only five votes in dispute.

The gentleman from Florida [Mr. CLARK] says I want some favors and am disappointed. Saturday I explained to the House that I refused to indorse an $8,000,000 canalization project on the St. Croix, beside my home city. The chairman of that commission is one of my close friends from my home town. When he came to Washington I told him I could not stand for it because it was a waste of public money.

My friend Mr. MOORE of Pennsylvania has said repeatedly that I do not know the importance of waterways and my work may help railways. As to the railway proposition, I will say the railways profit by these appropriations because it helps their terminals and boat lines, and they own by far the greater number of both. For years I have sought to secure laws regulating railways and for years gave help to my distinguished colleague [Mr. LENROOT], then speaker of the Wisconsin Assembly, who was active in that same fight.

I am greatly interested in waterways. Wisconsin's waterway commerce is second only to that of New York. It has a dozen or more fine harbors on Lakes Superior and Michigan, while three of these harbors carried over 60,000,000 tons in 1913, many times the actual waterway commerce of all the Southern States put together. Wisconsin only receives $308,000 in this bill for her harbors—less than the Brazos gets for 1,080 tons annually. So far as I know Wisconsin has all she needs for present projects, but over a million dollars in this one bill given to the Brazos, Arkansas, and Ouachita alone is all wasted.

In addition to the two greatest lakes in the world, the greatest river in the world is on our borders. One hundred miles runs along my own district. Years ago I remember when the Mississippi and the St. Croix were covered with large boats and a great commerce. That was before the advent of railways. To-day there is only a shadow of the old commerce. After spending over $20,000,000 on the upper Mississippi, it is not in as good shape, according to river pilots, as 40 years ago, although it can still float the largest river boats on a 4½-foot depth throughout the season. Some of the people of my district were at first opposed to my fight against these bills. A Government boat yard in my district was stirred by outside influences until I went to the city in which the yard is situated to say that if they wanted their Member to vote for such wasteful bills they must send some one else here. I carried that city at the next election by a larger vote than before. The people of Wisconsin as well as the people from Texas, whose commending letters I have read, are honest. They do not believe in this wasteful bill.

Mr. Chairman, the upper Mississippi receives $1,200,000 in this bill. After deducting sand, gravel, brush, Government construction material, and floatable timber, the commerce on the 600-mile stretch reached about 170,000 tons in 1913, and that was floated a distance on the average of less than 50 miles.

Six thousand automobiles and some live stock ferried across the river composed two-thirds of the commerce value shown by the engineers' reports; 770,000 tons of sand, gravel, brush, and so forth, used by the Government for river dams and construction, were added into the 1913 commerce report. That commerce report is a public scandal. Misleading commerce reports have been repeatedly exposed, and Col. Townsend now admits the loss of traffic on the upper Mississippi is about 90 per cent. St. Paul and Minneapolis are cities of 600,000 inhabitants. St. Louis has a greater population. A score of other cities are along the river; but all the actual commerce on that river to-day is only a joke, compared with millions of tons carried by railways along its banks. Promises of future commerce are equally hopeless. When Bernhard, the boat builder, asked what commerce St. Paul merchants could drum up for his line, the committee secured promises for only 12,000 tons—two or three trainloads in one year—that was all.

Waste on the lower Mississippi is a matter of national importance, but on the upper river it is equally inexcusable.

I desire to offer an amendment cutting the proposed appropriation in two, giving $600,000 to the 600 upper miles. Friends tell me that those who resent criticisms of the bill will unite to pass my amendment; but, if so, it will only serve to bring before the country the weakness of the present pork-barrel system. I believe that appropriation should be cut to actual maintenance. Col. Townsend so recommends; and it is in the direction of public economy.

The entire bill should be cut in two by striking out most of the appropriations now going into useless and hopeless rivers and canals.

Is my amendment an answer to criticisms? If not, I shall not dodge the issue. I refuse to be influenced by a $1,200,000 Mississippi River appropriation next my district or by any $8,000,000 canalization to run past my home town, or by any amount that may be given to my own State in this or any other bill. Every legitimate waterway should be improved; but I am not willing to stifle my judgment nor my conscience to vote for a vicious bill like the one before us. I am not questioning motives of those who do so; but, when you criticize my action, I say to you that I will not be a party to the "miserable scramble" spoken of by Bob. Toombs. What is more, I hope to do all I can in a small way to expose the character of this bill and to try to point the way to a better system.

Mr. Chairman, criticism of Congress is invited by this bill. We can affect to be righteously indignant over that criticism, but the fault is ours. I hope and expect a substitute will be adopted that will relieve the Treasury from the burden imposed by this bill. I do not trust the unrestricted judgment of Army Engineers, but, acting under a bad system without any possibility of immediate improvement, it seems the only alternative if we would save $20,000,000 in wasted money. I have offered this amendment seriously. I have offered many other amendments that have been defeated. This one will save $600,000; and if we pass a reasonable substitute bill we will save $20,000,000, the cost of a great battleship, while no legitimate waterway in the country need suffer from this bill's defeat.

Mr. Chairman, I ask unanimous consent to insert in the RECORD a statement of the commerce report of the river, and also a statement made by Mr. Bernhard.

The CHAIRMAN. The gentleman asks leave to extend his remarks by including the data indicated. Is there objection?

There was no objection.

The matter referred to is as follows:

ST. PAUL TO ST. LOUIS—ANOTHER COUNT IN THE INDICTMENT.

The next stretch on the Mississippi River is from St. Paul to St. Louis, and the Chief Engineer, on April 1, 1915, apparently in order to hand over nearly $5,000,000 to the lower river in 1915, threw a round million into this part of the upper river. In January, 1915, $444,274 remained on hand for this section, according to Senate Document 953, Sixty-third Congress. What justification was offered for spending nearly $2,000 per mile in one year on this stretch of the river? What commerce is served?

Keeping in mind that actual commerce on the river has probably decreased 95 per cent during the past few years, during which time $20,000,000 of Government funds has been dumped into this 600-mile stretch during that period, let us see how the Chief of Engineers excuses an allotment in 1915 of an even million in addition to the balance on hand and in addition to approximately $30,000 per mile already spent on this project. Examine his statement of commerce, taken from page 2437 of the Chief Engineer's report for 1914. It will not be found easily in the index.

The report says the quantity of freight carried by all boats, including the rock and brush used in Government work and also including logs and lumber floated down the stream, is as follows, and then follows a table, of which 772,392 tons hauled 9,445,576 ton-miles, valued at $781,897, is for material used by the Government in improving the river.

Upper Mississippi River freight statement for 1913.

Designation.	Short tons.	Ton-miles.	Valuation.
Logs	64,489	30,245,340	$315,271
Rafted lumber, shingles, etc.	13,570	4,400,147	190,001
Miscellaneous freight	1,294,864	12,229,310	31,417,968
United States material	772,392	9,445,576	781,897
Total	2,145,315	56,320,373	32,705,137

Classified freight traffic, 1913.

Teams	23,501	26,609	6,540,900	1.7	46,537
Wheat	11,500 bushels	382	12,347	7.9	3,015
Wood	21,847 cords	34,248	108,213	16.4	560,865
Miscellaneous	71,042 tons	71,042	5,366,996	231.0	1,642,366
Total		2,145,315	32,705,137	26.2	56,322,373

A comparative statement of upper river commerce is also offered by years, during which period between $20,000,000 and $25,000,000 have been expended by the Government on the advice of Army engineers. While the 1913 commerce was only about 35 per cent of that floated in 1885, it will be ascertained upon analysis that over nine-tenths of the 35 per cent floated in 1913 is bogus commerce, or, assuming the 1885 commerce reported to have been legitimate, in 28 years river freight fell approximately 96 per cent.

Mississippi River: Mouth of the Missouri to St. Paul, Minn.

[From reports of the Chief of Engineers, War Department.]

	Tonnage.
1885	5,607,196
1886	3,200,000
1887	3,500,000
1888	3,750,000
1889	3,500,000
1890	4,200,000
1891	3,300,000
1892	3,750,000
1893	3,200,000

1911	2,081,566
1912	1,830,294
1913	2,145,315

[From reports of the Chief of Engineers, War Department, 1904, vol. 2, p. 2157, and 1913, vol. 2, p. 2385.]

	Tonnage.
Average tonnage for years 1877 to 1903, inclusive	4,615,376
Tonnage in 1912	1,830,294
Decrease	2,785,082

Referring to the 1913 statement, let us briefly examine the items, which show some remarkable facts.

ENGINEER'S STATISTICS OF COMMERCE (?).

"Commerce" reached 2,145,315 tons in 1913, so the Chief of Engineers reports. Tons of what? Let us see:

	Tons.
Brush for river construction work	82,450
Gravel dredged from river	398,178
Rock for river work	708,000
Sand dredged from river	562,000
Logs that have floated for 50 years	98,268
Lumber and wood barged	64,408
Animals ferried across river	55,322
Automobiles ferried across river	6,034
	1,974,980

All could be floated in 2 or 3 feet of water, leaving 170,335 tons of questionable commerce remaining, which was hauled on an average of 26 miles or thereabouts.

What a legislative travesty when eleven-twelfths of the commerce for which $1,000,000 was allotted by the Chief of Engineers is of that character. Who weighed the brush? Who weighed the logs? Who weighed the rocks, gravel, sand, and so forth, used in the river work? Where was it carried, and for what purpose? Was it floated 1 mile or 10 miles? Who knows? Why measure Government material for river work anyway?

A WONDERFUL SYSTEM IN VALUING "COMMERCE."

The Chief of Engineers says that 26,609 tons of horses were carried a mile and a half across the river and their value was $6,540,900, or one-fifth of the total. Other live stock carried across the river, he says, was valued at $5,218,730; and then, to cap the climax, this report adds that 6,034 tons of automobiles ferried across the river were valued at $9,545,950.

Nearly two-thirds of all the glowing commerce valuations on the upper Mississippi, including Government sand, rock, and gravel, turns out to be animals and automobiles ferried across the river.

Again, how much of the remaining 170,000 tons was repair material or Government supplies out of a total 772,000 tons reported? How much was duplicated before it could boost a million-dollar allotment for the upper river?

The following statement is from a discussion on Rivers and Railroads in the United States by J. H. Bernhard, associate member of the American Society of Civil Engineers, in the proceedings of that society, August, 1915:

A mistake is made by the public in assuming that it is always the river channel that causes this idleness. Nothing could be further from the truth. To-day the Mississippi, from St. Louis to its mouth, affords a channel which is the best to be found on any stream in the world, unless one takes the Amazon or the Congo into account; and see its emptiness. An 8-foot channel is all that the most efficient service requires. The Government works unremittingly to develop waterways, only to see the water-borne traffic on inland rivers grow less as the years go by, not due chiefly to the inadequate depth of the channels, but to this rate-making anarchism; and until the idea that the principal function of inland water channels is to regulate the rates for rail transportation has been untaught, or made unnecessary by just rates, we will not see great river traffic.

Still the average "riverman" will insist that the poor condition of the channels keeps our inland waters idle. This is preposterous; the Rhine could never compare with the Mississippi in its advantages for transportation; its channel is narrower and shallower, more changeable; the current is swifter; and ice is known in the winter over its entire navigable length to its very mouth, yet in 1913 more than 97,000 vessels passed the Dutch and German frontier on the Rhine, which means a vessel every five minutes for the entire year.

Mr. FREAR. Mr. Chairman, I offer the amendment which I send to the Clerk's desk.

The CHAIRMAN. The gentleman from Wisconsin offers an amendment which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. FREAR: Page 28, line 19, strike out "$1,200,000" and insert "$600,000."

Mr. FREAR. Mr. Chairman, as I have stated, that practically provides for $1,000 a mile, not quite as much as the stretch of the river below. It is just the same as was proposed for the lower Mississippi. It seems to me that ought to take care of the maintenance.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin [Mr. FREAR].

The question was taken; and on a division (demanded by Mr. FREAR) there were—ayes 30, noes 35.

Accordingly the amendment was rejected.

Mr. ESCH. Mr. Chairman, I offer an amendment to come in as a new paragraph.

The CHAIRMAN. The gentleman from Wisconsin offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 28, after line 19, insert the following as a new paragraph: "That the Chief of Engineers, or such board as the Secretary of War may appoint, shall, within two years after the passage of this act, make such experiments in the transportation of heavy freights on said Mississippi River between the mouth of the Ohio River and St. Louis and between Dubuque, Iowa, and Minneapolis, Minn., at all stages of water in said river, with the experimental tows and barges described in House Document No. 857, Sixty-third Congress, second session, as will fully demonstrate the economy or lack of economy in the transportation of such heavy freights, and particularly upstream in parts of said river in which said improvement has been completed or practically completed, and for the making of such experiments said Chief of Engineers or board is hereby authorized to use not to exceed $50,000 of the unexpended balance of the $500,000 appropriated by the act of June 25, 1910, for designing and constructing experimental tow boats and barges and loading and unloading facilities for towing and delivering supplies along the Mississippi River and its tributaries."

Mr. ESCH. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to proceed for 10 minutes. Is there objection?

There was no objection.

Mr. SPARKMAN. I ask unanimous consent that all debate on this amendment close in 15 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this amendment close in 15 minutes. Is there objection?

There was no objection.

Mr. ESCH. Mr. Chairman, by this amendment I desire to put life into a provision of the river and harbor act approved June 25, 1910. The provision I have reference to is as follows:

The Chief of Engineers, under the direction of the Secretary of War, is hereby authorized to design and construct two experimental towboats of modern but different types, with a complement of suitable barges and necessary loading and unloading facilities, for towing and delivering supplies along the Mississippi River and its tributaries, and in making designs for such boats the said Chief of Engineers shall investigate and consider types of boats in use for similar purposes on nontidal rivers in this and other countries, and for the purposes of such investigation, designs, and construction there is hereby appropriated the sum of $500,000.

That became law in 1910. Immediately after the passage of that law the Chief of Engineers appointed a commission of experts on August 6, 1910. That commission was given the following work to do:

Consideration of devices for river transportation, experiments upon model towboats and barges, experiments upon paddlewheels, investigation of methods in use on European rivers, consideration of cargo-handling appliances, discussion and determination of designs of experimental towboats and barges.

That was in August, 1910. That commission began its work, and in the course of its work a subcommittee of the commission went to Europe to investigate the question of river navigation in various countries. As a result of that investigation this commission found:

That European methods of towing are in general not suitable for use on the Mississippi River and its tributaries.

They also found that towing by tow line, the European mode, is not considered practicable upon our western rivers on account of the physical conditions of these waterways and on account of the necessity of having a crew on each barge.

This commission appointed in August, 1910, did not make a report until February 20, 1914. When it did report it recommended the adoption of certain types of tows and barges, the construction of one fleet of six No. 2 deck barges, another fleet of six No. 4 open barges. It also recommended that the hulls should be made of steel, that two towboats be of the stern-wheel type and two of the twin screws in tunnels, with a beam of 43 feet and 34 feet, respectively, and length between perpendiculars 170 feet, and draft 4 feet in both cases, with other recommendations which I have set out and designated in my amendment. The information given to Congress in this report of February 20, 1914, was quite complete. A year ago I offered a similar amendment to the river and harbor bill, but in that I provided that the $50,000 should be taken out of the $1,200,000 provided for the upper river. In the present amendment I ask that $50,000 is to be taken out of the $475,000 that is still available and is to be used for experiments. I do not deduct this sum of $50,000 from the improvement fund for the upper river but segregate $50,000 out of the $475,000 that is still available.

I have stated that according to the engineers the European methods of river navigation are of little value to us in this country, therefore we must adopt types or models of tows and barges suited to our home conditions. Hence the necessity for this commission making a report at as early a date as possible in response to the direction of Congress made in 1910.

Mr. BORLAND. Will the gentleman yield?

Mr. ESCH. Yes.

Mr. BORLAND. I am thoroughly in accord with the gentleman as to the necessity of this experiment on the type of boats for river navigation. That has been one of the great drawbacks to river navigation up to the present time. But does the gentleman understand that these experiments have been carried on for the last three years on the Missouri River until we have developed a type of barge that answers the purpose?

Mr. ESCH. Yes; but the Missouri River boats are a double-tunnel type like the *Scott* and *Advance* and have a horsepower of 600, while this type recommended by the commission is to have a horsepower of 1,200, and the conditions of operation would be quite different.

These models that the engineers have recommended are the result of experiments of six months duration by Prof. Sadler, in an experimental tank at the University of Michigan. His experiments were with toy models. We want the barges and towboats actually constructed and actually used in the upper Mississippi River in order to determine whether they can meet the conditions of navigation in the upper river—whether they can take one barge loaded at 880 tons, that is the tonnage capacity per barge recommended—or two barges or three barges or four barges or a maximum of six barges; whether they can meet the conditions of low-water navigation, whether they can meet the dangerous cross currents in the upper river caused by the construction of winged dams. These are some of the problems that can not be solved except by actual construction of the towboats and barges and not by any mere model operated in experimental tanks.

I have stated that the experiments must be made within two years. That is ample time. We have waited six years and have not yet gotten the model tows and barges constructed nor have we made any experiments therewith. My amendment gives two more years in order that this may be done. [Applause.]

Mr. SPARKMAN. Mr. Chairman, I yield two minutes to the gentleman from Illinois [Mr. FOSTER].

Mr. FOSTER. Mr. Chairman, the amendment offered by the gentleman from Wisconsin, it has occurred to me, as he says, will give some life to this provision, which was carried in the river and harbor bill a few years ago. The appointment of a commission to examine and if possible find some means whereby the upper Mississippi River can be navigated by certain types of boats so as to carry freight on that river at a stage of the river which is usually shallow. I do not know whether under the authorization the commission will go ahead and carry it out or not, but I do believe that something ought to be done to construct these boats. But it seems to me that if they do not do so this amendment of the gentleman from Wisconsin [Mr. ESCH] ought to be incorporated in the bill, so that we will have some definite result. For that reason I have thought that the amendment of the gentleman from Wisconsin ought to prevail and will vote for it unless it can be shown otherwise.

Mr. SPARKMAN. Mr. Chairman, this amendment, in my judgment, is wholly unnecessary. The river and harbor act of 1910 carried a provision similar to the one the gentleman has offered here, and since that time the engineers of the War Department have been experimenting and making a study of a type of boat to be used on the Mississippi and other rivers of the country. They have about completed their study, so far as that is concerned, and have made a report. That report, as was stated by the gentleman a moment ago, was made March 20, 1914, a little more than two years ago, but quite recently I had a conversation with the Chief of Engineers, who told me that they were going ahead under that provision and would in a

short time have one or two boats constructed and ready for use. I do not think they expect to go into the business very extensively, may not perhaps expend all of the money appropriated for the purpose, but sufficiently to complete the experiment and to be able to make a satisfactory report to Congress of the results of their experiments. I do not think this amendment will hurt anything, but it will, in my opinion, do no good.

Mr. ESCH. Mr. Chairman, when this matter was up a year ago the gentleman from Florida [Mr. SPARKMAN] said he had called the matter to the attention of the Chief of Engineers at that time, and one year has elapsed since that time, and the situation is the same as before. Why not put a little "pep" into the proposition?

Mr. SPARKMAN. I think this discussion will have that effect, if such an effect is needed, just as much as would the adoption of the amendment offered by the gentleman from Wisconsin.

The CHAIRMAN. The time of the gentleman from Florida has expired. The question is on the amendment offered by the gentleman from Wisconsin.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Mississippi River from St. Paul to Minneapolis, Minn.: Completing improvement, $170,000.

Mr. SMITH of Minnesota. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amend, by inserting as a new paragraph, on page 28, line 21, after the figures "$170,000," the following:

"That the Secretary of War be, and is hereby, directed to make and enter into an agreement with the Municipal Electric Co., a public corporation organized and existing under the laws of the State of Minnesota, for the purpose of utilizing the hydroelectric power developed by the surplus waters not needed for navigation by the dam prescribed and provided for in House Document No. 741, Sixty-first Congress, second session, as adopted by Congress in the act entitled 'An act making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes,' approved June 25, 1910. Such agreement shall provide that for the privileges secured thereby said corporation shall pay to the United States the fair and proportional cost of maintenance of said dam, lands, and appurtenant works, and also pay in addition an annual sum, not less than 3 per cent, upon such amount as the United States shall have invested and expended in the completion of the project by which such water power is developed and maintained over and above the amount actually expended and which would have been expended in completion of the project for navigation only. Such amount shall be determined by the records in the office of the Chief of Engineers, and the said annual payments for rent and maintenance shall be made on or before the 2d day of January of each year; and the rent shall begin with the use of the power commercially by the said Municipal Electric Corporation, and not later than one year after said company has been notified by the Secretary of War that the water is available.

"The right shall be reserved to the United States and included in such contract for the United States to purchase and use such supply of said power as may be required for its own purposes on the same terms and conditions as the said power is sold or distributed to the members of said public corporation of the State of Minnesota."

Mr. SMITH of Minnesota. Mr. Chairman, the amendment which I offer, while a little long, is one that has been considered by Congress before. In the Sixty-second Congress it passed the Senate, and it was introduced in the House as a bill in the second session of the Sixty-second Congress, and referred to the Committee on Rivers and Harbors. It was also introduced in the Sixty-third Congress and referred to the same committee. It was first introduced in the Senate by my distinguished colleague, Senator NELSON. It is in the exact language as the amendment adopted in the river and harbor appropriation bill in the Senate in the Sixty-second Congress.

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Minnesota. Yes.

Mr. BORLAND. We would like to know, for information, whether there is surplus power that will be developed from that dam?

Mr. SMITH of Minnesota. Yes; there will 15,000, maximum, horsepower.

Mr. BORLAND. And is this company that is seeking to lease the power a municipal lighting company?

Mr. SMITH of Minnesota. It is the Municipal Electric Co., so named, created under the laws of our State and composed of the president of the board of regents of the University of Minnesota and the mayor of the city of Minneapolis and the mayor of the city of St. Paul.

Mr. BORLAND. It is, in effect, a municipal corporation?

Mr. SMITH of Minnesota. Yes.

Mr. BORLAND. It is not a private corporation?

Mr. SMITH of Minnesota. Oh, no.

Mr. BORLAND. It is a corporation formed by the two cities and the State University.

Mr. SMITH of Minnesota. It is a municipal corporation, incorporated for the purpose of furnishing light to the city of Minneapolis and to the city of St. Paul and to the State University, and to the four Federal buildings in those two cities and to Fort Snelling. I want to say further that while this amendment provides that the Municipal Electric Co. is to get the lease of the hydroelectric power developed by the surplus water not needed for navigation at this dam should it be determined that the Federal Government needs the whole or any part of this power the Municipal Electric Co. must furnish it to the Government at cost. The Federal Government is to have the first lien and the right to the power, and what is left after the Government is supplied goes to the two cities for street lighting and for other public purposes, and to the State University.

Mr. STEENERSON. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Minnesota. Yes.

Mr. STEENERSON. Is this a corporation organized for profit or simply to serve the public?

Mr. SMITH of Minnesota. This is a corporation without profit. It is simply to serve the State of Minnesota, and the two cities, and the United States Government without any profit to any one. The officers and the directors of the association, it is specifically provided in the law shall receive no salary. They have a right to employ such managers and engineers as would be necessary to carry on the business, but there is no profit anywhere.

Mr. Chairman, I wish to introduce at this time a copy of the law under which this corporation was created and also the charter which has been granted to it, and I wish also to introduce the application that is now on file in the War Department with reference to the project. I also wish to have read by the Clerk a statement made by Gen. Bixby, Chief of Engineers, at the time Senator NELSON's amendment, of which this is an exact copy, was under consideration in the Senate, stating the reason why he thought this amendment was a proper amendment and should be passed. I also wish to say before the Clerk reads the statement that at the time that statement was made by Gen. Bixby the charter of the Municipal Electric Co. was not on file in the War Department, but that since that time it has been furnished to the War Department.

The Clerk read as follows:

OFFICE CHIEF OF ENGINEERS,
January 8, 1913.

To the SECRETARY OF WAR:

1. Returned.

2. In the river and harbor act of June 25, 1910, Congress adopted a modified project for the improvement of Mississippi River from St. Paul to Minneapolis, set forth in House Document No. 741, Sixty-first Congress, second session.

3. The project for this improvement, then under way, provided for the construction of two locks and dams for the purpose of securing a navigable depth of 6 feet at low water. The principal feature of the modified project was the substitution of a single high dam for the two low dams provided for in the original project, such substitution being considered desirable for the reason that a high dam would provide better facilities for navigation, giving a navigable depth of 9 feet, and would also create a valuable water power which could be utilized to pay the cost of construction as well as of future maintenance and operation. The whole scheme of improvement, including the proposed utilization of the water power developed, is clearly set forth in the report of the Chief of Engineers dated March 3, 1910, printed in the aforesaid document to which attention is respectfully invited.

4. While the work was to be executed by the Federal Government solely at its own expense in order that the absolute control of the water power and the unqualified right to dispose of it might rest in the United States, it was considered that the cities of St. Paul and Minneapolis would be the most desirable lessees of such power, and it was clearly intended that these two municipalities should be given preference in the matter. The purpose of the bill under consideration is to give effect to this intention.

5. The bill directs the Secretary of War to contract with the Municipal Electric Co., understood to be a public corporation of which the two cities are members, for the use of the power developed at the dam by the water not required for navigation. It is deemed proper to say, however, that the foregoing statement regarding the corporation named in the bill is merely an assumption, as there is no information as to its status on the records of this department. If amended as indicated in red thereon, it is believed that the bill will amply provide for the protection of the public interest, and no objection is seen to its favorable consideration by Congress.

W. H. BIXBY,
Chief of Engineers, United States Army.

—

IN THE MATTER OF THE HIGH DAM BETWEEN MINNEAPOLIS AND ST. PAUL, MINN.—APPLICATION FOR PERMIT AND LEASE.

Hon. LINDLEY M. GARRISON,
Secretary of War:

Application is herewith made to the Secretary of War, on behalf of the Municipal Electric Co., of the State of Minnesota, composed of the cities of St. Paul and Minneapolis and the University of the State of Minnesota, for the early grant to it of permit and lease for use of the surplus water power to be developed by the operation of the Government dam in the Mississippi River between the cities of Minneapolis and St. Paul.

Reference is made to the fact that there exist circumstances connected with the authorization and erection of the dam in question and

the use of the water power therefrom, which call for peculiar consideration to be shown by the Government to these municipalities in respect to such water power.

These considerations are as follows:

I.

1. That the proposed power project and its use lie wholly within the State of Minnesota.

2. That the Government dam being in a 90 per cent state of completion, there is call for early action if these petitioning communities are to be considered at all at the hands of Government.

3. That the cities of Minneapolis and St. Paul from the inception of this Government project expected and petitioned for rights of use of power to be developed thereby, as appears by action taken May 6, 1901, by the Board of Park Commissioners of the former city, as follows:

"In response to communication of Maj. D. W. Lockwood transmitting correspondence with the United States Government relative to the conveyance of land for lock and dam at Minnehaha Park, the board authorized deed to the Government of land asked for, and resolved that with the deed be transmitted the annexed resolution.

"*Resolved* (by the Board of Park Commissioners of the city of Minneapolis), That the board hereby represents to the United States Government that if any water power shall ever be developed in connection with one or both of the two dams to be constructed by the Government in the Mississippi River, between Minnehaha Creek and St. Anthony Falls, the city of Minneapolis ought to be entitled, and in good morals is entitled, to one-half of such power for public use, by virtue of the donation of public lands by the city for such dams and flowage rights in connection therewith, and this board does respectfully petition and memorialize the Government not to grant or lease said one-half of such power to anyone except the city of Minneapolis."

4. That the river improvement in question, including the dam incident thereto, as now constructed, has been prosecuted by authority of Congress (since the abandonment of the plan under the Report of Engineers, H. Doc. 341), wholy in accordance with the report of the Chief of Engineers dated March 3, 1910, House document 741, which was adopted by the Sixty-first Congress, second session, chapter 382, Vol. 36, United States Statutes at Large, No. 1, page 659.

5. That throughout such engineer's report (document 741), so adopted by Congress, there clearly appears a governmental purpose that there should be granted in some form to the Twin Cities priority of use in the water power planned for and recommended in such report.

The report, in paragraphs 32 to 41, recommends the legislation afterwards enacted by Congress, with the provision in paragraph 38, as follows: "Provided that the cities of St. Paul and Minneapolis shall pay to the United States an annual rental of $10,000, etc., etc."

6. That the special Board of Engineers for Rivers and Harbors on February 14, 1910, in the same document conclude the adoption of the foregoing report and in such second indorsement of this project modify paragraph 40 thereof to read as follows:

"That in compliance with the conditions recited the cities of St. Paul and Minneapolis be granted permission to erect a power house and install such plant as shall be necessary for the development of power and to maintain and operate such plant and to dispose of said power for a period of 50 years, etc."

7. That in paragraph 24 of such document it was recommended that the cities be allowed until July 1, 1911, to obtain legislative sanction for the undertaking of this power project.

8. That in pursuance of such municipal plan the Legislature of Minnesota on April 13, 1911, passed an act authorizing municipal hydroelectric plants. (Exhibit I hereto attached.)

9. That under such authorization there was organized in the interests of the public the Municipal Electric Co. on behalf of the cities of St. Paul and Minneapolis and the University of the State of Minnesota. (Exhibit II hereto attached.)

10. That conveyances of land as requested by the Government for lock and dam and for flowage rights have been made or tendered by the cities of St. Paul and Minneapolis and the University of the State of Minnesota with the reasonable expectation of priority of consideration in the matter of future water power; and

That the Government throughout the project, as modified, so seems definitely to confirm such expectation.

11. That in accordance with the request made to the cities in document 741, these cities stand tendering the Government a large acreage of most valuable land (in the case of Minneapolis park land valued at the least at $35,000) which will be overflowed by the operation of the dam.

Such overflow is also likely in the future to entail upon these municipalities a large outlay for trunk sewer changes for the disposal of sewerage, which expense in the case of Minneapolis alone is estimated by the city engineer and the chairman of the committee on sewers, will possibly reach the sum of $750,000.

In the case of the city of St. Paul the destruction of a large area of wooded park land is involved. The trees have already been removed therefrom, and the resultant damage to that city's park system is estimated at $50,000. In addition there is necessitated an outlay for sewer changes which will probably reach the sum of $500,000.

It is further urged on behalf of St. Paul that the construction of the dam does not materially benefit that city so far as navigation is concerned, and that the principal benefit to it will be resultant upon participation in the use of electric energy generated by such Government construction.

II.

1. That the Minnesota statute under the terms of which the Municipal Electric Co. has been organized was passed to conform to the suggestions deemed necessary or expedient in the Government report cited and, as shown, within the limitation of time imposed.

2. That such statutory enactment is in accordance with the special situation and wholly conserves the public interest; and

As for competitive bids under some other plan keeping down the energy cost to the public, it is insisted that the public interest is wholly conserved by the limitation in rates for electrical energy in such enactment, "to cost, maintenance, and a reasonable emergency fund, and no more."

3. That the purpose of the acquisition of this power is solely in the interest of the public of these two cities and their great university; and

That by the charter of the Municipal Electric Co. formed under such enactment, such corporation is limited in the scope of its objects to the furnishing of electric energy to "Federal and State institutions and to the cities of Minneapolis and St. Paul."

4. That for the purpose of conserving the public interest the "Municipal Electric Co." is an instrumentality of the State of Minnesota with responsible functions of a State utilities commission in this regard, and that for it in the Minnesota act the rate is fixed, as cited.

5. That the situation of these cities is wholly unique; that in all fairness and equity there seems clear ground under all the circumstances here for governmental preference in the bestowal of power privileges.

The Government's expressed purpose and the hope and expectation throughout these years of St. Paul and Minneapolis of its fulfillment, and the grants made and tendered by them in its furtherance, give them, it is deemed, special claim to early and affirmative action by the Government awarding to them these power rights.

Such award should be made irrespective of any comprehensive plan of power disposal devised, or to be devised, so long subsequent to the plan announced by the Government for these two cities in connection with this project.

FRED B. SNYDER,
President of the Board of Regents of the University of Minnesota.
WALLACE M. NYE,
Mayor of the City of Minneapolis, Minn.
WINN POWERS,
Mayor of the City of St. Paul, Minn.

EXHIBIT No. 1.

CHAPTER 141—S. F. NO. 496.

An act to authorize the formation of public corporations, under certain circumstances, in order to secure and provide electrical energy at approximate cost for cities and any State institution in any such city.

Be it enacted by the Legislature of the State of Minnesota:

Formation of public corporations for development of water power: SECTION 1. Any city situated upon a river where there may be secured a developed water power conveniently near for utilization in the creation and development of electrical energy to supply such city and any State institution therein with such energy at approximate cost, either alone or in conjunction with an adjacent city, may do so through a public corporation formed at its request as hereinafter provided.

One city may unite with another: Sec. 2. Any such city which may desire to avail itself of the provisions of this act shall proceed as follows:

If there is another city adjacent thereto, it shall be invited by resolution of the legislative branch of the city first mentioned to unite with the latter in securing the organization of such public corporation. If such adjacent city within 30 days thereafter shall by resolution accept such invitation, said city shall by further resolution of their respective legislative bodies declare their desire to so secure such water power and to have organized under this act a public corporation therefor, and shall by the same resolution request the respective mayors or other executive heads (by whatever name known) of said cities, and the president or other executive head of the governing or managing board of any State institution (or of the senior State institution, if more than one) in such cities to proceed to form such corporation under this act.

If there is no adjacent city, or if there is one and it fails or refuses to unite in the adoption of such resolutions within 30 days, the legislative body of the city which may desire to avail itself of the provisions of this act shall by resolution request its mayor or other executive head, its city engineer, or the head of its engineering department (if known by any other name), and the president or other executive head of the governing or managing board of any State institution (or of the senior institution, if more than one) within such city to proceed to form such a corporation under this act.

Officials to meet upon call of mayor: Sec. 3. The officials designated shall meet upon the call of the mayor (of the larger of the cities, if more than one) at his office, and shall proceed to organize themselves into a public corporation under some appropriate name for the objects and purposes stated in section 1, and shall unite in a certificate which shall state the name and objects of the corporation, the fact that it is organized under this act, and that the members of the corporation shall be themselves, during their respective terms of office, and their respective successors in such offices. Such certificate shall be recorded in the office of the secretary of state.

Corporation to elect officers and employ a manager: Sec. 4. Such corporation, when organized, shall provide for and elect such officers as it may designate, and may employ a manager and such other agents and servants as may be necessary for the corporate business, and may adopt such rules, regulations, and by-laws for the government of the corporation and of its employees as may seem best, but the members of such corporation shall receive no pay or compensation as such members, or as officers, but may have their actual expenses.

Authorized to acquire and develop water power: Sec. 5. Such public corporation, when organized, shall be authorized and empowered to acquire by lease or otherwise any developed water power within or near the corporate limits of the cities whose officers are ex officio members of such corporation; to acquire all necessary lands, rights and privileges, and to provide itself with a suitable hydroelectric plant fully equipped with auxiliary power plant necessary to utilize economically said water power, and with the necessary means of distribution of the electrical energy therefrom.

Disposition of electrical energy: Sec. 6. The electrical energy so developed shall be disposed of as follows: First, to the grantor from whom the water power is acquired, if the contract therefor so provides; second, to any State institution in such city or cities desiring the same; and, third, any surplus then remaining in equal shares to the cities whose officers are members of the corporation, if more than one; otherwise the whole to the single city.

Same rate to all patrons: Sec. 7. The same rate shall be charged by the corporation to all users of electrical energy so supplied, whether the user is the guarantor of the water power, a State institution, or a city, and that rate shall be sufficient to pay and cover the cost of operation, maintenance, interest charges, and the retirement of any indebtedness, and to provide for the renewal of the plant and for a reasonable emergency fund, and no more.

Issuance of bonds: Sec. 8. Such corporation shall likewise be authorized to raise money by the sale of its bonds or certificates of indebtedness to carry out the objects and purposes of the corporation, and the indebtedness evidenced thereby shall be a lien upon all the property, rights, and franchises of the corporation.

Approved April 13, 1911.

EXHIBIT No. 2.

CERTIFICATE OF INCORPORATION OF THE MUNICIPAL ELECTRIC CO.

The cities of Minneapolis and St. Paul, Minn., having by resolutions of their respective legislative bodies duly expressed and declared their desire and election in accordance with the provisions of chapter 141, Laws of 1911, to secure for said cities and the University of Minnesota, located in said city of Minneapolis, the benefits of any water power now developed or which may hereafter be developed within or near the corporate limits of said cities, and having by said resolutions expressed their desire and election to have a public corporation organized in accordance with the provisions of said chapter 141, Laws of 1911, for the purpose of acquiring any such water power and for the purpose of utilizing said water power in the creation and development of electrical energy to supply said cities and the said University of Minnesota with electrical energy at approximate cost:

Now, therefore, John Lind, the president of the board of regents of the University of the State of Minnesota; James C. Haynes, the mayor of the city of Minneapolis, Minn.; and Herbert P. Keller, the mayor of the city of St. Paul, Minn., in accordance with the request of the legislative bodies of said cities and pursuant to chapter 141 of the Laws of 1911, being "An act to authorize the formation of public corporations under certain circumstances in order to secure and provide electrical energy at approximate cost for cities and any State institution in any such city," approved April 13, 1911, and for the purpose of forming such corporation, do hereby certify as follows:

1. The name of the corporation shall be Municipal Electric Co., and its principal place of business shall be at the University of Minnesota.

2. The objects of this corporation and the general nature of its business shall be to acquire by lease or otherwise any developed water power within or near the corporate limits of Minneapolis or St. Paul, or either of them, and from said water power to develop electrical energy and to distribute the electrical energy so developed to any Federal institution and to any State institution within said cities, or either of them, and to the cities of Minneapolis and St. Paul, and to that end and for that purpose to acquire all necessary lands, rights, and privileges, and to provide itself with the necessary electric plant or plants and with the necessary means of distribution of electrical energy, and to do all things necessary to carry out the purpose and object above expressed, and to that end to perform all and singular the powers and duties granted and described in and by chapter 141 of Laws of 1911.

3. The members of this corporation shall be John Lind, the president of the board of regents of the University of Minnesota; James C. Haynes, the mayor of the city of Minneapolis, Minn.; and Herbert P. Keller, the mayor of the city of St. Paul, Minn., during their respective terms of office as such president of the board of regents of the University of Minnesota, and such mayor of said cities, and their respective successors in such offices.

4. The corporation shall commerce at the time of the execution of this certificate and shall continue thereafter perpetually.

5. The management of the business of this company shall be vested in the aforesaid corporate members, so long as they shall respectively hold the offices above named and in the persons who shall succeed them in said offices from time to time, it being the intent hereof that the chief executive officer of each of said cities and the executive head of the board of regents or other governing body of said university, shall be the governing body of this corporation.

6. Said corporate members shall annually elect one of their number as president of the corporation and may appoint a secretary thereof from their own members or otherwise, and such other officers, agents, and employees as it may be deemed necessary for the proper conduct of the business of this corporation and fix the compensation of such agents and employees, provided only that no members of this corporation shall receive any compensation for services rendered as members or officers of this corporation, and may adopt such by-laws, rules, and regulations for the government of the corporation and its officers, agents, and servants, as to said members shall seem best. The first president of this corporation shall be Herbert P. Keller, and the first secretary shall be James C. Haynes, who shall hold office until their respective successors are chosen and qualified.

In witness whereof, the parties have hereunto subscribed their names at the city of Minneapolis, Minn., this 24th day of November, 1911.

JOHN LIND,
President of the Board of Regents of the University of Minnesota.

JAMES C. HAYNES,
Mayor of the City of Minneapolis, Minn.

HERBERT, P. KELLER,
Mayor of the City of St. Paul, Minn.

In presence of—
FRANK J. WATEROUS,
WM. P. ROBERTS.

STATE OF MINNESOTA,
County of Hennepin, ss:

On this 24th day of November, 1911, before me, a notary public, within and for said Hennepin County, Minn., personally appeared John Lind, president of the board of regents of the University of Minnesota; James C. Haynes, mayor of the city of Minneapolis, Minn; and Herbert P. Keller, mayor of the city of St. Paul, Minn., to me personally known to be the persons described in and who executed the foregoing instrument and acknowledged that they executed the same as their free act and deed.

[SEAL.] WM. P. ROBERTS, *Notary Public, Hennepin County, Minn.*

My commission expires January 7, 1914.

Filed for record in this office on the 25th day of November, A. D. 1911, at 10.30 o'clock a. m.

JULIUS A. SCHMAHL,
Secretary of State.

Mr. SMITH of Minnesota. Mr. Chairman, I ask that I may proceed for 10 minutes longer.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to proceed for 10 minutes more. Is there objection?

Mr. SMITH of Minnesota. It is pretty hard to make a statement covering this subject in less time than that. This means at least $30,000 per year to the Government, and probably more.

The CHAIRMAN. Is there objection to the request? [After a pause.] The Chair hears none.

Mr. SMITH of Minnesota. Mr. Chairman, I wish again to call attention to the fact that at the time Gen. Bixby made that statement the charter of the Municipal Electric Co. was not on file in the War Department, and that is why he used the language he did. But he points out in his statement just what we have been contending for, to wit, that the cities of St. Paul and Minneapolis and the State university are entitled to "reasonable concessions" in the way of a lease of this power and "should be given a preference" because they have practically donated a valuable water-power site and valuable flowage rights to the Federal Government. At the point where the high dam is erected and for several miles upstream the water flows through a deep gorge, leaving on either side quite a strip of lowland. This lowland has been a part of the park system of the cities of St. Paul and Minneapolis. No one can tell what these lands are worth for park purposes. The two cities now have a population of nearly 700,000, and this park is right in the center of these two cities. It is safe to say that $1,000,000 would not pay the actual worth of these park lands. No one can say at this time how much the power site is worth, because it is gradually increasing in value. Every power site in this country is increasing in value. There is no such thing as decrease in value of a water-power site.

For the purpose of improving navigation Congress authorized, in 1894, the construction of two locks and dams, known as Nos. 1 and 2, having a combined height of 27 feet, in the Mississippi River, between St. Paul and Minneapolis, at an estimated cost of $1,166,437. The river between the cities of St. Paul and Minneapolis flows through a gorge with a strip of lowland on either side of the channel. This lowland, as well as a valuable power site, was owned by the two cities and the State of Minnesota. For a nominal consideration the Government purchased a small tract of land on the left bank of the river for purposes of navigation, and the State of Minnesota and the city of Minneapolis, without any consideration except as herein stated, deeded to the Government the power site and the lowlands on the right bank of the river for purposes of navigation only. This deed was accompanied with the resolution—

that if any power should ever be developed in connection with one or both of the dams to be constructed by the Government in the Mississippi River between Minnehaha Creek and St. Anthony Falls, the city of Minneapolis ought to be entitled, and in good morals is entitled, to one-half of such power for public use by virtue of the donation of public lands by the city of Minneapolis for such dams and flowage rights in connection therewith, and the board further memorializes the Government not to grant or lease said one-half of such power to anyone except the city of Minneapolis.

The city of St. Paul passed similar resolutions.

By these respective deeds the Government acquired title to all of the lowlands; but, as a matter of fact, the water at the authorized level—the height of the dam—would cover only a small part of the lands acquired and the rest, which was heavily covered with timber, would still be left intact, and the people of the two cities would still derive the benefits of the natural beauties of the river gorge for park purposes as they had previously been doing, thus, while they had deeded to the Government these valuable park lands for the purpose of improving navigation, the public would still be able to use these lands to practically the same extent that they had theretofore.

In the early nineties water power became very valuable because of the discovery of long-distance transmission, which enabled the wide distribution of hydroelectric power, and an agitation was started looking toward the development of power at either or both of these dams.

In March, 1909, Congress authorized the appointment of a committee to investigate the feasibility of modifying this project so as to develop power as well as improve navigation. This committee was composed of Maj. C. S. Riche, Maj. Francis Shunk, and Maj. Charles S. Bromwell, Corps of Engineers, United States Army.

The board thus created held a public hearing at St. Paul on January 12, 1910, for the purpose of securing a definite proposition from the Twin Cities and the State of Minnesota in reference to changing these dams from low to high.

The board made a complete report on this subject, which was published and is known as H. R. 741, Sixty-first Congress, second session. This report considers the proposition from three different points of view, only one of which for present purposes need be discussed, namely:

The erection of a single 30-foot dam (in lieu of the two dams) primarily for navigation purposes and incidentally for power purposes, such dam to be built in cooperation with the State and municipal governments.

Neither the United States nor any private corporation has the right to condemn lands for the purpose of developing power; however, the United States can condemn lands for the purpose of navigation; therefore, inasmuch as a single 30-foot dam, or high dam, would not be built as an aid to navigation, such lands as might be needed for the purpose of developing power could only be acquired by the consent of the municipalities and the State. That the board recognized this fact is evidenced by that portion of their report in which they state:

It is abundantly evident from the proceedings at this hearing that this land could not be acquired by a private company. Public opinion is so strongly against any such arrangement that the board is convinced that a recommendation in favor of cooperation with a private company would be equivalent to a recommendation that the high dam be not built.

If public opinion could be entirely disregarded—

Continued the report—

this proposition is entirely feasible, but such is the local feeling against private control that the board is of the opinion that such an agreement could not be brought about even if otherwise possible. The statements made to the board at its public hearing were most emphatic in this respect. The communities control the flowage rights and would prefer that the water run to waste rather than that any private concern should have any control of the power in any way, shape, or form. In view of this local sentiment, the board can not recommend that the United States should now endeavor to cooperate in this matter with any private concern, but that it should be carried out in cooperation with the State and municipal agencies, and that the cities of St. Paul and Minneapolis have expressed a willingness to bear the increased cost of the scheme. Under such arrangement it seems evident that the cities should be the lawful owners of the power developed.

The Board of Engineers for Rivers and Harbors concurred in this report as to municipal cooperation in the construction of the high dam. However, the Chief of Engineers, in submitting this report to Congress, recommended that the cost of construction of the high dam should be borne by the United States alone, "as experience had shown that any other policy might lead to friction and misunderstanding, often attended by serious complications." He further recommended—

that reasonable and proper concessions be made to the State and the Twin Cities in the matter of leasing the surplus power in exchange for flowage rights over their lands.

In the river and harbor act of 1910, Congress adopted the report of the special board, as modified by the Chief of Engineers, since which time the Government has abandoned Dam No. 2 and has been constructing Dam No. 1, as modified from 13 to 30 feet.

Through an act of the State legislature the State of Minnesota and the two cities have acquired a legal status under what is known as the Municipal Electric Co., and have been ready and willing at all times since Congress adopted the report of the Chief of Engineers to enter into a lease with the Government for the power at this dam. Up to the present time the Government has failed to recognize the desires, rights, and equities of the people of our State, assigning as its reason that there is not sufficient authority in existing law to make such a lease.

It is for the purpose of making definite and certain just what the Government is authorized to do that I offer this amendment.

The Government had acquired sufficient flowage rights from the State and the Twin Cities for the original project, but needed additional lands and flowage rights for the high dam. The city of Minneapolis has deeded the necessary additional lands to the Government on its side of the river, and the university stands ready and willing to do likewise.

The State of Minnesota and the two cities have donated to the Government this valuable power site and these valuable lands without any consideration, except a nominal amount paid to the State for a small tract of land near the east end of the dam, with the understanding that the State and the municipalities would be given reasonable and proper concessions in a lease of the power at this dam.

True, Congress has the sovereign right to dispose of this power in any way it sees fit, but notwithstanding it has the abstract legal right, it has no moral or equitable right. All the lands, with the one exception, given to the United States by the State of Minnesota and the municipalities were to be held in trust by the Government and returned later in the form of a privilege to lease any resultant power at a reasonable rate based on the cost of erecting that portion of the dam needed for power purposes, or, in other words, based on the difference between the cost of the completed modified project and the cost of the original plan. There is nothing legally to prevent the Government from disposing of this power as it sees fit; however, the paternal relation of the parties to this controversy and the equities involved sufficiently counteract any legal rights. In this case the Federal Government is dealing with a State and municipality, groups of its own citizens. The relation is a delicate one, and it is hardly conceivable that the Federal Government would treat a State unjustly or take advantage of the trust placed in it by that State, a situation not reconcilable with the avowed policy of the Federal Government.

The United States, moreover, can not in good faith and conscience proceed with the disposition of this power without taking due cognizance of the equities of the two cities and the university which are involved, namely, (1) the surrender of valuable park lands; (2) the large additional cost entailed for changing sewer systems; and (3) the concession of valuable water-power rights upon the express understanding that any benefits accruing from the construction of the dam shall redound to the cities and the State which made the gift to the United States.

First. With the added height of the new project, a large area of beautiful wooded park lands will be totally destroyed. The Mississippi River gorge, with its natural park lands and attractive islands, has always been one of the beauty spots of the Twin Cities and a recreation ground for thousands of people. With the erection of the high dam all the islands will be flooded and the park lands at the foot of the bluffs will be under water. The trees have already been cut from the islands and from along the shore, leaving only a desolate expanse shorn of all its former beauties. This will be somewhat relieved by the creation of a pool or lake; but such a lake can be utilized only by a few, whereas the former park lands were used constantly by thousands. It is difficult to estimate the damage done and the damage still to result, as it is largely an æsthetic value rather than a pecuniary one, nevertheless, a real and substantial value not to be underestimated.

Second. The pool in the near future will also entail upon the two cities a large outlay for the construction of a trunk sewer system opening below the dam to care for all the sewers now opening into the river above the dam. As all Minneapolis sewers open directly into the pool, the burden will fall hardest upon that city. To leave the sewers in their present condition would mean the creation of a stagnant polluted pool giving rise to offensive effluvia detrimental to and endangering the lives of the near-by residents. The cost of the change in the sewer system has been estimated by the city engineer to be $750,000 for the city of Minneapolis alone, and about $500,000 for St. Paul. No exact figures are available at present.

That the power rights of the cities have considerable value has never been denied nor has it been accurately estimated, but the value has frequently been placed at a figure that is absurdly low. By comparing the flowage and other figures that can be and have been accurately ascertained with similar figures from plants now in operation under similar conditions a fair estimate of the actual value of the power rights can be determined.

The United States Government at present owns and operates a power plant at Rock Island, in the Mississippi River, a plant not much larger than that under construction at the Twin Cities. Col. Burr, the commanding officer, has prepared figures on the cost of electrical current and has also placed a valuation on the plant based on figures and results obtained from actual usage. The Rock Island plant is capable of developing 22,000 horsepower per year when fully utilized. At present only about 1,400 horsepower is being used by the arsenal at a cost of 3.6 mills per kilowatt-hour. For valuation purposes the average practical capacity of the plant is used as a basis, namely, 18,000 horsepower. At a cost of $15 per horsepower per year the development of 18,000 horsepower is worth $270,000 gross to the Government. Allowing $50,000 for maintenance, interest, operation charges, and depreciation, the net profits to the Government would be $220,000, which, upon the 3 per cent basis, would give a capital value of $7,333,000 for the power project at Rock Island. Col. Burr in computing this value adds "that such an estimate is exceedingly reasonable," and that moreover, "it is a permanent indestructible property increasing annually in value and which will increase in value after all existing steam plants are consigned to the scrap heap." He further substantiates his point by referring to the project now pending to build a dam at the foot of the Le Claire Rapids, a short distance above the Rock Island Dam, a project which, in comparison to the water-power possibilities, would be a duplicate of the Rock Island Dam, and yet to develop this dam a private corporation proposes to spend $10,000,000.

The power possibilities of the modified project at the Twin Cities have been estimated by various engineers at different times. Col. Potter, United States Engineer Corps, has estimated the average amount of power that can be developed to be about 9,500 horsepower per year. With electrical current worth $20 per horsepower per year—a very conservative figure for Minneapolis, which is far removed from the coal fields—the gross

profits would be $200,000. Allowing $40,000 for maintenance, interest, and depreciation—a liberal allowance in comparison with Col. Burr's figures—the net profits would be $150,000, which represents a net return of 3 per cent on a value of $5,000,000. However, the high dam was built jointly for power and navigation purposes, whereas the Rock Island plant is solely for power, as navigation is cared for on the west branch of the river. Therefore, in computing the value of the dam at the Twin Cities a portion of the construction costs should be charged to navigation. This portion of the costs amount to a little over $1,000,000, while the cost for power purposes plus the cost of the necessary power plant and machinery will not exceed $1,000,000, leaving the value of the water-power rights over and above the cost of the dam, $4,000,000.

These are the valuable water-power rights that the State and municipalities owned and which they gave to the United States practically free upon the express understanding that they were to be given reasonable concessions in the way of a lease of this power.

If this power is not leased to the cities, it must naturally be leased to a private corporation. The Municipal Electric Co. requested a lease based upon the cost of constructing that portion of the dam needed solely for power purposes. If a lease were made to a private corporation upon the same basis, the Government would virtually be making a gift to private interests of the $4,000,000 of water-power rights and lands voluntarily given by the Twin Cities and the State to the Government with the understanding that the public and not private interests should receive any benefits accruing therefrom.

On the other hand, a lease of this power based on its actual value, about $5,000,000, would place the Government in the anomolous position of having received without cost water-power rights worth $4,000,000 from its citizens and turning them over to a private concern. The Government in such an instance would profit to the extent of the sum paid and the cities would suffer a loss of equal amount; besides, the corporation would follow the usual course of corporations and would issue stocks and bonds to at least the full value of these water-power rights and force the general public to pay the interest on this amount for all time to come. The Government would be placing an exorbitant and unjust burden upon its own citizens. It is beyond comprehension that the United States Government would be a party to such an unfair and unjust transaction. As it is impossible for a private concern to acquire control of the land and power rights without the consent of the cities, the Government would be acting as a tool or mediary for a private corporation to the direct impairment of the public's rights if it should now grant a lease to a private concern.

Therefore, in view of the recommendation made by the Board of Engineers in H. R. 741, and in the adoption of this recommendation by Congress, together with the passage of a law authorizing the Government to make the lease with the municipalities; in view of the paternal relation existing between the General Government and the State and municipalities; in view of the loss to the cities of the valuable park lands for park purposes; in view of the cost entailed to the cities by the erection of the dam for the construction of a trunk-sewer system; in view of the surrender and grant of valuable power rights to the Government—in view of all these facts, the only policy that the Government can honestly pursue is to lease the power to the Municipal Electric Co. according to the original understanding and agreement. The position of the city is not antagonistic to private ownership or industry. All the city is asking is the right to use its own property in its own way.

Mr. SPARKMAN. Is the gentleman speaking of some conditions that were imposed by the report under which this dam was constructed? Did those cities, or either of them, comply with those conditions?

Mr. SMITH of Minnesota. The city of Minneapolis has complied literally with those conditions. The State University is now ready—and has always been ready—to deed, and the city of St. Paul has some question about this, because there has been no effort on the part of the Government to do its part and enter into a lease with these cities and the university, as promised.

Mr. ADAMSON. If the gentleman will yield, I have at hand some modern information directly in point. The War Department says, speaking of the original act:

No stipulation has been made that either they or the city of St. Paul should acquire any part of the water power to be developed at Lock and Dam No. 1.

Mr. SMITH of Minnesota. I decline to yield further.

Mr. ADAMSON. One more sentence, please.

Mr. SMITH of Minnesota. Never mind. I will fix your sentence. Mr. Chairman, I decline to yield. The gentleman from Georgia has never had any particular love for this proposition, and I am not surprised that he now tells this House that there was no stipulation made. What would a stipulation of that kind amount to? We are now asking that the Government make reasonable concessions to the cities in the way of a lease for this surplus power, as recommended by the Chief of Engineers and the Board of Engineers, and as recommended by this Congress in its adoption of the report of the engineers.

The Board of Engineers and the Chief of Engineers say the two cities of St. Paul and Minneapolis are deeply interested in the construction of a high lock and dam, and, in addition, say those two cities would be naturally the most desirable lessees of the surplus power that may be created thereby; through assurances of reasonable and proper concessions to them their flowage rights may be obtained by the Government without cost. That is what the Chief of Engineers recommended to Congress in his report known as No. 741, and that is the recommendation that the Congress adopted.

Of course I know, and the gentleman from Georgia knows, that there is some opposition to this proposition. I hold in my hand a letter written by Fred P. Royce, vice president of Stone & Webster, a member of the Hydroelectric Trust, and who was at the time he wrote the letter vice president of the Minneapolis General Electric Co., one of the subsidiary companies of the trust then under the control and management of the Stone & Webster people. I will place this letter in the RECORD. And I want to say to my friend from Georgia that that letter outlines the provisions of the bill that he has brought into this House this year, as well as the bill that he brought in last year. The only thing we demand is that the Government shall live up to the assurances that it held out to us at the time this project was adopted. We are only asking for justice and equity to those cities.

Mr. STEENERSON. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Minnesota. Yes.

Mr. STEENERSON. Does the gentleman's proposition contemplate that the public corporation mentioned should pay a sufficient amount of rental to cover the interest on the extra amount invested in order to make this high dam over and above what it would cost for navigation?

Mr. SMITH of Minnesota. I am glad the gentleman interrupted me with that question. The amendment which I offer provides that the cities and the university shall pay the United States Government for the privilege of using the surplus water a fair and proportional cost of maintaining the dam, lands, and appurtenant works, and also pay, in addition, an annual sum not less than 3 per cent upon such amount as the United States shall have invested and expended in the completion of the project by which such water power is developed and maintained over and above the amount actually expended and which would have been expended in completion of the project for navigation only, and it also provides that every particle of this power shall be delivered to the Federal Government in case the Federal Government at any time should need it. [Applause.]

The letter of the vice president of the Minneapolis General Electric Co. to which I referred bears date, Boston, Mass., November 17, 1910, and was addressed to the Hon. Frederick C. Stevens, St. Paul, Minn., who was then a Member of Congress from the fourth congressional district of Minnesota, is in part as follows:

DEAR SIR: Following the writer's conference with you in Minneapolis in October we have thought that it might be of interest to you if we should prepare and submit to you a statement covering the history, condition, and purposes of the Minneapolis General Electric Co. and its policy toward the public at Minneapolis. * * * The principle that any company is entitled to earn a fair return on the money actually invested in the property necessary to carry on its business has become well established. It has also been demonstrated that a gas or electric company can not succeed in earning this fair return on its investment and at the same time furnish satisfactory service to the public unless it is allowed to have a field free from competition. * * * When it is understood that the demands on the company will be probably doubled oftener than once in 10 years, some idea of the probable future demands on the management of the company will be gained. Ample provision has been made to meet this future demand. Careful investigations having shown that there were certain good water-power developments possible within a comparatively short distance from Minneapolis, it was realized that the consumers should have the benefit of them. On that account the company has acquired most of the flowage rights necessary to develop at least five of these powers with an aggregate capacity of not less than 75,000 kilowatts. * * *

The management of the Minneapolis company believe that they should be protected from competition. * * * We believe that in every case where a Federal license is requested and the power is to be used for public-service purposes a thorough examination should be made of the property by competent Government engineers, and no permit should

be granted unless it can be shown that there is a market for the power that can not be provided for as well and as cheaply by existing companies. * * * We should perhaps consider the best method to be adopted of utilizing the power that will be developed at the new Government dam at Minneapolis. * * * The logical and most satisfactory way of distributing this surplus power in Minneapolis would be through the Minneapolis company.

FREDERICK P. ROYCE,
Vice President Minneapolis General Electric Co.

The Frederick C. Stevens to whom the above letter was addressed is the same Frederick C. Stevens who, in company with Mr. ADAMSON, of Georgia, visited the War Department this morning.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. ADAMSON. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to proceed for 10 minutes. Is there objection?

There was no objection.

Mr. ADAMSON. I rise at the request of the chairman of the committee, Mr. Chairman; otherwise I would not have done so. I am sorry my good friend from Minnesota [Mr. SMITH] in a measure lost his temper. I had no idea on earth of offending him. I am not hostile to that project. I am very much in favor of that project, and I am very much in favor of the Government realizing something from it, especially as the Government has expended so much money creating it.

The letter I offered to contribute during the gentleman's speech is a modern letter, from the Secretary of War. It is not ancient history. In that letter he states what I knew, that no stipulation had been made with either of those cities that would require giving to them any water power to be developed at Lock and Dam No. 1. Further on in the letter—and I shall ask unanimous consent to print it in the RECORD——

Mr. ANDERSON. Mr. Chairman, will the gentleman yield right there?

Mr. ADAMSON. Yes.

Mr. ANDERSON. Of course, if the writer of that letter means that no lease has been entered into with this corporation or with either of those two cities for the use of this water power, all right. But if he intends to represent that no representations were made to the cities, at the time the Government got the right to build this dam, that they would be given a preferential right in the leasing of this water power, then he states that which has no foundation.

Mr. ADAMSON. Mr. Chairman, that is a quarrel between the gentleman from Minnesota [Mr. ANDERSON] and the Secretary of War. I am reading a letter from the Secretary of War:

Both cities have declined to convey the flowage rights now needed without consideration, and agreements have been reached whereby the city of Minneapolis will be paid $15,000 and the city of St. Paul will be given part of the Government land at Lock and Dam No. 2, which is valued at $6,000.

Now, Mr. Chairman, I am very fond of both St. Paul and Minneapolis. They have treated me well on my visits there. I do not know of any two communities on earth less in need of charity than those two prosperous cities. There was no sign of a breadline or of any soup houses at all. I viewed the premises where the dam is. It is a magnificent structure that has cost a great deal of money. The distinguished gentleman from Minnesota [Mr. SMITH] is one of those who has declaimed in this House against giving away the rights of the Government and of the people. He is one of those who have impugned the motives of statesmen here who have tried to procure general dam legislation for the benefit of all the people and the Government, on the ground that we were giving away something; and now his proposition is to come in and give either of the two cities and a corporation, after decrying about giving to other corporations, the benefit of what the Government has erected.

I have a further statement from the War Department showing all the structures similar to this in the United States. I wish to put that in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Following are the letter and statement referred to:

WAR DEPARTMENT,
Washington, March 11, 1916.

Hon. WILLIAM C. ADAMSON,
Chairman Committee on Interstate and Foreign Commerce,
House of Representatives.

SIR: In further reply to your letter of January 30, 1916, requesting information for the use of the Committee on Interstate and Foreign Commerce in considering some of the details of water-power legislation, I have the honor to advise you as follows:

1. The total amount appropriated by Congress for the improvement of the Mississippi River between St. Paul and Minneapolis to date is $2,391,600. The total amount expended to January 31, 1916, was $1,544,583.44 for Lock and Dam No. 1 and $739,644.14 for other work. The estimated cost of completion of Lock and Dam No. 1 is $170,000.

2. The actual construction of Lock and Dam No. 2 began in the spring of 1898. This is a low dam built for navigation purposes only, has no effect on the water-power project, and will be drowned out by the high dam authorized in 1910 and now under construction. The appropriations and expenditures given in the preceding paragraph include work on this lock and dam.

3. The estimated time of completion of the contract: Some time during the navigation season of 1917.

4. As to the amounts paid for real estate, flowage rights, etc.—The total cost of land and flowage rights, including the cost of the sites of the two locks and dams, has been $24,970 to date. The State of Minnesota and the city of Minneapolis have deeded land and flowage right without consideration, but no stipulation has been made that either they or the city of St. Paul should acquire any part of the water power to be developed at Lock and Dam No. 1. It should be stated, however, that the flowage right conveyed by the city of Minneapolis was under the original project and subject to a limitation as to the height of the dam. Under the present project the dam will be above that limit and the conveyance will be void on that account. Both cities have declined to convey the flowage rights now needed without consideration, and agreements have been reached whereby the city of Minneapolis will be paid $15,000 and the city of St. Paul will be given part of the Government land at Lock and Dam No. 2, which is valued at about $6,000.

Very respectfully,

NEWTON D. BAKER,
Secretary of War.

—

WAR DEPARTMENT,
Washington, February 12, 1916.

Hon. WILLIAM C. ADAMSON,
Chairman Committee on Interstate and Foreign Commerce,
House of Representatives.

SIR: In response to your request in paragraph 1 of your letter of January 28 last, I beg to inclose herewith a memorandum giving certain data with respect to the matter of the lease of power privileges at dams constructed in whole or in part with funds appropriated by Congress.

In response to paragraph 2 of the letter, I have the honor to inclose a table showing the maximum, minimum, and mean monthly discharge at Dam No. 1, Mississippi River, and the resultant theoretical and efficient horsepower that could have been developed during January and February of 1910–1915, inclusive. The computations of the horsepower which could have been developed are based on the assumption that flashboards 3 feet high would be in use during that time of the year.

Very respectfully,

H. L. SCOTT,
Acting Secretary of War.
Major General, Chief of Staff.

Table of horsepower at mean, maximum, and minimum discharge at Lock and Dam No. 1, Mississippi River.

MEMORANDUM.

1. Dams on Fox River, Wis.: The Fox River improvement, with a series of locks and dams, was purchased from the Green Bay and Mississippi Canal Co. for the sum of $145,000 appropriated by act of Congress approved June 10, 1872. Under the terms of the transaction the Government simply purchased the line of water communication, the water powers created by the dams being reserved to the company.

2. Dams on Muskingum River, Ohio: By a provision in the river and harbor act of August 5, 1886, Congress accepted from the State of Ohio the Muskingum River improvement, with all the locks, dams, canals, franchises, and property rights of every kind, including all water leases and rights to use water then running and in force between the State and private persons or corporations. In the river and harbor act of August 11, 1888, a provision was incorporated authorizing the Secretary of War to grant leases or licenses for the use of lands and water powers belonging to the United States for such periods of time and at such rates as he might deem just and expedient.

3. Dams on Green and Barren Rivers, Ky.: The Green and Barren Rivers improvement was purchased by the United States in pursuance of authority granted in the river and harbor act of August 11, 1888. The improvement consisted of a number of locks and dams built by a navigation company at which the surplus water was leased, and in the river and harbor act of September 19, 1890, Congress authorized the Secretary of War to continue the practice and to grant leases for periods not exceeding 20 years.

4. Cumberland River, Tenn.: By an act approved June 28, 1902, amendatory of the river and harbor act of June 13, 1902, Congress authorized the Secretary of War to lease the surplus water not required for navigation at Dam No. 1 on this river. No leases have so far been granted.

5. White River, Ark.: By an act approved June 28, 1906, Congress granted to the Batesville Power Co. the right to make construction for the development and use of water power at Lock and Dam No. 1, and for that purpose to withdraw water from the pool formed by said dam, the Secretary of War being authorized to fix from time to time the charges to be paid by said company for the use of said power.

6. St. Marys River, Mich.: In the river and harbor act of March 3, 1909, Congress provided that any excess of water in the St. Marys River at Sault Ste. Marie over and above the amount required for navigation shall be leased for power purposes by the Secretary of War upon such terms and conditions as in his judgment shall be best calculated to insure the development thereof. Under this authorization two leases have been granted—one to the Edison Sault Electric Co. and one to the Michigan Northern Power Co. These two leases cover practically all the surplus water belonging to the United States not needed for navigation at the rapids of St. Marys River, and each runs for a period of 30 years.

7. Mississippi River from St. Paul to Minneapolis: The river and harbor act of June 25, 1910, adopted a project for improvement which contemplated the construction of a high dam, and the leasing of water power created thereby, at rates that will insure a reasonable compensation to the United States. No leases have been made.

8. Dam 17, Black Warrior River, Ala.: By act approved August 22, 1911, Congress authorized the Secretary of War to change the plans for the construction of Dam No. 17 so as to increase its height to 63 feet, the object being: To render unnecessary the building of Locks 18 and 19, to provide for the extension of navigation up the Mulberry and Locust Forks of the river, and for the development of water power. The lease of water power thus created has not been authorized by Congress.

9. Coosa River, Ala., Dam No. 4: By an act approved June 4, 1906, Congress authorized the Secretary of War to make a contract with any individual or corporation to complete the dam and forebay at Dam No. 4, and in consideration thereof the contracting party was to have the use of the surplus water for manufacturing purposes. No contract was made under this authorization, and in the river and harbor act of March 4, 1911, the Secretary of War was authorized to make a contract with the Ragland Water Power Co. to complete this dam, in consideration of which the company was to have the use of the surplus water for 50 years. A contract was entered into with the said company, but the work was not done, and the time limit for completion fixed by the act has expired.

10. Coosa River, Dam No. 12: By an act approved March 4, 1907, the Alabama Power Co. was authorized to build a dam at the site selected for Lock and Dam No. 12, and to use the water for power purposes, on condition that the Government should have the right to build a lock and control the dam for purposes of navigation. The dam was completed by the company within the time prescribed by the act.

11. Hudson River, near Troy, N. Y.: No provision for developing power has as yet been made nor is there any authority for disposing of it.

Mr. SMITH of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. ADAMSON. Yes.

Mr. SMITH of Minnesota. When does your letter bear date?

Mr. ADAMSON. It is recent.

Mr. BORLAND. March 11, 1916.

Mr. ADAMSON. Yes; March 11, 1916.

Mr. SMITH of Minnesota. That is after you knew this amendment was coming up?

Mr. ADAMSON. I knew some time ago about the gentleman's project. He gives me the credit of being opposed to it. I am opposed to this amendment, but I am not opposed to the project. I want to make this statement: I do not want to quarrel with the gentleman. I like him, and I wish him good in all things; but I want him to quit giving away what belongs to the Government and to the people. He has decried against that practice many times. There are many projects like this in the United States, not all of the same magnitude, but the paper which I will insert and print will show all of them. We have endeavored to agree upon a general plan by which the Secretary of War could lease the surplus water at any or all the Government structures. The gentleman from Arkansas [Mr. OLDFIELD] introduced a bill for that purpose. We have not reported that separate bill, because the Secretary of War said he preferred to have it incorporated in the general dam legislation which you, Mr. Chairman, know, and the Secretary of the Interior

knows, and the Secretary of War knows, we are all trying to agree upon, so as to secure, not legislation dictated, as the gentleman wants, by any corporation or for the benefit, as he is trying to bring about, of any corporation, but a bill that will protect all the rights of the people and at the same time secure construction and advancement in the country.

The proposition approved by the Secretary of War is incorporated in the bill which has been reported here. If that bill can not be passed, the separate bill of the gentleman from Arkansas [Mr. CLDFIELD] can be passed, which will enable the Secretary of War, under the general authority, to entertain propositions to dispose of the surplus water power at all these structures. But, Mr. Chairman, after all the lectures and insinuations that I have heard in this House for the last 20 years about giving things away, I am opposed to the Government spending two or three million dollars on a structure and then giving the power to any city or any corporation which pretends to operate as the trustee or intermediary between the Government and that city. If that is to be done, almost every city in the United States that is on a navigable river can call upon the Government as an eleemosynary institution to construct a dam and give it water power. Four or five cities in my own district could be accommodated by building dams, all at the aggregate cost that has been expended on this one project. If it is fair for them, it is fair for us; but the proper and fair thing to do is to allow a general provision, under which all can be treated alike. They ought all to be given a chance, so that the Government can on the most advantageous terms dispose of the surplus water power. In the meantime the act under which this project was authorized gives to the Secretary of War power to contract, if he can find an advantageous proposition. I do not care now to reply to the suggestions of gentleman about the general dam act, unjust and irrelevant as they are. At the proper time, when that bill is considered, I will take care of such unjust insinuations. Sufficient for this time to say that the corporation favored by the gentleman from Minnesota [Mr. SMITH] may be as bad as any other corporation. It certainly proposes a scheme to enjoy a monopoly. I worked on the general dam law before I ever heard of Stone and Webster, and neither that nor any other corporation can mistate the general dam legislation to me.

Mr. NORTON. Will the gentleman yield?

Mr. ADAMSON. Certainly.

Mr. NORTON. Is the gentleman in favor of giving this great power, or the excess of this great power that the Government would not use, to the cities of Minneapolis and St. Paul, or does he rather prefer to give it to the General Electric Co. or some other private corporation?

Mr. ADAMSON. The Secretary of War ought to make the best contract he can to protect the interests of the Government, and at the same time to use it for navigable purposes as the prime object.

Mr. NORTON. Just another question. What objection has the gentleman to this Congress saying that the people of Minneapolis and St. Paul shall have this excess power to use, provided they pay to the Government a reasonable compensation or interest for the amount the Government has invested in the plant?

Mr. ADAMSON. I have no objection to their taking it if they bid more than anybody else and give better terms to the Government than anybody else; but I want the Government to make the best terms possible.

Mr. NORTON. That is all this amendment proposes, is it not?

Mr. ADAMSON. I do not understand this amendment to open it to the public at all.

Mr. NORTON. No; it gives it to the city.

Mr. ADAMSON. I prefer a general plan that will cover all these projects everywhere in the country. They ought all to be treated exactly alike, and the Secretary of War ought to be authorized, as he will be, to get the best terms possible in each case.

Mr. NORTON. Another question. The gentleman knows that this power is worth millions of dollars to the municipality or to the private concern that gets it. Now, does the gentleman think there ought to be any question but that that power, if it can be used by the citizens of Minneapolis and St. Paul, ought to go to them, and that Congress should say so?

Mr. ADAMSON. In the provision that we have incorporated it is provided that these cities shall have a fair opportunity, and the preferential opportunity to secure it solely for municipal purposes.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. MILLER of Minnesota. Mr. Chairman, I always value the opinion of my good friend from Georgia [Mr. ADAMSON] on any matter relating to transportation, and I really value his opinion very highly on a matter of this kind; but I do not believe he quite appreciates the exact situation in the vicinity of this dam.

Mr. Chairman, I feel as though I were pretty well identified with this project. I have sort of grown up with it. When I was a senior at the University of Minnesota in 1894 this dam was begun. It is only now being completed. After the lapse of the 22 years that have passed I am glad to congratulate that locality that the dam is about to be completed. In its inception perhaps there was some question as to its value. In the 22 years that have passed those two cities have grown, and have become one of the greatest and most important industrial centers in America. The project originally did not comprehend water power. Now it does so, and properly. That water power is a Government instrumentality. It belongs to the people of the United States. For what purpose? For the Government to make money out of it? No; for the Government of the United States to administer for the welfare and best interests of the people concerned. [Applause.] Who are the people concerned? Not the people in the beautiful peach orchards of Georgia nor among the hills of Maine. They are upon the banks of the Mississippi River, where lie the great institutions that are affected. Now, what are some of those institutions? Fort Snelling is one of the great and important military posts of the United States. It is a large consumer of electric power. It is a post that will be enlarged, and that will need larger quantities of electric power as the years go by.

What is the next institution that we ought to consider? The University of Minnesota, which has made its contribution in order that this project might be completed. The shores of the campus are being inundated to a considerable extent in order that this dam may be built. That is no small, insignificant institution of learning. When I first went there the total membership was 1,500. To-day it is upward of 7,000. The campus then consisted of but a few acres. To-day it is large, and for a long distance skirts the Mississippi River. That great institution, with its colleges devoted to mechanical arts, with its mining and engineering colleges, even running an electric railway to connect the main campus with the school of agriculture, requires large quantities of electric power.

It has made its contribution; it is a public institution, performing a tremendously important public work; why not let it get some of the benefits resulting from the development of the water power on its own land? What public purpose higher than this can there be to serve? The education of the youth of a land to lead in the industrial development of a region and in the humanitarian work among a great people is of the very highest public concern. To improve the facilities afforded by such an institution should be the object of all having the public interests in charge. The Federal Government, too, is directly interested in many features of the university. For instance, at this institution of learning is one of the finest cadet battalions in the country, 1,400 in number, and that is an institution existing for Federal purposes only.

I would have failed, indeed, had I omitted to mention the biggest consideration of all, the hundreds of thousands of people in St. Paul and Minneapolis who in their corporate municipal capacity are deeply interested in this project.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. MILLER of Minnesota. I ask for two minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MILLER of Minnesota. I know what it is in some degree to find a water power corralled within the hands of a few, and so does every man here. There are some water powers, even along the Mississippi River, yet available, but not many. This is one of the best of all, and, thank God, it is the property of the United States, to be administered for the welfare of the people. Now, let us administer it for the welfare of the people of that great center. [Applause.] Let us provide, as the amendment does, that the people who have builded their homes here, the people who have lived there, the people who have formed the two cities, the people who have deeded the land necessary for the construction of the enterprise, the people on whose land this water power is being developed, shall be allowed to conserve this power for the public good and have the first chance to use this water power, not only using it for strictly municipal purposes but regulate its use by its citizens without paying tribute to corporations that will doubtless seek to control it. If you do that, you have administered a public utility for the welfare of the public; and if you fail, in my judgment you have set yourselves against the general interests of public welfare. [Applause.]

Mr. SMALL. Mr. Chairman, the provision for the construction of this dam was adopted in the river and harbor act of 1910, based on a report of the engineers known as House Document 741, Sixty-first Congress, second session.

In that report of the Chief Engineer's the summarization of the matter is in this language:

That from the standpoint of navigation and other Federal interests, it would be advisable to modify the existing project in such manner as, while better serving those interests, will permit the creation and utilization of a valuable water power which can be applied to minimizing the cost of construction; (b) that instead of inviting the cooperation of and entering into contractual relations with any private or municipal corporations for the execution of the work (a policy which experience has shown to be conducive to friction and misunderstanding, and often attended by serious complications), the cost of construction should be borne by the United States alone so that the control of the water power will be absolute, and it may be used, leased, or otherwise utilized as may be most advantageous to interests of the Government.

Mr. MADDEN. How much water power is it to develop?

Mr. SMALL. Fifteen thousand horsepower.

Mr. MADDEN. What do they do with it?

Mr. SMALL. They do not utilize it at present, for it is not completed. The last report of the engineers shows that on the 30th of June last the project was 87 per cent completed. Doubtless work has been continued since that time and it is now more nearly complete.

Mr. SMITH of Minnesota. Will the gentleman yield?

Mr. SMALL. I will.

Mr. SMITH of Minnesota. The gentleman is reading from page 4. Will he read all of page 4? I want to say to my colleague that it is immaterial how much more the dam has cost than the $200,000 estimated by the board, because my amendment provides that there shall be paid at least 3 per cent on every dollar put into the dam over and above the original estimate.

If the gentleman will read a little further on the page, leaving out the estimate, he will find what concession the Chief of Engineers desired to make to the cities, but take the whole report and he will find that the board that visited the two cities made the report to the Chief of Engineers recommending that the two cities should have the power without qualification, except to furnish the needed money, and that was why the Chief of Engineers changed the language, because he thought it was better that the United States should furnish all the money and that there should be no partnership about it.

Mr. SMALL. Now, Mr. Chairman, I think everyone will concede that the two cities of St. Paul and Minneapolis should be permitted to utilize this power at the proper time and on the proper terms, providing they are willing to give the Government as much as any other person or corporation which may desire to use the same power.

But the crux of the matter lies in the contention of the gentleman from Georgia [Mr. ADAMSON]. The proposition here is to lease the power to the hydroelectric corporation if it pays the expense of the maintenance of the dam itself, not of the navigable river, and 3 per cent on the cost of the construction of the dam.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. SMALL. I ask for two minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SMALL. Now, regardless of whether that is a fair or not fair price, there are two vital objections to it. One is that we have been holding up utilization of water powers all over the country until we could get a general dam act. That act we expect to have passed at this session. The Senate has already passed an act.

Mr. SMITH of Minnesota. Will the gentleman allow me to ask him one question?

Mr. SMALL. Yes.

Mr. SMITH of Minnesota. This dam was started long before your general dam act. My distinguished colleague from Georgia has just told you that the idea running through the general dam act now before Congress is to put the power up to public auction and sell it to the highest bidder. If you do that the municipalities can not get it. This is the only way we can get it. We have appropriated the land, notwithstanding what my colleague says. The War Department has a deed from Minneapolis of every foot of the land that is necessary for the project, with a condition attached to it that if the Government does not do it it will give $15,000 for a little small stretch of it.

Mr. SMALL. In other words, the gentleman wishes for this corporation to be the recipient of unadulterated favoritism.

Mr. SMITH of Minnesota. Oh, no.

Mr. ADAMSON. Mr. Chairman, I ask unanimous consent for two minutes so that I can make a correction.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

Mr. STEENERSON. Mr. Chairman, reserving the right to object, I would like to have five minutes.

Mr. COOPER of Wisconsin. Mr. Chairman, I would like to have two minutes.

The CHAIRMAN (Mr. FERRIS). This is not closing debate. Is there objection?

There was no objection.

Mr. ADAMSON. Mr. Chairman, in the first place, this subject was not mentioned at the War Department this morning, and in the second place, as I remember, and I have sent for a copy of the bill to see for certain, the provision in the general dam act as reported by me, I think, gives the cities the preference for municipal purposes solely, but not for the purpose of allowing a corporation under that pretext to take charge of the matter.

Mr. SMITH of Minnesota. Mr. Chairman——

Mr. ADAMSON. Oh, I do not mean to say that you are operating under that pretext at all.

Mr. SMALL. Mr. Chairman, I desire to say that this is my time.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. SMALL. Yes; but I will ask the gentleman to make it brief.

Mr. SWITZER. Does the gentleman believe this ought to be put in a way that some corporation, some monopoly could run the price up and obtain control of the power and force the city to pay a higher price?

Mr. SMALL. No; I do not.

Mr. COOPER of Wisconsin. Mr. Chairman, I would like to ask a question in that connection. Will the gentleman yield?

Mr. SMALL. Yes.

Mr. COOPER of Wisconsin. I would like to ask this question, and it seems to me that it goes to the whole of the great problem now before Congress and the American people, and that is the question of hydroelectric power—if these are to be put up to the highest bidder, will not the General Electric Co., with millions of capital behind it, get all of the valuable property? It can bid more than any other bidder.

Mr. SMALL. Mr. Chairman, under the general dam act, as it shall finally be passed, the interest of the United States will be properly conserved and the interest of the consumers will be properly conserved; but I have not the time to go into that matter now. The point that I make is that this power development by this dam in the upper Mississippi, between St. Paul and Minneapolis, should be put upon the same basis, with no better and no worse terms than other water powers which have been and which will be developed in the future by the Government of the United States.

Mr. STEENERSON rose.

Mr. SMALL. I can not yield further. I want to make this further suggestion. The United States has spent in the construction of reservoirs above at the headwaters of the Mississippi $1,559,000.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. SMALL. Mr. Chairman, I ask unanimous consent to proceed for one minute more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SMALL. Mr. Chairman, the city of Minneapolis, through its great manufacturing plants, its flour mills, is one of the beneficiaries of the conservation of these headwaters of the Mississippi in these reservoirs, and by reason of the equalization of the water they are getting the benefit of it during a longer season of the year. They are now coming in and asking, not that the city of Minneapolis or the city of St. Paul, not that this particular corporation, shall get this water power upon such terms as others are willing to pay, and terms, if you please, which will at the same time protect the users of it, but they ask you to adopt an amendment fixing the name of the lessee of this water power, fixing the terms regardless of the opportunity to consider and determine whether these are fair terms, and regardless of whether they shall coincide with the terms that shall ultimately be adopted by Congress in the general dam act. It is unfair and is a species of favoritism.

Mr. STEENERSON. Mr. Chairman, the gentleman from Georgia [Mr. ADAMSON] and the gentleman from North Carolina [Mr. SMALL] have outlined what we have a right to assume is their view of the future policy of the United States with regard to surplus power to be developed by Government dams, and I do not believe that this House will at this time, at the very beginning of the development of this policy, place it upon the basis that they have indicated; that is to say, where the

Government has surplus power to dispose of, that it shall put it up at public auction and sell to the highest bidder. The vice of that policy is plainly seen in the case before us. Here is a project developing 15,000 horsepower per annum, worth perhaps $150,000 or $200,000 each year, and when it is proposed to lease it to the corporation representing the municipalities, especially organized to serve the public without profit, upon the basis of a rental that will bring at least 3 per cent interest on the investment to the Government, you say no, that is not enough; we will put the lease up at auction and sell it to the highest bidder. The proposition in the amendment is to pay the Government a suitable income upon the investment over and above what the Government has spent for navigation.

If this be put up at public auction to the highest bidder, the Stone & Webster Co. or affiliated companies will bid up the price in order to obtain—what? To obtain a power which the gentleman from Georgia [Mr. ADAMSON] has with such great ability been fighting these many years, namely, monopoly. It will be possible under this plan for the present power concerns to bid in the Government power, to get it from the Government, and then control it and have a monopoly of power in that great center of population indefinitely. Then, when they have obtained that, they will exploit the people upon the basis of the improvement built by the Government without restraint. Is that what we are adopting this water-power policy for? Is that the purpose you seek to accomplish? Or is it that we may get income upon the money invested and serve the public at cost, like every municipal or public-service institution? [Applause.]

Mr. BORLAND. Will the gentleman yield?

Mr. STEENERSON. I yield to the gentleman.

Mr. BORLAND. Assuming that the private corporation would overbid the city and get the power from the Government, would it not then turn around and sell the power to the same set of consumers at an advanced price represented by the increased bid?

Mr. STEENERSON. Why, certainly. It would bleed the people of Minnesota, it would bleed the people of Minneapolis and St. Paul and the University of Minnesota to the last farthing, and you, the Congress of the United States, would put power in their hands to do that forever. [Applause.]

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. HUMPHREY of Washington. Mr. Chairman——

Mr. SPARKMAN. How much times does the gentleman want?

Mr. HUMPHREY of Washington. I want five minutes.

Mr. ANDERSON. I may want five minutes. If the gentleman from Florida [Mr. SPARKMAN] is going to conclude, I do not care to use any time; but if other gentlemen are going to attack the proposition, I shall want some time.

Mr. SPARKMAN. I will yield to the gentleman from Washington, then.

Mr. HUMPHREY of Washington. Mr. Chairman, I have been waiting with a great deal of interest to have some of my conservation friends on this side of the House arise and insist that the same rule be applied in this case that they have always insisted should be applied to the water-power projects in the West. What has become of the gentlemen on this side of the aisle that have been so insistent that the Government, in selling this water power, ought to make the charge upon the amount of power developed? I have not heard anybody make that statement here to day.

Mr. SMITH of Minnesota. Will the gentleman yield for a moment? Will you make any distinction between a city that owns a water power, that owns valuable private land, that has to spend in the neighborhood of $1,000,000, and the water site out on the Government domain and the Government owning all the land and all the site?

Mr. HUMPHREY of Washington. Mr. Chairman, ever since I have been a Member of this House, since the question arose in regard to the development of water power, I have heard it insistently urged on the floor of this House that the Government should charge for the power developed and not for the value of the property. And here in this particular instance you propose to let them have this power and charge them 3 per cent over and above what it would have cost the Government to construct it for navigation purposes. Now, I do not consider that that is a fair compensation for the Government if you are going to compensate it at all—3 per cent on the money, beginning at the time when the contract is entered into. I hope that before this discussion ends some of my conservation friends that have stood upon the floor of this House so often and have blocked every attempt that has been made to develop water power in the West will explain themselves as to why it is different when in the Middle West, when it is in Minnesota. What has become of our distinguished patriot on this side of the House that has so often stood up here and said that the Government must not be robbed? If you are going to develop water power, let us have it upon the power developed and not upon the value of the land or the money put into the proposition, or abandon this rule for the West. Why do they want one rule for the Middle West and another for the Pacific coast? I hope that the patriotic conservationists have not taken to the cloakroom because this matter is up for consideration. Why do not the conservationists seek to protect the Government now as they always pretend to do when there is a project on the Pacific coast to be considered?

Mr. ADAMSON. Will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. ADAMSON. I want to read a sentence that the gentleman on the other side would not permit me the time to read a short time ago. It is as follows:

Provided, That the said Secretary of War in making such leases, other conditions being equal, shall give preference to the bid solely for municipal use of any municipal corporation or other public corporation not operated for profit.

Mr. HUMPHREY of Washington. Of course that is fair; there can be no question about it. But here we are certainly asked to give an advantage to this one particular corporation. Why should they not comply with the general law? Of course I am not in sympathy with a great deal we hear in regard to these water powers, but, as I said a moment ago, I can not help but notice it when they talk one thing for the Pacific coast and another for the Middle West.

Mr. LINDBERGH. Mr. Chairman, I believe in conservation, but I do not advocate what the gentleman from Washington [Mr. HUMPHREY] suggests of Minnesota Members. The position I take upon that question is, that whenever the Government turns over to a private monopoly any of these water powers they place within the power of that monopoly the right, or rather the privilege, to charge back to the people whatever the private monopoly sees fit unless there is some Government regulation of prices.

The trouble with the proposition is that if a private corporation, in business solely for the profits it can make out of the business, gets possession of this water power, then it will charge back to the people in general, not only what it pays to the Government, but such additional sum as it sees fit to make for its own profits. Now, if we lease this water to a municipality or the university, every advantage is with the public. That is a very difficult thing than giving a monopoly to some private concern.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. LINDBERGH. Sure I do.

Mr. HUMPHREY of Washington. Inasmuch as the gentleman recognizes the right of the Government to go and pay it 3 per cent on the investment, why do you not place that compensation on the water developed, the same as you are insisting on being done with the water powers of the West?

Mr. LINDBERGH. The gentleman is mistaken in saying that I claim any such thing. My position is this, that whatever the Government charges will be charged back to the consumer whether in one part of the United States or in another part of the United States. I am opposed to the Government granting any privilege to a private monopoly at any price, for what sense is there in the public granting such a right for a consideration which the courts hold that the monopoly can turn right about and charge back to the public plus such profit as it sees fit, or at least a profit over and above what it pays to the Government for, say, in this case, a lease. The Government making a bargain for the purpose of getting more money into the Treasury simply means that whatever bargain they make must be returned in some form to be collected back from the people in general. And we have to draw a distinction between a municipality or university that is going to use this power and a private corporation securing the control of the power to levy a profit on the people.

We have to draw a distinction between this case of the municipality of Minneapolis, or the university, or public utility it is for, or that is going to use this power, and a private corporation seeking to control that power simply to make money out of it. That is all the explanation I wish to make in connection with the matter.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. SPARKMAN. Mr. Chairman, I hope this amendment will not be adopted; not that I have any objection to the two cities—St. Paul and Minneapolis—obtaining cheap hydroelectric power, but I object to giving them a preference in the use of such power over others, private of public, in this country.

It is a fact, Mr. Chairman, that for some time we have been unable to pass legislation here by the Government with authority to any private or quasi public institution to use such power. Every time a proposition of that kind has come up before this House it has been voted down. I recall very distinctly a bill brought in here by the Rivers and Harbors Committee about four years ago to build a very high dam, No. 17, on the Black Warrior River, within 12 miles of the city of Birmingham, Ala. This dam would furnish a sufficient head to develop a large amount of power, and the proposition was coupled with authority to a certain corporation to use the power under lease from the Government. But it was voted down, not unanimously, to be sure, but overwhelmingly, and from then until now no committee of the House, certainly not the Committee on Rivers and Harbors, has thought it advisable to bring in a similar measure, although there are many places where power can be developed, our purpose being to await the effort being made by another committee, the Committee on Interstate and Foreign Commerce, of which the gentleman from Georgia [Mr. ADAMSON] is chairman, to present to this House a bill that will take care of these propositions wherever they may arise throughout the country.

I think it is unwise, Mr. Chairman, to single out these particular cities and practically give them this power which is owned by all the people of the country, whether in or outside of our cities.

Now, suppose some one were to come and say, "This high dam on the Black Warrior River is constructed in such a way as to be in a position to develop a great deal of power. Let us turn that over to the city of Birmingham on certain conditions very favorable to that city, or some corporation that will obligate itself to turn over part of it to the city of Birmingham." There would be just the same objection to that as there is to the proposition here.

Now, as I said a moment ago, I have no objection to these two cities obtaining cheap power, but I can not go quite as far as my friend from Minnesota [Mr. MILLER] did a while ago, when he asserted with emphasis that this power was the people's power. Now what was his deduction from that premise? Not that the whole people should have the benefit of it, but those two cities. It belongs to all the people, but according to his view those two cities should have the use of it. That is not the proper deduction to make from the premise.

If the Adamson bill passes—and it has got to pass some time or other—it will be for this House to say just what it will contain. The gentleman from Georgia [Mr. ADAMSON] has read a proviso, already in the proposed bill, which, if the measure becomes a law, will take care of this whole situation. It gives preference not only to the cities of Minneapolis and St. Paul but to every other city in the country to utilize the power that the Government may develop.

Mr. SMITH of Minnesota. Mr. Chairman, will the gentleman yield there for just a moment?

Mr. SPARKMAN. Certainly.

Mr. SMITH of Minnesota. I am sure that the gentleman does not understand the effect of the bill prepared by the gentleman from Georgia. The effect of his bill, as he claims, is that municipalities shall have a preference. How? After the power has been put up at auction and sold to the highest bidder. If you can show me how any municipality in this country will get any benefit out of a bill that authorizes the Secretary of War to put up at public auction and sell the power to the highest bidder, then I will withdraw my amendment.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. SPARKMAN. It says:

Provided, That the Secretary of War, in making such leases, other conditions being equal, shall give preference to the bid, solely for municipal use, of any municipal corporation or other corporations not operated for profit.

I am not sure but what that would cut out the gentleman's corporation, and that it would cut out the two cities solely for their use.

Mr. SMITH of Michigan. You have not read the provision in the bill prepared by the gentleman from Georgia. I will read it. It says:

Provided, That the Secretary of War, in making such leases, other things being equal, shall give preference to the bid, solely for municipal use, of any municipal corporation or other public corporation not operated for profit.

That is, it shall give preference to the highest bidder, other things being equal.

There are two things in that bill that destroy what he would like to have us believe that he desires to accomplish. If he gets his bill through, it will give preference to a municipality, but it requires that the Secretary of War shall put this power up at auction and sell it to the highest bidder.

Mr. SPARKMAN. We have not enacted that bill into law. When it comes before the House we can do what we please with it. I have every confidence that the House will do that which is right.

Now, another feature that would cause me to oppose this amendment, if there were nothing else, is that we own this power now. The Government of the United States has it, can control it, and do what it pleases with it. But the moment this amendment is adopted, if the Government wants to use any power there it will have to go to this corporation and pay for it. I do not want any such condition as that.

Mr. SMITH of Minnesota. The gentleman does not quite understand the amendment. Under the amendment the United States Government will have the first right to all of this power at just exactly what it costs to manufacture it, with no profit to anyone.

Mr. MADDEN. It does not say that.

Mr. SPARKMAN. I am opposed to turning over this power to anybody under such conditions. The provision is:

The right shall be reserved to the United States and included in such contract for the United States to purchase and use such supply of said power as may be required for its own purposes on the same terms and conditions as the said power is sold or distributed to the members of said public corporation of the State of Minnesota.

I am opposed to putting the Government of the United States in any such position. We have the power now, and we had better keep it as it is for the present and until proper legislation for its disposition can be enacted.

Mr. MADDEN. Mr. Chairman——

Mr. SPARKMAN. How much time does the gentleman want?

Mr. MADDEN. Just five minutes.

Mr. SPARKMAN. Then I ask unanimous consent that all debate on this paragraph and amendments thereto close in seven minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this paragraph and amendments thereto close in seven minutes. Is there objection?

Mr. ANDERSON. I would like three or four minutes.

The CHAIRMAN. Does the gentleman from Florida desire to modify his request?

Mr. SPARKMAN. I understood from the gentleman that if I wanted to close the debate I could do so.

Mr. ANDERSON. I said if the gentleman desired to close the debate I did not desire any time, but the gentleman is not going to close.

Mr. SPARKMAN. We ought to get on with this bill. I think everybody understands it.

Mr. MADDEN. I am ready to take a vote now. I will yield, and let the vote be taken.

SEVERAL MEMBERS. Vote! Vote!

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota [Mr. SMITH].

The question being taken, on a division (demanded by Mr. SMITH of Minnesota) there were—ayes 47, noes 58.

Mr. SMITH of Minnesota. I ask for tellers, Mr. Chairman.

Tellers were ordered, and the Chairman appointed Mr. SPARKMAN and Mr. SMITH of Minnesota.

The committee again divided; and the tellers reported—ayes 46, noes 65.

Accordingly the amendment was rejected.

Mr. SMITH of Minnesota. Mr. Chairman, I ask permission to extend my remarks by introducing a letter from Mr. Frederick C. Stevens, and also the law and charter and application relating to this subject.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to extend his remarks as indicated. Is there objection?

There was no objection.

Mr. LENROOT. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Wisconsin offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. LENROOT: Page 29, line 7, strike out "$1,500,000," and insert "$150,000."

Mr. LENROOT. Mr. Chairman, I do not expect that this amendment will be adopted, because in the consideration of this bill it is very plain that the United States Treasury is entirely

forgotten, and that economy has no place in the consideration of a measure of this character. Earlier to-day in the debate I suggested what I believe to be a proper river and harbor bill under the present condition of the Treasury, and that is a bill carrying appropriations that would maintain rivers and harbors to accommodate the commerce that now exists upon them, and in addition appropriations for the carrying on of existing projects where there would be a direct and substantial loss to the Government if the projects were not carried on at this time. The gentleman from Florida [Mr. SPARKMAN], the chairman of the committee, in reply to that suggestion stated that with very few exceptions that was the theory of this bill. I do not know whether my good friend from Florida [Mr. SPARKMAN] will admit that this item is one of those exceptions or not; but the truth nevertheless is that it is one of the exceptions. If this amendment of mine should be adopted, which I know it will not be, there would be a direct saving to the United States Treasury at this time of $1,350,000, and at the same time the Missouri River will be maintained in its present condition; and all of the public works that are going on under existing projects will be maintained so far as necessary so that there will not be a dollar of loss to the Government; so if this Missouri River $20,000,000 project is a meritorious project, the only thing that will be accomplished by the adoption of this amendment will be to postpone that expenditure of $1,350,000 until such time as the Treasury is in better condition.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. I yield to the gentleman.

Mr. SWITZER. Does the gentleman expect the appropriation in the next four or five years will be any smaller than it will be this year?

Mr. LENROOT. I do not; but I do expect that the Treasury will be in better condition than it is to-day. [Applause on the Republican side.] And if the Treasury is not in better condition, then I am frank to say that the appropriations ought to be very much smaller than they are in this bill. [Applause on the Republican side.]

Now, Mr. Chairman, this Missouri River project is one that was specially examined with a view to reporting to Congress upon the question whether that project should be abandoned or not. It was first referred to the district engineer, Mr. Deakyne, who made a report upon it under date of April 22, 1915. He recommended that the project be entirely abandoned and that hereafter an appropriation of only $40,000 a year be made for the purpose of snagging; and, reading from his report, speaking of the commerce upon this river, he says:

> Eliminating the logs and the sand and gravel barged, the remaining traffic is 37,551 tons, divided into classes which are carried over average distances of from 8 to 291 miles. The total freight charge on this traffic was about $41,000. The Kansas City-Missouri River Navigation Co., the only through line on the river, operating between Kansas City and St. Louis, charges 80 per cent of the railroad freight rates. Assuming this to be the relation between the rail and water rates for the entire traffic, the saving to shippers by the use of the river in 1913 was about $10,000.

Let me say right here that, irrespective of the completion of the continuation of the present project, it has cost the Government $100,000 annually for maintenance, or, in other words, it cost the Government $90,000 over what was saved in freight rates.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. LENROOT. Mr. Chairman, I ask that I may proceed for 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. LENROOT. The cost to the Government for maintenance alone, to say nothing about the cost of the project, was $10 for every dollar that was saved in freight rates.

Now, it is fair to say that it is reported that this last year the commerce was $60,000 as against $37,000 in 1913. The average cost per ton by rail is $1.40 in round numbers. The cost by water is about $1.10, and so there is a saving by water carriage of 30 cents a ton.

Now, assuming that it was 60,000 tons, there is a saving to the shipper of $18,000, at a cost to the Government of $100,000, to say nothing about the cost of the project itself. It is true that when the project was first begun it was estimated that there would be a million tons of traffic upon this river. I undertake to say that no man in this House will ever see the time when there is a million tons of traffic on the Missouri River between Kansas City and St. Louis. But assuming there is a million tons, assuming there is a saving of 30 cents a ton, it is estimated that the annual cost of maintenance will be $500,000 a year, so that the Government, even if there is a million tons of traffic carried on this river, will be paying out of the Treasury a half a million dollars a year to save the shippers $300,000 a year.

Referring to the Deakyne report, he says:

> It is evident that this saving is entirely inadequate to warrant the serious consideration of an expenditure by the Government of $1,100,000 per year in interest and maintenance.

The report of Mr. Deakyne went next to the division engineer for review—Col. Townsend—and Col. Townsend, by the way, is one of the three engineers who recommended, in the first instance, the adoption of the $20,000,000 project.

Col. Townsend, in reviewing the report of the district engineer, agrees with it in every particular save one, that instead of $40,000 a year for snagging he recommends $150,000 for maintenance, and that is the amendment that I have proposed. He says in his report that if this $150,000 is properly expended it will not only keep the river clear but will maintain, without any loss to the Government, the work that has been done by the Government.

In paragraph 4 of Col. Townsend's report, he says:

> In the opinion of the division engineer, the problem of developing our western rivers should be treated as a single one. Instead of scattering appropriations over the entire western territory, a channel of 8 or 9 feet depth should first be provided from Chicago to New Orleans, and the offer of assistantce in the construction of a canal along the Des Plaines River from the State of Illinois accepted. An opportunity should then be afforded the American people to determine whether they want waterways not by rhetorical efforts in river conventions but by a practical utilization of the channel thus afforded. Until such revival occurs appropriations on the tributaries should be confined to maintaining the existing status. The existing works should not be allowed to deteriorate. At present an annual appropriation of $150,000 for snagging and the maintenance of existing works is therefore recommended.

Turning again for a moment to the Deakyne report, he refers to the prospective commerce on the Missouri River, and calls attention to the fact that on the Mississippi River, where there is a stretch of river exactly similar to that proposed upon the Missouri, except only that the facilities for traffic and country contributory is very much greater than on the Missouri, but after that has been completed the highest traffic has been 258,000 tons per year upon that portion of the Mississippi River, and he says that it is unreasonable to suppose that the traffic on the Missouri River will assume any larger proportions than that.

So you have Deakyne's report recommending the abandonment of the $20,000,000 project, and we have Col. Townsend's report, who was one of the three who originally recommended the project, recommending the abandonment of the $20,000,000 project, and finally it comes to the Board of Engineers for review, and that board met at Kansas City.

I am not going to criticize the Board of Engineers any more than to say that the Board of Army Engineers is human just as Members of Congress are human, and they are subject to political influences, I believe, to a lesser degree than most people, and, nevertheless, they are subject to political influence to some extent, which is not necessarily reflecting upon them. Any man who will take that report of the Board of Engineers wherein they recommend the project be not abandoned and will read it carefully from beginning to end will conclude that they have not made a showing that would satisfy any jury in the United States that that project should be continued. They have some 20 paragraphs in this report, and if you will examine the report thoroughly you will see that there are only two or three findings of fact in the entire report, but paragraph after paragraph that states not what they believe but what the Kansas City interests claim. Again and again you will find in each paragraph, "It is claimed by interested parties," "It is stated by interested parties," and so on, and when they come to the final paragraph wherein they sum up their reasons for their action in not concurring in the report of the district and division engineers, they say:

> A review of the entire situation indicates that the present grounds for continuance of this project were stronger than those which led to its adoption. The board therefore concludes that it is advisable for the United States to continue the improvement—

And so forth.

They say the reasons are stronger now than when the project was adopted, and that is based upon the fact that when this was adopted there was no commerce, and that now there is a commerce of 60,000 tons upon that river, costing the Government, irrespective of the $20,000,000 we propose to expend, $6 for every dollar that is saved to the shippers upon this record.

Mr. Chairman, I have gone into the merits of this for the purpose solely not at this time of recommending the abandonment of the project, but of showing to this committee that if they wish to vote upon this question upon its merits, if they wish to save $1,350,000 to the United States Treasury, leaving the consideration of the ultimate improvement, acceptance, or

abandonment of this project to such time as the Treasury is in condition to consider it, they will adopt this amendment that I have proposed.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. BORLAND. Mr. Chairman, I am very glad that the gentleman has stated that he has no serious idea that the House will adopt his amendment. If he is anywhere as near correct in his statement, his amendment itself, expending $150,000. would not be justified. How can he justify expending $150,000 a year if the commerce is measured by the statement which he made of $10,000 saving in freight rates? In no case ought his amendment to be adopted. But the gentleman has overlooked what I have attempted to call to the attenion of the House, namely, the difference of putting a waterway, a navigable river, in condition as a carrier of freight and the improvement of a harbor upon the coast. An improved harbor becomes at once the terminal facility for lines of railroads, and is of great advantage to railroads as well as to all other forms of transportation. It ought to be built because it is an outlet for American commerce. A river differs from a harbor in that it is a competitor of the railroad in the interior of the country. This is what makes the difference in the fight on river improvement.

The Missouri River, from Kansas City to the mouth, is a direct competitor of five lines of railroad. Not only that, but it is a direct rate regulator for all of the lines of railroad running west of the Missouri River—between that and the Rocky Mountains. All of the traffic originating west of the Missouri and between that and the Rocky Mountains, and in some cases to the Sierra Nevada, wants an outlet to the east. It must have through routes, with joint rates and joint tariffs made over and upon the same lines of shipment. The minute you introduce a new line of shipment, a new competitor that is willing to take 80 per cent of the rail rate, as the boat line is willing to do, you have a fight on your hands. We have had a fight on our hands to build up a traffic on that east and west line of the Missouri River between Kansas City and St. Louis competitive with the railroads. I need not depend on anybody for testimony to that effect other than the railroad men themselves. In case No. 6119 of the Interstate Commerce Commission, being the case against the Illinois Central and Mississippi & Yazoo Valley Railroads, Mr. Shepherd, assistant freight agent of the Illinois Central, testified:

The rates between New Orleans and Kansas City are not normal rates, but are depressed by water competition on the Missouri and Mississippi Rivers.

Therefore the amount that is hauled by boats on the Missouri and Mississippi Rivers is not the full measure of the saving to the shippers in that territory, and that was the underlying and fundamental mistake of Mr. Deakyne. Mr. Deakyne came from Philadelphia to Kansas City. On the 4th day of March we passed a bill providing that certain projects should be reexamined, and on the 22d of April Mr. Deakyne had sent in his report condemning the project he had been sent there to look at. The committee of river engineers went over the situation as no river has ever been gone over to my knowledge in the history of the country, and this report embodies their findings; and the report says in its conclusion——

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. BORLAND. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to proceed for 10 minutes.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in 12 minutes.

The CHAIRMAN. Is there objection?

Mr. RUCKER. Mr. Chairman, reserving the right to object, I have an amendment that I would like to offer, and I would like to have five minutes.

Mr. SPARKMAN. Then, Mr. Chairman, I ask unanimous consent that all debate on the paragraph and all amendments thereto end in 17 minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BORLAND. I quote from the report of the Board of River Engineers:

The United States embraces within its limits widely varying conditions of soil and climate, with farm, mine, and forest products of all kinds. Each section has some special advantage in the production of at least one of the articles required in civilized life. To attain the maximum benefit from these conditions it is essential that the means of intercommunication and distribution shall be fully developed, so that producers and consumers may be served at a minimum of cost. Both railways and waterways are needed. Each class of transportation has a sphere of its own. Destructive competition between them is uneconomical and wrong. In the more thickly settled parts of the country both now flourish even on parallel lines. It is uncertain whether this condition is as yet possible in the Missouri Valley. Its inhabitants claim that it is. This waterway lies in a direct path of traffic, and a well organized freight carrying line operates on it. When equally efficacious and up-to-date water transportation lines shall have been established on the Mississippi River, is seems beyond reasonable doubt that the commercial possibilities of these streams will be utilized to advantage. The testimony given to the board and appearing in the record of the public hearing shows potent causes for the decline of river traffic entirely apart from the true relative costs of transportation by rail and water. Changes of law have eliminated some of these causes, and it is claimed that the operations of the Kansas City-Missouri River Transportation Co. give promise that the remainder will disappear, and that through such agencies the much-to-be-desired problem of minimum cost of transportation by water and rail will receive a definite solution.

A review of the entire situation indicates that the present grounds for continuance of this project are stronger than those which led to its adoption. The board therefore concludes that it is advisable for the United States to continue the improvement of the Missouri River between Kansas City and the mouth in accordance with the existing project.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. BORLAND. Yes.

Mr. COOPER of Wisconsin. How many engineers were on that board?

Mr. BORLAND. Seven. The chairman of that board was Gen. Black, who is now Chief of Engineers of the Army of the United States. I want to say further to the gentleman from Wisconsin [Mr. LENROOT] that I need not go any further than his own locality to demonstrate the saving in water rates. Here is one of the exhibits attached to Gen. Black's committee report, which shows that the cost of hauling wheat from Kansas City to Chicago, 451 miles, is 12 cents a hundred pounds, and from Chicago to New York, 812 miles, the cost all rail is 18.8 cents per 100 pounds; rail and lake, 14.7 cents per 100 pounds; and lake and canal, 8.85 cents. So the gentleman's own territory is getting an advantage upon its farm products of an 8.85-cent rate upon wheat, while we of the Southwest are paying 12 cents. What is the cause of the difference in the cost of shipment of the wheat? Nothing, except the question of rail transportation and water competition.

They have the water competition and we have not. Now, let us see what our Kansas friends say about this thing. They had the Kansas millers' convention the other day down in Wichita, and Henry Lassen, who is the president of that organization, said:

"Every farmer and miller in the Southwest is vitally interested in the outcome of the movement to develop the Missouri River," he said. "Nothing can help the Southwest more than the development of the river. I am not speaking against the railroads, because they can not handle all of the business. We need a cheap method of transportation to compete with Minneapolis mills. The latter have lake transportation in their favor. There is nothing that can be shipped better by river than wheat and its products.

"Twenty-five per cent of last year's wheat crop is held in Kansas," said Mr. Lassen. "Under normal conditions, without the shortage in freight cars, not more than 10 per cent would be held within the State."

The present car shortage, Mr. Lassen said, is a breakdown of the delivery system.

Another 100,000,000-bushel wheat crop can be expected this year, Mr. Lassen believes. According to the Wichita miller, wheat conditions are excellent. Although occasional dry spells occurred this winter, the ground was so thoroughly soaked last fall that a wonderful crop will be produced.

Now, the gentleman says that we ought to depend on the railroads. When this project was adopted by Congress it was on the figures of 1907, which were that through the gateway of Kansas City there was passing 5,000,000 tons of commerce. That is the gateway that controls the rates to the Southwest. We adopted this project when there was 5,000,000 tons of commerce going through the gateway of Kansas City. This board found that in 1915 there was 11,000,000 tons of commerce passing through the same gateway, and every pound of that commerce is affected directly or indirectly by water competition. How long are these five railroads going to continue to handle that business between Kansas City and St. Louis? They are not handling it now. In order to double-track one of those existing lines, it will cost $55,000 a mile. It will cost $2,500 a mile to keep them up after they are made. That is three-quarters of a million dollars yearly to maintain a rail line to St. Louis, and it will cost two-thirds of that, or $500,000 to maintain a water line. Does anyone think that the shippers are not going to pay for the additional capitalization of railroads? Who pays for the capitalization of railroads? Is the gentleman right that we are going to save all this money that we do not put into river navigation? And these railroad men say if it was not for the open-water channel they would raise the rail rates into the Southwest to-day if they had the power. And the only thing that keeps them from having the power is that Congress has determined to improve the Missouri River for navigation.

Now, Congress has said, in 1910, that if a railroad reduced its rate to meet water competition, it should not afterwards raise those rates without showing conditions other than eliminating the competition. The railroads have got to a point where they must reduce their rates in competition with river navigation, and the easiest thing for them to do is to stop, if they can, river navigation competition.

Now, why do I say they have reached a point where they have got to reduce their rates? Simply because they are going before the Interstate Commerce Commission pleading that they have the right to readjust rates into the Southwest to meet that competition. In a case before the Interstate Commerce Commission, Case No. 7112, we forced them to make through rates with the boat line on mill products for export from Newport News and Norfolk. If we can compel one railroad to do that we can compel every railroad to make a general joint tariff agreement with the river lines, and as fast as the railroads come in a cheaper route of transportation is open to the shipper on that line of railroad by routing via the boat line.

Mr. PLATT. Will the gentleman yield?

Mr. BORLAND. I will yield.

Mr. PLATT. What you are really for is not water transportation on the Missouri, but to cut down the railroad rates?

Mr. BORLAND. We not only want to, but we are carrying freight. If the gentleman wants to see how we are doing it, I refer him to that same engineer's report, in which he shows that this company has solved the problem of the steel-hulled barges, compartments, noninflammable and nonsinkable barges. The power boats take the barges from the wharf and they are loaded from the car, and as soon as the barge is ready the power boat takes it downstream. And in that way they have solved the competition with rail lines.

Mr. MADDEN. How many of these barges are there?

Mr. BORLAND. Twelve barges now and three power boats.

Mr. MADDEN. What is the capacity?

Mr. BORLAND. The capacity runs from 1,400 tons down to 300.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BORLAND. I would like to ask for five minutes additional. This particular matter, I think, is vital to the whole river navigation problem.

The CHAIRMAN. The gentleman asks unanimous consent that the order of the committee be changed, and that he be given five additional minutes.

Mr. SPARKMAN. Mr. Chairman, I shall have to object to that.

The CHAIRMAN. The gentleman from Missouri [Mr. RUCKER] is recognized for five minutes.

Mr. RUCKER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Missouri offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. RUCKER: Amend, by inserting at the end of line 7, on page 29, the following:

"*Provided*, That $250,000, or so much thereof as may be required, be expended for the permanent improvement of the shores along Carroll and Chariton Counties, at points where the river is leaving its channel, so as to prevent the widening of said river by confining its waters to the present channel, in harmony with the general scheme adopted by the Army Engineers to secure and maintain a 6-foot channel between Kansas City and the mouth of said river."

Mr. RUCKER. Mr. Chairman, I am not going to discuss the general proposition, the economic importance of Missouri River improvement, which was so ably discussed by my colleague from Kansas City [Mr. BORLAND] a few moments ago.

Let me remark, however, before addressing myself to the amendment sent to the desk, that I am somewhat surprised at the distinguished gentleman who a few moments ago addressed the committee in opposition to the item of $1,500,000 for the Missouri River reported by the committee in this bill. The gentleman thinks this is reckless, wanton waste of public funds, and from that side of the aisle every hour during the day admonitions are heard as to the state of the Federal Treasury, and that under the awful conditions which now stare us in the face these appropriations ought not to be asked for or given. And yet nearly every gentleman over there, at least nearly every one of those who have addressed the committee, has done what he could do, and is doing what he can do, to make the condition of the Treasury still more deplorable and lamentable than they tell us it now is. Even the distinguished gentleman who addressed us a few moments ago, and whose analysis so beautifully and logically betrayed the great extravagance we are practicing by leaving this item in the bill, has himself asked for an appropriation from that same depleted and impoverished Treasury for $75,000 with which to build a post-office building in a town of a little over 2,000 inhabitants. "O, consistency, thou are a jewel" that is not always found on that side of the aisle! [Laughter.]

Now, Mr. Chairman, the Government of the United States has wisely entered upon the project of improving this great river, the Missouri River. It is a sane course to pursue, and I take it that this House by an almost unanimous vote, responding to a sense of duty, will indorse the action of the Committee on Rivers and Harbors in reporting the item which is now under consideration. In the scheme of improving the Missouri River necessarily must be involved the scheme of bank protection, in order to keep the river from widening its bed, changing its course, and filling its channel with sand and snags.

The amendment I have offered does not seek to increase the appropriation or to take more money from the Federal Treasury. Its object and purpose is to divert a part of the appropriation authorized by this item to specific work at places where it is grievously needed. Let me say to you we will soon have in here a bill which, I understand unofficially, may carry something like $50,000,000 or $60,000,000 for flood prevention and not one cent to aid in navigation—millions to prevent floods and overflows, and the consequent destruction of crops and damage to lands, without any pretense that this large expenditure is in any sense designed or intended to be expended in securing the navigability of the rivers upon which it will be expended. And yet when we are considering this bill some gentlemen who are likely to encounter no difficulty in voting vast sums of money for flood prevention manifest great concern and anxiety to know whether the intention of amendments like the one I have offered is really in the interest of navigation solely and to the exclusion of shore protection. I am frank to say I am advocating the adoption of an amendment which will authorize, if adopted, the use of money for shore protection. To me it is a self-evident fact that protection of the shore is a necessary incident to permanent improvement of a river in the interest of navigation.

I am not going to discuss the volume of commerce now carried upon the Missouri River nor what increase in volume we may logically and reasonably expect when the river is ultimately put in proper condition. I am going to address myself briefly to the real purpose I have in mind, without any attempt at concealment, appealing to the judgment of this House to sustain my contention. We spend countless millions of dollars to remove sand and dirt from the channels of rivers in order that a sufficient depth may be obtained to float boats loaded with commerce. Those who think as I do believe it to be the part of wisdom and of economic administration to expend comparatively small sums of money to keep the sand out of the channel rather than large sums to take it out after it washes in.

It has been scientifically and accurately ascertained by those competent to deal with the question that the Missouri River actually washes away not less than 10,000 acres of land every 12 months. It gives no additional force to my contention to tell you that this 10,000 acres of land is of incalculable value; that it is fertile and productive, and if saved from the destructive currents of the river would annually afford homes and sustenance for a large number of people. Nor does it strengthen my argument to present the fact that this 10,000 acres of land wasted every year is or was the home of brave, determined, patriotic sons of toil who have, in many instances, spent the best part of a lifetime in establishing their homes. Within my personal knowledge, confined to two counties in my district which border upon this river, great destruction is wrought every year. Not only are the lands washed away, but in many cases the houses which have sheltered families for many years must be quickly removed or they, too, fall a prey to the raging current of the river. These facts, which show conclusively that during every period of 12 months the channel of the river must find lodgment somewhere for 10,000 acres of land distributed down the river, to my mind conclusively shows, also, the wisdom of appropriating money to make secure and permanent the banks of rivers and thus, incidentally, save homes and effectually prevent the large deposit of earth and sand in the river, which must be removed annually in order to keep a sufficient channel for boats to ply the stream. I am glad the old theory that Congress can use public moneys only to aid in securing the navigability of streams, once so largely accepted, has given way to a broader, saner, and more patriotic conception of the power of Congress which now asserts its right to spend public money avowedly and solely for the purpose of preventing damage to property resulting from overflows. If Congress can wisely expend money to prevent destruction of crops by reason of overflows in some sections, then surely no one should hesitate to vote an appropriation of public money to protect the land from which crops are grown and upon which the homes of good people are erected in other sections.

With neither desire nor purpose to conceal the effect of the amendment offered by me, but asserting that I believe the thought is founded in common sense and fair dealing, and that its adoption will be in line with the general plan for the improvement of the Missouri River, and would also protect and preserve the homes of a large number of worthy, loyal citizens of the United States, I earnestly urge the adoption of the pending amendment.

Mr. SPARKMAN. Mr. Chairman, I hope neither one of these amendments will prevail.

Mr. ALEXANDER. Mr. Chairman, will the gentleman yield there for a moment?

Mr. SPARKMAN. I have only two minutes, but I will yield.

Mr. ALEXANDER. The district of my colleague Mr. RUCKER lies directly east of mine, and the same conditions exist in my district as exist in his, and the specific diversion of a certain amount of money from this general appropriation would tend to deprive other localities of some of this appropriation. For that reason I question the propriety of making specific appropriations for any particular point.

Mr. SPARKMAN. Yes; that was what I was going to say. I am opposed to this, first, because if we are going to do this work at all, we should go ahead and do it as rapidly as is reasonably practicable. I think the Treasury of the United States can stand it. I should hate to think it could not.

Now, with reference to the second amendment, the amendment offered by the gentleman from Missouri [Mr. RUCKER], I wish to say we have no estimate from the Engineer's office as to what that class of work will cost. If it is a piece of work that must be done under the project we have already adopted, then the engineers can go ahead under this appropriation and do it; if it is not such a project, then we should not take it up at all, because we do not know what it will cost. We have no project.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Wisconsin [Mr. FREAR].

The question was taken; and the Chairman announced that the "noes" seemed to have it.

Mr. FREAR. A division, Mr. Chairman.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 27, noes 50.

So the amendment was rejected.

The CHAIRMAN. The question now is on agreeing to the amendment offered by the gentleman from Missouri [Mr. RUCKER].

The question was taken, and the amendment was rejected.

Mr. RUCKER. I am satisfied the House did not understand that motion. Otherwise it would have never voted as it did. [Applause.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Missouri River: For improvement and maintenance from Kansas City to Sioux City, $50,000, of which amount at least $25,000 may be expended for such bank revetment as in the judgment of the Chief of Engineers may be in the interest of navigation; continuing improvement and for maintenance from Sioux City to Fort Benton, $125,000, of which amount at least $50,000 may be expended for such bank revetment as in the judgment of the Chief of Engineers may be in the interest of navigation; in all, $175,000.

Mr. CALLAWAY. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Texas moves to strike out the last word.

Mr. CALLAWAY. Mr. Chairman, I want to call the attention of the committee to a newspaper report on the upper Mississippi, under date of August 21, 1915, from the Chicago Tribune:

OMAHA, NEBR., *August 21, 1915.*

While Kansas City, Omaha, Sioux City, and other cities are trying to revive steamship traffic on the Missouri River, and are asking Congress for appropriations to deepen the channel, the skeletons of 295 steamboats are rotting in its sands.

Of the 72,339 tons below Sioux City but 8,443 tons were hauled by steamship; the rest, wood and railroad crossties, were rafted.

In 1915 there is just one steamship on the river between Sioux City and Kansas City. She is the *Julia*, of 10 tons, and she plies between Omaha and Decatur, 60 miles. The United States Government spent many millions of dollars in order that the *Julia* might operate. On her last trip the *Julia* brought one passenger—the first and only steamship passenger to land in Omaha in 30 years.

Along the same line, the Sioux City Tribune, of November 22, 1915, says:

MISSOURI RIVER TRAFFIC INVESTMENTS.

It is relating how "over $34,000,000 of river-traffic investments" are demanding the "pork" for the Missouri River. Foolishly it itemizes these "investments."

An analysis of the itemized list shows that of the $34,688,000 listed as "investments" in Missouri River traffic $10,000,000 is credited to New Orleans Harbor improvements which are being made for ocean traffic. Of the remaining $24,688,000, just $125,000 represents actual investments. The rest shows up in items like these: "Proposed barge line," "proposed bond issue for terminals," "boat line proposed by private funds," and "estimated proposed bond issue."

This is a sample of the way the country is being deceived. There are no actual investments of any consequence in river traffic, because capital knows river traffic is absurd and impossible. If river traffic were as profitable a competitor to railroads as "pork-barrel" advocates make it out to be, the navigable rivers of the country would be crowded with river steamboats just as they were in the early days, for the rivers are surely as navigable now as they were then. The whole proposition is a fraud.

Now, I want to refer to the engineer's report on this upper Missouri River and to show just how fraudulent, according to the report, some of these estimates are.

Commercial statistics of the Missouri River, Kansas City to Fort Benton, season of navigation, 1913, opened April 1, closed November 15. Freight traffic——

In the general summary of freight traffic they give $2,013,000; tons, 165,766. In their tonnage is included 115,688 tons of sand.

In their estimate of the value of this traffic the whole amount of which is about $2,013,000, the contractor's outfit on this stretch of the river is $925,000, or about one-half of the entire traffic of the river is the contractor's outfit with which he hauls this sand, that makes almost three-fourths of the tonnage.

Mr. Chairman, I have been at a loss to understand how these river navigators argued that such appropriations as are made in river and harbor bills are a good thing for the country, but I have been associated with scientifically educated naval engineers for the last four months and I have their viewpoint.

The CHAIRMAN. The time of the gentleman has expired.

Mr. CALLAWAY. I ask unanimous consent to continue for five minutes.

The CHAIRMAN. The gentleman from Texas asks unanimous consent that he may proceed for five minutes. Is there objection?

Mr. SPARKMAN. I would like to ask that all debate on this paragraph and amendments thereto close in 10 minutes.

The CHAIRMAN. The gentleman asks unanimous consent that all debate on the paragraph and amendments thereto close in 10 minutes. Is there objection?

Mr. BOOHER. Reserving the right to object, I speak on behalf of a gentleman who, I think, will want 10 minutes.

The CHAIRMAN. Does the gentleman modify his request?

Mr. SPARKMAN. Yes; to 15 minutes.

The CHAIRMAN. The gentleman from Florida modifies his request to 15 minutes. Is there objection?

There was no objection.

Mr. CALLAWAY. Associating with these engineers, who are scientific men, educated at Government schools, has given me an insight into their viewpoint on economics; it might be instructive to this House. Possibly that is the view taken by these river navigators, following the Government engineers. I want first to quote a mechanical engineer of very repute, Hudson Maxim. Hudson Maxim was born in Maine. He is a brother of Sir Hiram Maxim, of England, the inventor of Maxim rapid-fire guns. Sir Hiram was titled by the Crown because of his inventions. Hudson married an Englishwoman, stayed in this country, invented smokeless powder, sold out his business to Dupont Powder Co., and entered the employ of that company as chief mechanical engineer. While he is discussing a different subject, he reaches possibly the economic viewpoint of these learned engineers who are figuring on rivers and harbors. He says:

The result is that the nation as a whole is not impoverished in the least by the burden of armaments, but is rather benefited by their support. Also, a nation may likewise be economically benefited by actual war, so long as it has such resources, number of population, industrial arts and sciences, and naval and military equipment as to prevent subjugation and the humiliation and degradation of being forced to pay ransom or tribute in the shape of a large war indemnity to a foreign power.

The money spent by the Government in building fighting ships could not be esteemed so much money lost, even if the ships were useless. The Government taxes the people for the money to build the ships, and then pays the money back to the people again for the ships. The people get their money all back, and the Government gets the ships. The people lose nothing, and the Government is the gainer to the value of the ships. The result is that the fighting ships have cost nothing. On the contrary, their production has benefited all. Everybody is made better and richer through the building of them. When we have looked upon our Navy, remembering what the pacifists have told us about its enormous cost, we are strongly impressed with the colossal expenditure, not realizing that the Navy has actually cost nothing. Its production has been a source of profit and benefit to the people.

I notice in the Army and Navy News, published at San Francisco, Cal., December, 1915, in the discussion of the same subject, the following:

The second alleged reason is utterly without foundation. Military preparedness costs us nothing. The few hundred dollars we spend for imported drugs for the medical departments of Army and Navy is an entirely negligable item. Everything else we get right in the United States, and the money is kept right at home. We construct our own ships and guns in our own yards and factories from materials that come from our own mines. The wool and cotton for clothing come from our own fields; the provisions come from our own farms and ranches. No money leaves the country. It stays right at home, making our shipyards

and factories hum with activity, and providing employment for thousands of good Americans. Instead of being hoarded the money is kept in circulation and everybody is benefited.

But for fear somebody would say these were not up to the standard I want to quote from an admiral who is regarded as one of the brightest in the Navy, Admiral Grant. I quote from his testimony before the Committee on Naval Affairs:

Mr. CALLAWAY. If one has to have his bigger than the other, and the other has got to have his bigger than the one, then what?

Admiral GRANT. You may not know, Mr. CALLAWAY, but I do not see that we are running ourselves to death by building a battleship. Some people consider that money thrown away. I do not, because of every cent that goes into a battleship half of it goes into the labor product and the other half for material goes originally for the labor and material to produce that material. It is not money wasted, in my opinion. You will find it universally stated—that is, a great many men state it—that this $18,000,000 for this battleship is money wasted and thrown away. I do not consider it so. That is my opinion only.

Mr. CALLAWAY. Your opinion is that the money is still among us?

Admiral GRANT. Yes sir.

Mr. CALLAWAY. And that the $18,000,000 put into labor and put into material is still with us, and that money is laid out here and there has been no waste at all?

Admiral GRANT. That is my opinion. That is the way I look at it.

Mr. HENSLEY. On the same theory, why should we not tear down these magnificent buildings and reconstruct them again?

Admiral GRANT. I do not think that is on the same line at all.

Mr. BRITTEN. We are using the buildings.

Admiral GRANT. I have known in the West, in the early days, of men who furnished money to laboring men to move sand from one side of a lot to the other to give them employment.

Mr. HENSLEY. Do you regard that as a necessity?

Admiral GRANT. Very philanthropic.

Mr. HENSLEY. A good investment?

Admiral GRANT. Good charity.

The CHAIRMAN. The gentleman's time has expired.

Mr. CALLAWAY. Mr. Chairman, I would like three minutes more to finish this quotation.

The CHAIRMAN. The time has been limited by the committee.

Mr. CALLAWAY. I ask unanimous consent for three minutes.

The CHAIRMAN. The gentleman asks unanimous consent that the order be modified so as to give him three minutes more. Is there objection?

Mr. BOOHER. Reserving the right to object, if the gentleman's time is extended, some one else will want a similar extension——

Mr. SPARKMAN. I would not like to extend the time. The gentleman can get time later on, on the next item.

The CHAIRMAN. The gentleman from Florida objects.

Mr. SPARKMAN. Mr. Chairman, time has been reserved on behalf of the gentleman from Nebraska [Mr. SLOAN].

Mr. SLOAN. Mr. Chairman, I will use but two or three minutes, because this does not touch my district, but it does touch my State. I do not know what the virtues of this particular project are. But matters in this bill do not depend upon particular basic facts by themselves, but rather as a matter of relation. And if this upper Missouri River, this classic stream of ours, is not entitled to equal consideration with the rivers of Texas, then I suppose this committee will vote it out. I refer to Texas because that is the State whence hails the gentleman [Mr. CALLAWAY] who is leading the assault upon this project.

These rivers in Texas have stayed in the bill—the Brazos and the Trinity, the latter called Trinity instead of Unity because it is said to stop at two different intervals, leaving it in three sections. As we studied these rivers in the old geography, they started on the plains near the Panhandle and ran to the Gulf, but we learn from their consideration here that they do not run in that direction or even follow gravity; they run from the plains of Texas to the city of Washington. The only live freight they have ever carried in all these years is Congressmen [laughter], save and except they have been followed in one or two historical cases, so graphically described by Hoyt, in "Texas Steers," and then, of course, they carried the dead ones back. [Laughter.]

I merely ask, so far as I am concerned as a Member from Nebraska, that the Missouri River be given the same consideration that is given every other project in this bill. We are claiming it as a matter of relative importance, not particularly in reference to its virtue or the lack of it. [Laughter.]

Mr. SPARKMAN. Mr. Chairman, I yield to the gentleman from Nebraska [Mr. STEPHENS] five minutes.

Mr. STEPHENS of Nebraska. Mr. Chairman, the item carried in this bill of $50,000 for the improvement of the Missouri River from Kansas City to Sioux City is used largely for snagging and for the revetment of the banks in several places between Kansas City and Sioux City, where small towns are being endangered and where they have established some navigation.

Mr. MADDEN. Will the gentleman define the word "some"?

Mr. STEPHENS of Nebraska. "Some navigation" is correct. This river between Omaha and Sioux City has at the present time two or three small steamboats carrying grain from the inland town of Decatur to Omaha. It is an inland town and has no railroad facilities at all. It has had a small steamer carrying grain and other freight between Omaha and Decatur for two years, I think. Last summer private parties in the town of Decatur provided at their own expense two or three small boats for the purpose of extending this commerce between that inland town and Omaha.

Now, if there ever was a time when there was any excuse whatever for improving this channel, the excuse exists now, because this is the first time in the 25 or 30 years that I have been acquainted with the river that we have done much at all in the way of stimulating the building up of commerce on this stream. The appropriations carried in the bill heretofore have been of immense benefit to the towns along the river in preventing them from being washed away. Three or four years ago a small section of Nebraska containing a population of about 3,000 people would have been washed into the river had it not been for the appropriation carried in this bill at that time which made it possible to revet the banks and keep the stream in its channel. I believe that if there ever was a time when we should carry this item in the bill it is now, when these people are providing means for carrying their commerce between Decatur and Omaha. They have invested many thousands of dollars in these boats. They made an application last year for me to secure the loan from the Government of the flatboats used by the snagging crew. They wanted them to transport grain to Omaha. Some technical provisions of the law prevented this loan; but it does show that the people of this town are doing their best to get water transportation to the metropolitan city of Omaha, and I believe this item should be retained in the bill.

MESSAGE FROM THE SENATE.

The committee informally rose; and the Speaker having resumed the chair, a message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed with amendments bill of the following title, in which the concurrence of the House of Representatives was requested:

H. R. 12207. An act making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1917, and for other purposes.

RIVERS AND HARBORS.

The committee resumed its session.

The CHAIRMAN. The pro forma amendment will be withdrawn and the Clerk will read.

The Clerk read as follows:

Missouri River: For improvement and maintenance from Kansas City to Sioux City, $50,000, of which amount at least $25,000 may be expended for such bank revetment as in the judgment of the Chief of Engineers may be in the interest of navigation; continuing improvement and for maintenance from Sioux City to Fort Benton, $125,000, of which amount at least $50,000 may be expended for such bank revetment as in the judgment of the Chief of Engineers may be in the interest of navigation; in all, $175,000.

[Mr. CALLAWAY addressed the committee. See Appendix.]

The Clerk read as follows:

Humboldt Harbor and Bay, Cal.: Continuing improvement and for maintenance, $450,000.

Mr. RAKER. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

The Clerk read as follows:

Sacramento and Feather Rivers, Cal.: Continuing improvement and for maintenance, $115,000: *Provided*, That $10,000 of this amount shall be expended for improvement on the Feather River, subject to the condition precedent that local interests contribute a like sum toward the improvement: *Provided further*, That so much of the river and harbor act of June 3, 1896, as authorizes the appointment of a board of engineers to have charge of the examination, survey, and improvement of Sacramento and Feather Rivers, Cal., is hereby repealed.

Mr. SPARKMAN. Mr. Chairman, I offer the following amendment which I send to the desk and ask to have read.

The Clerk read as follows:

Page 31, line 2, after the word "maintenance," insert the words "including above Sacramento to Red Bluff."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Florida.

The amendment was agreed to.

The Clerk read as follows:

Tillamook Bay and Bar, Oreg.: For maintenance, $5,000.

Mr. HAWLEY. Mr. Chairman, I offer the following amendment which I send to the desk and ask to have read.

The Clerk read as follows:

Page 31, line 3, after the word "bar," insert "and Hoquarton Slough to Tillamook City."

Mr. HAWLEY. Mr. Chairman, the purpose of this amendment is to make available the maintenance of the entire waterway from Tillamook City, from which the greater proportion of the commerce on the waterway arises, to the bar, so that the engineers can use the appropriation of $5,000 to keep the bay in condition for navigation and also this slough, which is about 5 miles long. The people of Tillamook have raised by taxation from $2,000 to $2,500 a year, with which they have been maintaining the navigation on Hoquarton Slough. Under the law that is the limit of money that they can raise. This amendment does not increase the appropriation. The greater proportion of the commerce—85 per cent or more, I am told—goes to and from Tillamook City. If this amount is made available, so that a small portion of it, in case of necessity, can be used for the maintenance of navigation on the Hoquarton Slough on which there is a regular established project of 9 feet at high water, the commerce in that section of the country will be greatly benefited. It does not increase the expense, it simply provides that the engineers can do in the ensuing year what they have been doing for a long period of years, with the exception of the last two years, and I hope the chairman of the committee will accept the amendment.

It is of great importance to the traffic on the waterway that the water in the slough should be maintained at the depth, at the very least, provided in the existing project, and this is what the amendment will authorize the engineers to do.

Mr. SPARKMAN. Mr. Chairman, I hope the amendment will not prevail. It is not nearly as harmless as it would appear from the remarks made by the gentleman from Oregon [Mr. HAWLEY]. As I caught the substance of the amendment it provides that the Government shall do certain work which the people there have undertaken to do. When we adopted the project, we adopted it subject to certain conditions set forth in the project, which this amendment would nullify. That part of the report reads as follows:

In view of all the facts the board believes that the United States would be justified in undertaking the project at a cost of $814,000, provided the localities to be benefited contribute one-half of said sum and agree to create and maintain an effective channel between Bay City and the city of Tillamook of at least equal capacity to that authorized by the existing project, which provides for a depth of 9 feet at mean high water.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Oregon.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Snake River, Oreg., Wash., and Idaho: Continuing improvement and for maintenance from the mouth to Pittsburg Landing, Idaho, $25,000.

Mr. McCRACKEN. Mr. Chairman, I ask unanimous consent at this point to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. In the river and harbor act of 1910 there was a provision for the purchase of a canal and locks around Willamette Falls, Oreg., and the Secretary of War was instructed to enter into negotiations looking to the purchase of that canal. That was for the purpose of assisting navigation in the vicinity of Oregon City, as I understand it. I would like to know from some member of the committee whether the War Department executed that commission intrusted to it by law in 1910?

Mr. SPARKMAN. I did not just catch the question.

Mr. MOORE of Pennsylvania. Has the War Department entered into negotiation for the purchase of existing canals and locks at Willamette Falls in the State of Oregon?

Mr. HAWLEY. Will the gentleman yield to me?

Mr. MOORE of Pennsylvania. I will.

Mr. HAWLEY. The Government has finally obtained title to the locks at Oregon City. The State of Oregon contributed $300,000 toward the purchase of the locks and the Government an equal amount.

Mr. MOORE of Pennsylvania. Will the gentleman simply state in my time what the object of this purchase was?

Mr. HAWLEY. The locks before had been owned by a private company that charged toll—the Portland Railway, Light & Power Co.

Mr. MOORE of Pennsylvania. How much did the Government contribute?

Mr. HAWLEY. Three hundred thousand dollars, and the State contributed $300,000. All of it is not expended.

Mr. MOORE of Pennsylvania. The Government participated in the purchase of this canal?

Mr. HAWLEY. On equal terms with the State.

Mr. MOORE of Pennsylvania. What has been done since the canal was purchased?

Mr. HAWLEY. There were many difficulties in the way of securing a title, and the title was only secured this last summer, and the Government intends to make some alterations in the locks to accommodate the traffic. The gate of the lower lock is too near the surface of the water to accommodate larger traffic.

Mr. MOORE of Pennsylvania. Can the gentleman explain whether tolls were charged on this canal originally?

Mr. HAWLEY. All the time until the Government took it over.

Mr. MOORE of Pennsylvania. And that impeded transportation, of course?

Mr. HAWLEY. It was a burden on transportation.

Mr. MOORE of Pennsylvania. May I ask whether the locks are now free to everybody?

Mr. HAWLEY. They are now free to everybody.

Mr. MOORE of Pennsylvania. And this is accomplished by the Government entering into a transaction to pay $375,000?

Mr. HAWLEY. Three hundred thousand dollars, and the State pay $300,000.

Mr. MOORE of Pennsylvania. That was the proportion?

Mr. HAWLEY. Yes. There is a plan, as I understand it, for the Government to make some alterations and to make some changes in the locks the better to accommodate the transportation on the river.

Mr. MOORE of Pennsylvania. What was the tonnage the canal was doing under private ownership?

Mr. HAWLEY. I do not have the figures here at this moment.

Mr. MOORE of Pennsylvania. There was commerce on the canal?

Mr. HAWLEY. There was commerce on the river above the locks to and from way points and to Portland. And at the locks at Oregon City, on the west side, where the locks are located, there were three large paper mills that used the locks all the time.

Mr. MOORE of Pennsylvania. In your judgment, then, it is in the interest of navigation?

Mr. HAWLEY. Yes.

Mr. MOORE of Pennsylvania. And beneficial to the people?

Mr. HAWLEY. Very beneficial.

The Clerk read as follows:

Channel west of Swan Island, Kenebec River, Me., near the town of Richmond.

The Clerk read as follows:

Columbia and Lower Willamette Rivers below Portland, Oreg.: Continuing improvement and for maintenance, $360,000.

With a committee amendment, as follows:

Page 32, line 17, after the word "below," insert the words "Vancouver, Wash., and."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Florida [Mr. SPARKMAN].

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Mouth of Columbia River, Oreg. and Wash.: Continuing improvement and for maintenance, $1,200,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Pennsylvania moves to strike out the last word.

Mr. MOORE of Pennsylvania. Mr. Chairman, this is one of the greatest waterway improvements now under way. The appropriation here is for $1,200,000 for continuing the improvement and maintenance of the mouth of the Columbia River. I presume that is work around the jetties?

Mr. HAWLEY. It is for the completion of the north jetty.

Mr. MOORE of Pennsylvania. The completion of the north jetty?

Mr. HAWLEY. Yes, sir.

Mr. MOORE of Pennsylvania. Does this mean that this is the end of the work on the jetties?

Mr. HAWLEY. One other appropriation may be needed.

Mr. MOORE of Pennsylvania. How much has been appropriated thus far on the jetties exclusively, if the gentleman can tell?

Mr. HAWLEY. The amount expended already for the construction is about $13,000,000, for the work done at the mouth of the river, including the north and south jetties.

Mr. JOHNSON of Washington. About $12,000,000.

Mr. MOORE of Pennsylvania. May I ask where the commercial statistics are taken for the Columbia River? Are they taken at Astoria or at Portland?

Mr. HAWLEY. I think they are taken at both places, but most of the commerce, the greater bulk of commerce, arises at Portland.

Mr. MOORE of Pennsylvania. Is the tonnage in excess of 4,000,000 for Columbia and its tributaries?

Mr. JOHNSON of Washington. If the gentleman will permit me, I will answer yes. There are 500 ocean-going ships.

Mr. HAWLEY. The tonnage is over 8,000,000 tons.

Mr. MOORE of Pennsylvania. Then it has increased considerably in recent years?

Mr. HAWLEY. Yes; it is more than 8,000,000 tons annually.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield there?

Mr. MOORE of Pennsylvania. Yes.

Mr. SPARKMAN. I am not sure, nor are the engineers sure, that it is going to take another appropriation like this to finish the project. Indeed, they are hopeful that they will get through with it before the appropriation provided for in this bill shall have been expended. I will say, further, that I saw that harbor last year, and I was very much pleased with the work the engineers are doing there. I had been led to believe it would be difficult to complete that channel, because of silt which it was said the stream carried.

Mr. MOORE of Pennsylvania. Carrying away a part of the jetties at times?

Mr. SPARKMAN. But after going and looking at it and talking with the engineers, I became convinced it was entirely feasible, and that they would complete it perhaps within the estimated cost.

Mr. MOORE of Pennsylvania. The estimated tonnage, as given here, together with the expenditures already made upon the jetties does not, of course, comprehend the entire Columbia River and its tributaries?

Mr. SPARKMAN. Oh, no.

Mr. MOORE of Pennsylvania. Other improvements are being made along the line, as at Celilo Falls?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. It is an important project, and I am glad to see it is making such progress.

Mr. CULLOP. Mr. Chairman, I desire to correct the statement, made inadvertently, no doubt, by the distinguished gentleman from Florida [Mr. CLARK], chairman of the Committee on Public Buildings and Grounds, last Friday on the floor of the House, in reference to the city of Bicknell, Ind., a flourishing city in my district. The gentleman from Florida gave the population as 2,794. He doubtless was misled by the census report of 1910, which gives the population at that time as 2,794. But it is now a city of more than 9,000 population—a thriving, enterprising city. It is located in the heart of the great coal fields of Indiana. In this locality there are three veins of coal within less than 500 feet of the surface of the earth, aggregating in thickness 21 feet, and some of the largest mines in Indiana—aye, in the Mississippi Valley—are found at the city of Bicknell. The average monthly pay roll is $250,000 for labor in its mines, aggregating $3,000,000 per year for wages in this industry alone. It is destined to be one of the most important business places in southwestern Indiana. The coal is of a superior quality, with an almost inexhaustible supply. Its growth has been rapid and substantial, and it is attracting capital desirous of profitable investment. The Pennsylvania Railroad Co., at this city, is now putting in yardage costing more than $300,000, to handle the great amount of traffic furnished at this important business point.

Eastern and northern capital is now arranging to erect a power plant near the city of Bicknell, costing approximately $1,000,000, for the purpose of producing and transmitting power to the various mines and manufacturing plants in that and adjacent localities. Its growth and enterprise has been marvelous. Its buildings, both business and residential, are substantial and of beautiful design. There is not a vacant residence or business house in this beautiful Indiana city of more than 9,000 population. True it is, as the gentleman from Florida [Mr. CLARK] stated last Friday, in 1910 it had a population of only 2,794, and if he had consulted the census returns of 1900 he would have found at that time it had a population of less than 600. It has prospered in the last six years, and its outlook for the future is very promising, which is most gratifying to its citizens and friends. There is no place in the great Mississippi Valley where coal of such a superior quality can be mined as profitably as in this locality.

Again, the distinguished gentleman from Florida [Mr. CLARK] is mistaken when he states its postal receipts are only a little more than $6,000 per year. Its postal receipts this fiscal year, I am reliably informed by a gentleman in the Post Office Department, will exceed $10,000; and on the 1st day of July of this year it is to be advanced to a second-class office. I am sure the gentleman from Florida has not investigated its present condition or he would not have made the statement he did, as I am sure he would not knowingly do this thrifty and enterprising city or its citizens an injustice. I believe he desires to be fair and just to all.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. CULLOP. I regret I have not the time to yield.

Mr. SWITZER. Does the gentleman know that the Treasury Department will not acquire the site, even after the appropriation is made?

Mr. CULLOP. No; I do not know that. But I will inform the gentleman that this place comes squarely within the rule laid down by the Treasury Department for public buildings, and the conditions there are such as to require one, both from a business and economical standpoint.

Mr. SWITZER. I have one, too, but I do not get a site or an appropriation for it.

Mr. CULLOP. Then the gentleman is in no position to complain if he has been unable to get an appropriation. He could not expect the department to purchase a site before he secures an authorization. The post office to which I refer is situated in most undesirable quarters, wholly inadequate to accommodate the business of the same, and unsuitable for the work of the employees. Rents are very high, because there is not a vacant business or dwelling house in the city. It is almost impossible to rent a suitable place for the office at a price the Government is authorized to pay. The quarters now occupied by the office are altogether unsuitable for the office in a city of its size and importance. It deserves a more commodious and more appropriate place for the conduct of the business of the Government than can now be secured because of the congested condition of that city, and good business methods require a better and safer building for the office. Private business will pay a better rental for suitable quarters than the Government will pay, and hence the difficulty to procure a proper building in a suitable locality in the city for the office. The city now has free delivery. I am quite sure conditions at this place are such as to comply with the rule promulgated by the Treasury Department to authorize the purchase of a site and the erection of a building, and it would be a good investment for the Government to do so. The gentleman from Indiana was fully within the rule laid down by the department when he introduced his bill for this building, and his proposition in this case is a meritorious one.

Mr. Chairman, repeatedly our Republican friends on that side of the aisle during the consideration of this bill have proclaimed their opposition to the measure because the Government did not have the money to pay the expense of the proposed improvements. Not content with howling calamity about business conditions, they now add to it a plea of national poverty, undertaking to discredit our financial standing before the entire world. This is un-American. The pride of every American should be above such petty partisan politics. Sir, this is not only the most powerful Nation in the world, but it is also the richest. Our national wealth amounts to more than $225,000,000,000. We are as rich as England, Germany, and France combined, ten times as rich as Italy, eight times as rich as Austria, and four times as rich as France. We are abundantly able to pay for any obligation we may create and thoroughly responsible for all obligations that we may incur. In addition to that we are enjoying the most marvelous era of prosperity the country has ever known, and our people are happy and contented. We are not poverty stricken, as Republican calamity howlers would have the people believe. The people have no patience with the men who are talking about poverty, distress, and calamity.

We are the only great nation in the world enjoying the blessings of peace, while others are torn asunder by desolating war, exhausting their treasure and killing their producers, our Nation is reaping the golden harvests of peace, capturing the commerce of the world, and increasing both the individual and national wealth, the great blessing resulting from our wise domestic and foreign policies. Fortunate, indeed, is our Nation at this time, while the world is passing through the most distressing crisis known throughout the annals of time. The people are wiser, much wiser, than many gentlemen who are talking calamity, poverty, and distress are aware, and they have no patience with such petty partisan politics.

This Nation, with its great resources, its unparalleled wealth, is abundantly able to pay every obligation we shall create without distressing its people or impairing its credit. It is not the question of our ability to pay or to raise the revenue, but the material question is whether the expenditures are provident and what obligations we should incur. This is the crux of the whole matter, and to this proposition we should concentrate our best efforts and use our best judgment. It should then, therefore, resolve itself into purely a business matter, whether we should adopt this or that project. If any are not good business

projects, then they should be rejected and the people not burdened to pay for them. This is the important question, the one for the solution of which we will be held responsible.

Again, I say it is not a sufficient answer to say somebody else at some time in the past did this or that or was going to do so and so. That is no defense for what we are doing now. There should be a better answer, one giving the facts concerning the subject under consideration, so that all may know and understand the basis for the action. People ask for nothing more and want nothing less. They are entitled to have such information, and it should be furnished for their satisfaction. It is an old adage that "two wrongs never make a right," and because somebody else when in power made appropriations for similar projects, which were without merit, for which there was no adequate return, will not suffice as a justification for the commission of a wrong here. We ought to profit by the experience and avoid the pitfall into which they were plunged. If they blundered, made mistakes, we should not repeat them, but avoid them.

The CHAIRMAN. The pro forma amendment will be considered as withdrawn, and the Clerk will read.

The Clerk read as follows:

Grays River, Wash.: For maintenance, $500.

Mr. JOHNSON of Washington. Mr. Chairman, I offer an amendment, which I send to the Clerk's desk.

The CHAIRMAN. The gentleman from Washington offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. JOHNSON of Washington: Page 33, after line 8, insert a new paragraph, as follows:

"Improving Willapa Harbor and River, Wash., in accordance with the report submitted in House Document No. 706, Sixty-third Congress, second session, and subject to the conditions set forth in said document, $100,000: *Provided*, That the Secretary of War may enter into a contract for such work and materials as may be necessary to prosecute the said project, not to exceed in the aggregate $247,950."

Mr. JOHNSON of Washington. Mr. Chairman, I present this paragraph calling for an appropriation for the improvement of Willapa Harbor and the river of that name because the identical item was in the rivers and harbors bill which passed the last House, but which failed to become a law. The merits of the project are fully set forth in the document to which the paragraph refers. Under the rules which the Committee on Rivers and Harbors act, the improvement of Willapa Harbor must be treated as a new project. Therefore that committee refuses to add the item to this bill, and points to the specially adopted rule for this bill, which provides that no new projects shall be added to it. The committee broke its own rule when it added the New York item, concerning which there was so much consideration in the opening discussion of this measure.

The people of Raymond and South Bend, the cities on Willapa Harbor, are entitled to have their project voted on, in spite of the committee's rule. They should not be asked to wait longer for the commencement of work on their harbor. Work was commenced long ago on the various harbors of the North Pacific, and work continues on most of them. The Willapa Harbor ranks well up with any of them, not only as to its depth of water, its safety, and its tonnage, but is fully entitled to improvement by the Government engineers on the authority of Congress in accordance with the paragraph I have submitted and on which I ask a vote.

Mr. HUMPHREY of Washington. Mr. Chairman, I want to say in regard to this project that Willapa Harbor is one of the chief harbors of the Pacific Northwest. The amount of traffic there last year was over $5,000,000. It is a terminus of the Northern Pacific Railroad, and the Milwaukee Railroad has also recently reached this harbor. There is more standing timber tributary to Willapa Harbor than to any other seaport in the United States. I think the policy of the committee in continuing to improve some projects that to say the least are questionable, while great projects like this go unimproved, is a mistake. This is for a 24-foot project, and all the traffic that I have mentioned is foreign traffic. With the shoaling up of this bay that traffic must cease. This project is of highest merit and should go into this bill.

Mr. SPARKMAN. Mr. Chairman, I hope this amendment will not prevail. I believe it is true that it was inserted in the bill of 1914, along with 60 or 70 other projects which have been left out of this bill. I am further under the impression, without committing myself to it right now, that it is a good project that perhaps ought to be adopted, but we can not undertake to care for it without adopting a great many others equally as meritorious.

The CHAIRMAN. The question is on the amendment of the gentleman from Washington [Mr. JOHNSON].

The amendment was rejected.

Mr. HUMPHREY of Washington. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Washington offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. HUMPHREY of Washington: Page 33, after line 8, insert:

"Improving Skagit River, Wash.: Completing improvement at Skagit City Bar in accordance with the recommendation of the Chief of Engineers, contained in House Document No. 935, Sixty-third Congress, second session, $30,000."

Mr. HUMPHREY of Washington. Mr. Chairman, there could not be a better illustration of what is being done in this bill. The Skagit River is the largest river that flows into Puget Sound. Last year the traffic on that river amounted to about $5,500,000. This bar is forming only a few miles from the mouth of the river, and, unless something is done, in the course of another year it is liable to obstruct, if not entirely stop, the navigation on that stream. Here is a river that has about five times as much traffic as the Missouri. A little while ago we gave $1,500,000 to the Missouri, but here is a river that carries five times as much traffic, which is liable to be entirely stopped for the want of an appropriation of $30,000, which the committee have refused to incorporate in this bill because it is a new project.

It shows where we are going under this rule of continuing to complete projects, some of them that are not worthy of completion, and refusing to adopt new and worthy projects of this character. Take it in this particular instance, where $30,000 is needed for a five and a half millions of traffic, and evidence showing that there is an actual saving on freight and passengers of $37,501. That is not speculative, but it is according to the evidence submitted in the report. I offer this amendment to call attention once more to the policy we are pursuing. I was one who voted to take on new projects. The reason was that there were several others of like character to this, where, by appropriating a few thousand dollars, you can accommodate a tremendous traffic; but instead of that we let the traffic suffer, or perhaps to be entirely destroyed, while we appropriate millions for rivers where they have very little traffic and where there would be no damage to the traffic if we did not continue to improve it.

I trust that this is the last bill of this character to be reported to the House; that unless we can take on new projects and appropriate where the traffic demands it, that we will stop having a river and harbor appropriation bill entirely.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Coquille River, Oreg.: For maintenance, $6,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. We have passed an item of $348,000 for a waterway connecting Lakes Union and Washington. It is for continuing the improvement. I find in the report that there was a local cooperation on this project.

Mr. SPARKMAN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. SPARKMAN. Does the gentleman ask to go back to that item?

Mr. MOORE of Pennsylvania. There were reasons why I did not make the motion at the time we passed it, but I have no desire to go back to the item. I am merely discussing the State of Washington improvements before we pass on to Hawaii.

The report of the committee shows that there was a local cooperation on this project which was to conpect Lakes Union and Washington. The contemplated cost was over $3,300,000, and there was local cooperation to this extent, as the report states:

The right of way and the flowage rights were secured by the United States by King County and accepted as satisfactory by the Secretary of War June 20, 1909.

I want to ask whether there was a canal connecting Lake Union and Lake Washington before the project was approved?

Mr. HUMPHREY of Washington. Only a very small canal, but it was recognized by the Government as navigable and was used only to run logs.

Mr. MOORE of Pennsylvania. Lake Union is above Lake Washington?

Mr. HUMPHREY of Washington. No; Lake Washington is above Lake Union and Puget Sound is below Lake Union. Lake Washington is 8 feet above Lake Union and Lake Union is 8 feet above Puget Sound.

Mr. MOORE of Pennsylvania. A kind of water terrace. The idea was to connect Lake Washington with Puget Sound?

Mr. HUMPHREY of Washington. Yes; this appropriation completes this great work. It has the greatest lock on the North American Continent outside of those at Panama.

Mr. MOORE of Pennsylvania. This appropriation of $348,000 will finish up the work?

Mr. HUMPHREY of Washington. Yes; and what the Government has done is to furnish the locks. The local authorities furnished the right of way and did the excavating and the Government has furnished the lock and excavated below the lock.

Mr. MOORE of Pennsylvania. Did any Federal money go into the purchase of the canal?

Mr. HUMPHREY of Washington. No.

Mr. MOORE of Pennsylvania. I want to commend the gentleman from Washington. He was on the committee at the time the project was inaugurated, and he has stood steadfastly by it. I have been over the two lakes and Puget Sound. It is a great project. I also agree with the gentleman from Washington that there has been a little too much hesitancy on the part of the Rivers and Harbors Committee in not taking on new projects in this bill.

Mr. MADDEN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. MADDEN. Does the gentleman think there is any prospect in the near future of anybody connected with the Dismal Swamp Canal or the Albemarle Canal turning over any property that they own to the Government of the United States without expense?

Mr. MOORE of Pennsylvania. I accept the gentleman's remarks as facetious. The gentleman knows why I am asking these questions.

Mr. MADDEN. They are serious.

Mr. MOORE of Pennsylvania. There is no reason why one canal should be taken over more than another, if they have equal merit.

The Clerk read as follows:

Harbor at San Juan, P. R.: For maintenanace, $10,000.

Mr. COADY. Mr. Chairman, I rise for the purpose of calling the attention of the House to the importance of the bill (H. R. 12643) introduced by my colleague [Mr. TALBOTT] on March 3, 1916, and which provides for an appropriation of $125,000 for the dredging of Curtis Bay Channel, Baltimore Harbor, to a depth of 35 feet from the Patapsco River Channel to and into Curtis Bay. This channel is now 30 feet deep and 250 feet wide, and the adoption of the Talbott bill and the expenditure of the amount of money it provides would give it an additional depth of 5 feet, making altogether 35 feet. This would give the Curtis Bay Channel the same depth of the Patapsco Channel, with which it connects at a point a few miles below the main harbor of Baltimore, and would enable large ships coming into our port to use this bay as well as the Patapsco River.

Curtis Bay is commercially a part of Baltimore. The large commercial and manufacturing plants that are located on it, and they are many, are operated and financed by Baltimore business men. The Baltimore & Ohio Railroad Co. has a large coal pier at the head of this bay that is capable of loading 3,000,000 tons of coal annually on vessels. This railroad company has another such pier in course of erection which when completed will cost $1,500,000. The Pennsylvania Railroad Co. is said to be seeking a site on these waters on which to erect a large terminal station for the handling of freight.

An increased commercial development will surely follow these improvements. No better place than Curtis Bay for loading naval colliers exists along the Atlantic seaboard.

It is close to the coal fields of Western Maryland and West Virginia, and the Baltimore & Ohio is one of the largest coal-carrying roads in the United States.

The collier *Newton* was loaded at one of these piers with 7,500 tons of coal in three and three-fourths hours.

Real preparedness includes proper facilities for the rapid coaling of the colliers that supply our ships of war with fuel.

The deepening of this channel should be a part of our preparedness program. With only 30 feet of water there may be danger of the grounding of one of these big colliers when loaded to its full capacity.

Baltimore city has expended large sums of money in the work of improving its main harbor and has cooperated with the United States in providing approaches to the channels. Up to this year of 1916 it spent over $11,700,000 for harbor improvements and it is now spending $250,000 on its inner harbor. Last year our tonnage was over 13,500,000 tons. We have 34 steamboat and steamship lines, and over 13,000 boats engaged in the bay and coastwise trade.

This project is recommended by United States engineers. An Acting Secretary of the Navy has recommended it and has called attention to its superior advantages as a coaling place for our war vessels. He has said that this improvement would be of the greatest value to the Navy in admitting the latest type of naval colliers to the railroad piers for loading coal; that Curtis Bay is one of the chief loading ports for the Navy, and it might easily become a valuable asset in time of war.

Col. Beach, of the United States Engineers, has said that this contemplated improvement is of more than local importance and it affects the whole country in its influence upon the supply of coal for the Navy.

This improvement is bound to be of great benefit to our commerce, an aid to navigation, and a great advantage to our Navy in the coaling of its ships.

The Clerk read as follows:

SEC. 2. That for examinations, surveys, and contingencies for rivers and harbors for which there may be no special appropriation, the sum of $250,000 is hereby appropriated: *Provided*, That no preliminary examination, survey, project, or estimate for new works other than those designated in this or some prior act or joint resolution shall be made: *Provided further*, That after the regular or formal reports made as required by law on any examination, survey, project, or work under way or proposed are submitted no supplemental or additional report or estimate shall be made unless ordered by a concurrent resolution of Congress: *And provided further*, That the Government shall not be deemed to have entered upon any project for the improvement of any waterway or harbor mentioned in this act until funds for the commencement of the proposed work shall have been actually appropriated by law.

Mr. TREADWAY. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amendment offered by Mr. TREADWAY: Page 34, line 4, after the word "law," insert:

"The Secretary of War is hereby authorized and directed to cause reexaminations and surveys to be made upon such projects as are now receiving allotments for maintenance or improvement which were adopted more than 10 years ago. A report shall be made to Congress which shall contain the recommendations of the engineers whether or not in their judgment the projects shall be continued and whether reasons for their original adoption still apply."

Mr. TREADWAY. Mr. Chairman, it seems to me that the adoption of this amendment would in a way do away with a good deal of criticism that we have heard in the debate on this bill. We have adopted in years gone by projects which later on have not appeared to have as much merit and to be of as great benefit to the waterways of the country as they appeared to be at the time of their adoption. There are projects for which we have voted money in the course of the reading of this bill adopted many years ago. One of the objections I have had to the lump-sum appropriation scheme, which has been the method for the appropriations in the last two bills, is the fact that the engineers seem to regard as instructions from Congress any adopted project, no matter what the merits might be at the time they were allotted money for it and no matter what the opinion of Congress might be toward the project at the present time.

It seems to me that we ought to have further information on which we can base our opinions in the future as to the relative merits of projects before us. It is in no sense a criticism of the committee; it is in no sense a criticism of the method of the making up of the bill. It is simply a means by which we can secure the very latest opinions of the engineers as to the merits of the projects that may be before us looking for appropriations for improvement or maintenance.

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

Mr. TREADWAY. Yes.

Mr. BORLAND. Does the gentleman mean that the reexamination ought to be from an engineering standpoint or from a commercial standpoint?

Mr. TREADWAY. Of course, the engineers express to us only their views from an engineering standpoint. They do not pretend to express any commercial views.

Mr. BORLAND. Oh, I think that would not be the effect of the gentleman's amendment.

Mr. TREADWAY. We ask for the opinion of the Board of Engineers from their standpoint.

Mr. BORLAND. I want to call the attention of the gentleman to the effect that a specific provision was put in the river and harbor act of last year requiring the reexamination of certain projects; and the engineer reexamined the Missouri River, and the report was that from an engineering standpoint it is sound, but the engineer reported against this on commercial grounds, without holding any hearings, without calling anyone before him, and without consulting any shipper in the district.

The bill was passed on the 4th of March and he prepared his report on the 22d of April, and it turned out on hearing that his report as to commercial conditions was absolutely valueless. He reported that the engineering plan was sound. Which kind of a report does the gentleman expect to get?

Mr. TREADWAY. I desire from the engineers a report on all projects now before Congress that were adopted 10 years ago. In recent years, the gentleman well knows, no project has been adopted which the engineers have not first recommended.

Mr. BORLAND. Certainly.

Mr. TREADWAY. I did not attempt to specify as to what kind of a recommendation they should make, nor do I desire to make particular reference to the gentleman's project on the Missouri River. It is nothing in the nature of a particular item to which I refer. I have no idea when the Missouri River project was adopted. As one member of the committee I find that we are in a way very largely in the dark as to the merits of projects at the present time, and I think it is no more than right that Congress should have a revised opinion from the Board of Engineers as to the merits of projects for which we are asked to appropriate money.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. SPARKMAN. Mr. Chairman, I hope that this amendment will not prevail, because it is totally unnecessary. Under the provisions of section 14 in the river and harbor act of 1915 the engineers are going on and doing exactly what the gentleman's amendment would provide for. As I caught the drift of the amendment, he has confined it to some period anterior to 10 years from this date. The provision in the 1915 act does not curtail the powers or duties of the engineers in any particular in the matter of such examinations, but gives them full power in that regard, and they are going ahead under that provision examining all these projects and are making reports from time to time, so that this amendment is wholly unnecessary.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts [Mr. TREADWAY].

Mr. BORLAND. Mr. Chairman, I would like a minute or two.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this amendment close in three minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BORLAND. I thoroughly agree with the gentleman from Massachusetts in the idea that there ought to be periodical reports of the engineers as to the engineering features of the projects. That is what the engineers are supposed to look after. Then if it turns out that Congress is proceeding on a false basis and the engineering feature of it is not feasible, the engineers ought to stop the expenditure of money. But it seems to me that the River and Harbor Committee ought to have some means, and I would rather assume that they did, of holding hearings on each project before they bring in a bill to determine whether a continued improvement is necessary from a commercial standpoint. It seems to me that particular phase of the question is peculiarly within the consideration of the committee. I believe they should hold hearings as to whether a particular project ought to be appropriated for. That is not a question within the jurisdiction of the engineers at all. The engineers determine whether the project is feasible from an engineering standpoint, and if it turns out that it is not, they ought to make report, whether it is a 10-year-old project or a 1-year-old project, that that project ought to be discontinued or modified.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts [Mr. TREADWAY].

The amendment was rejected.

Mr. SMITH of Minnesota. Mr. Chairman, I move to strike out the last word. I am going to vote for this bill, and I wish to make a few observations in reference to the general policy that is pursued in the improvement of our inland waterways.

Mr. SPARKMAN. How much time does the gentleman want?

Mr. SMITH of Minnesota. About seven minutes.

Mr. SPARKMAN. Well, Mr. Chairman, I ask unanimous consent that all debate close in eight minutes, and I reserve one minute for myself.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. SMITH of Minnesota. Mr. Chairman, as to the high dam at Minneapolis, that project was commenced 22 years ago through the efforts of Senator Washburn, who is long since dead. It was nursed along by Congressman Fletcher, and he has been out of Congress for 10 years. It was assisted by Congressman Nye, who was here for 6 years, and I have been here for 4 years. Twenty-two years have passed since this project was undertaken. It was estimated at that time that it would cost only $1,166,000. But we have spent $2,200,000 on the project and still we have only 87½ per cent of it perfected. Portions of the dam have gone out twice, and there is great disappointment among the friends of this dam because it did not go out this year. However, it came nearly going out.

I have no criticism of the Committee on Rivers and Harbors. I simply make these observations for the purpose of calling attention to matters in connection with our system of improving inland waters. We turn over to the Board of Engineers the question of determining whether or not these projects are feasible, and after the Board of Engineers determine they are feasible, we turn them over to the Board of Engineers to be constructed, and after the board has taken on the work they come before Congress year after year for appropriations to continue the work, and Congress grants the requests and recommendations of the engineers as a matter of course, until, in my locality, the cost of the project has more than doubled the original estimates.

There are no engineering features connected with the high dam at Minneapolis that makes it difficult. It is simply a dam erected between high stone walls. Each year for the last three years the people of this locality have been given to understand that the dam would be completed. I know there are institutions in my community that wish this dam were never built. For example, the Minneapolis General Electric Co., which owns five other dams in this community, is not ready to take it over. The longer it is delayed the better so far as this company is concerned. They own three dams that are undeveloped, and they are not ready for this dam; and so year after year we go on building this dam, letting the water wash it out and then replacing it. It is a "pork barrel" bill, they say, but for whom? For the railroads of this country? For the hydroelectric companies in this country? Certainly not for the people of my community, because every dollar you put into that dam, whether the power is leased to the General Electric Co. or whether it shall belong to the State of Minnesota and the Twin Cities, the people of that community will have to pay dividends, or rent, on that dollar for all time to come, and the General Government will derive no benefit, because it has parted with its dollar. Why this increased cost, and why this delay? That is the question for the committee to ascertain. About 10 miles farther up the Mississippi River the Minneapolis General Electric Co., within the last three years, erected a dam that develops practically the same amount of power that this dam develops. It only took the company a little over a year to erect this private dam.

They will have to pay a rental that will yield a fair return on the cost of the dam, and the more you can make it cost the more we will have to pay. Do you think my people are anxious that year after year their Congressmen shall bring home "pork" to them in the shape of an item in the river and harbor bill? Why, gentlemen, my constituents are not so foolish as that; your constituents are not so foolish as that.

I say that the time has come when the Committee on Rivers and Harbors of this House that has worked so hard and so nobly for these projects should ascertain why these projects are not completed; why they are delayed year after year. Who is going to put his money into navigation equipment until he is certain that the rivers are to be made navigable and kept so? Why, the debate that has taken place in this House during the last week would scare any man who had a dollar to invest and who wanted to go into the navigation business.

I know of no better way to destroy the hope of ever getting inland waterway navigation than to continue the performance that we have had during this and the preceding Congress over the river and harbor bill.

These are the observations that I want to call to the attention of the House. I believe in inland waterways. I believe they are necessary to the transportation system of this country. I know that the Committee on Rivers and Harbors has worked hard in behalf of these projects, but it is time that somebody be jacked up; it is time that these projects should be brought to completion.

Gentlemen, I am not for public ownership. I believe that wherever possible private enterprise should be given an opportunity to develop the great industries of the country, but here we have a situation in which private enterprise has become highly monopolized, and every move that is made by the public seems to be directed toward helping that monopoly to get a still firmer hold upon the rights of the public. [Applause.]

The CHAIRMAN. The time of the gentleman from Minnesota has expired. The Clerk will read.

The Clerk read as follows:

Buzzards Bay, Mass., at its upper end, with a view to providing additional anchorage area and improving the approaches to the Cape Cod Canal, in so far as it may be the duty of the United States to improve the same.

Mr. BURGESS. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BURGESS: Page 34, line 18, after the paragraph ending with the word "same," insert:

"Quinnipiac River, Conn., from New Haven Harbor to Meriden.

"Naugatuck River, Conn., between the head of navigation at Derby and Waterbury, Conn., with a view to the construction of a barge canal."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

Mr. COOPER of Wisconsin. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last word.

Mr. COOPER of Wisconsin. Mr. Chairman, in view of the criticism directed against certain waterways provided for in this bill, each of which has a tonnage of more than 100,000 tons a year, I desire to call attention to what Mr. Burton, chairman of the Committee on Rivers and Harbors—afterwards Senator—said in the House on March 17, 1902:

I think that it will be conceded by all that when a waterway has a tonnage of over 100,000 per annum it is worthy of attention and of the fostering care of the Government.

I want also to remind gentlemen that there has been criticism because the Government is improving some of the short waterways, called "creeks." Here is what Senator Burton said March 17, 1902, concerning this argument:

The Interstate Commerce Commission has prepared, at my request, a statement of the tonnage on certain of the minor railroads of the country. I selected at random 16 railways, the shortest of which has a mileage of 11.78 miles and the longest of 253.7 miles, and found that of these 8 had a tonnage of less than 100,000 per annum, varying from 3,310 tons on one railway having a length of 44 miles to 59,146 tons on one having a mileage of 86 miles, and if we select the one having the largest tonnage on a short mileage, 98,000 tons on a railroad having a mileage of 11.78 miles.

Yet it will appear that each one of these railroads is capitalized for a very considerable sum. The following is a list of them:

Statement of mileage and tonnage of certain roads for the year ending June 30, 1901.

Name of road.	Miles operated.	Tons carried.	Tons carried 1 mile.
Clarendon & Pittsford R. R.	11.78	98,586	443,637
Buffalo, Attica & Arcade R. R.	28	31,620	342,492
Queen Anne's R. R.	67	29,831	825,231
Dayton, Lebanon & Western R. R.	23	62,120	836,300
Birmingham & Atlantic R. R.	42.46	62,005	1,165,884
Nashville & Knoxville R. R.	86.80	59,146	1,951,818
Leavenworth & Topeka Ry.	56.12	12,027	321,852
Florida Midland R. R.	44	3,310	46,721
Total		358,645	5,933,935

So that it will appear on examination that this criticism that ponds and creeks are absorbing a great share of these river and harbor bills is absolutely without foundation.

He gives a list of the tonnage of some of these creeks: Raccoon Creek, N. J., 172,000 tons; Mantua Creek, N. J., 188,000 tons; Cooper Creek, 230,138 tons; Duck Creek, Del., 348,728 tons; East Chester Creek, N. Y., 300,000 tons.

Mr. Chairman, early during this debate I called attention to what I thought was an error in the minority report of my friend from Wisconsin [Mr. FREAR]. He says in the minority report, and the House will remember it——

The CHAIRMAN. The time of the gentleman has expired.

Mr. COOPER of Wisconsin. I ask unanimous consent to continue for five minutes.

The CHAIRMAN. The gentleman asks unanimous consent to continue for five minutes. Is there objection?

Mr. SPARKMAN. I ask unanimous consent that debate on this paragraph end in five minutes.

Mr. FREAR. Will the gentleman make it five minutes more? I have not answered before——

Mr. COOPER of Wisconsin. Then I would like to have 10 minutes, and give the gentleman 10.

Mr. FREAR. All right. That is perfectly satisfactory, if the House wants it; but I object otherwise.

Mr. SPARKMAN. I ask unanimous consent for five minutes to be used by the gentleman from Wisconsin [Mr. COOPER] and five minutes to be used by the gentleman from Wisconsin [Mr. FREAR].

The CHAIRMAN. Is there objection?

There was no objection.

Mr. COOPER of Wisconsin. The gentleman from Wisconsin [Mr. FREAR] said in his report that we had expended more than $850,000,000 for our waterways. The gentleman corrected me when I called attention to that statement by saying that what he meant was that that amount had been appropriated instead of expended. But in his speech of January 13, 1916, made some weeks before the minority report was filed, he said:

Mr. Speaker, we have paid out of the Government Treasury over $850,000,000 for our waterways.

The gentleman's language in the speech was "paid out of the Government Treasury." That shows what the gentleman understood when in his report he used the word "expenditure." The gentleman in his minority report asks the specific question:

What policy has governed the expenditure of $850,000,000 on waterways since 1875?

There can be no mistake about the the meaning of the expression—

We have paid out of the Government Treasury $850,000,000—

Nor about the meaning of the question—

What policy has governed the expenditure of $850,000,000 on our waterways since 1875?

Now, I have a statement which I procured at the office of the Chief of Engineers from Col. Taylor, who examined the records and gave me these figures:

The amount expended prior to June 30, 1875, was $54,570,505; the amount on hand January 1, 1916, unexpended money appropriated, $38,833,721. Together these make an aggregate of $93,404,226 less than the amount of money which this minority report said had been expended between 1875 and 1916. In other words, when the gentleman in his speech said that we had "paid out of the Treasury" $850,000,000, and in his report that we had "expended" the same amount since 1875, he made an error, according to the figures of the War Department, of more than $93,000,000.

I merely called attention to that because I thought it a mistake. And it was a mistake.

Mr. Chairman, I would like to ask the gentleman from Wisconsin who his expert, Prof. Moulton, is, and where he is a professor?

Mr. FREAR. I will answer in my own time.

Mr. COOPER of Wisconsin. I would like to have the information.

Mr. FREAR. The gentleman has not yielded to me heretofore, and I will answer him in my own time.

Mr. COOPER of Wisconsin. Well, there was no offense in that. The gentleman has repeatedly refused to yield to other persons. I do not know who this professor is except that I have his book here, in which his name is given as Harold G. Moulton. The preface is dated February, 1912, and closes with these words:

Above all, I am deeply grateful to Prof. J. Laurence Laughlin, who inspired the work and who gave his worthy criticism at every stage of the writing.

Mr. Laughlin is a professor in Chicago University.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. FREAR. Mr. Chairman, within three years we have witnessed a phenomenal growth in sentiment against reckless waste and extravagance in public affairs. Less than a decade ago Senator Aldrich stated that Government extravagance caused over $300,000,000 waste in appropriations every year. This waste is not confined to any single appropriation bill, but is found in many of the large bills that for years passed practically unchallenged.

Private claims involving comparatively insignificant amounts receive close scrutiny, but not so with large pork-barrel appropriations that generously carry something for communities all over the country. Personal or locality interest creates a barrier to thorough, careful, businesslike accounting, whether it be for waterways or nitrate plants.

It may not be time wasted to refer briefly to what has been accomplished in arousing public sentiment and official action against wasteful waterway legislation.

One hundred and thirty-three votes have been recorded against the 1916 bill and 149 in favor of the $20,000,000 substitute bill. That is great progress.

Three years ago scarcely a dozen Members arose to protest against the passage of the 1914 $43,000,000 river and harbor bill. For days all opposition had been derided, and amid laughter and ridicule the handful of Members was hopelessly outvoted and outshouted. Gentlemen with a "few unnecessary observations" created much amusement by suggesting that new Members frequently used the pork barrel as a target, but soon became convinced that the inside of the barrel is not so black as it is painted.

Three years ago the committee was gravely informed that there could be no just criticism of waterway projects, because one and all were approved by Army engineers. Army engineers are among the honor men of the Military Academy, and criticism

of an Army engineer was alleged to be a direct attack on Col. Goethals, who built the Panama Canal. That was the refrain sung in unison by those who had projects at stake in the bill.

Again three years ago the red danger flag of "railroads" was swung by those who had big appropriations hanging fire. Any man who asked for facts or pointed out waste was alleged to be acting for railways, an arch enemy of waterways. The critic of river and harbor bills was declared to be looking for notoriety or else disgruntled because he had failed to land something for his own constituency. Pork hunting was declared to be a legitimate game, practiced from time immemorial, and any man who refused to play the game must be governed by ulterior and selfish motives.

Even men of standing who believed in the old order of things denounced honest criticism as "bunk." Realizing that conditions are wrong, they said that condition is a necessary accompaniment of representative government.

Three years ago a corporal's guard was howled down when the 1914 vicious river and horbor bill sailed through the House. Two years ago the 1915 bill, submitting to public sentiment, eliminated new projects but clung to every scandalous, wasteful, old proposition wherever located. The malcontents, discontents, and opponents of waste reached about 80 votes against the bill when in 1915 it tumbled over opposition in the House, but public confidence in the infallibility of Army engineers received a body blow in 1915 through a defeat of the Muscle Shoals item contained in that bill.

APPROVALS BY ARMY ENGINEERS.

Army engineers were backed by the present Chief of Engineers, Col. Black, then chairman of the board. A proposition from Army engineers to give $18,700,000 to a private water-power company in Alabama was involved in the Muscle Shoals item. Vicious and indefensible in character, it gave a rude shock to those who had lauded the disinterestedness and independence of Army engineers. Notwithstanding it was fought for hard and long by Democratic leaders, the House began to find an objectionable smell to the bill and to many of its innocent-looking projects, and for the first time in years an item involving eventually many million dollars was struck out.

The 1916 river and harbor bill has been under discussion for many days. Formerly it was put through in a few hours, but now it receives serious consideration. True, the committee, as a whole, swings a powerful influence, but for the first time in years three members filed minority reports and voted against the bill. Two hundred and seventy projects, distributed along the coast from Portland, Me., to Portland, Oreg., and from Minnesota to Mississippi, also hold a fair percentage of votes for the bill, but no man can be oblivious to the significance of a vote reaching 159, counting 10 pairs, in favor of the $20,000,000 substitute, which would permit a saving of nearly $20,000,000, or of 143 votes, counting 10 pairs, cast squarely against the 1916 river and harbor bill.

No champion of Army engineers will discount the significance of a vote in committee by 40 majority, which directs engineers to enter into no more contracts with private dredging concerns, at a profit of more than 25 per cent above the cost of performance by a Government plant. Suspicious contracts, carrying 80 per cent profit, like those let in the Norfolk-Beaufort Waterway, will now receive careful scrutiny.

SUSPICIOUS PRIVATE DREDGING CONTRACTS.

It is hard to find any reasonable explanation for such contracts between engineers and dredgers, when official reports show, first, that $200,000 is sufficient to keep busy the Government plant now on that Norfolk-Beaufort project; and, second, that private dredgers on the same job charge the Government for the same work 80 per cent more than it costs when performed by a Government crew. Yet, on an indefensible, useless, $5,400,000 canal proposition, recommended by Army engineers, instead of asking for only $200,000 for the Government crew, the official estimate asks $1,000,000 for 1916 on that one project. More significant, the 1916 bill carries $1,000,000, of which $800,000 is for private dredging contracts, costing 80 per cent more than Government work.

Correspondence submitted to the House showed that the Dredgers' Protective Association has in the past pushed and pulled hard for river and harbor pork barrels; that confidential lists of dredgers were furnished to the National Rivers and Harbors Congress, as a basis for securing contributions to that famous $50,000,000 annual river and harbor lobby; and that these same dredgers in the past have divided up Government contracts among themselves by allotment.

With these alleged facts exposed and before the House, the Chief of Engineers, Col. Black, wrote a long letter to Chairman SPARKMAN, protesting against any limitation in dredging contracts, notwithstanding private dredgers are fattening off Government contracts all over the country to-day.

In his letter, read to the House, Col. Black says:

> At the present time it is believed that contracts are let at prices which are as low as will permit the contractors to maintain their plant and make any profit whatever.

The least said about Col. Black's judgment and opinion, the better; but it calls to mind one or two other significant expressions from the man Congress has placed in a position of unparalleled financial responsibility, from the determination of private dredging and building contracts aggregating over $30,000,000 annually to a decision of just how much shall be put into specific projects annually, or where $20,000,000 nitrate factories shall be established.

Let us ascertain how far his judgment is entitled to our confidence in view of the unlimited power he assumes and which we surrender to him. We will not forget the Muscle Shoals recommendation of $8,575,000 for enormous dams and locks, to accommodate 6,000 tons of annual "commerce." We will not forget the fact that Col. Black, the present Chief of Engineers, on page 6 of House Committee Document No. 20, Sixty-third Congress, chairman of the Board of Army Engineers, overruled Col. Riché on the subject of giving to a water-power company $1,750,000 more for flowage rights.

A PRESENT OF $1,750,000 TO A POWER COMPANY.

Let me make the statement clear as shown by that document: Col. Riché agreed to a proposition to give $8,575,000 for "navigation" to a 26-mile canal but he balked over flowage damages, and said on page 57 of Document 20:

> I recommend all lands and easements be donated to the United States and do not fear delay will result in loss to the United States or prevent the improvement of Muscle Shoals.

In response to this proposal Col. Black, then chairman of the board, in overruling Riché, significantly said, page 6:

> It would doubtless lead to considerable delay and would be apt to defeat the present opportunity to make this improvement on favorable terms.

Congress has since learned what this opportunity provided: First, the privilege of giving $8,575,000 toward navigation down among the sand hills of Alabama, to accommodate 6,000 tons of questionable annual commerce; second, the privilege of giving $1,750,000 additional for flowage rights in order to help out the same astounding proposition; and, third, the further privilege of loaning to the Muscle Shoals Hydro-Electric Power Co., J. W. Worthington, president, an additional sum of $8,375,000, payable back in installments during the course of 100 years.

It was Col. Black, now Chief of Engineers, who recommended that the Government give $18,700,000 to this indefensible project which is similar in character to the nitrate proposition contained in section 82, recently stricken from the Hay Army bill when before the House.

Congress might be disposed to overlook the letter sent by the Chief of Engineers to Congress protesting against any limitation on dredgers' contracts, notwithstanding the unsavory facts surrounding prior contracts and the unbusinesslike, astounding proposal from Col. Black on the Muscle Shoals project; but other significant evidences of failure to grasp simple economic propositions and the interests of the Federal Treasury indicate that no measure calculated to safeguard the Treasury should be overlooked.

Let me quote from Col. Deakyne, an Army engineer, who recently protested in House Document No. 463, Sixty-fourth Congress, against the wasteful Missouri River $20,000,000 project. He said:

> The total freight charge on (1914) traffic was about 41,000 tons. The Kansas City (Mo.) River Navigation Co., the only through line on the river operating between Kansas City and St. Louis, charges 80 per cent of the railroad freight rates. Assuming this to be the relation between the rail and water rates for the entire traffic (37,551 tons), the saving to shippers by the use of the river in 1913 was about $10,000. It is evident that this saving is entirely inadequate to warrant the serious consideration of an expenditure by the Government of $1,100,000 per year in interest and maintenance.

This is what Deakyne wrote when recommending an abandonment of the $20,000,000 Missouri River project—a river on which the Government has already expended over $20,000,000 and on which a balance of $14,000,000 is recommended by Army engineers.

Col. C. McD. Townsend, chairman of the Mississippi River Commission and division engineer, indorsed in substance the Deakyne recommendation for abandonment of the Missouri River project, excepting $150,000 annually was recommended for snagging and dredging in lieu of the proposed project that asks $14,000,000 more in cash and $500,000 for annual maintenance.

Col. Black, who wrote the letter protesting against any interference with dredgers' contracts, and who recommended the $18,700,000 private water-power proposition at Muscle Shoals, by

a singular coincidence is the same Col. Black who is now Chief of Engineers and was the former chairman of the board that on December 8, 1915, overruled Col. Deakyne and Col. Townsend. In doing so he says of the Missouri River, on page 7 of Document No. 463:

It has been estimated that with the channel held by revetted banks there would be available for agricultural purposes in the bottom land along the river between Kansas City and St. Louis 500,000 acres, the greater part of which would be less than a mile distant from the river, and a considerable portion of which is now necessarily nonproducing. It is claimed that this area would contribute very substantially to the river traffic.

And he overruled Deakyne and Townsend and recommended that $14,000,000 more be expended with an accompanying annual interest and maintainance expense to the Government of $1,100,000 on the Missouri River.

PRIVATE BENEFICIARIES AT GOVERNMENT EXPENSE.

No man expects the owners of 500,000 acres of reclaimed land to become enraged over the Government's reclamation of their lands without expense to them. That is Col. Black's proposition.

Nor would it be reasonable to expect the Alabama Power Co. to be wrathful over Col. Black's recommendation that $18,700,000 be advanced by the Government to its water-power project. In fact, it is not to be expected that the army of dredgers would object to a longer lease in their unlimited dredging contracts as proposed by the Chief of Engineers, but Congress is beginning to inquire into these matters, and as a result the Muscle Shoals project, although recommended by Col. Black, was stricken from the last River and Harbor bill and the Missouri River item of $1,500,000 in the 1916 bill had a narrow squeak in the Committee of the Whole while the proposal to longer leave dredgers' contracts without limitation received a pronounced backset by over 40 majority.

Who says the world is not moving when Congress awakens to the way in which it has been misled by army engineers? This bill now goes to another legislative body where the protest against limiting dredgers' contracts will again be urged. But what shall be said of leaving to army engineers the absolute determination of such contracts when it is discovered that under an innocent item in the 1915 bill granting a resurvey of a portion of the Tennessee River, engineers expended in 1915 upwards of $150,000, on borings at Muscle Shoals, in order to prepare for the Alabama Water Power Co. project which was stricken out of the 1915 bill?

OTHER QUESTIONABLE ITEMS IN THE 1916 BILL.

I have briefly referred to projects and recommendations which destroy confidence in the judgment of Army engineers, who in turn now object to restricting profits on private dredging contracts. What shall be said of many small items in the 1916 bill of the character of Cold Spring Harbor, N. J., a notorious real estate scheme for which the Government has already given $961,000. It carries $40,000 in this bill, and was originally recommended by Army engineers, who stated in Document 388, Fifty-ninth Congress:

The project will be of material benefit to the city of Cape May as a pleasure resort by filling the adjacent swamp lands, obliterating mosquito-breeding beds, and furnishing opportunity for expansion of building sites.

The Engineer's report further urges that "improvement" in order to secure a removal of the Tom Lipton yacht races from New York to Atlantic City, see page 5.

This proposal need not suprise those who will learn from Document 346, Sixtieth Congress, that Toms River, which floated 92 tons of commerce in 1914—

is located on one of the three principal automobile lines of travel. * * * Suitable depth in the river would increase this traffic, owing to the ease with which owners could communicate with their yachts at this point.

And pursuant to the Engineers' recommendation our Government is now keeping the river open to accommodate private yacht owners.

The Toms River proposition is no more absurd than for the Government to be spending hundreds of thousands of dollars every year in a perpetual-motion job by pulling deadheads out of the Pearl, Leaf, Red, and other rivers for the us of milling and logging companies that practically have the exclusive use of such streams.

Where is the limit of engineering proposals when on the St. Francis River, Ark., it requires prodding in the mud to determine any line of demarcation between the marsh and a river along which the Government has been reclaiming lands now valued at $88,874,000, according to a report of a Memphis trust company.

Nor are Army engineers' reclamation proposals of private lands at Government expense more unreasonable in theory than for the Government to cut water hyacinth from Florida and Mississippi creeks and rivers in an effort to promote "commerce." Millions of dollars are spent by the Government annually in reclaiming overflowed private lands, all under the cloak of navigation, and it is significant that all these projects have the indorsement of Army engineers who now object to any limit being placed on private dredging company profits.

ARMY ENGINEERS NOT ALONE TO BLAME.

Let me repeat what has often been stated before, that army engineers are not to blame for the situation, although following Washington bureaucratic custom they are constantly reaching out for more power.

We put them where they are. We pretend to use them as a buffer to withstand congressional influence, and then when they miserably fail we pretend not to see their shortcomings.

From the day he first learns to discriminate between hay foot, straw foot, down to the day when inducted into the Chief Engineer's office, the officer has been taught obedience to superiors, acknowledgment of authority, and the surrender of his judgment to those above him. From the day he enters the military school to the day he completes his military career the officer ordinarily has no large financial responsibility nor source of income other than a meager salary compared with those with whom he associates in official and business life. Honorable, unquestionably. As a class we may concede these honor men resist temptation that might naturally cause the fall of others, but that is not the question involved. Called upon to handle many millions of dollars annually in contracts, without any supervision or limitation of those contracts; recommending millions annually for waterway projects without having had practical business training; confronted with the fact that political authority is exercised by men in high political positions, by those who may reward or destroy—besieged, importuned, and denounced in turn by those who have projects at stake—these engineers are assumed by us to be supermen. We place them in unenviable positions of trust and then seek to break down the barrier we have assumed to create against our own selfishness. We indulge in sophistry in an effort to deceive ourselves. Well-knowing engineers constantly yield to such influences, as evidenced by the Cumberland River, Lookout Harbor, Muscle Shoals, Missouri River, and scores of other questionable projects, we yet point to them as proof against influence and men qualified to handle some of the most responsible affairs of government.

What a legislative travesty and what a hypocritical proposition with which we seek to deceive ourselves.

Where public interest conflicts with private interest every man is expected to be absolutely independent and unbiased, but we know he is not nor will he ever be while human nature exists. Unlimited authority must cease and political pressure be withdrawn before the annual river and harbor bill will command respect.

A FEW QUESTIONABLE 1916 APPROPRIATIONS.

Need any further testimony of present autocratic methods of Army engineers be offered than that already presented?

We do not need alone to look with suspicion upon a $250,000 appropriation in the 1916 bill for the Trinity River recommended by Army engineers or to be reminded that this is a stream on which about $2,000,000 has been expended, and yet after 30 years' improvement the official report says, "There is little or no commerce on Trinity River above mile 6."

Nor do we wonder that Army engineers once proposed to float commerce on this river by using artesian wells?

Take the Brazos, which receives $390,000 in the 1916 bill on the advice of engineers. A stream that after many years of "improvement" and an expenditure of $1,776,000, reports on the upper river "there can be no commerce until completed" and on the lower river "no commerce statistics from one boat that makes weekly trips."

Generous with Government funds, our engineers recommend, and we find in the 1916 bill an item of $499,000 for the Ouichita in Arkansas. After appropriating $3,722,869 for this stream we find the present project is only 46 per cent completed, and, deducting timber, sand, and gravel, the commerce reported for 1914 was less than 27,000 tons.

Similar history accompanies the Red, which boasts of less than 2,000 tons of real commerce annually, and of the Arkansas, which gets $209,000 in this bill, although it has been recommended for abandonment by Army engineers.

After getting us in deep they sometimes try unsuccessfully to get us out. Needless to say, once in it is hard to get out.

Let us not forget $98,000, a small amount comparatively, given to the Coosa on the advice of engineers. An expenditure

of $1,384,661, we find has been made, but on Chicken Shoal only 20 per cent is completed, and open-channel work is about 30 per cent completed on a river improvement first began in 1876. What can we hope for on learning that real commerce, deducting wood and timber, reaches less than 18,000 tons for 1914, and to read on page 749 of the 1915 report—

The decrease from last year is probably permanent. Only one boat is operating on this improvement, and that is not proving a paying investment.

The Cumberland gets $710,000 in this bill on the advice of Army engineers in addition to $5,773,000 already appropriated, although it has been repeatedly demonstrated that, deducting floatable wood and timber and also sand, the actual traffic reached only about 53,000 tons in 1914.

Take the Tennessee, which gets $944,000 in this bill on the recommendation of Army engineers after some $11,000,000 has been appropriated for the same river. Again it has been demonstrated that, deducting sand, gravel, and floatable timber, which does not require any large depth of water over that enjoyed 50 years ago, the actual traffic in 1914 on the river reached about 186,000 tons, of which ore and marble hauled from 5 to 15 miles, according to official reports, amounted to 78,000 tons.

Even the upper Mississippi, after deducting Government brush, sand, gravel, and floatable timber, reaches about the same as the Tennessee, as I have repeatedly demonstrated from an analysis of commerce statistics, and yet that upper river gets $1,200,000 in this 1916 bill on the recommendation of Army engineers.

On 58 projects in the Mississippi Valley, it has been proposed by an engineer of acknowledged standing that we stop in this mad race to spend money irrespective of returns.

ALL WATERWAY AUTHORITIES ADVISE A HALT IN WASTE.

I can do no better than quote the words of Col. C. McD. Townsend at this time, with the further statement that Col. Townsend is chairman of the Mississippi River Commission and the best-informed Army engineer in the country on Mississippi River Valley waterways. He says:

Specifically the writer would not abandon any navigable stream in the Mississippi Valley that has been partially improved, but would leave 58 of them in their statu quo, confining operations to snagging and maintenance of existing works. * * * If facilities afforded by the Government are utilized (greater improvement of the Ohio and lower Mississippi), the upper Mississippi and the Missouri should then receive attention.

This was the admonition of Col. Townsend at the beginning of the present session last December, and his words inserted in the CONGRESSIONAL RECORD of December 10 last bring a tremendous responsibility to Army engineers and legislators who ignore his advice at this time and are urging unlimited extravagance on useless projects.

CANALIZED RIVERS AND CANALS OF LITTLE VALUE.

Since 1873 Mr. CANNON has been a Member of this body. Honored for many years by the highest office in the gift of his associates, his knowledge of legislation and legislative methods is second to none. His judgment of results is based upon that knowledge. No legislator in Congress is better qualified to speak. Discussing the inland-waterway travesty which carries $1,000,000 in the 1916 bill for the Beaufort and Norfolk worthless canal project, Mr. CANNON said, on April 4, during this debate:

Mr. Chairman, I have a very clear recollection of the desire of Indiana and Illinois for canals many years ago. * * * The canal passed through the neighborhood where I lived. * * * In round numbers, for canals Indiana expended about $15,000,000. It took a long time to pay it. Illinois accumulated a debt not so large, but I think from eight to ten million dollars for the Illinois and Michigan Canal. * * * The Hennepin Canal. That was completed at a cost of nearly $12,000,000, to the best of my recollection. * * * If any canal boat has ever carried a ton of freight over that canal from that time to this, I am not informed of it. * * * It was money thrown away.

Waterway authorities have given careful investigation to conditions surrounding canalized rivers and canals. Generally speaking, they agree that conditions are similar and neither will be of any especial permanent value for commercial purposes because of the new order of things and improved methods of transportation.

In "Waterways against Railways," Prof. Moulton gives his judgment, after an exhaustive study of waterways in Europe and this country, as follows:

We have found from our study that everywhere in Europe no less than in the United States there has occurred with the development of the railways a rapid decline in the amount of traffic carried on inland waterways. * * * To attempt now to return to the antiquated system of transportation of a half century ago * * * is to attempt to turn backward the clock of time.

OTHER WATERWAY AUTHORITIES.

Ex-Waterway Commissioner Reid, of Wisconsin, a practical riverman of many years' experience, made two extended trips to Europe at his own expense. During his investigations he traveled over the Rhine, the Danube, and Volga and studied the waterways of Europe as he had previously studied those of this country. His observations are summed up in a brief statement taken from my minority report, No. 254, part 2, Sixty-fourth Congress:

Our river traffic has rapidly declined. European Governments prevent railways from maintaining direct competition and foreign bargemen are content with a few cents a day for their service. Conditions here are far more difficult to overcome, and a return to practical inland river transportation is possible only with radically changed conditions, not affected by expensive river improvements.

Ex-Senator Burton was selected by Congress as chairman of the National Waterway Commission. He, too, gave a very careful investigation of European waterways in addition to those in this country with which he was already familiar. In Congress prior to leaving the Senate he gave a careful review of many wasteful projects we are engaged in "improving." Speaking of the Missouri River, typical of others, on which $20,000,000 had already been expended, he said:

You may spend $20,000,000—yes, $30,000,000—on this project, and in spite of that enormous amount, the traffic will diminish, because you are facing a condition that no policy of river improvement can reverse—the loss of that class of river traffic and the utilization of other agencies for the carrying of freight. I wish it were not so * * * but I am tired of rainbow chasing, and that is what this is. It is much worse than rainbow chasing. It is pure, bald, unmitigated waste.

FACTS SUSTAIN THESE AUTHORITIES.

I could quote from other authorities that have made an impartial study of the waterway question, but no man of national standing has arisen to dispute the deductions of such men. No man can successfully do so, because he is confronted with the proposition that after appropriating $850,000,000 for American waterways, over $800,000,000 of which has been expended and approximately one-half of which has gone into rivers, creeks, and canals, practically not one river or canal, apart from deep waterways, has proven a success commercially. The Ohio and Monongahela, by reason of coal deposits at their headwaters, have preserved a semblance of their commerce, but the Mississippi has lost approximately 90 per cent of its commerce while we have been expending $150,000,000 on that river. The Missouri has become practically deserted, after an expenditure of over $20,000,000. The Ohio has not held its own, after an expenditure of over $50,000,000. The Tennessee has lost most of its river trade of 50 years ago, although $11,000,000, in round numbers, has been appropriated for locks and dams and other improvements.

So the list could be continued indefinitely to include the Warrior, Alabama, Coosa, Cumberland, Trinity, Brazos, Arkansas, Ouichita, Red, and other rivers and canals.

We are wasting money on aimless ventures and are making no effort to get any economic or scientific understanding of the waterway question, depending entirely on local insistence in determining the appropriations we distribute.

We may spend another $400,000,000 on rivers, creeks, and canals without any substantial increase in actual commerce, judging from past experience. We are taking over many new projects, and the game of draining the Federal Treasury goes merrily on, but no results are accomplished by this enormous expenditure of money, nor can we hope for any tangible returns.

Army engineers furnish misleading commercial reports of rivers and canals as a basis for future appropriations. After deducting sand, gravel, Government construction material, logs, and timber float on a small depth, the net commerce, aided by expensive improvements, is ordinarily slight and of little value compared with money spent.

I have repeatedly analyzed such reports, and the objectionable policy of placing projects all over the country in order to get the bill through has been regularly denounced by many Members. It is indefensible, and no substantial improvement will be reached until we reform our system, or lack of system.

Let me submit several tables that have been prepared. The showing of net tonnage on several rivers has been disputed in some instances, but, counting duplications and quadruplications, it gives a fair demonstration of the loss of actual commerce on rivers and canals all over the country. In proportion to appropriations the meager returns speak for themselves.

WHERE THE MONEY GOES.

In order to present the destination of waterway appropriations in concrete form it may be stated that two substitute bills reaching $20,000,000 and $30,000,000 were passed during the Sixty-third Congress in lieu of two bills aggregating $92,000,000 which were defeated.

The $50,000,000 was by law turned over to Army engineers for allotment, and out of 240 projects given specific amounts the following was awarded to an even dozen waterway projects:

Engineers' allotment, 1914 and 1915, of $47,586,000, and 1916 bill.

Rivers.	1914, twenty million.	1915, thirty million.	Total Sixty-fourth Congress.	1916, proposed bill, $39,608,410.
Mississippi	$5,250,000	$5,815,000	$11,065,000	$8,320,000
Missouri	950,000	1,100,000	2,050,000	1,750,000
Ohio[1]	1,769,000	3,915,000	5,684,000	5,509,000
Tennessee	223,000	501,000	724,000	944,000
Cumberland	210,000	378,000	588,000	710,000
Ouichita	300,000	136,000	436,000	499,000
Aransas Pass	470,000	180,000	650,000	100,000
Sabine Pass	240,000	100,000	340,000	590,000
Brazos	230,000	240,000	470,000	390,000
Black Warrior	768,000	48,000	816,000	.....
Cape Fear	185,000	323,000	508,000	218,500
Beaufort Canal	.....	400,000	400,000	1,000,000
Total	10,595,000	13,136,000	23,731,000	20,030,500

[1] The Ohio River was also given $3,200,000 in the 1915 sundry civil bill.

Of two hundred and twenty-odd projects given the remaining 50 per cent from the 1914 and 1915 allotments about one-half were trafficless rivers which have a combined actual commerce less than the waterway tonnage of Buffalo or Boston or Cleveland or Philadelphia, or several other lake and ocean harbors. The 12 rivers that received $23,731,000 in 1914 and 1915, or 50 per cent of the total during the Sixty-third Congress, are well recognized by the committee in the 1916 bill with an aggregate of $20,030,500 out of $39,358,410 contained in the bill after deducting $250,000 for surveys.

The 1916 bill from which the minority dissents gives these same 12 river projects nearly as much as was allotted for the two years 1914 and 1915. More striking, one-half of the entire proposed 1916 appropriation goes to these 12 river projects. Deducting $20,030,500 above provided and $250,000 for new surveys leaves $19,327,910, which is divided among the remaining 270 items. Of these items approximately 170 are canals, bayous, and rivers all of which do not handle as much actual commerce as two or three harbors than can be named.

Over $250,000,000 has been spent on the 12 river and canal projects by the Government in an effort to resuscitate a lost commerce. Deducting floatable timber and sand that floated a half century ago in larger quantities than to-day and do not require expensive waterways, several of these projects are reported to have floated in 1913 approximately as follows:

	Tons.
Upper Mississippi (average upper Mississippi haul less than 50 miles, or less than 30,000 tons average continuous haul)	170,000
Lower Mississippi (excluding coal)	200,000
Ohio (95 per cent coal) under	2,000,000
Tennessee (includes on Tennessee 78,000 tons coal hauled 16 miles)	200,000
Tombigbee and Warrior (includes on Warrior 32,000 tons coal, distance not stated), average	56,000
Beaufort Canal	65,000
Cumberland	53,000
Missouri	24,000
Hennepin Canal	11,850
Muscle Shoals Canal	5,887
Red River	1,694

Aside from soft coal, as near as can be estimated, the average haul was from 30 to 100 miles on the various rivers.

THE ABOVE RIVERS RECEIVED 50 PER CENT OF EVERY BILL.

During 1914, 1915, and 1916 approximately one-half of the entire amount given to all waterways was for these 10 river and canal projects. The balance was divided among about 270 or more projects, of which 20 genuine waterways disclosed 1913 traffic as follows:

10 ocean harbors.	Tons.	10 lake harbors.	Tons.
New York (estimated)	100,000,000	Superior-Duluth	46,875,000
Philadelphia	26,267,335	Chicago-Calumet	13,275,000
Boston (estimated)	20,000,000	Milwaukee	8,647,000
Baltimore	14,781,942	Ashland	5,623,309
Norfolk	17,349,942	Ashtabula	15,743,375
Savannah	3,154,089	Cleveland	16,488,083
New Orleans	6,442,932	Buffalo	18,920,854
Galveston	4,445,088	Erie	3,340,071
San Francisco	9,353,530	Marquette	1,852,229
Portland, Oreg	7,923,902	Soo Canal	79,714,344

Approximately 200,000,000 tons of waterway commerce was handled at the 10 ocean ports, and, allowing for duplications, one-half that amount at the 10 lake ports. Presumably the commerce was carried on the average 200 to 500 miles, counting ocean and lake traffic, but, like some other waterway statistics, no definite figures are available.

The significance of the comparisons will not be overlooked. Ten ocean ports handled fifty times the actual commerce carried on 10 river projects that annually receive about half of the average waterway bill, and these same rivers floated only about 4 per cent of the commerce counted at 10 lake ports.

COST TO THE GOVERNMENT FOR FLOATING "COMMERCE."

The cost to the Government for furnishing a waterway for inland commerce per ton is not definitely settled as to method of computation and only approximate results can be reached, because the amount properly chargeable to investment interest is variously estimated, although annual maintenance is sure and certain. Excluding floatable timber and sand, usually hauled short distances, the following estimates have been made on the several rivers and canals noted:

	Per ton.
Ohio River (excluding coal, $40 per ton)	$3.00
Ouachita	8.00
Warrior and Tombigbee	12.00
Upper Mississippi	12.00
Lower Mississippi	35.00
Arkansas	20.00
Hennepin	36.75
Missouri	40.00
Muscle Shoals (Tennessee)	40.00
Aransas Pass Canal	80.00
Brazos	80.00
Red	100.00
Muscle Shoals (proposed)	150.00
Big Sandy, Ky	350.00

It is interesting to note that in round numbers the following estimate of expenditures per mile have been made by the Government on three waterways:

	Per mile.
Lower Mississippi, 1,000 miles, at	$100,000
Ohio River to Missouri River, 200 miles, at	86,000
Upper Mississippi, 600 miles, at	40,000
Ohio River, 1,000 miles, at	60,000
Lower Missouri, 400 miles, at	40,000

Government and State canal investments are proportionately wasteful.

	Per mile.
Hennepin Canal, 60 miles, at	$126,000
Muscle Shoals, 26 miles, at	175,000
Muscle Shoals, proposed, 26 miles, at	560,000
Chesapeake & Delaware Canal, proposed, 13 miles, at	1,530,000

The above river and canal projects are small waterways that float an insignificant commerce compared with the investment. Can any condemnation of our wasteful purposeless waterway policy compare with a brief statement of expenditures past, present, and prospective.

CHANGE THE SYSTEM.

Mr. Chairman, I believe no permanent improvement in river and harbor legislation will be brought about until the whole system is changed. It is hard to conceive of any more unsatisfactory procedure than the present method of securing waterway legislation.

No one factor is alone responsible for conditions. Enthusiastic waterway conventions urge particular projects. In the case of the National Rivers and Harbors Congress a permanent organized lobby keeps pressing on Congress a policy of appropriating $50,000,000 annually for "a policy not a project."

If we would get away from present conditions and inaugurate a scientific and economic waterway system fashioned on the plan adopted by European Governments we must take the matter out of politics.

Never in recent history has the time been more opportune for a change, and with the hope that a suggestion may bear fruit by pointing the way toward a businesslike method of handling the question I submit herewith a bill I have introduced proposing a national waterway commission.

A bill (H. R. 6821) creating a national waterway commission.

Be it enacted, etc., That a commission is hereby created and established, to be known as the national waterway commission, hereafter referred to as the commission, which shall be composed of five commissioners, who shall be appointed by the President, by and with the advice and consent of the Senate. Not more than three of the commissioners shall be members of the same political party. The first commissioners appointed shall continue in office for terms of three, four, five, six, and seven years, respectively, from the date of the taking effect of this act the term of each to be designated by the President, but their successors shall be appointed for terms of seven years, except that any person chosen to fill a vacancy shall be appointed only for the unexpired term of the commissioner whom he shall succeed. The commission shall choose a chairman from its own membership. No commissioner shall engage in any other business, vocation, or employment. Any commissioner may be removed by the President for inefficiency, neglect of duty, or malfeasance in office. A vacancy in the commission shall not impair the right of the remaining commissioners to exercise all the powers of the commission.

SEC. 2. That each commissioner shall receive an annual salary of $10,000, payable in the same manner as the judges of the courts of the United States. The commission shall appoint a secretary, who shall receive an annual salary of $5,000, payable in like manner. The commission shall have the authority to employ and fix the compensation of civil engineers, clerks, and other employees as it may from time to time find necessary for the proper performance of its duties and as may be

from time to time appropriated by Congress, and in making appointments for continuous service the commission, so far as practicable, shall select its employees from the classified service.

All property of the United States in the hands or under the control of Army engineers or other officials or of private individuals or public contractors, including dredges, steamboats, barges, yards, and other property used in the improvement of public waterways, shall be placed under the jurisdiction and authority of the commission.

SEC. 3. That the Secretary of War may, if practicable, detail such Army engineers as are requested by the commission to assist in organizing and establishing a comprehensive system of waterway improvement, providing that such details of engineers shall not be made to the detriment of their military duties.

SEC. 4. That the commission shall have the authority and it shall be its duty to make an investigation of all waterway projects now constructed in whole or in part by Federal aid. The commission shall prepare a complete and succinct statement, by years, of the amount heretofore appropriated for each project, the estimated amount required to complete such project, a report of the commerce now served and to be served, the character of such commerce given by separate items so far as can be furnished, the source of information, the interests to be served, the kind of water craft used, and such other information as may be useful in determining the public use and value of the project. The commission shall also furnish Congress, at the earliest practicable date, information concerning all harbors and waterways now improved or being improved in whole or in part by Government aid, showing the amount of commerce, character of terminals or landings, ownership thereof, and, so far as practicable, ownership of regular lines of craft used thereon; and the commission shall also report its recommendations for the finishing of the projects now being constructed or modification of existing plans or abandonment of work on any project, together with findings upon which such recommendations are based.

The commission shall further ascertain and report what projects are now being improved for purposes other than navigation, and if for power development, a full statement of interests concerned, officers and stockholders, public use to be served, if any, private or public contribution toward expense of construction, and the commission's recommendations thereon. Said commission shall further ascertain and report what projects are now being carried on in whole or in part for land-reclamation purposes, the character of such project, amount of lands to be recovered, estimated value of such lands, ownership thereof, and contributions now being made by beneficiaries toward such expenditures, together with the commission's recommendations.

The commission shall make a full investigation into all work now being performed by the Mississippi River Commission, the amount of money heretofore expended on such river, character and permanency of work performed, and reclamation interests now being served, if there be any, a full statement of contributions by public or private interests toward said work, together with a comprehensive and intelligible report of the probable cost of the present plans of levee construction or other river improvement now being undertaken, the percentage of project completed, and this commission's recommendation thereon. Such Mississippi River report shall be separate and distinct from reports on other projects now under improvement by the Federal Government.

All of such data and all other available information of a pertinent character affecting particular projects or entire waterway improvements now being conducted by the Federal Government shall be collected in convenient form and presented to Congress in installments at the earliest practicable date.

When the commission shall have reason to believe at any time that the proposed project is not for general use of the public or will not warrant further expenditures, or if contributions shall be required to be furnished before further appropriations are made or further expenditures authorized, such commission shall immediately report to Congress, with a preliminary recommendation thereon, and shall furnish a copy thereof to the United States Treasurer. That thereupon, when so recommended, the Treasurer shall withhold all funds theretofore appropriated not specifically obligated under existing contracts and shall refuse further payments until subsequent and specific action shall be had thereon by Congress.

SEC. 5. That prior to the presentation of any new waterway-project appropriations the commission shall cause a careful survey of the proposed improvement, and if it shall appear such project is to serve a public use and is feasible, the commission shall thereupon collate data showing the estimated cost thereof, commerce to be served, water craft to be used, public terminals furnished, and contributions recommended to be made by public or private interests, together with such additional data as has heretofore been specifically required to be furnished on existing projects. The commission shall thereupon transmit to the Committee on Appropriations of the House of Representatives a full report concerning such new project or projects, its recommendations thereon, and, if requested so to do, all other and further information that may be required by the Committee on Appropriations.

Whenever the commission shall determine that any waterway project is primarily for power or land-reclamation purposes or to serve special interests, the commission may recommend Government aid for such project, notwithstanding the special interests to be served, and shall prepare data showing the proportionate amount of Federal aid recommended, together with suitable restrictions as to audit and payment of funds from the Public Treasury. Such recommendation shall be presented as a proposed separate bill to the Committee on Appropriations of the House and shall not be embodied in any general waterway appropriation bill by such committee.

Whenever any new survey shall be proposed for any waterway project, the commission, prior to such survey, may require data to be furnished showing the public use and prospective commerce to be served and such other information as may be desired, and a brief synopsis of such information shall be furnished to Congress by the commission to accompany any recommendations made for new surveys.

All existing waterways, new projects, and new surveys shall be classified, so far as practicable, prior to each regular session of Congress, together with estimates of appropriations required for maintenance and improvement for the ensuing two-year period, and a brief report as to each project considered shall be separately prepared and, with the commission's recommendation thereon, shall be placed in the hands of the Committee on Appropriations of the House at the beginning of each session.

Whenever the Appropriations Committee so requires the commission shall furnish additional data concerning any project, and shall further aid the Committee on Appropriations when requested so to do in the preparation of the regular river and harbor bill, which shall be prepared and presented by the Committee on Appropriations of the House.

The commission shall further compile and cause to be published at the earliest practicable date for the use of Congress an intelligent, concise statement of past waterway expenditures by the Government and of amounts needed to complete all continuing projects, and shall further give estimates of future obligations to be incurred by new projects recommended for construction. The commission shall give preference in its recommendations to Congress of appropriations needed to complete the more important projects, and, so far as practicable, shall enter upon a program looking toward the early completion of such projects.

The commission shall make a thorough investigation of reasons for loss of river traffic and shall make recommendations for the reestablishment of such traffic. It shall ascertain and determine the most available craft for river use, and, as soon as practicable, shall prepare plans and build experimental craft for such purpose.

Whenever reason therefor shall appear the commission may fix reasonable freight rates on all interstate water-borne traffic by common carrier and upon all such traffic on navigable waters wholly within the State, subject, however, to the jurisdiction now conferred by law on the Interstate Commerce Commission to fix maximum joint rates between and over rail and water lines.

The commission shall determine the reasonableness of wharfage or water-terminal charges, whether such terminals are owned by private persons or municipalities, and all river and harbor improvements, including terminal facilities, shall be under the supervision and control of the commission.

Whenever the commission shall determine that unprofitable railway freight tariffs are maintained in any given case in order to prevent waterway competition, it shall be the duty of the commission to make a report thereon in duplicate to the Interstate Commerce Commission and to Congresses, with recommendations that Congress give power, if need be, to the Interstate Commerce Commission for fixing minimum railway rates.

The commission shall at the earliest practicable date adopt an intelligent system of national waterway improvement and shall perform such other and further duties as may present themselves from time to time.

Whenever it shall be desirable to secure sworn testimony from any witness or witnesses relating to any project or to navigation generally, or whenever the commission shall have reason to believe that private interests are secretly or improperly seeking to influence the commission or to force the passage of any private or public waterway measure through Congress the commission may cause a hearing or summary investigation to be held, and for that purpose may issue summons, subpœnas, or other writs in the same manner and under the same procedure as is more specifically set forth in the act to regulate commerce approved February 4, 1887, and the amendments thereto, which portions of such act relating to procedure, so far as applicable, are made a part of this act, and may bring before such commission all parties believed to be informed concerning the facts or interested in the passage of such measure. A complete record shall be preserved of the testimony taken at such hearing and a certified transcript thereof shall be transmitted immediately to the Committee on Appropriations.

SEC. 6. That all unexpended balances to the credit of any project not specifically obligated under existing contracts shall, from the date of the passage of this act, be transferred by the Treasurer to the general fund, and all vouchers thereafter paid by the Treasurer shall be upon order of the national waterway commission.

SEC. 7. That the sum of $500,000, or so much thereof as may be necessary, be, and the same hereby is, appropriated, out of any money in the Treasury, to carry out the provisions of this act.

The Clerk read as follows:

Sheepshead Bay, N. Y.

Mr. HULBERT. Mr. Chairman, I have an amendment which I submitted to the chairman of the subcommittee on surveys to be inserted at this point, and I will ask him to send it to the Clerk's desk.

Mr. BURGESS. Mr. Chairman, I offer the following amendment, which I send to the Clerk's desk and ask to have read.

The Clerk read as follows:

Amendment offered by Mr. BURGESS: Page 35, after line 1, insert as a new paragraph:

"Shore front from Jones Inlet to Rockaway Inlet, with a view to obtaining data as to tide, current, drift, and depth of water, with a view to determining whether or not the interests of navigation are being endangered by the erosion thereof."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Waterway or ship channel along the most practicable route between Lake Erie and Lake Ontario of sufficient capacity to admit the largest vessels now in use on the Great Lakes.

Mr. MANN. Mr. Chairman, I reserve the point of order on the paragraph. I do not know that I shall make the point of order. There are several items in this bill for canals that may be properly in the bill or may not be properly in the bill. What is intended to be accomplished by this project with reference to a waterway around Niagara Falls? I refer to this ship canal between Lakes Erie and Ontario. What is the proposition?

Mr. BURGESS. Just what it says.

Mr. MANN. Oh, well, it does not say anything. You might build it around by the North Pole for all I know. What is the proposition?

Mr. SPARKMAN. Mr. Chairman, I will say that so far as I know the purpose is to get an estimate upon a canal leaving Lake Erie some little distance above the Niagara River and running across to Lake Ontario on what I would call the east side of the river; that is, on the American side.

Mr. MANN. That runs around south of the city of Buffalo?

Mr. SPARKMAN. It is on American soil. It is to run to the right, as you look down the river.

Mr. MANN. Where is this canal expected to start from, above or below the city of Buffalo?

Mr. SPARKMAN. That is to be determined, of course, by the engineers, if they should report favorably upon a project.

Mr. MANN. I understand that, but I assume that the committee does not stick items like this in a bill without some idea of what they are. Are items of this sort put in the bill just because some one somewhere has had a bad dream and asked to have them put in?

Mr. SPARKMAN. Oh, no.

Mr. MANN. I assumed not.

Mr. SPARKMAN. One of the gentlemen from New York presented this survey to me, and it went then to the chairman of the subcommittee, Mr. BURGESS. It is to start at some point below Buffalo. I have forgotten just now the point; but perhaps the gentleman from New York [Mr. HULBERT] can state.

Mr. MANN. Is not this something that would be very expensive? I refer now to the survey.

Mr. SPARKMAN. I think not.

Mr. MANN. Mr. Chairman, I withdraw the point of order.

Mr. BURGESS. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 35, after line 7, insert the following:
"Buffalo Harbor, Buffalo Creek, and Buffalo Ship Canal, N. Y., with a view to increasing the dimensions thereof to meet the demands of present and prospective commerce."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Texas.

Mr. STAFFORD. Mr. Chairman, what is the proposition with this survey? Is this to carry out the idea of the Welland Canal or is it in conjunction with the Erie Canal?

Mr. DRISCOLL. Mr. Chairman, I will state for the benefit of the gentleman that this provision has nothing to do with the proposed ship canal or the barge canal to extend from Lake Erie to Lake Ontario. That is the proposition submitted by a colleague of mine, and I think his idea was to construct a canal or a channel to compete with the Canadian Channel at the Welland Canal that is now being completed at the expenditure of a great deal of money.

Mr. STAFFORD. Will the gentleman explain what his proposition is in the amendment just now submitted?

Mr. DRISCOLL. For a great many years at Buffalo, or at the harbor of Buffalo, conditions have been congested, especially in the outer harbor. From the outer harbor to the fork, probably a distance of 500 feet, a narrow-neck channel, the space is less than 200 feet.

That channel is obstructed by a line of boats that generally anchor along what is known as the Delaware trestle. Leading from there up into Buffalo Creek or the Buffalo Ship Canal, on account of the great increase in commerce coming up through the concrete locks, we feel that a general survey would be very beneficial not only to the port of Buffalo but to every State bordering upon the Great Lakes; and that is our reason for asking for this survey.

Mr. STAFFORD. And this is no canalization scheme?

Mr. DRISCOLL. No.

Mr. STAFFORD. Merely an inner-harbor proposition?

Mr. DRISCOLL. That is all.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas [Mr. BURGESS].

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Overpeck Creek, N. J., from Little Ferry to Leonia.

Mr. RICKETTS. Mr. Chairman and gentlemen of the House, the Committee on Rivers and Harbors has brought into this House H. R. 12193, designated as a bill making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

For more than a week past this bill has been under consideration. Numerous and various amendments have been offered to certain of its provisions by the gentleman from Wisconsin [Mr. FREAR], the gentleman from Iowa [Mr. GOOD], and others, and nearly all of these amendments have been turned down by the House.

The consideration of this bill from day to day has been especially interesting. Many heated discussions have been had upon the merits and demerits of certain provisions of the bill. I have taken no part in the discussion, but I have listened attentively to the persuasive arguments offered, both for and against numerous provisions of the bill. I have also carefully read each and every item in this bill, and have read many portions of the hearings, and to one who is serving his first term in this House I confess the recommendation for the appropriations provided for in this bill are astounding, to say the least of them. So much so, if you please, as to constrain me, in order that I might vote intelligently on the various amendments that have been offered or may hereafter be offered, and that I might be able to vote either for or against this bill when it comes up for final passage, to make some investigation with reference to the appropriations heretofore made by Congress in relation to the subject matter of the bill.

The first appropriation for rivers was made by Congress on the 6th of April, 1802, in the sum of $30,000, and each and every year since that time Congress has appropriated various sums of money for the improvement and protection of rivers, canals, and harbors.

The report of the Secretary of War, Lindley M. Garrison, to the Speaker of the House of Representatives on January 12, 1915, shows that Congress has appropriated from year to year, commencing with the first appropriation on the 6th of April, 1802, to certain States and Territories for the protection, preservation, and maintenance of their rivers, canals, and harbors the following sums of money, to wit:

Alabama	$9,115,230.60
Alaska	513,500.00
Arkansas	1,871,501.05
California	21,672,604.10
Connecticut	6,799,123.81
Delaware	2,560,449.49
Florida	17,536,579.88
Georgia	15,388,219.57
Hawaii	3,058,500.00
Idaho	37,705.59
Illinois	19,874,736.72
Indiana	2,461,839.92
Iowa	2,500.00
Kansas	25,000.00
Kentucky	9,568,585.70
Louisiana	5,296,829.57
Maine	7,399,565.99
Marina Islands	10,000.00
Maryland	10,836,445.50
Massachusetts	21,410,898.91
Michigan	59,378,884.50
Minnesota	1,699,238.20
Mississippi	5,848,490.95
Missouri	224,000.00
Montana	14,750.00
New Hampshire	1,719,471.00
New Jersey	7,311,272.71
New York	57,161,356.20
North Carolina	11,190,257.92
Ohio	22,423,769.53
Oregon	5,816,879.55
Pennsylvania	5,082,468.73
Porto Rico	785,500.00
Rhode Island	8,134,002.82
South Carolina	10,600,536.64
Tennessee	356,853.00
Texas	40,135,890.38
Vermont	983,085.20
Virginia	10,797,518.58
Washington	9,394,332.00
West Virginia	6,559,965.42
Wisconsin	16,484,000.05

Now, it seems to me that it has been the policy of Congress for many years to make appropriations for the protection and maintenance of rivers, canals, and harbors of the United States. These annual appropriations have been made from the beginning of the Government down to the present time. Besides these enormous appropriations which have been made by Congress from year to year, additional miscellaneous appropriations have been made aggregating $409,947,557.97. These various appropriations reach the grand total of $850,551,708.25.

Mr. Chairman, is it any wonder that there is a deficit in the United States Treasury at the end of this fiscal year of $50,097,315? Is it not more the wonder that this Government has escaped bankruptcy?

I am frank to admit that the great national harbors of the Atlantic and Pacific and of the Great Lakes should be protected and maintained. The appropriations heretofore made, year after year, with reference to these harbors have been entirely appropriate and in the interest of the people of this Nation and of this Government. Now, it is proposed by this bill to appropriate this year the sum of $39,608,410 for the various projects enumerated in the present rivers and harbors bill. Of course, there can be no question but what there are many meritorious projects set forth in the present bill, and I again most heartily support this bill to that extent. There are, however, many unmeritorious projects provided for in the bill which require the expenditure of several millions of dollars, and which, in my judgment, is entirely unnecessary.

I feel that it is the part of gross extravagance to spend about twenty millions of dollars on inland rivers, canals, and lakes that are of but little importance to the people of this Nation. They are, no doubt, of great interest to the inhabitants of the various States, and the States in which these rivers are located

should make provision for their repair and maintenance. I do not feel that these small rivers, lakes, and harbors should be provided for in a national way or by an appropriation from the National Treasury on the part of Congress.

I know that those in favor of this bill will say to us that we do not understand the situation and location of these various small rivers, canals, and harbors; that we are not advised with reference to the needs of the people who use these rivers and harbors; and that consequently we ought not to make any objection to this lavish expenditure. I further clearly understand that new Members of Congress are presumed to be seen and not heard; that the older Members of Congress, who have had years of experience with this appropriation, are well advised with reference to the merits of the same, and that new Congressmen should follow the advice and counsel of their seniors in Congress with reference to appropriations. I can not subscribe to this theory. I want to vote for this bill because of the several meritorious projects contained therein, but I feel that the bill should be pruned and shorn of a great many of the immaterial projects that it contains. This is an omnibus bill, so framed as to embarrass Members who would like to support its meritorious provisions, but who can not do so without supporting unmeritorious provisions contained in it.

ECONOMY.

Both the Republican and Democratic Parties have declared in their numerous platforms in years gone by for economy. The Democratic Party in its platform of 1912 declared in part as follows:

We favor the adoption of a liberal and comprehensive plan for the development and improvement of our inland waterways with economy and efficiency so as to permit their navigation by vessels of standard draft.

The Republican Party in its platform of 1912 provided in part as follows:

The Mississippi River is the Nation's drainage ditch. Its flood waters, gathered from 31 States and the Dominion of Canada, constitute an overpowering force which breaks the levees and pours its torrents over many millions of acres of the richest land in the Union; stops the mails, impedes commerce, and causes great loss of life and property. These floods are national in scope and the disasters they produce seriously affect the general welfare. The States unaided can not cope with this giant problem, hence, we believe the Federal Government ought to assume a fair proportion of the burden of its control so as to prevent the disasters from recurring floods.

Now, it will be seen that the Democratic Party in its platform proposes to deal with these appropriations in an economical way, and the Republican Party in its platform proposes to assume a fair proportion of the burden with reference to the protection and maintenance of the rivers in the Mississippi Valley.

I had hoped that many of the amendments offered by the gentleman from Wisconsin [Mr. FREAR] and the gentleman from Iowa [Mr. GOOD] and others would be adopted and to that end I supported the various amendments offered. However, I am convinced that it is the purpose and intention of a majority of the Membership of this House, regardless of their party affilliation, to pass this appropriation bill involving this great expenditure regardless of the consequences and without knowing where the money is to come from.

The appropriations by Congress have constantly increased since 1910, and the appropriations that must of necessity be made by this Congress will far surpass any that have been made in the history of the Government. Now, who is to bear the burden of raising the money? It is the taxpayer of the country. There can be no question but what this Congress must provide for these lavish appropriations through the enactment of an inheritance tax, an additional income tax, a tax on the shipment of manufactured war munitions, an additional tax on spiritous and malt liquors, and possibly an additional tax on corporations, automobiles, gasoline, oil, iron, and steel, and, in short, place a direct tax upon all the business interests of the country.

I do not claim to be familiar with all the facts surrounding these various projects, but the facts have been pretty thoroughly thrashed out on the floor of this House in the discussions had during the consideration of this bill, and there is a marked discrepancy in the conclusions reached with reference to the various provisions of the bill. This discrepancy has tended more to confuse than to enlighten. When you stop to think that we are about to spend nearly forty million dollars of the people's money, it seems to me that we ought to be certain that the expenditure of this amount of money is really necessary.

I do not mean to criticize the committee. This practice has gone on for so many years, and the various States have annually received their proportionate appropriation so regularly, that many of the members of the committee and of this House really and sincerely believe that this appropriation should be made, and that it is in the interest of the people of the Nation. I regret that Congress should have drifted into such a false position. There are many distinguished Members on both sides of this House, men who have given these matters careful and long consideration, who fully believe that this appropriation is greatly in excess of what it should be. Besides, from present indications, these appropriations are to be made continuously from year to year, and no one knows when Congress will cease to make such appropriations. Some one has said to me that no appropriation bill is more carefully scrutinized by the Members of this House than the rivers and harbors appropriation bill. This may be true, but if this is a fair example of legislation in the interest of economy, then I confess that I do not understand the meaning of the term.

Congress has heretofore appropriated $493,725 for the improvement, repair, and maintenance of the Ocmulgee River in Georgia, and the present Congress proposes to appropriate $53,000 this year for the repair, improvement, and maintenance of the Altamahee, Oconee, and Ocmulgee Rivers in Georgia.

Congress has appropriated heretofore $285,750 for work on the Oconee River in Georgia, and the sum of $493,725 for work on Jekyl Creek in Georgia. Congress has appropriated $1,728,154.24 for the protection and maintenance of the White River in Arkansas, and it is proposed to make an additional appropriation this year. For many years exceptions have been taken, both by Members of Congress and by the press of the country to these unmeritorious expenditures, and I have felt it to be my duty to give expression to my views with reference to this matter, so that the people of the district whom I have the honor to represent may know what has been done by Congress with reference to the appropriations provided for for the various projects in this bill.

The people of the Nation as a whole ought to know just what is going on in Congress with reference to the expenditure of public money. There seems to me to be considerable pork in this bill, and I hope the committee will consent to some of the amendments offered here so that I may be able to support the bill for the meritorious items which it contains. If the committee will eliminate the insignificant projects contained in this bill, for which large and extravagant appropriations are sought to be made, and clean up the bill and get rid of this pork, then I would be glad to vote for it. In fact, there are many Members here who would be glad to vote for it, but so long as the bill remains in its present form I do not see my way clear to vote for it. Why not take the pork out of it? Why waste public money in this reckless way? The Government needs the money, and needs it badly. I believe in economy in administering the affairs of the Nation, and I am unequivocally against such reckless and wholesale extravagance.

We are transacting business for the people, and we should protect the interests of those whom we represent. That is my sense of feeling in the matter, and I shall be governed accordingly.

The Clerk read as follows:

Channel connecting York River, Va., with Back Creek to Slaight's Wharf, with a view to securing a depth of 10 feet and widths of 200 and 100 feet, respectively.

Mr. BURGESS. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 36, after line 6, insert:
"Northwest River, Va. and N. C., with a view to its improvement from its mouth as far up as may be practicable."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Beach Creek, Va., with a view to increasing the dimensions of the channel to a depth of 6 feet and a width of 60 feet.

Mr. BURGESS. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 36, after line 10, insert:
"Mattaponi River, Va., with a view to removing the bars and securing increased depth of water at the mouth.
"Queens Creek, Va., with a view to securing increased depth of water at the mouth."

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Escambia River, Fla.

Mr. BURGESS. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 37, line 23, insert:
"One Mile Creek.
"Bayou Manannota, Ala."

The amendment was agreed to.

Mr. BURGESS. I also offer the following amendment, Mr. Chairman.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 37, after line 23, insert:
"Key West Harbor, Fla., with a view to removing the middle ground.
"Onosohatchee River, Fla."

Mr. MANN. What is the proposition with reference to removing the "middle ground" at Key West?

Mr. SEARS. That is the name of it. It is known as the "middle ground." As I understand it, there is a mud bank in the harbor of Key West, and by removing same—and the expense will not be much—it will give approximately 26 feet of water, and a very much wider channel. One of the steamship companies going into Key West is now building a boat 440 feet long, for the purpose of handling the commerce at this harbor, and unless this "middle ground" is removed the same can not be done as the channel will not be wide enough. As a matter of fact, there should be an appropriation in this bill for the purpose of removing this "middle ground," and I am satisfied the same would have been included, in view of the importance of the harbor as a naval base, as well as from a commercial standpoint, if the committee had not unanimously decided not to include any new projects.

I trust there will be no opposition to this amendment.

Mr. MANN. Very well.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Texas [Mr. BURGESS].

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the next amendment offered by the gentleman from Texas [Mr. BURGESS].

The Clerk read as follows:

Amendment offered by Mr. BURGESS: Page 37, line 23, insert "One Mile Creek and Bayou Marmotte, Ala."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Bayous des Cannes and Nezpique, La.

Mr. COOPER of Wisconsin. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin [Mr. COOPER] moves to strike out the last word.

Mr. COOPER of Wisconsin. Mr. Chairman and gentlemen, when the distinguished gentleman from Florida [Mr. SPARKMAN], the chairman of the Committee on Rivers and Harbors, made his speech opening this debate, the gentleman from Texas [Mr. EAGLE] interrupted to say that the aggregate expenditures had been $680,000,000. I rose, not knowing the facts concerning the total expenditure, and asked a question:

Mr. COOPER of Wisconsin. I should like to ask one question.
Mr. SPARKMAN. Certainly.
Mr. COOPER of Wisconsin. I notice in the speech of the gentleman from Wisconsin [Mr. FREAR] made on January 13 that he made the following statement:
"Mr. Speaker, we have paid out of the Government Treasury over $850,000,000 for waterways."
Now, has $850,000,000 been paid out of the Treasury in actual money?

I made that inquiry because I did not know. The gentleman from Florida answered:

Mr. SPARKMAN. That is not my understanding, and I have gone over the matter very closely. I think the error of the gentleman from Wisconsin [Mr. FREAR] arose from the fact that he was considering appropriations rather than expenditures.
Mr. FREAR. Unquestionably. Almost anyone would understand that by reading the speech as a whole. That was the intention.

Whereupon, the gentleman from Florida said:

But the gentleman called me to task awhile ago, and insisted that I was wrong when I used the word "expenditures."

Mr. Chairman, that speech covers 45 pages of the CONGRESSIONAL RECORD and I had not had time to read it very carefully, at least, not all of it. [Laughter.]

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I ask unanimous consent to continue for five minutes.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to proceed for five minutes more. Is there objection?

There was no objection.

Mr. COOPER of Wisconsin. That speech covers 45 pages, 90 columns solid. Not more than half of it was delivered on the floor of the House.

The chairman of the committee [Mr. SPARKMAN], referring to the gentleman [Mr. FREAR], interrupted and said:

But the gentleman called me to task awhile ago, and insisted that I was wrong when I used the word "expenditures."

The gentleman from Wisconsin [Mr. FREAR] had criticized the gentleman from Florida, the distinguished chairman of the committee, for having used the word "expenditures" wrongly; but when I asked the question to elicit information as to the sense in which the gentleman from Wisconsin [Mr. FREAR] himself had used the words "paid out of the Treasury," the gentleman replied that I ought to have understood that he meant "appropriated."

In reply to the gentleman from Florida [Mr. SPARKMAN], the gentleman from Wisconsin [Mr. FREAR] said:

I did not get the distinction the gentleman made at the time.

Then the colloquy continued as follows:

Mr. SPARKMAN. I think if the gentleman will look over his speech he will find that he did not make that distinction.
Mr. FREAR. No; I presume that was an error in expression. The chairman says the amount is $800,000,000, but it is impossible to say what the exact expenditure has been since the last report.
Mr. COOPER of Wisconsin. Will the gentleman allow me to make one comment right there?
Mr. SPARKMAN. Certainly.
Mr. COOPER of Wisconsin. I do not think a gentleman should be obliged to read 40 or 50 pages of a speech to find out what it means, when a gentleman says that more than $850,000,000 has been paid out of the Treasury. [Applause.]

As a matter of fact, less than $800,000,000 had been paid out. The $853,000,000 were all of the appropriations for waterways not since 1875, but since the beginning of the Government. Besides the $54,000,000 expended previous to 1875 there was $38,000,000 on hand on the 1st of January, 1916; so that the $54,000,000 and the $38,000,000, with their fractions, made more than $93,000,000 of difference between the sum actually "paid out of the Treasury" since 1875 and the amount in the statement of the gentleman from Wisconsin [Mr. FREAR].

Mr. PLATT rose.

Mr. COOPER of Wisconsin. I can not yield now. Of course, I would not even so much as intimate that the gentleman from Wisconsin [Mr. FREAR] intended to mislead the House. I did not attribute or think of attributing the slightest personal wrongful motive to the gentleman.

The gentleman says that I ought to have known who Prof. Moulton is. Will the gentleman kindly tell me in what institution the gentleman is a professor?

Mr. FREAR. Prof. Moulton is a professor in the University of Chicago, a man of acknowledged standing in the United States. The gentleman sitting at my right, the leader of the minority [Mr. MANN], knows him well, and I have heard him spoken of very highly by many people.

Mr. COOPER of Wisconsin. The gentleman said I did not know because of my ignorance.

Mr. FREAR. I withdraw that remark.

Mr. COOPER of Wisconsin. There are a great many people in the world of whom I have never heard. There are a great many people in the world who have never heard of the gentleman from Wisconsin [Mr. FREAR], but they are not therefore necessarily ignorant.

Mr. FREAR. Will the gentleman yield?

Mr. COOPER of Wisconsin. Not now.

Mr. FREAR. The gentleman will find that there are others.

Mr. COOPER of Wisconsin. A few days ago I consulted Who's Who in America to learn about Prof. Moulton, but his name was not in that very voluminous book. Strange as it may seem, it so happened that I never heard of him until I listened to the speech of the gentleman from Wisconsin. Now, in this book of Prof. Moulton he says:

When this investigation was undertaken the writer shared in the common belief that traffic of certain kinds can be carried at substantially less cost by water than by rail.

He inclined to that view, he says, until he made a long investigation in Europe, which was financed by the famous clothing house of Hart, Schaffner & Marx. They gave him the money to go abroad, and Prof. J. Laurence Laughlin inspired the work.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I ask for five minutes more. This is important.

The CHAIRMAN. The gentleman from Wisconsin asks that his time be extended five minutes. Is there objection?

There was no objection.

Mr. COOPER of Wisconsin. The gentleman has declared that Prof. Moulton is a great expert, and speaks of Mr. Reed as also a great expert. Now, Mr. Reed was a county probate judge in Wisconsin, as I have ascertained from people who knew. A few years ago the Legislature of Wisconsin passed a law providing for the appointment of a man to investigate waterways, and a county probate judge in La Crosse, was appointed, a man who used to be a resident of the city of Hudson, the home of the gentleman from Wisconsin, Mr. FREAR. He went to Europe and investigated and came back. Within a short time, three or four years, the legislature repealed the law, and he is out of office. He has been here in the gallery, so a gentleman who knows him tells me, much interested in this matter. He is opposed to the improvement of inland waterways in the United States, as anybody can see who reads his opinions on the subject.

Now, here is another book that was published by another professor in the Chicago University, entitled "Government Regulation of Railway Rates." It is by Prof. Hugo R. Meyer, and was published in 1905, just prior to the legislation to extend the authority of the Interstate Commerce Commission. He said:

This book presents the conclusions forced upon the author by a painstaking study of the railway question extending over some 12 years.

* * * * * * *

The net result has been the disclosure of such overwhelming proof of the evils of State direction of industry or interference with its natural course, that he has become firmly convinced of the unwisdom of Government regulation of railways or their rates.

Prof. Meyer was strongly against any Government regulation of railroad rates. He was convinced against his will about this, as Prof. Moulton, of the same institution, was convinced against his will on the subject of waterway improvements.

Further on he said:

The book appears at the present time because of the possibility that Congress, influenced by the discontent that exists in some sections of the country because of the friction necessarily incident to the transaction of the complicated business of transportation, may be led to an act of ill-considered laws granting dangerously enlarged power to the Interstate Commerce Commission. * * *

* * * A fair consideration of these facts and of the conditions under which railroads must operate to secure their greatest efficiency compels the conclusion that whatever evils now exist none of them are at all commensurate with the harm which must result from bestowing the power to fix railroad rates to the Interstate Commerce Commission.

Mr. CONRY. Will the gentleman yield?

Mr. COOPER of Wisconsin. Yes.

Mr. CONRY. Is the university with which these distinguished professors are connected endowed by anybody?

Mr. COOPER of Wisconsin. Yes.

Mr. CONRY. By whom?

Mr. COOPER of Wisconsin. By John D. Rockefeller—a great man in the world of business, but not especially an enemy of railways.

Now, this book of Prof. Meyer was issued in 1905, just before the tremendous struggle came on in the House of Representatives over the Hepburn bill to grant more power to the Interstate Commerce Commission. In 1903 I had introduced a bill conferring power on the Interstate Commerce Commission to regulate railroad rates, the first bill of that kind ever introduced by a Member from Wisconsin in either House of Congress. We know the tremendous struggle that went on here to force the legislation through the two Houses of Congress.

Prof. Moulton's book, published in 1912, financed by Hart, Schaffner & Marx and supervised by Prof. J. Laurence Laughlin, is an argument against—and I have looked it through carefully—against all waterway improvement unless it be some harbor where railroads have terminals. He is opposed to waterway improvement, as the other professor was opposed to railway-rate regulation. I do not recognize either him or Mr. Reed as an authority to whom I must always yield my judgment as to what is best for the industrial development of the country. On the title-page Mr. Moulton is not called a professor.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. COOPER of Wisconsin. Yes.

Mr. FESS. Dr. Moulton is the son of Dr. W. J. Moulton, who was brought from Oxford, England, by President Harper when he opened the University of Chicago under the reorganization in 1893 or 1894, and this Dr. Moulton received his degree in the Chicago University.

Mr. COOPER of Wisconsin. What year?

Mr. FESS. I could not give the gentleman the exact year, but I think prior, of course, to the writing of that book.

Mr. COOPER of Wisconsin. The book was published in 1912.

Mr. FESS. Then, quite a time before that. The Dr. Moulton, whose book the gentleman has, was educated in the University of Chicago.

The CHAIRMAN. The time of the gentleman from Wisconsin has again expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I ask unanimous consent to proceed for 30 seconds more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. COOPER of Wisconsin. I say after careful examination of this book of Moulton's, so often cited by the gentleman from Wisconsin, that from cover to cover it is an elaborate argument against anything like the improvement of rivers in the United States for transportation purposes, and that Prof. Moulton is just as strongly opposed to such improvements as the other professor—Prof. Meyer—was opposed to Government regulation of railway rates.

Mr. SPARKMAN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly, the committee rose, and the Speaker having resumed the chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12193, the river and harbor appropriation bill, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. BYRNS of Tennessee for one week, on account of death in family.

To Mr. HILL for this week, on account of illness.

To Mr. FARR for three days, on account of illness in family.

To Mr. MOONEY for one week, on account of illness in family.

INDIAN APPROPRIATION BILL.

Mr. HAYDEN. Mr. Speaker, by direction of the Committee on Indian Affairs, I report back to the House the bill H. R. 10385, the Indian appropriation bill. (H. Rept. 514.)

The SPEAKER. Has the gentleman from Arizona any suggestion to make in reference to it?

Mr. MANN. It goes to the Committee of the Whole House on the state of the Union.

The SPEAKER. It will be referred to the Committee of the Whole House on the state of the Union and ordered printed.

EXTENSION OF REMARKS.

Mr. SEARS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of the middle ground in Key West Harbor.

The SPEAKER. Is there objection?

There was no objection.

Mr. HUDDLESTON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

HOUR OF MEETING TO-MORROW.

Mr. RAINEY. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock to-morrow.

The SPEAKER. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. RAINEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 13 minutes p. m.) the House adjourned until to-morrow, Tuesday, April 11, 1916, at 11 o'clock a. m.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H. R. 7093) granting an increase of pension to George W. Stewart, and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and a memorial were introduced and severally referred as follows:

By Mr. CARY: A bill (H. R. 14418) to authorize and direct the Postmaster General to procure postal cars and contract for hauling them, and appropriating money therefor; to the Committee on the Post Office and Post Roads.

By Mr. CARTER of Oklahoma: A bill (H. R. 14419) authorizing the Secretary of War to have made an appropriate investigation of the Washita and other rivers in southeastern Oklahoma; to the Committee on Rivers and Harbors.

By Mr. HENSLEY: A bill (H. R. 14420) to purchase a site for the erection of a post-office building in the city of Perryville, Mo.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14421) to purchase a site for the erection of a post-office building in the city of Flat River, Mo.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14422) to purchase a site for the erection of a post-office building in the city of Ste. Genevieve, Mo.; to the Committee on Public Buildings and Grounds.

By Mr. TAVENNER: A bill (H. R. 14423) to provide for the purchase of a site and the erection of a public building thereon at Carthage, Ill.; to the Committee on Public Buildings and Grounds.

By Mr. SMITH of Idaho: A bill (H. R. 14424) to prohibit the sale of intoxicating beverages on the islands of American Samoa and Guam; to the Committee on Alcoholic Liquor Traffic.

By Mr. WEBB: A bill (H. R. 14425) prohibiting threats by mail against the President of the United States or against any officer who may by the law of succession be entitled to succeed to the office of President of the United States; to the Committee on the Judiciary.

Also, a bill (H. R. 14426) to amend section 6 of the act entitled "An act to incorporate the American National Red Cross," approved January 5, 1905; to the Committee on Military Affairs.

By Mr. TINKHAM: A bill (H. R. 14427) granting additional leave of absence, with pay, to employees within the Federal classified service attending militia maneuvers or Federal instruction camps; to the Committee on Reform in the Civil Service.

By Mr. DARROW: A bill (H. R. 14428) to increase the pensions of those who have lost limbs or have been totally disabled in the same in the military or naval service of the United States; to the Committee on Pensions.

By Mr. TAVENNER: A bill (H. R. 14429) to provide for the purchase of a site and the erection of a public building thereon at East Moline, Ill.; to the Committee on Public Buildings and Grounds.

By Mr. MUDD: A bill (H. R. 14430) authorizing the Secretary of the Navy to construct a foot-passenger bridge over Mattawoman Creek, Charles County, Md., for the use of the employees of the Government proving grounds at Indianhead; to the Committee on Naval Affairs.

By Mr. HARRISON: A resolution (H. Res. 198) making it in order for the Speaker to entertain motions for the consideration of bills of a privileged character on the first and third Mondays of each month; to the Committee on Rules.

By Mr. BARNHART: A concurrent resolution (H. Con. Res. 28) providing for the printing of the prayers of the Chaplain of the House during the Sixty-third Congress; to the Committee on Printing.

By Mr. BRUCKNER: Memorial of the Legislature of the State of New York favoring an increased Navy; to the Committee on Naval Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. BEAKES: A bill (H. R. 14431) for the relief of John Henry Gibbons, captain on the retired list of the United States Navy; to the Committee on Naval Affairs.

By Mr. CANTRILL: A bill (H. R. 14432) granting an increase of pension to Robert Perry; to the Committee on Invalid Pensions.

By Mr. CARTER of Oklahoma: A bill (H. R. 14433) granting an increase of pension to Squire Grose; to the Committee on Pensions.

By Mr. COADY: A bill (H. R. 14434) granting a pension to Isabella C. Waddell; to the Committee on Invalid Pensions.

By Mr. COOPER of West Virginia: A bill (H. R. 14435) granting an increase of pension to Isaac Thacker; to the Committee on Invalid Pensions.

By Mr. COSTELLO: A bill (H. R. 14436) for the relief of Morris Dietrich; to the Committee on War Claims.

By Mr. CROSSER: A bill (H. R. 14437) granting a pension to Mrs. Jennie B. Darby; to the Committee on Invalid Pensions.

By Mr. DAVIS of Texas: A bill (H. R. 14438) granting a pension to Charlotte M. Beckham, widow of Capt. R. H. Beckham, deceased; to the Committee on Pensions.

By Mr. FARR: A bill (H. R. 14439) granting an increase of pension to Margaret A. Bass; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14440) granting an increase of pension to Henrietta Steinmetz; to the Committee on Invalid Pensions.

By Mr. GREEN of Iowa: A bill (H. R. 14441) for the relief of Lyman Bryant; to the Committee on Military Affairs.

By Mr. GOOD: A bill (H. R. 14442) granting an increase of pension to William W. Clark; to the Committee on Invalid Pensions.

By Mr. GRIFFIN: A bill (H. R. 14443) granting a pension to Frederick W. Mellor; to the Committee on Invalid Pensions.

By Mr. JOHNSON of Washington: A bill (H. R. 14444) granting an increase of pension to Helen E. Smith; to the Committee on Invalid Pensions.

By Mr. McARTHUR: A bill (H. R. 14445) for the relief of George F. De Maranville; to the Committee on Military Affairs.

By Mr. McCRACKEN: A bill (H. R. 14446) granting a pension to John L. Johnson; to the Committee on Invalid Pensions.

By Mr. MUDD: A bill (H. R. 14447) for the relief of Owen Matthews; to the Committee on Military Affairs.

Also, a bill (H. R. 14448) granting an increase of pension to Joseph Smolinski; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14449) granting a pension to Abram Gardner; to the Committee on Invalid Pensions.

By Mr. NELSON: A bill (H. R. 14450) granting an increase of pension to Alfred A. Bonney; to the Committee on Invalid Pensions.

By Mr. RAMSEYER: A bill (H. R. 14451) granting an increase of pension to William Roush; to the Committee on Invalid Pensions.

By Mr. RUBEY: A bill (H. R. 14452) granting a pension to George W. Burk; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14453) granting an increase of pension to John H. Davison; to the Committee on Invalid Pensions.

By Mr. RUSSELL of Missouri: A bill (H. R. 14454) granting an increase of pension to Ellen M. Mills; to the Committee on Invalid Pensions.

By Mr. SANFORD: A bill (H. R. 14455) granting a pension to Joseph P. Weis; to the Committee on Pensions.

Also, a bill (H. R. 14456) for the relief of John J. Dooley; to the Committee on Military Affairs.

By Mr. SEARS: A bill (H. R. 14457) granting an increase of pension to Stephen J. Coleman; to the Committee on Invalid Pensions.

By Mr. SELLS: A bill (H. R. 14458) granting an increase of pension to James H. Tunnell; to the Committee on Invalid Pensions.

By Mr. SHALLENBERGER: A bill (H. R. 14459) granting an increase of pension to William M. Mackey; to the Committee on Invalid Pensions.

By Mr. SHERWOOD: A bill (H. R. 14460) to correct the military record of Edward S. Knappen; to the Committee on Military Affairs.

By Mr. SMITH of Minnesota: A bill (H. R. 14461) granting a pension to Ella Mitchell York; to the Committee on Invalid Pensions.

By Mr. SMITH of New York: A bill (H. R. 14462) for the relief of George Deitz; to the Committee on Military Affairs.

Also, a bill (H. R. 14463) for the relief of Albert E. Kelly; to the Committee on Claims.

By Mr. SPARKMAN: A bill (H. R. 14464) granting a pension to James E. Whitehead; to the Committee on Pensions.

By Mr. STEELE of Pennsylvania: A bill (H. R. 14465) granting a pension to Rosa E. Lilly; to the Committee on Invalid Pensions.

By Mr. THOMAS: A bill (H. R. 14466) granting a pension to Carrie A. Stittions; to the Committee on Pensions.

By Mr. THOMPSON: A bill (H. R. 14467) granting an increase of pension to Joseph L. Reel; to the Committee on Invalid Pensions.

By Mr. TILSON: A bill (H. R. 14468) granting an increase of pension to Mary L. Finney; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Memorial of Society of Sponsors of the United States Navy, pledging loyalty to the United States; to the Committee on Military Affairs.

Also (by request), memorial of women voters of Washington, favoring action on the Susan B. Anthony amendment; to the Committee on the Judiciary.

Also (by request), petition of Health Officers' Association of Los Angeles, Cal., favoring Federal aid for indigent persons afflicted with tuberculosis; to the Committee on Interstate and Foreign Commerce.

By Mr. BACHARACH: Memorial of Board of Trade of the city of Newark, N. J., relative to national defense; to the Committee on Military Affairs.

By Mr. BAILEY: Petition of W. R. Davidson, George F. Guyer, Ben Butterworth, Rev. Nelson B. Kline, C. C. Ball, John Sterrat, jr., J. J. Mitchell, Fred Kleine, Charles B. Graffius, A. E. Fox, George Proud, Clair Caldwell, R. J. Protzeller, D. B. Beaver, F. N. Artley, Sidney Alsop, J. C. Wesner, Harry M. Finn, Alex Leslie, Samuel Jessop, Thomas Bell, Guy Leslie, James Bendle, Logan Long, Albert Marsh, John Bendle, jr., C. M. Darling, J. H. Leslie, and J. H. Temple, all of Spangler, Pa., in favor of national prohibition; to the Committee on the Judiciary.

By Mr. BARCHFELD: Petition of 104 citizens of Bethel and Upper St. Clair Townships, Allegheny County, Pa., favoring national prohibition; to the Committee on the Judiciary.

Also, petitions of the First Methodist Episcopal Church, the First Christian Church, the United Presbyterian Church, and the Woman's Christian Temperance Union of Homestead; the New Century Club and First Presbyterian Church of Dormont; the United Presbyterian Church and the Woman's Christian Temperance Union of Crafton; the United Presbyterian Church and Baptist Church of Mount Lebanon; the Civic Club of Bridgeville; the Beechview Methodist Church and Lutheran Church of the Redeemer of Pittsburgh; Forest Grove Presbyterian Church, of McKees Rocks; and Bethel Presbyterian Church, of Bridgeville, all in the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

Also, petition of 95 citizens of Allegheny County, Pa., favoring House bill 6468, to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of the faculty of the department of architecture of the Carnegie Institute of Technology, against the erection of the proposed power house on the Potomac Channel, near the Bureau of Engraving and Printing; to the Committee on Public Buildings and Grounds.

Also, petition of 117 voters of Duquesne, Pa., favoring the passage of House joint resolutions 84 and 85, proposing an amendment to the Constitution of the United States for nation-wide prohibition; to the Committee on the Judiciary.

By Mr. BRUCKNER: Petition of John H. Martens, favoring passage of Stevens-Ayres bill; to the Committee on Interstate and Foreign Commerce.

Also, petition of National Light & Power Co., St. Louis, Mo., against passage of bills relative to numbers on motor boats; to the Committee on the Merchant Marine and Fisheries.

Also, petition of the Typotheta of New York City, favoring House bill 11621, relative to mailing catalogues, etc.; to the Committee on the Post Office and Post Roads.

Also, petition of National Association of Bureau of Animal Industry Employees, New York City, favoring House bill 5792, relative to salaries in Bureau of Animal Industry; to the Committee on Agriculture.

Also, petition of J. A. McCarthy, New York City, favoring House bill 6915, the Griffin bill; to the Committee on the Post Office and Post Roads.

By Mr. BURKE: Memorial of Cigarmakers' Union No. 381, of Watertown, Wis., favoring passage of House bill 6871, relative to convict-made goods; to the Committee on Labor.

By Mr. CASEY: Memorial of Pittston City District of the Luzerne County Sabbath School Association, State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

By Mr. DALE of New York: Memorial of Republican State Central Committee of Wyoming, favoring woman-suffrage amendment; to the Committee on the Judiciary.

Also, petition of the Pineoleum Co., of New York City, favoring 1-cent letter postage; to the Committee on the Post Office and Post Roads.

Also, memorial of Western Oil Jobbers' Association, favoring effectual dissolution of the Standard Oil Co.; to the Committee on the Judiciary.

Also, petition of W. E. Shrewsbury, of New York City, favoring preparedness; to the Committee on Military Affairs.

By Mr. DALLINGER: Petition of First Baptist Young People's Society of Christian Endeavor of Cambridge, Mass., favoring national prohibition; to the Committee on the Judiciary.

By Mr. DILLON: Petition of sundry citizens of Sioux Falls, S. Dak., against the Sunday-observance bill in the District of Columbia; to the Committee on the District of Columbia.

By Mr. EAGAN: Memorial of Union League Club, of Chicago, and Society of Colonial Wars, in the District of Columbia, favoring preparedness; to the Committee on Military Affairs.

Also, petition of Western Oil Jobbers' Association, relative to effectual dissolution of the Standard Oil Co.; to the Committee on the Judiciary.

Also, petition of United States penitentiary guards at Leavenworth, Kans., for increase in pay; to the Committee on Appropriations.

By Mr. ELSTON: Petition of Ottie W. Smith and other citizens of Alameda County, Cal., against passage of House bill 652, Sunday-observance bill in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of Ottie W. Smith and others, of Alameda County, Cal., against passage of bills to amend the postal law; to the Committee on the Post Office and Post Roads.

Also, petition of the Woman's Christian Temperance Union of Berkeley, Cal., favoring the passage of a bill to prohibit the sale of alcoholic liquors in the District of Columbia; to the Committee on the District of Columbia.

Also, memorial of the board of supervisors of Alameda County, Cal., favoring House bill 8352, to standardize the treatment of tuberculosis and provide Federal aid to indigent patients; to the Committee on Interstate and Foreign Commerce.

Also, petition of Trinity Church, of Berkeley, Cal., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of the Berkeley (Cal.) Woman's Christian Temperance Union, favoring national prohibition; to the Committee on the Judiciary.

By Mr. FLYNN: Memorial of Western Oil Jobbers' Association, favoring effectual dissolution of the Standard Oil Co.; to the Committee on the Judiciary.

Also, petition of Olin J. Stephens, of New York, relative to compulsory military service; to the Committee on Military Affairs.

Also, petition of the Pineoleum Co., of New York City, favoring 1-cent letter postage; to the Committee on the Post Office and Post Roads.

Also, petition of committee on provision for the feeble-minded, favoring House bill 13666, relative to feeble-minded in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of Richey, Browne & Donald, of New York City, against passage of bill to regulate method of directing the work of Government employees; to the Committee on Labor.

By Mr. FULLER: Petition of Culver (Ind.) Military School, relative to amendments to the military bill; to the Committee on Military Affairs.

By Mr. GARNER: Memorial of Southwestern Millers' League, favoring a merchant marine; to the Committee on the Merchant Marine and Fisheries.

Also, petition of El Paso (Tex.) Chamber of Commerce, favoring preparedness; to the Committee on Military Affairs.

Also, petition of Civic League of Del Rio, Tex., favoring inspection of dairy products; to the Committee on Rules.

By Mr. GRIFFIN: Petition of Richey Browne & Donald, of New York City, against passage of a bill to regulate the method of directing the work of Government employees; to the Committee on Labor.

Also, memorial of Ohio Association Volunteer Retired List, relative to Volunteer officers' retirement bill; to the Committee on Military Affairs.

Also, petition of the Pineoleum Co., of New York City, favoring 1-cent letter postage; to the Committee on the Post Office and Post Roads.

By Mr. GUERNSEY: Petition of citizens of Old Town, Me., favoring national prohibition; to the Committee on the Judiciary.

By Mr. HAMLIN: Papers to accompany House bill 12449, to pension John G. Monroe; to the Committee on Invalid Pensions.

By Mr. HAWLEY: Petition of Ministerial Association of Medford, Presbyterian Church of Creswell, Woman's Civic Improvement Club of Creswell, sundry citizens of Oregon, and citizens of Linn, Oreg., favoring national prohibition; to the Committee on the Judiciary.

By Mr. HAYDEN: Petition of Mrs. J. E. Laurence and 7 other citizens of Phoenix, Ariz., opposing the passage of House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

Also, petition of Tula A. Robertson and 34 other citizens of Flagstaff, Ariz., favoring the adoption of a prohibition amendment to the Constitution of the United States; to the Committee on the Judiciary.

Mr. HOLLINGSWORTH: Petition of Rev. J. B. Buckey and 47 others, of Salineville, Ohio, favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of American Flint Glass Works Local Union, Toronto, Ohio, against repeal of the seamen's act; to the Committee on the Merchant Marine and Fisheries.

By Mr. HUMPHREY of Washington: Petition of 28 citizens of Seattle, and Perseverance Lodge, No. 121, International Order of Good Templars, of Seattle, Wash., favoring national prohibition; to the Committee on the Judiciary.

By Mr. KEISTER: Petition of sundry citizens and organizations of the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

By Mr. LEWIS: Petition of a number of citizens of Cumberland, Md., opposing the passage of House bill 8348; to the Committee on the Judiciary.

By Mr. LINDBERGH: Petition of citizens of Akeley, Minn., protesting against the passage of House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

By Mr. LOUD: Petition of Gerrit Masselink and 18 others, of Big Rapids, Mecosta County, Mich., favoring passage of woman-suffrage amendment; to the Committee on the Judiciary.

By Mr. McARTHUR: Petition of Pioneer Methodist Church of St. Johns, Portland, Oreg., favoring the establishment of a Federal motion-picture commission; to the Committee on Education.

Also, petition of Central Presbyterian Church, of Portland, Oreg., favoring the establishment of a Federal motion-picture commission; to the Committee on Education.

Also, petition of First United Brethren Church, of Portland, Oreg., favoring establishment of a Federal motion-picture commission; to the Committee on Education.

By Mr. McGILLICUDDY: Petition of citizens and organizations of the State of Maine, favoring national prohibition; to the Committee on the Judiciary.

By Mr. MAPES: Petition of citizens of Lamont, Mich., favoring national prohibition; to the Committee on the Judiciary.

By Mr. NELSON: Petition of sundry citizens of Crawford County, Wis., against bills to amend the postal law; to the Committee on the Post Office and Post Roads.

Also, petition of sundry citizens and organizations of Wisconsin, favoring national prohibition; to the Committee on the Judiciary.

By Mr. NORTH: Petition of the Holy Name Society of St. Patrick's Church, for the Federal-censorship bill for moving pictures; to the Committee on Education.

Also, petition of Federation of Catholic Societies, for the Federal-censorship bill for moving pictures; to the Committee on Education.

Also, petition of Homer City Council, No. 199, Junior Order United American Mechanics, against the Fitzgerald postal bill and the Siegel postal bill; to the Committee on the Post Office and Post Roads.

Also, petition of 57 citizens of Indiana County, Pa., favoring a Christian amendment to Constitution of United States; to the Committee on the Judiciary.

Also, petition of sundry citizens and organizations of the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

By Mr. PETERS: Petition of sundry citizens and organizations of the State of Maine, favoring national prohibition; to the Committee on the Judiciary.

By Mr. PHELAN: Petition of Brotherhood Class of Cliftondale, Sangus, Mass., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of citizens of the State of Massachusetts favoring embargo on arms, etc.; to the Committee on Foreign Affairs.

By Mr. PRATT: Petition of the widows of soldiers of the United States, who reside in the city of Ithaca, N. Y., favoring the passage of the Ashbrook widows' pension bill, House bill 11707; to the Committee on Invalid Pensions.

By Mr. RAINEY: Petition of Mrs. Ellen L. Rupert and others of Rockport, Ill., favoring national prohibition; to the Committee on the Judiciary.

By Mr. RANDALL: Petition of Joe Senger and 79 other residents of Franklin Grove, Ill., favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of the Board of Supervisors of Alameda County, Cal., favoring House bill 8325; to the Committee on Interstate and Foreign Commerce.

Also, memorial of the Health Officers' Association of Los Angeles County, Cal., favoring Federal aid for indigent persons afflicted with tuberculosis; to the Committee on Interstate and Foreign Commerce.

By Mr. SLOAN: Petition of International Christian Endeavor of Congregational Church at Crete, Nebr., favoring prohibition in the District of Columbia; to the Committee on the District of Columbia.

By Mr. SMITH of Idaho: Papers to accompany House bill 14415 for relief of O. W. Lindsley; to the Committee on Claims.

By Mr. SMITH of Minnesota: Petition of A. E. Peck Manufacturing Co., of Minneapolis, Minn., against continuance of tax on tooth paste; to the Committee on Ways and Means.

Also, memorial of Calhoun Commercial Club of Minneapolis, Minn., relative to national control of the Mississippi River; to the Committee on Rivers and Harbors.

By Mr. STEAGALL: Petition of sundry citizens of Downs, Ala., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of sundry citizens of Samson, Ala., relative to rural-credits legislation; to the Committee on Banking and Currency.

Also, petition of sundry citizens and organizations of the State of Alabama, favoring national prohibition; to the Committee on the Judiciary.

By Mr. STEELE of Pennsylvania: Petition of sundry citizens and organizations of the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

By Mr. STEPHENS of California: Memorial of Women's Conference of Jewish Organizations, Los Angeles, and Cremieux Lodge, San Francisco; also communications from Edward F. Mullen and 21 others of Los Angeles, all in the State of California, protesting against the Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also, memorial of Commonwealth Club of San Francisco, Cal., favoring peaceful settlement of international disputes; to the Committee on Foreign Affairs.

Also, petition of Building Material Dealers Creditors' Association, Sebastian Kraemer, E. H. Porter, and F. W. Enderly, all of Los Angeles, Cal., protesting against the stamp tax on bank checks; to the Committee on Ways and Means.

Also, petition of Women's Club, of Lodi, Cal., and the California Federation of Women's Clubs, San Francisco, Cal., favoring appropriations for Yosemite National Park; to the Committee on the Public Lands.

Also, memorial of Board of Supervisors, Alameda, and Health Officers' Association of Los Angeles, both in the State of California, favoring Federal aid for indigent consumptives; to the Committee on Interstate and Foreign Commerce.

Also, petition of Mary R. Moore and 33 others of Los Angeles, Cal., favoring the Warren bill; to the Committee on Military Affairs.

Also, petition of Jefferson Davis Chapter, United Daughters of the Confederacy, San Francisco, Cal., favoring the Works bill for the relief of Confederate veterans; to the Committee on Pensions.

Also, petition of California Associated Societies for the Conservation of Wild Life, favoring a national-park service; to the Committee on the Public Lands.

By Mr. TAYLOR of Colorado: Petition of citizens of Palisade, Colo., against passage of compulsory Sunday observance bills; to the Committee on the District of Columbia.

By Mr. TEMPLE: Petition of J. A. Forsythe and 15 other citizens of Beaver and Lawrence Counties, favoring a Christian amendment to the Constitution of the United States; to the Committee on the Judiciary.

By Mr. TILSON: Petition of F. H. Evarts and 43 others, of New Haven, Conn., favoring bills to amend the postal law; to the Committee on the Post Office and Post Roads.

By Mr. TINKHAM: Petition of United States Penitentiary guards at Leavenworth, Kans., for increase of pay; to the Committee on Appropriations.

Also, petition of Society of the Chagres, Balboa Heights, Canal Zone, relative to resolution to reward members of the Isthmian Canal Commission; to the Committee on Appropriations.

By Mr. WASON: Petitions of John A. Scott and 10 other residents of Bennington, Miss F. L. Edwards and 21 other residents of Bennington, N. H., favoring national prohibition; to the Committee on the Judiciary.

Also, resolution of Bennington Grange, of Bennington, N. H., favoring national prohibition; to the Committee on the Judiciary.

SENATE.

TUESDAY, *April 11, 1916.*

The Senate met at 11 o'clock a. m.

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, Thy name has been the hope and inspiration of our Nation in all its history. In the time of our conscious weakness our fathers called upon Thy name. Thou didst deliver us. Thou didst give us power. In the day of our conscious strength and greatness we call upon Thy name that we forget not Thy benefits to us and that we may remember Thou hast a purpose in all that Thou hast ministered unto us as a Nation. Thou hast sent us upon a mission among the nations of the earth. Thy kingdom is within us. We pray that our Nation may be in our hearts as well and that Thy kingdom and our Nation may be one in our hearts. With a divine inspiration and with a godly purpose may we address ourselves to the tasks of this day. For Christ's sake. Amen.

The Secretary proceeded to read the Journal of the proceedings of the legislative day of Thursday, March 30, 1916, when, on request of Mr. SIMMONS, and by unanimous consent, the further reading was dispensed with and the Journal was approved.

PERSONAL EXPLANATION.

Mr. WEEKS. Mr. President, I have a general pair with the senior Senator from Kentucky [Mr. JAMES]. When the vote was taken yesterday afternoon I came into the Senate when the call had been nearly completed. Understanding that the Senator from Kentucky had voted I voted. If he had been present he would have voted in the negative upon the proposition which was before the Senate. I voted in the affirmative. I, of course, voted under a misapprehension of the conditions.

I make this statement to protect the Senator from Kentucky, who had provided a pair on this question.

PRICE OF GASOLINE (S. DOC. NO. 403.)

The VICE PRESIDENT. The Chair lays before the Senate a communication from the chairman of the Federal Trade Commission, transmitting a preliminary report concerning the investigation of gasoline prices by that commission. The communication and accompanying report will be printed in the RECORD and referred to the Committee on Agriculture and Forestry.

Mr. McCUMBER subsequently said: I should like to ask the Chair what was done with the report concerning gasoline?

The VICE PRESIDENT. It was referred to the Committee on Agriculture and Forestry and ordered to be printed in the RECORD.

Mr. McCUMBER. I ask that it be printed also as a document. I think it is a matter of considerable interest to the country and that it should be so printed in addition to its being printed in the RECORD.

Mr. SMOOT. The rule has been either to print as a public document or in the RECORD, and whichever course the Senator chooses can be taken.

Mr. McCUMBER. I have not asked that it be printed in the RECORD. I simply ask that it be printed as a document so that it may be available in that form.

The VICE PRESIDENT. Without objection, the communication will be printed as a document and not printed in the RECORD.

NATIONAL DEFENSE.

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Secretary of War, transmitting, in response to a resolution of March 30 (calendar day of April 7), three opinions of the Judge Advocate General of the Army bearing upon various phases of the legal situation involved in measures pending before the two branches of Congress upon the reorganization of the Army.

Mr. BRANDEGEE. Inasmuch as the communication does not concern the present subject of debate, I ask that it be printed in the RECORD when we take up the Army bill for consideration.

The VICE PRESIDENT. The communication and accompanying papers will be referred to the Committee on Military Affairs and printed in the RECORD following the consideration or during the consideration of the Army reorganization bill.

FINDINGS OF THE COURT OF CLAIMS.

The VICE PRESIDENT laid before the Senate communications from the chief clerk of the Court of Claims, transmitting certified copies of the findings of fact and conclusions filed by the court in the following causes:

Mary K. Corwin, daughter and one of the heirs of Henry D. Kingsbury, deceased, *v.* The United States (S. Doc. No. 397);

Wright Bisbee *v.* The United States (S. Doc. No. 398);

Warren D. Crandall *v.* The United States (S. Doc. No. 399);

Clarence W. Denton *v.* The United States (S. Doc. No. 400);

Albert H. Van Deusen *v.* The United States (S. Doc. No. 401); and

James P. Harbeson *v.* The United States (S. Doc. No. 402).

The foregoing findings were, with the accompanying papers, referred to the Committee on Claims and ordered to be printed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives by E. T. Taylor, jr., one of its clerks, announced that the House disagrees to the amendments of the Senate to the bill (H. R. 10385) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1917; asks a conference with the Senate on the disagreeing votes of the two Houses thereon; and had appointed Mr. CARTER of Oklahoma, Mr. KONOP, Mr. HAYDEN, Mr. CAMPBELL, and Mr. NORTON managers at the conference on the part of the House.

The message also announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 3984) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

The message further announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 4399) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

NATIONAL DEFENSE.

Mr. UNDERWOOD. Mr. President, some days ago I published a letter which I received from Mr. Landis in reference to the statement I made about him. He has written me another letter on the subject, which disclaims knowledge of Mr. Carter. I ask that the letter may be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

E. I. DU PONT DE NEMOURS & CO.,
Wilmington, Del., April 10, 1916.

Hon. OSCAR W. UNDERWOOD,
United States Senate, Washington, D. C.

MY DEAR SENATOR: The CONGRESSIONAL RECORD of April 7 did not reach me until to-day, and I hasten to write you because I want you to know that some one is imposing on you and lying about me.

Under date of April 5, referring to charge made by you against me in letter to Mr. du Pont, I wrote you assuring you that I had nothing whatever to do with any provision in the House bill bearing on nitrates or anything else, and that I did not recall that I had ever spoken to any Senator or Representative at any time about nitrates or the fixation of atmospheric nitrogen.

You had my letter read to the Senate and printed in the CONGRESSIONAL RECORD, and you followed it with a statement explaining the source of your information about me and my alleged antagonism to the House nitrate provision.

It appears from your statement that a man by the name of R. B. Carter, formerly of Albemarle County, Va., claiming to be an engineer employed by the Du Pont Co., states that while dining with me recently I told him he should not advocate a Government nitric-acid plant, because the Du Pont Co. was opposing such an enterprise.

I want to say to you in all sincerity and honesty that I do not recall ever having met, or known, a man by the name of R. B. Carter. I certainly never dined with a man by that name in recent years.

Until I read his name in the CONGRESSIONAL RECORD I never heard of Mr. R. F. Bower, of Albemarle County, Va.

Further than is set forth by Mr. du Pont's letter addressed to the Secretary of War and the bill accompanying it touching conditions under which the Du Pont Co. would undertake the fixation of atmospheric nitrogen, I have in no way interested myself in the question.

I will appreciate it greatly if you will have this letter read from the Secretary's desk.

Very truly, yours, C. B. LANDIS.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented a memorial of Local Branch, Commandery of the Military Order of the Loyal Legion of the United States, of the District of Columbia, remonstrating against the erection of a power plant in the city of Washington, D. C., on such a location as will mar the beauty of memorial structures, which was ordered to lie on the table.

He also presented a petition of the Merchants' Association, of Manila, P. I., praying that final action on legislation affecting the government of the Philippines or having to do with their relations with the United States be withheld until the European war shall have been ended, which was ordered to lie on the table.

He also presented a petition of Typographical Union No. 8, of St. Louis, Mo., praying for Government ownership of telephone and telegraph systems, which was referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of Honolulu, Hawaii, praying for prohibition in the Territory of Hawaii, which were referred to the Committee on Pacific Islands and Porto Rico.

He also presented a telegram in the nature of a petition from U. S. Grant Post, No. 327, Department of New York, Grand Army of the Republic, of Brooklyn, N. Y., and a petition of the Society of Sponsors of the United States Navy, of Philadelphia, Pa., and of the board of governors of the India House, of New York City, N. Y., praying for an increase in armaments, which were ordered to lie on the table.

Mr. POINDEXTER. I present resolutions in the nature of a petition adopted by the Northwest Conference, held at Spokane, Wash., March 27 and 28, 1916, on what has come to be called preparedness. I ask that they may be printed in the RECORD.

There being no objection, the resolutions were ordered to lie on the table and to be printed in the RECORD, as follows:

The Northwest Conference on Preparedness, held at Spokane March 27 and 28, 1916, after duly authorized call to the people of Oregon,

Washington, Idaho, Montana, and Wyoming, adopted the following resolutions at the conclusion of two days of discussion and deliberation:

"The United States is the richest country on earth, and the most vulnerable to attack. With a navy that ranks fourth in the battle fleets of the world, it has two long ocean fronts, the Gulf of Mexico, the Panama Canal, Hawaii, the Philippines, and Porto Rico to defend.

"It is the only great power that is content to risk its safety on a small navy and the unknown quantity of a volunteer army. France, Germany, Austria-Hungary, Russia, Italy, Japan, Australia, all have adopted compulsory training of their youth and compulsory liability to service in time of war, and Great Britain has now adopted a modified form of compulsory service.

"In the light of these undeniable facts we call upon Congress and the President to give this endangered Nation a modern and well-balanced navy, with ships enough to guard the long Pacific coast front without impairing the fleet that will always be needed to guard the long Atlantic front.

"We make this appeal on the broad basis of national safety and welfare. This is a union, one and indissoluble. A blow at the Atlantic States and cities will be a blow felt by the Middle West, the Rocky Mountain States, and the Pacific slope, and a blow at the Pacific coast will be an injury to every other star in the flag.

"The States bordering on the Pacific coast of the great Northwest have many wealthy and populous coast cities and towns and railroad and steamship terminals wholly dependent upon the traffic of the ocean highways lying to-day at the mercy of invading foreign powers for the want of national seacoast fortifications for protection from invasion from the high seas.

"Therefore, with an adequate Navy in the Pacific should go ample provision of naval bases for the fuller protection of that Navy and the cities of the Pacific coast—those of Puget Sound and the Columbia River and of San Francisco and southern California as well.

"We believe, with Washington, Jefferson and Madison, and Monroe and Jackson, that the applied principle of manhood duty to the flag should go hand in hand with manhood suffrage.

"We believe with the military authorities of to-day—the Chief of Staff, the Assistant Chief of Staff, the president of the Army War College, the major general commanding the Department of the East, and practically every other military authority who has testified before the Military Affairs Committees of the House and the Senate—that this Nation will not have adequate, dependable, just, and democratic defense until it has discarded the unfair and volunteer plan and applied the equitable principle of universal physical, moral, and military training of its youth, with universal liability to serve in case of war.

"We believe that sufficient appropriation should be made by our State legislatures to provide adequate armory facilities and to meet the administrative and incidental expenses of the National Guard troops of our several States when organized in accordance with the accepted plan for a force of citizen soldiery contained in the pending Federal legislation which we have indorsed.

"We urge all business and professional men to at once give patriotic personal study and service as auxiliaries to the existing National Guard and Naval Militia and to business men's military lectures and citizens' camps, to the end that every citizen will voluntarily and at once give some assistance to changing the United States of America into a defended treasure land

"Compulsory training of the country's youth will tend powerfully to the correction of grave evils and make our people more efficient in all the industries and arts of peace. We place it first, therefore, in the consideration of plans of national defense recommended by the country's ablest military and naval authorities as they have testified before the committees of the Senate and the House.

"To their plans and their counsel we will cheerfully yield our local interests everywhere.

"The Chamberlain bill from the Senate committee follows closely the recommendations of the country's duly constituted military advisers. It should be adopted, and we will call upon the Senators and Representatives from the five States sending delegates to this convention—Wyoming, Montana, Idaho, Washington, and Oregon—to support it with their voice, vote, and influence.

"Whereas it has become absolutely admitted, through practical application, that the country, even in time of peace and more urgently in time of war, demands the construction of highways across this continent, to be used in case of war in repelling the invasion of a foreign power or in offensive warfare for the transportation of munitions of war from coast to coast, from the interior: Therefore

"*Resolved*, That we urge upon Congress appropriations in aid of such highways as may be deemed necessary for military operations.

"*Resolved*, That ample supplies of nitrogen and potash are an essential part of the preparedness of the United States to meet the emergency that would be created by war, and a comprehensive plan for conducting experiments and doing the other things necessary to develop these industries in our own country must be an essential part of a broad plan for industrial and military preparedness."

Mr. McCUMBER presented a memorial of the Commercial Club of Jamestown, N. Dak., remonstrating against the imposition of a tax on gasoline, which was referred to the Committee on Finance.

He also presented a petition of sundry citizens of Minot, N. Dak., praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was ordered to lie on the table.

He also presented memorials of sundry citizens of Leonard, Pekin, Dunn Center, Wildrose, Kulm, McClusky, and Niagara, all in the State of North Dakota, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. SHEPPARD presented memorials of sundry citizens of Austin and Pampa, in the State of Texas, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of the Farmers' Union of Fannin County, Tex., remonstrating against section 11 of the so-called cotton-futures bill, which was referred to the Committee on Agriculture and Forestry.

He also presented memorials of sundry citizens of Waco and Keene, in the State of Texas, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Comanche, Palacios, and Canyon, in the State of Texas, and a petition of sundry citizens of Oil City, Pa., praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. WORKS presented a petition of sundry citizens of Sawtelle, Cal., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. JONES presented petitions of sundry citizens of the State of Washington, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Conconully, Oakville, and Mount Vernon, all in the State of Washington, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. SHAFROTH presented petitions of sundry citizens of Clifton, Colo., praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. SMITH of Michigan presented petitions of sundry citizens of Michigan, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Prescott, Mich., praying for the creation of a system of rural credits, which was ordered to lie on the table.

He also presented a petition of sundry citizens of Morenci, Mich., praying for an investigation into the price of gasoline, which was ordered to lie on the table.

He also presented a petition of sundry citizens of Grand Rapids, Mich., praying for an investigation into conditions surrounding the marketing of dairy products, which was referred to the Committee on Agriculture and Forestry.

He also presented a petition of sundry citizens of Kalamazoo, Mich., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented memorials of sundry citizens of Michigan, remonstrating against any change being made in the parcel-post law, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of sundry citizens of Hillsdale and Dundee, in the State of Michigan, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

Mr. MYERS presented a memorial of sundry citizens of Kalispell and Somers, in the State of Montana, remonstrating against appropriations for sectarian purposes, which was ordered to lie on the table.

Mr. BURLEIGH presented a petition of sundry citizens of Old Town, Me., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. PHELAN presented petitions of sundry citizens of San Francisco, Sacramento, and Los Angeles, all in the State of California, praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

He also presented a petition of sundry citizens of San Francisco, Cal., praying for the enactment of legislation to prohibit interstate commerce in the products of child labor, which was referred to the Committee on Interstate Commerce.

Mr. THOMPSON presented petitions of sundry citizens of Pittsburg, Kans., praying for the enactment of legislation to grant pensions to employees of the Postal Service, which were referred to the Committee on Post Offices and Post Roads.

He also presented a petition of the Young People's Society of Christian Endeavor, of Lakin, Kans., praying for prohibition in the island of Porto Rico, which was referred to the Committee on Pacific Islands and Porto Rico.

Mr. CHAMBERLAIN presented a petition of sundry citizens of St. Johns, Oreg., praying for Federal censorship of motion pictures, which was referred to the Committee on Education and Labor.

He also presented a memorial of sundry citizens of Salem, Oreg., remonstrating against the enactment of legislation to limit the freedom of the press, which was referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of Oregon, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Oregon, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. CURTIS presented petitions of the congregations of the Methodist Episcopal Church, the Baptist Church, and the Presbyterian Church, all of Wellsville, in the State of Kansas, praying for prohibition in the District of Columbia, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Louisville, Junction City, La Harpe, Gaylord, Newton, Jefferson, Atchison, Goddard, Wichita, Lucas, Onaga, Lost Springs, and Alton, all in the State of Kansas, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Chanute, Garnett, Kansas City, Ottawa, and Pittsburg, all in the State of Kansas, praying for the enactment of legislation to grant pensions to employees in the Postal Service, which were referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of Lawrence and Topeka, in the State of Kansas, praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

He also presented memorials of sundry citizens of Dwight, Olathe, Lenexa, Wakefield, Manhattan, Lairds Creek, Bronson, Detroit, Mount Pleasant, Arkansas City, Princeton, Altoona, Earlton, Stover, Carbondale, Overbrook, Fredonia, Burlington, Horton, Baldwin, and Ozawkie, all of the State of Kansas, remonstrating against any change being made in the parcel-post law, which were referred to the Committee on Post Offices and Post Roads.

Mr. WEEKS. I present resolutions of the General Court of the Commonwealth of Massachusetts relative to the conditions of destitution in Poland and to the entry of food therein. I ask that the resolutions be printed in the RECORD and referred to the Committee on Foreign Relations.

There being no objection, the resolutions were referred to the Committee on Foreign Relations and ordered to be printed in the RECORD, as follows:

THE COMMONWEALTH OF MASSACHUSETTS, 1916.

Resolutions relative to the conditions of destitution in Poland and to the entry of food therein.

Whereas, according to reliable information, the situation in the belligerent countries of Europe is such that the inhabitants of Poland and the invaded districts of Russia are dying of starvation; and

Whereas it has been authoritatively presented that the only solution for this problem is to increase the available food supply in said territory from outside sources through the medium of an organization similar to the present Commission for the Relief of Belgium: Therefore be it

Resolved, That the Senators and Representatives in Congress from Massachusetts are hereby requested to take early and concerted action to bring before the United States Department of State the awful plight of the inhabitants of these districts, with a view to having representations made to the Governments of the belligerent nations that the importation of foodstuffs therein be made possible.

Resolved, That copies of these resolutions, attested by the secretary of the Commonwealth, be sent by said official to each of the Senators and Representatives in Congress from Massachusetts.

In house of representatives, adopted March 17, 1916.
In senate, adopted in concurrence March 22, 1916.
A true copy.
Attest:

ALBERT P. LANGTRY,
Secretary of the Commonwealth.

Mr. WEEKS presented petitions of sundry citizens of Massachusetts, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of West Newton, Mass., praying for Federal censorship of motion pictures, which was referred to the Committee on Education and Labor.

He also presented a petition of sundry citizens of Watertown, Mass., praying that an appropriation be made to provide for the construction of a national leprosarium, which was referred to the Committee on Public Health and National Quarantine.

He also presented a petition of sundry citizens of Belchertown, Mass., praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was ordered to lie on the table.

He also presented a memorial of the Massachusetts State Branch of the Woman's Peace Party, remonstrating against the acquisition of any Mexican territory at any time or under any circumstances, which was referred to the Committee on Foreign Relations.

He also presented a petition of sundry citizens of Pittsfield, Mass., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented a petition of sundry citizens of Worcester, Mass., praying for the enactment of legislation to provide for a reclassification of the employees of the Bureau of Animal Industry, Department of Agriculture, which was referred to the Committee on Agriculture and Forestry.

Mr. SMITH of Michigan. I present a resolution adopted by the Rotary Club of Saginaw, Mich., which I ask may be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SAGINAW ROTARY CLUB,
Saginaw, Mich., April 6, 1916.

Hon. WM. ALDEN SMITH,
United States Senate, Washington, D. C.

MY DEAR SENATOR: The Saginaw Rotary Club, at its meeting yesterday, adopted unanimously the following resolution, which, in accordance with its terms, I have the honor to transmit herewith:

"*Resolved*, That the secretary of this club be instructed to communicate with our representatives in Congress, requesting them to give hearty support in the most adequate and effective measures for national preparedness which may be possible of enactment by the present Congress."

Respectfully, yours, MAX P. HEAVENRICH, *Secretary.*

Mr. SMITH of Michigan. I present resolutions adopted by the City Commission of Jackson, Mich., which I ask may be printed in the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

CITY OF JACKSON, MICH., *April 4, 1916.*

Hon. WM. ALDEN SMITH,
United States Senate, Washington, D. C.

DEAR SIR:

"*Resolved* That the City Commission of Jackson, Mich., favor the passage by Congress of a bill providing for pensions for Federal employees if incapacitated by old age or disability after 25 years of service; and be it further

Resolved, That a copy of these resolutions be sent to each of the United States Senators and Representatives in Congress from the State of Michigan.

[SEAL.] C. H. VEDDER, *City Clerk.*

Mr. SMITH of Michigan. I present a communication from members of Pisgah Lodge, No. 34, Independent Order of B'nai B'rith, of Detroit, Mich., which I ask may be printed in the RECORD.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

DETROIT, MICH., *April 3, 1916.*

Hon. WILLIAM ALDEN SMITH,
United States Senate, Washington, D. C.

DEAR SENATOR: The members of the Pisgah Lodge, No. 34, of the Independent Order of B'nai B'rith, are unalterably opposed to the Burnett immigration bill because of the literacy test and because of the proposed increase in the head tax.

We wish to assure you that as American citizens we are heartily in favor of legislation excluding immigrants who are diseased, criminal, or insane. We are of the belief, however, that if there is need to amend the present immigration law, such amendment should be confined to the exclusion of the mentally, morally, and physically unfit.

It is a well-known fact that not only are there many criminals among those who can read and write, but quite a number of criminals are even highly educated.

As to the increase of head tax, it seems to us that there is no need for such increase, in view of the fact that there is a surplus of millions of dollars to the account of the Immigration Service in the Treasury of the United States at present.

We, therefore, most emphatically protest against the passage of the said bill.

This country has been and should remain open to all honest and worthy immigrants, regardless of wealth, learning, race, or creed.

Trusting that you will give this protest your most earnest consideration, we are,

Respectfully, yours,

LOUIS JAMES ROSENBERG,
Chairman.
ADOLPH FREUND,
Secretary Temple Beth El.
A. M. HERSHMAN,
Rabbi Congregation Schaare Fedecu.

Mr. GRONNA. I have received a telegram from citizens of Grafton, N. Dak., which I send to the desk and ask to have read.

There being no objection, the telegram was read, as follows:

GRAFTON, N. DAK., *April 4, 1916.*

Hon. A. J. GRONNA,
Senate, Washington, D. C.:

Grafton and vicinity is deeply interested in National Guard legislation. If the guard is discouraged by legislation now, what can we look for eventually but conscription to maintain adequate national defense? Will you not support Lee and Cummins amendments in preference to section 56, Chamberlain bill? Grafton has maintained a National Guard company for over 30 years, of which we are justly proud. Its record and that of the whole regiment in the Spanish-American War is one which the whole State can read with pleasure, for practically every man in the guard volunteered when the call came. Give the National Guard a fair chance, and we are confident the people will support them in preference to any form of the continental-army plans.

W. K. TREUMANN, *President,*
T. W. KIBBEE, *Druggist,*
N. D. ERIE, *Merchant,*
E. A. CAPSER, *Merchant,*
J. E. GRAY, *Lawyer,*
Directors of Grafton Commercial Club.

Mr. JOHNSON of Maine presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented the memorial of G. H. Mardeu, of Madison, Me., remonstrating against Federal censorship of motion pictures, which was referred to the Committee on Education and Labor.

REPORTS OF COMMITTEES.

Mr. NORRIS, from the Committee on Public Lands, to which was referred the bill (S. 4810) for the issuance of a patent for certain Government land to Benjamin F. Robinson and John Dows, reported it with an amendment and submitted a report (No. 338) thereon.

Mr. CHAMBERLAIN, from the Committee on Public Lands, to which was referred the bill (H. R. 4746) granting the city of Portland, Oreg., the right to purchase certain lands for public-park purposes, reported it without amendment and submitted a report (No. 339) thereon.

Mr. CLARK of Wyoming, from the Committee on Public Lands, to which was referred the bill (S. 5348) to authorize the exchange of lot 10, section 19, township 45 north, range 114 west, sixth principal meridian, for certain private lands needed in connection with the construction of Jackson Lake Reservoir, Wyo., and for other purposes, reported it without amendment and submitted a report (No. 340) thereon.

He also, from the same committee, to which was referred the bill (S. 3986) granting certain coal lands to the town of Kaycee, Wyo., reported it with an amendment and submitted a report (No. 342) thereon.

Mr. SUTHERLAND, from the Committee on Public Buildings and Grounds, to which was referred the bill (S. 4) to provide for the purchase of a site and the erection of a public building thereon at Bingham Canyon, in the State of Utah, reported it without amendment and submitted a report (No. 341) thereon.

Mr. THOMAS, from the Committee on Public Lands, to which was referred the bill (H. R. 28) to amend an act entitled "An act granting to the city of Durango, in the State of Colorado, certain lands therein described for water reservoirs," approved March 1, 1907, reported it without amendment and submitted a report (No. 343) thereon.

ALLEGHENY RIVER BRIDGE.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (S. 5229) granting the consent of Congress to the county commissioners of Warren County, Pa., to construct a bridge across the Allegheny River, in the borough of Warren, county of Warren, in the State of Pennsylvania, and I submit a report (No. 335) thereon. I ask unanimous consent for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

FLINT RIVER BRIDGE.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 9923) granting the consent of Congress to the county of Mitchell or to the county of Baker, both in the State of Georgia, acting jointly or separately, and their successors and assigns, to construct a bridge across the Flint River, and I submit a report (No. 336) thereon. I ask unanimous consent for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

MONONGAHELA RIVER BRIDGE.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 10139) to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia, and I submit a report (No. 337) thereon. I ask for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

PUBLIC BUILDING AT AUGUSTA, GA.

Mr. HARDWICK. From the Committee on Public Buildings and Grounds I report back favorably without amendment the bill (S. 5407) authorizing and directing the Secretary of the Treasury to extend the time of payment of the amount due the Government by the city of Augusta, Ga., and I ask unanimous consent for its immediate consideration.

Mr. SMOOT. I will not object to the bill being considered at this time, but, Mr. President, as long as the calendar under Rule VIII contains 18 pages of bills to which there is no objection, I am going to object to the consideration of other bills until the calendar is considered. We might just as well make the calendar twice 18 pages and then perhaps enough Senators would be interested in it to take it up. I am not going to object to the consideration of this bill.

Mr. HARDWICK. I thank the Senator. This is an emergency proposition.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill. It provides that so much of the provisions of the act of March 4, 1911, making appropriations for the sundry civil expenses of the Government as relates to the United States post office and courthouse at the city of Augusta, Ga., be, and the same is hereby, amended so as to authorize and direct the Secretary of the Treasury to extend the time of payment of the amount due the Government by the city of Augusta for a period of five years, without interest, the Government of the United States retaining title to the property until payment in full is made by the city, but delivering possession and use of the property, without rental or other charges, to the city of Augusta pending such payment.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WORKS:

A bill (S. 5441) for the relief of the heirs of Albert Sidney Johnston (with accompanying papers); to the Committee on Military Affairs.

By Mr. PHELAN:

A bill (S. 5442) to acquire a site and for the erection and completion thereon of a public building in the city of Vallejo, Cal.;

A bill (S. 5443) to acquire a site and for the erection and completion thereon of a public building in the city of Richmond, Cal. (with accompanying papers);

A bill (S. 5444) to acquire a site and for the erection and completion thereon of a public building in the city of Palo Alto, Cal. (with accompanying papers); and

A bill (S. 5445) to acquire a site and for the erection and completion thereon of a public building in the city of Placerville, Cal. (with accompanying papers); to the Committee on Public Buildings and Grounds.

By Mr. OVERMAN:

A bill (S. 5446) granting an increase of pension to Helen A. Gibbs (with accompanying papers); to the Committee on Pensions.

By Mr. CULBERSON:

A bill (S. 5447) providing for the erection of a public building at Taylor, Tex.; to the Committee on Public Buildings and Grounds.

By Mr. CLAPP:

A bill (S. 5448) to confer jurisdiction upon the United States District Court for the District of Minnesota to hear, try, and determine the value of certain pine timber; to the Committee on the Judiciary.

A bill (S. 5449) granting an increase of pension to Andrew J. Weidle; to the Committee on Pensions.

By Mr. SHEPPARD:

A bill (S. 5450) to amend section 108, chapter 5, of the act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911; to the Committee on the Judiciary.

A bill (S. 5451) to regulate the binding and tying of cotton bales in interstate or foreign commerce or intended for interstate or foreign commerce; to the Committee on Interstate Commerce.

By Mr. McCUMBER:

A bill (S. 5452) granting an increase of pension to Sarah M. Thomas; and

A bill (S. 5453) granting an increase of pension to John F. Pettit; to the Committee on Pensions.

By Mr. WILLIAMS:

A bill (S. 5454) granting a pension to Robert Webb Banks; to the Committee on Pensions.

By Mr. CHAMBERLAIN:

A bill (S. 5455) granting an increase of pension to Henry Carl (with accompanying papers); and

A bill (S. 5456) granting a pension to Mark M. Coffman (with accompanying papers); to the Committee on Pensions.

By Mr. SMOOT:

A bill (S. 5457) granting an increase of pension to Sarah A. Workman (with accompanying papers); to the Committee on Pensions.

By Mr. PAGE:

A bill (S. 5458) to amend section 4747 of the Revised Statutes, relating to pensions (with accompanying paper); to the Committee on Pensions.

By Mr. SMITH of Michigan:

A bill (S. 5459) to remove the charge of desertion from the military record of Robert Letherby; to the Committee on Military Affairs.

A bill (S. 5460) granting a pension to Elizabeth A. Stebbins; and

A bill (S. 5461) granting a pension to Verona H. Coon; to the Committee on Pensions.

By Mr. SIMMONS:

A bill (S. 5462) granting an increase of pension to Rebecca Ramsey (with accompanying papers); to the Committee on Pensions.

By Mr. WEEKS:

A bill (S. 5463) granting a pension to Rosario F. Freemault; to the Committee on Pensions.

By Mr. JONES:

A bill (S. 5464) granting a pension to William A. Bowens (with accompanying papers); and

A bill (S. 5465) granting an increase of pension to Annie K. Ames (with accompanying papers); to the Committee on Pensions.

By Mr. PITTMAN:

A bill (S. 5466) to open abandoned military reservations in the State of Nevada to homestead entry and desert-land entry and to amend an act entitled "An act to open abandoned military reservations in the State of Nevada to homestead entry," approved October 1, 1890; to the Committee on Public Lands.

A bill (S. 5467) for the relief of John B. O'Sullivan; to the Committee on Claims.

By Mr. CLARK of Wyoming:

A bill (S. 5468) granting a pension to Nellie Loucks; to the Committee on Pensions.

By Mr. CUMMINS:

A bill (S. 5469) granting an increase of pension to Soren V. Kalsem (with accompanying papers); to the Committee on Pensions.

By Mr. KENYON:

A bill (S. 5470) granting an increase of pension to Hugh Findlay (with accompanying papers); to the Committee on Pensions.

By Mr. CURTIS:

A bill (S. 5471) for the relief of Peter Carroll and others, lately laborers employed by the United States military authorities in and about Fort Leavenworth, Kans.; to the Committee on Claims.

A bill (S. 5472) granting an increase of pension to Elizabeth J. Beck (with accompanying papers);

A bill (S. 5473) granting an increase of pension to Thomas M. James (with accompanying papers);

A bill (S. 5474) granting an increase of pension to T. Ewing W. Elliott (with accompanying papers);

A bill (S. 5475) granting a pension to Jennie Y. Brandon (with accompanying papers);

A bill (S. 5476) granting an increase of pension to Morgan W. Jones (with accompanying papers);

A bill (S. 5477) granting a pension to Mary J. Evans (with accompanying papers);

A bill (S. 5478) granting an increase of pension to Elizabeth Shaw (with accompanying papers);

A bill (S. 5479) granting a pension to Joseph J. Wood (with accompanying papers);

A bill (S. 5480) granting an increase of pension to John D. Patterson (with accompanying papers);

A bill (S. 5481) granting a pension to Elizabeth Crockett (with accompanying papers);

A bill (S. 5482) granting a pension to Hattie W. Hurst (with accompanying papers);

A bill (S. 5483) granting an increase of pension to Smith Culler (with accompanying papers);

A bill (S. 5484) granting a pension to Eliza Jane Mayabb (with accompanying papers);

A bill (S. 5485) granting a pension to Annie S. Gradle (with accompanying papers);

A bill (S. 5486) granting an increase of pension to J. C. Griffith (with accompanying papers);

A bill (S. 5487) granting a pension to Henry Weese (with accompanying papers);

A bill (S. 5488) granting a pension to Charlotte Ann Ury (with accompanying papers);

A bill (S. 5489) granting a pension to Della E. Pierce (with accompanying papers);

A bill (S. 5490) granting a pension to John A. Pryor (with accompanying papers); and

A bill (S. 5491) granting an increase of pension to George W. Platt (with accompanying papers); to the Committee on Pensions.

A bill (S. 5492) for the relief of Matthew McDonald (with accompanying papers); to the Committee on Naval Affairs.

A bill (S. 5493) to correct the military record of Thomas Jackson Hanson (with accompanying papers); to the Committee on Military Affairs.

By Mr. OWEN:

A bill (S. 5494) granting a pension to Lucy Ramsay; to the Committee on Pensions.

By Mr. NELSON:

A bill (S. 5495) for the relief of Edward J. Lynch, collector of internal revenue for the district of Minnesota (with accompanying papers); to the Committee on Finance.

A bill (S. 5496) to amend section 5 of an act entitled "An act to authorize the drainage of certain lands in the State of Minnesota," approved May 20, 1908; to the Committee on Public Lands.

A bill (S. 5497) granting a pension to W. H. Johnston; to the Committee on Pensions.

By Mr. SHIELDS:

A bill (S. 5498) granting a pension to Robert T. C. Blevins (with accompanying papers); to the Committee on Pensions.

By Mr. BROUSSARD:

A bill (S. 5499) to amend the act of Congress approved March 4, 1913 (37 Stats., 869), to increase the limit of cost for the enlargement, extension, remodeling, rebuilding, and reconstruction of the post office and courthouse at Alexandria, La. (with accompanying papers); to the Committee on Public Buildings and Grounds.

By Mr. GALLINGER:

A bill (S. 5500) granting an increase of pension to Harriet A. Streeter (with accompanying papers); to the Committee on Pensions.

By Mr. VARDAMAN:

A bill (S. 5501) to authorize and direct the President to nominate and appoint Capt. James B. Hutchinson, Philippine Scouts, a captain of Infantry in the United States Army; to the Committee on Military Affairs.

THE PUBLIC HEALTH SERVICE.

Mr. WORKS. I introduce a joint resolution and ask that it be printed in the RECORD and referred to the Committee on Public Health and National Quarantine.

The joint resolution (S. J. Res. 120) making it unlawful for any member of the Public Health Service to become a member of any medical or private health association, was read twice by its title, referred to the Committee on Public Health and National Quarantine, and ordered to be printed in the RECORD, as follows:

Whereas the American Medical Association is a national organization of physicians and surgeons of one school of medicine only and intended to advance the personal and private interests of its members; and

Whereas one of the objects of said association actively and aggressively prosecuted is to procure legislation, State and National, in the interest of the school of medicine represented by it and against all others; and

Whereas the Public Health Service of the United States is intended to represent all classes of people of all medical or nonmedical beliefs in national and interstate affairs; and

Whereas the Surgeon General of the Public Health Service has been elected president of said association and other officers of the service have become members thereof; and

Whereas it is believed that the best interests of the Public Health Service and of the people require that its officials and employees be free from influence or control by any school of medicine, or mode of healing: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be unlawful for any officer or employee of the Public Health Service of the Government to be or become a member or officer of, or in any way connected with any medical or private-health association or organization of any kind.

METROPOLITAN POLICE OF THE DISTRICT OF COLUMBIA.

Mr. SWANSON submitted an amendment intended to be proposed by him to the bill (S. 4479) to amend an act approved June 8, 1906, entitled "An act to amend section 1 of an act entitled 'An act relating to the Metropolitan police of the District of Columbia,' approved February 28, 1901," which was referred to the Committee on the District of Columbia and ordered to be printed.

INVESTIGATIONS OF LIGNITE COALS.

Mr. SHEPPARD submitted an amendment proposing to appropriate $50,000 for special investigations of lignite coals, etc., intended to be proposed by him to the sundry civil appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

NATIONAL DEFENSE.

Mr. JONES submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

Mr. REED submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

Mr. NELSON submitted two amendments intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which were ordered to lie on the table and be printed.

CITRUS CANKER.

Mr. BRYAN. I desire to offer an amendment to the Agricultural appropriation bill (H. R. 12717) and to make a statement with reference to the amendment.

In the matter of the eradication of the citrus canker Florida is making some progress along with her sister States of the South. On the urgent deficiency bill reported in December and passed some time ago there was an appropriation of $300,000 to carry on the work to the end of this fiscal year. In the Agricultural appropriation bill for the fiscal year ending June 30, 1917, the Secretary of Agriculture has recommended an appropriation of $250,000. The Secretary states that it was very difficult to estimate the amount of money that would be required, but in the hearings along in January he estimated that it would take perhaps $30,000 a month in the State of Florida, and he further estimated that the amount of the expenditure which would have to be devoted to that State would be about one-half of the amount needed. In the Agricultural appropriation bill hearings, while stating that he could not arrive at anything approaching an estimate, the Secretary was of the opinion that perhaps $250,000 would carry him along until December.

Mr. President, I am very glad to say that great progress has been made in Florida in fighting this pest. I suppose it is hardly necessary to state how it originated. It came here from Japan and worked its way from Texas over into Florida, where, of course, the citrus industry is one of the great industries of the State, there being perhaps $300,000,000 of investments in it.

I hope the Secretary is correct in supposing that it will not be necessary to spend as much money in the future as it has been in the recent past, but if it is not necessary, then the money will not be spent. I am very fearful that as soon as the rains come again the disease will reappear, and it will be very difficult to meet the situation if, unfortunately, the disease reappears during the summer months or in the fall.

Under an appropriation made by the legislature, which was thought to be sufficient to stamp out the pest, there was gathered by the State of Florida a force of men. The deficiency appropriation was placed upon the deficiency bill for the reason that the appropriation made by the State was exhausted, and if the Government would take it up until the State legislature could meet again, then a division and an equitable arrangement between the State and the Federal Government as to the proportion which should be spent by each would be considered. It would be most unfortunate if during the summer or fall months, during the recess of Congress, the disease should reappear and there not be money to have that force carry on its work, because it took considerable time to gather together men who could understand the disease, men who would know it when they saw it and who were able to make it certain that they would not spread the disease as they went from one grove to another.

I should consider it a great misfortune if this force—perhaps 200 men—should be dissipated and scattered because of the lack of money needed immediately on account of the failure of the appropriation through the negligence either of the State or of Congress to meet the situation.

There is no doubt but that the disease can be stamped out. As the Secretary says, no man can state how much money it will take. It will take considerably less than was estimated a year ago, because of the active participation of both the State and Congress in fighting the disease.

I offer this amendment now, so that after the bill passes the House and comes into the Senate the conditions may then be known and, if necessary, Congress can make a larger appropriation.

Therefore I propose the amendment increasing the appropriation from $250,000 to $500,000.

The VICE PRESIDENT. The amendment will be referred to the Committee on Agriculture and Forestry and be printed.

WITHDRAWAL OF PAPERS—EUGENE WESTCOTT.

On motion of Mr. WEEKS it was—

Ordered, That the papers accompanying the bill (S. 6667) granting pension to Eugene Westcott, Sixty-third Congress, be withdrawn from the files of the Senate, no adverse report having been made thereon.

LANDING OF SIR FRANCIS DRAKE IN CALIFORNIA.

Mr. PHELAN submitted a concurrent resolution (S. Con. Res. 20), which was read, considered by unanimous consent, and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the President of the United States is hereby authorized and requested to appoint a representative of this Government to appear at the celebration of the landing of Sir Francis Drake on the shores of Marin County, Cal., on the dates of May 19, 20, and 21, 1916: *Provided*, That the expenses of such representative shall be paid by those in charge of the celebration, and that no expense whatever shall be required of the Federal Government.

PRICE OF GASOLINE.

Mr. KENYON. Mr. President, I desire to submit a resolution. First, I shall ask to have read a letter from the general counsel of the Western Oil Jobbers' Association with reference to the subject of gasoline, containing a statement of the prices of gasoline at Dayton, Ohio, April 7, 1916, and at Richmond, Ind., points 42 miles apart; also a resolution adopted by the Western Oil Jobbers' Association at their annual convention at St. Louis, Mo., March 16 and 17, 1916. I ask that the letter and the resolutions which I present may be read for the information of the Senate, after which I shall offer a resolution on the subject.

The VICE PRESIDENT. Is there objection to the request of the Senator from Iowa? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

DISCRIMINATION.

On April 7, 1916: Gasoline at Dayton, Ohio, 23 cents; gasoline at Richmond, Ind., 18.5 cents; difference, 4.5 cents.

The two points are 42 miles apart.

The Standard Oil Co. of Ohio makes the Ohio price, and the Standard Oil Co. of Indiana makes the Indiana price.

The difference is typical of the conditions throughout both States.

WESTERN OIL JOBBERS' ASSOCIATION,
Chicago, Ill., March 27, 1916.

Hon. WILLIAM S. KENYON,
United States Senate, Washington, D. C.

DEAR SIR: The independent oil jobbers of the Middle West will be driven out of the gasoline business during the coming summer if the present discriminatory prices are not equalized.

The price of gasoline in New York charged by the Standard Oil Co. of New York is 26 cents to consumers The price at Chicago charged by the Standard Oil Co. of Indiana is 18½ cents. Prices in Ohio charged by the Standard Oil Co. of Ohio, freight rates from the Oklahoma fields considered, have been 2 cents higher than those charged by the Standard Oil Co. of Indiana throughout the Middle West. The price at Pittsburgh was 24 cents, in comparison with the Chicago price of 18½ cents, while the difference in freight from the midcontinent field is less than a cent.

The Oil, Paint, and Drug Reporter, on page 33 of the issue of March 27, 1916, says: "Our midcontinent correspondent reports free offers (for gasoline) at 20 and 21 cents, many of the bids being turned down." In other words, gasoline can be sold f. o. b. cars Oklahoma, where the independent oil jobbers of the Middle West obtain their supplies, for more than the tank-wagon market price of gasoline in the Middle West.

A letter on my desk from a jobber operating in this territory says:

"At six of our country stations we are now charging prices on gasoline 2½ cents per gallon above the Standard Oil Co., and this price barely lets us out even, to say nothing of the loss our agents are taking in reduced commissions."

Competition in the Middle West will be dead if this condition continues.

This discrimination in price is probably legal, owing to the absurd dissolution decree.

Is Congress going to adjourn without going to the bottom of the whole gasoline situation?

You will find inclosed a speech on the situation delivered by me at St. Louis a few days ago, in which I contend that the dissolution decree is a failure and ask that Congress shall either make the Sherman law effective or abandon it. Resolutions adopted by our association to the same effect are also inclosed.

The burdens of Congressmen and Senators are many, but I trust you will have time to read what I have to say on the subject. The Western Oil Jobbers, 75 independent jobbers, doing business throughout the Middle West, face financial ruin. Has Congress an interest in the preservation of competition?

Very truly, yours,

R. L. WELCH, *General Counsel.*

Resolution adopted by the Western Oil Jobbers' Association at their annual convention at St. Louis, Mo., March 16 and 17, 1916.

Resolved by the Western Oil Jobbers' Association, an association of independent oil men doing business in the Middle West, That the dissolution of the Standard Oil Co. is a failure; that under the provisions of the dissolution decree the stockholders of the Standard Oil Co. have

practically all of the advantages of combination which they had prior to the decree, and in addition thereto are not subject to regulation as a whole, in the manner in which the holding company, the Standard Oil Co. of New Jersey, would now be subject to regulation but for the decree.

That the Standard Oil Co., by this decree, has been granted an artificial immunity from the provisions of the Sherman Act and the Clayton law.

That, on the other hand, the independent oil interests of the United States are compelled to compete against this anomalous and artificial combination of capital, are denied the benefits of combination, and are subject to all of the rigors of both the laws referred to.

That Congress ought to provide by law for the effectual dissolution or control of the Standard Oil Co.

That we respectfully petition Congress to supplement the Sherman Act so as to provide for the effectual dissolution of the Standard Oil Co., and for the vigorous and impartial enforcement of that law against all combinations in restraint of trade, or courageously to abandon and repeal the Sherman law, and provide for reasonable combinations in industry, impose the terms thereof, and, by Federal incorporation, the enlargement of the powers of the Federal Trade Commission, or otherwise provide for the effectual regulation and control of big and little business.

Mr. KENYON. Mr. President, I offer the resolution which I send to the desk, and I ask unanimous consent for its immediate consideration.

The resolution (S. Res. 166) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the Attorney General of the United States is hereby requested, if not incompatible with the public interest, to send to the Senate any reports in his department of any investigations of the oil interests of the United States, including the Standard Oil Co. and other companies affiliated therewith or independent thereof, the same to cover all reports of investigations made by Department of Justice relating to said subject, or to gasoline or oil, since the decree of dissolution of the Standard Oil Co.

SAMUEL R. SMITH.

Mr. KERN submitted the following resolution (S. Res. 167), which was read and referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Whereas Samuel R. Smith, for many years a member of the Capitol police force and employed at the Senate end of the Capitol, received injuries while in the discharge of his duties on the 20th of November, 1910, which have permanently disabled him so that he is unable to gain a livelihood by manual labor; and

Whereas the said Smith was dropped from the rolls on the 31st day of January, 1912, and is now out of employment: Therefore be it

Resolved, That the said Samuel R. Smith be, and is hereby, placed on the rolls of the Senate of the United States at the salary he was receiving at the date of his injury and that he be assigned by the Sergeant at Arms to such service as he may be able to perform.

FUR SEALS ON PRIBILOF ISLANDS.

Mr. SMITH of Michigan submitted the following resolution (S. Res. 168), which was read and referred to the Committee on the Judiciary:

Resolved, That the Attorney General be, and he is hereby, authorized and requested to examine into the facts as stated in House Report 500, Sixty-third Congress, second session, April 4, 1914, concerning the illegal killing of fur seals on the Pribilof Islands, and taking of skins therefrom, and to bring suit as urged therein if the law and evidence warrants such action.

GAME SANCTUARIES IN NATIONAL FORESTS.

Mr. TAGGART. I ask unanimous consent for the present consideration of Order of Business 237, being the bill (S. 4418) to establish game sanctuaries in national forests, and for other purposes. The bill was introduced by the Senator from Oregon [Mr. CHAMBERLAIN], and it was considered by the Committee on Forest Reservations and the Protection of Game, and has been favorably reported by the Senator from Oregon [Mr. LANE]. I should like to have the bill considered.

The VICE PRESIDENT. Is there objection to the present consideration of the bill.

Mr. SMOOT. I object.

The VICE PRESIDENT. There is objection.

INDIAN APPROPRIATIONS.

The VICE PRESIDENT laid before the Senate the action of the House of Representatives disagreeing to the amendments of the Senate to the bill (H. R. 10385) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1917, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. ASHURST. I move that the Senate insist upon its amendments, agree to the conference asked for by the House, the conferees on the part of the Senate to be appointed by the chair.

The motion was agreed to; and the Vice President appointed Mr. ASHURST, Mr. MYERS, and Mr. CLAPP conferees on the part of the Senate.

PENSIONS AND INCREASE OF PENSIONS.

Mr. JOHNSON of Maine submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 3984) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its amendments numbered 6, 7, 10, 13, 14, 17, 18, 19, and 20.

That the Senate recede from its disagreement to the amendments of the House numbered 1, 2, 3, 4, 5, 8, 9, 11, 12, 15, 16, and 21, and agree to the same.

CHARLES F. JOHNSON,
WILLIAM HUGHES,
Managers on the part of the Senate.
ISAAC R. SHERWOOD,
JOE J. RUSSELL,
JOHN W. LANGLEY,
Managers on the part of the House.

The report was agreed to.

Mr. JOHNSON of Maine submitted the following report:

The committee of conference of the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 4399) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its amendments numbered 1, 2, 4, 5, 6, 7, 9, 12, 13, and 14.

That the Senate recede from its disagreement to the amendments of the House numbered 3, 8, 10, and 15, and agree to the same.

That the Senate recede from its disagreement to the amendment of the House numbered 11, and agree to the same with an amendment as follows: Restore the matter stricken out by the amendment, and on page 12, line 24, after "month," insert "in lieu of that she is now receiving"; and the House agree to the same.

CHARLES F. JOHNSON,
WILLIAM HUGHES,
Managers on the part of the Senate.
ISAAC R. SHERWOOD,
JOE J. RUSSELL,
JOHN W. LANGLEY,
Managers on the part of the House.

The report was agreed to.

RIVER REGULATION AND FLOOD CONTROL.

Mr. NEWLANDS. Mr. President, some time ago, at the height of the flood at New Orleans, a telegram was addressed by the New Orleans Association of Commerce to the Secretary of Commerce, which I will insert in the RECORD, calling attention to these floods and to the party assurances given regarding flood mitigation and river development, and suggesting immediate legislative action upon the subject. Following the receipt of that telegram, the President reconstituted the interdepartmental committee, which some time ago was instructed by him to inquire into the differing phases of river regulation and control presented by various bodies and to report to him. That committee consisted of the Secretaries of War, of the Interior, of Agriculture, and of Commerce.

The office of Secretary of War being vacant, the three other Secretaries met and communicated with the senior Senator from Louisiana [Mr. RANSDELL], the junior Senator from Louisiana [Mr. BROUSSARD], the Representative from Mississippi [Mr. HUMPHREYS], and myself. Mr. HUMPHREYS was unable to be present, owing to illness; but after several discussions of the question the interdepartmental committee drew up a report to the President presenting their views regarding needed legislation. That report has been recently transmitted to me by the President of the United States. I ask to have read the letter of the President and the report of the interdepartmental committee, and I will ask unanimous consent to insert in the RECORD the telegram to which I have referred.

The VICE PRESIDENT. Without objection, it is so ordered.

The telegram referred to is as follows:

[Telegram.]

NEW ORLEANS, *February 15, 1916.*

Hon. WILLIAM C. REDFIELD,
Secretary Department of Commerce, Washington, D. C.

DEAR SIR: One of the main-line levees of the Mississippi River in northern Louisiana has just given way in a district which suffered in 1912 and in 1913. A vast area of fertile farm land is being inundated. The people are fleeing from their homes. We are sending them help, as we always do. You are one of the members of the interdepartmental committee appointed many months ago to study the various submitted plans of stream and flood control. Your committee, we have been informed, reached an agreement upon the principle of the measures which were to be supported before Congress by the executive department. This organization, voicing the settled judgment of the business community of New Orleans, is on record as favoring the principle and the form of one great measure submitted to you for your approval, and by you in principle indorsed.

Through three sessions of Congress we have waited patiently for the action to which the Democratic Party is pledged and to which you gentlemen yourselves have submitted your belief and your approval. We have waited, conscious that each year of delay in approaching the problem of flood and stream control in a broad and comprehensive manner adds another year to the many years of our continual and recurring peril. Still no action has come. We do not presume to sit in judgment upon those of you who occupy posts in close relationship to the processes of legislation and of execution in the Federal Government, but we do know that our peril continues, that we lose in money and in lives in each returning year of flood. We suffer an invasion as real as though it were directed by the head of an alien government. We lose lives as certainly as though they had been lost in Mexico or on the high seas. We suffer the imposition of indemnities which we must meet with taxes and bond issues that are just as much indemnities as though levied by a conquering army, and through the years and in proportion to the wealth of the region afflicted, what we have lost and what we have paid surpasses the indemnities inflicted upon France after the Franco-Prussian War—the greatest indemnity ever paid by any one nation.

Here in New Orleans we feel that we as individuals and our investments are physically safe because we have massed resources of human power and of material which enable us to keep our levee breastworks so far ahead of the long lines reaching up the two sides of the Mississippi River from here to Cape Girardeau that levees elsewhere give way before the flood level reaches us, and thus we are saved by the misfortune of our fellow citizens of the Mississippi Valley. We appeal to you now in behalf of those unfortunates in Kentucky, southern Missouri, Arkansas, Mississippi, and Louisiana who have lost their homes, their fortunes, or their lives through the onslaught of the forces of nature operating over the territory of thirty-odd States, and concentrating their evil effect upon those who live in the smaller regions on the lower reaches of the Mississippi Valley.

It is now too late for Congress to do more for those who are suffering than to give them food, if they need it, to furnish them with Government tents, and to put at their call the officers of the United States Army; but it is not too late for the interdepartmental committee to make known its conclusion and its findings with reference to suggested legislation having to do with the inland rivers of the United States. It is not too late for the executive department of the Government to put its recommendations before Congress, to lend the strength of its influence in support of the measures already drafted and pending therein, which will bring to bear upon the whole vast interrelated problem of stream flow control, flood disaster prevention, and use of the rivers in navigation the coordinated power and capacity of the whole Federal Government. It is not too late for this administration and this Congress to undertake "after Panama" the task of "the inland rivers"; carrying out the policy so well phrased and indorsed by President Wilson in his telegraphic message to Senator NEWLANDS, dispatched in the autumn of 1912:

"SEAGIRT, N. J., *September 29, 1912.*

"Hon. FRANCIS G. NEWLANDS,
"*President Irrigation Congress, Salt Lake, Utah:*

"Please express to the National Irrigation Congress my hearty approval of the policy it is met to promote, and especially of the policy of supplementing bank and levee protection by storage of flood waters above for irrigation and water power, turning floods from a menace into a blessing and at the same time abundantly feeding navigable waters.

"WOODROW WILSON."

Is it asking too much to request you to read this telegram at the next Cabinet meeting as a respectful and an urgent message from the Association of Commerce, as representing the afflicted and jeopardized people, to the responsible heads of a Government from which we had expected adequate measures of safety?

WALTER PARKER,
General Manager New Orleans Association of Commerce.

Mr. NEWLANDS. Now I ask that the Secretary read the letter of the President and the report of the interdepartmental committee.

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested.

The Secretary read as follows:

THE WHITE HOUSE,
Washington, April 3, 1916.

Hon. FRANCIS G. NEWLANDS,
United States Senate.

MY DEAR SENATOR: I take the liberty of sending you inclosed a copy of a memorandum concerning flood control which the Secretaries of the Interior, of Agriculture, and of Commerce were kind enough to prepare for me. I hope that it will prove of interest to you. I know that you were consulted at the time the memorandum was contemplated.

Sincerely, yours,

WOODROW WILSON.

THE SECRETARY OF THE INTERIOR,
Washington, February 26, 1916.

DEAR MR. PRESIDENT: In accordance with your suggestion, we beg to present a résumé of our views as to the practicable way of dealing with the problem of so regulating and handling our rivers that they will be made to be of greater use and of less injury to the Nation.

We do not feel the necessity for emphasizing the need for such legislation. Each recurring year makes plain the greatness of the work that must be undertaken if we are to keep our rivers within their banks. The floods of each year take their toll in property and lives. Our streams are filling with silt and their channels becoming less certain and reliable as nature's primal highways. Vast bodies of lands of the richest alluvial character are submerged so large a portion of the time as to be of no value to the Nation and of no service to the world. Therefore, to make more navigable our streams, to protect the cities and farms already established, and to make a place for others, to save life and increase our crops, to conserve the waters on the higher reaches of the streams where they may be used for needed irrigation, and to convert their fall into electric power—these are the chief ends to be reached by river improvement.

It is now time, we believe, to urge a comprehensive and constructive plan of river development upon Congress, a plan which recognizes the magnitude of the problem, the impossibility of dealing with it by temporary expedients and that looks definitely to the time when the flood evils of to-day will be remedied and the waters put to their highest use. This means nothing less than a study under one responsible authority of the problems and possibilities of each river, and after such study a determination upon a definite policy with regard to it and the commitment of the Government to the pursuit of such policy. It has been suggested that an adequate lump sum and continuing fund for carrying on such national work shall be placed in the hands of a commission composed of the President and four of his Cabinet, which fund shall be expended upon such projects as it sees fit. We do not think this plan in its logical entirety necessary to the end in view.

We do believe, however, that the Congress should commit itself to a comprehensive policy of river development, involving the expenditure over a long period of a large sum of money, with sufficient appropriations immediately available for continuing the work on the lower Mississippi, substantially in accordance with the plans of the Mississippi River Commission, and for taking the necessary preliminary steps for the study of problems and the projection of work on other parts of the Mississippi and of other rivers. It should study each river system and as projects are developed, reports with recommendations for expenditure should be made to Congress, with the understanding that Congress, on the basis of the data furnished, would provide sufficient sums for the continuous prosecution of the work. There are precedents for this course, such as the Panama Canal and the Alaskan railroad projects. In these cases Congress determined that such enterprise should be undertaken, the general lines of development, and in a sense pledged itself to award the money necessary for the completion of the enterprise within a limited time, leaving the details of the plans and their execution to executive bodies.

We believe that for the execution of such a policy the Congress should authorize a national waterways council, composed of the President and the four heads of departments most concerned, War, Interior, Agriculture, and Commerce, and a subordinate water control board, composed of a highly qualified representative from each of the four departments and of such engineers or other officials as the Congress may authorize. The four department representatives of the latter board should have such standing in the departments and such functions as would enable them to secure such data and services in connection with the work from the various bureaus in the departments as may be serviceable and necessary. The national waterways council should be authorized to direct and control the general policy and procedure of the water control board and other agencies charged with the execution of the work, to establish the necessary rules and regulations, to consider and approve plans, the distribution of funds under authorization from the Congress, to decide questions of conflict, and to report to Congress. The latter board should be authorized to coordinate and invoke the services of the necessary bureaus and agencies of the Government, to make preliminary surveys and detailed plans for work in various areas, to prepare estimates, to study the activities of the States, municipalities, organizations, and individuals in water regulation, to prepare a general program of water and waterways regulation and development involving the combined resources and cooperation of all the agencies, to recommend to the council for approval the assignments for the different bureaus or services of the departments, to complete statements of the work already accomplished, and immediately to supervise the prosecution of the work under the plans approved. It would be understood that in the meantime there should be no interference with the execution of the existing plans of the Mississippi River Commission for the work on the lower Mississippi, and that these plans should proceed as outlined unless it should become clear that improvements could be made.

The most pressing call for help has come and continues to come from the lower Mississippi. As to this river what may be determined defensive plans have been elaborated by the eminent body of national officials who are now prepared to proceed with their work to its completion. Their embarrassment arose out of the fact that they can not plan for the execution of their work continuously and for a sufficiently long period, owing to the fact that each year the work must wait on the appropriations for that year. There would seem to be every reason for prosecuting these plans vigorously, and later as investigations proceed for supplementing these works with others of a constructive nature higher up the river, and for undertaking as soon as possible projects on other rivers.

To summarize, we recommend:

1. That Congress declare its purpose to deal with our river problems in a comprehensive way, involving a large ultimate expenditure of funds and the immediate expenditure of considerable amounts, and the creation of machinery intimately related to the executive branch of the Government.

2. That the boards and the other parts of the machinery provided for shall be directed to continue the work on the lower Mississippi substantially under existing plans, and to proceed with the investigations and the elaboration of plans on other parts of the Mississippi River and other rivers of the Nation.

3. That all the available agencies of the Government shall be coordinated in this endeavor to improve and protect our rivers, to control floods, to utilize waters, and to reclaim valuable lands and make the necessary reports to Congress as bases for additional appropriations.

4. That the expenditures for this work, should, in the main, be met by the sale of national bonds, and that the lands benefited should be made to bear a proportion of such expenses, agreements in this regard to be submitted to the Congress as part of the plan for development.

Cordially, yours,

FRANKLIN K. LANE,
D. F. HOUSTON,
WILLIAM C. REDFIELD.

The PRESIDENT,
The White House.

Mr. NEWLANDS. Mr. President, at the time this matter was under consideration by the interdepartmental committee there were two bills which had been pending in Congress for some time relating to river development. One was advocated by the senior Senator from Louisiana [Mr. RANSDELL] and the Representative from Mississippi [Mr. HUMPHREYS], known as the Ransdell-Humphreys bill. The other was advocated by myself and the junior Senator from Louisiana [Mr. BROUSSARD], known as the Newlands-Broussard bill; the latter bill, since Mr. BROUSSARD'S withdrawal from the House of Representatives, being fathered in that body by Mr. RAINEY, of Illinois.

The difference in these two bills is this: The Ransdell-Humphreys bill provides simply for the control and regulation of the Mississippi River below Cairo, the treatment of that river being bank revetment, with a view to fixing the channel, and bank levees, with a view to preventing the overflow of the banks. That was designed, of course, to take care of the vast floods of water falling upon the great Mississippi Valley, comprising, I believe, over one-half of the area of the entire country, whose waters, as the land above became settled and cultivated and as swamps were reclaimed, were being shed more and more rapidly into the tributary streams of the Mississippi, thus increasing the flood height below.

There arose an insistent demand for a more rapid and more complete and more extensive development of this control. The so-called Newlands-Broussard river-regulation bill not only embraced the Mississippi River, but embraced the larger subject of the flood control of every watershed in the country, with a view not only to the promotion of navigation but with a view to source control, thus slowing up the waters in their progress from the watersheds to the lower reaches of the great rivers, and their control for every beneficial purpose, including mitigation of floods, the irrigation of arid lands, the development of water power, the reclamation of swamp lands, the increase of intensive cultivation in the great humid region, and the development of forest areas.

It will be observed that the authors of those two bills were present at this conference, and the result of that conference practically was that the features of both bills were included in the recommendation of the interdepartmental committee. That committee *did not* commit itself regarding the very extensive appropriation of funds called for by the Newlands-Broussard bill—an appropriation which called for $60,000,000 annually for 10 years, and divided that fund for contemporaneous work among the different watersheds of the country according to their relative importance. It was thought wise by the interdepartmental committee not to make any recommendation upon that subject, but to leave the subject of the fund entirely to the wisdom and discretion of Congress.

Whilst individually, in order to pass a measure at this session, I would waive the requirements regarding the specific fund, yet I hope that the wisdom of Congress will determine that the most effective way of going about this work is to recognize at the very start the largeness of the conception, the bigness of the work, and to provide adequately for it, so that it may not be subject to the contingencies to which other great public works have been subjected, namely, the temporary laying aside, the temporary abandonment, the temporary slowing up of the work in such a way as possibly to defeat the success of the plan itself.

We have a notable instance of this regarding the Missouri River, where many years ago Congress authorized the protection of the banks and levee building with a view to securing a stable channel between the mouth of the river and Kansas City, a distance of about 300 miles, and where, after spending millions of dollars and securing a bank revetment for a space of nearly 100 miles, which has ever since withstood the violence of the floods and which has ever since constituted the only stable part of that channel, Congress abandoned it; and only recently, having undertaken the work again at the instance of the Senator from Missouri and having appropriated a million dollars a year toward that development, the Senator from Missouri found himself confronted by the report of a new engineer, coming from an eastern district, not as familiar with conditions as the previous United States engineer, recommending an absolute abandonment of the work—a recommendation which was fortunately reconsidered by the board of review and was not adopted.

In my judgment, it is absolutely necessary, if we are to enter upon this work successfully and not see it defeated by indirection in the future, to make up our minds that a large sum shall be devoted to this work, and that the work shall be energetically and continuously conducted; and we must have in our minds the fact that our purpose is to make over 25,000 miles of waterways in this country as perfect instrumentalities of commerce as are our railroads themselves, with every device for coordination between rail and boat, such as transfer facilities and sites, with all the instrumentalities that cheapen transfer, and, above all things, legislation that will compel fair treatment of the water carriers by the rail carriers, and not permit the rail carriers, as they have done heretofore, to sandbag the water carriers.

Mr. President, I do not propose to enter into this matter at any length. I will simply add that the House of Representatives, recognizing the great importance of this work, realizing that a condition prevailed there of divided jurisdiction—the Interstate Commerce Committee having jurisdiction of the phases of interstate commerce and the Rivers and Harbors Committee having charge of the physical construction and development of these rivers—concluded recently to appoint a special committee for this purpose, called the Committee on Flood Control, the purpose of which committee is simply to regulate and control the flood waters of the country by all practicable means, through levees to prevent overflow, through arid-land reclamation, through swamp-land reclamation, through storage for water power and other purposes, so as to control these great agencies, which can be used either for good or for destruction, in such a way as to prevent them from imperiling the lower parts of the rivers, great cultivable areas and great commercial cities. The House Committee on Flood Control is now conducting hearings on this subject.

I am of the opinion that in the Senate it may possibly become necessary to resort to the organization of some such committee. At present two committees apparently have jurisdiction over this subject—one, perhaps, as a matter of right and the other as a matter of practice. As a matter of practice, the Commerce Committee of the Senate, having jurisdiction over foreign commerce, not interstate commerce, has thus far had jurisdiction over all our legislation relating to the development of our rivers; and yet it is perfectly manifest that if we are to perfect these rivers as instrumentalities of interstate commerce the jurisdiction relating to those rivers belongs to the Committee on Interstate Commerce.

The result of this contest between the two committees has been that I was compelled recently in introducing the so-called Newlands-Broussard river-regulation bill to ask that it lie on the table with a view hereafter of having the Senate settle the committee to which that bill should go, whether to the Commerce Committee, according to the previous practice, or to the Interstate Commerce Committee, according to its jurisdictional right.

Now, whether it will be necessary to press that I do not know. I have been in hopes that I would come to some accommodation with the chairman of the Commerce Committee of the Senate, the Senator from Arkansas [Mr. CLARKE], and that we might arrange to appoint a joint subcommittee which would take in hand this subject; but thus far I have not received any response from him with reference to that suggestion. If that suggestion should fail, we shall have either to make a contest over the question of jurisdiction as to which of these committees it shall be referred to or we shall have to resort to the expedient resorted to by the House and create an entirely new committee, with but one subject under its jurisdiction, and that is flood control and river regulation. I may add that the Senator from Texas [Mr. SHEPPARD] has recently offered in the Senate a rule providing for a new committee, resembling the new committee of the House, to be called, as is that committee, the Committee on Flood Control. Unless the matter of jurisdiction between the committee and the Interstate Commerce Committee of the Senate is adjusted, it may be wise and necessary to adopt the rule offered by the Senator from Texas [Mr. SHEPPARD], and thus create a new committee, whose jurisdiction will be undoubted and uncomplicated.

DIRECTORS OF BANKS AND TRUST COMPANIES.

The VICE PRESIDENT. Morning business is closed.

Mr. SIMMONS. Mr. President, if there is no other——

Mr. KERN. I should like to have the Senate take up a bill that will occupy very little time. It is the bill (S. 4432) to amend section 8 of an act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914. The bill has had the approval of the Federal Reserve Board, and is one in which the banks and trust companies are very much interested.

Mr. SIMMONS. I should like to suggest to the Senator from Indiana that I think we can safely rely upon getting a vote upon the sugar bill about 2 o'clock, and then I presume the balance of the day could be set apart for matters of this character. However, if it is not going to lead to any debate——

Mr. SMOOT. I do not believe there is any objection to the bill. I do not think it will take very long for the Senate to dispose of it.

Mr. SIMMONS. Very well, I have no objection.

Mr. KERN. I think the bill is generally understood.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 4432) to amend section 8 of an act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, which has been reported from the Committee on Banking and Currency with amendments.

The amendments were, on page 2, line 3, after the word "bank," to strike out the comma, and in line 7, before the words "other banks," to strike out "one or more" and insert "two," so as to make the bill read:

Be it enacted, etc., That section 8 of an act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, be, and the same is hereby, amended by striking out the period at the end of the second clause of said section, inserting in lieu thereof a colon, and adding to said clause the following:

"*And provided further*, That nothing in this act shall prohibit any officer, director, or employee of any member bank, or class A director of a Federal reserve bank, who shall first procure the consent of the Federal Reserve Board, which board is hereby authorized, at its discretion, to grant, withhold, or revoke such consent, from being an officer, director, or employee of two other banks, banking associations, or trust companies, whether organized under the laws of the United States or any State, if such other bank, banking association, or trust company is not in substantial competition with such member bank."

The amendments were agreed to.

Mr. SMITH of Michigan. May I ask the Senator from Indiana a question? The bill so modifies the recent law that a stockholder may be a director in more than one bank?

Mr. KERN. In two banks or trust companies.

Mr. SMITH of Michigan. Is there any limitation as to that right?

Mr. KERN. It is limited to two, with the approval of the Federal Reserve Board. The board must be satisfied that they are noncompetitive.

Mr. SMITH of Michigan. They must be noncompetitive?

Mr. KERN. Yes. The bill has the approval of the banks of the country and of the Federal Reserve Board. It has been submitted to them. The effect of the bill is to permit the Federal Reserve Board to authorize a director of a member bank to serve as a member of the board of directors of another bank or trust company if such other bank is not in substantial competition with the member bank.

This is the situation which it is desired to meet. I will illustrate it by conditions in my own city. There are a number of leading banks and a number of directors and stockholders of leading banks. A good many years ago they organized a trust company to do business which the banks were unable to do. Those trust companies have been built up through the ability and energy and the financial standing of the men who were directors and stockholders of the banks. These trust companies are great financial institutions. If the directors—the men engaged in the banks—are compelled to retire from the trust companies it takes from the trust companies their real foundation so far as ability and financial standing are concerned, and it was felt that it would be very injurious.

Therefore there have been demands from all over this country as to that provision of the Clayton Act which goes into effect next October and is not yet in force, and as the election for directors of these trust companies will come on in June, it is highly desirable to have this bill passed before June so that there will be no interference. It was submitted to the Federal Reserve Board and they think such a provision is desirable.

Mr. HARDWICK. If the Senator will yield to me just a moment, I wish to suggest to him, too, that there are a large number of other cases where banks in our principal cities have a little interest in little country banks around. This bill will meet that proposition.

Mr. SMOOT. There is another case, Mr. President, I will state to the Senator. Many times directors in national banks are also directors in savings banks of the town. They in no way compete, and they should be allowed to serve on those directorates.

Mr. SMITH of Michigan. That is just the point I was aiming at. In my State the State banks have no right to join the Federal Reserve System until new legislation has been obtained, and it seems a little unusual that a State bank should not be permitted to have a director who is a director in a national bank and a member of the Federal Reserve System.

Mr. KERN. This meets it.

Mr. SMITH of Michigan. It meets it only partially, I think; and if you will just add the words "State banks" after "trust companies" you will accomplish the purpose.

Mr. KERN. The bill says "that nothing in this act shall prohibit any officer, director, or employee of any member bank or Class A director of a Federal reserve bank, who shall first secure the consent of the Federal Reserve Board, which board is hereby authorized, in its discretion, to grant, withhold, or revoke such consent, from being an officer, director, or employee of two other banks, banking associations, or trust companies, whether organized under the laws of the United States or any State."

Mr. WILLIAMS. That covers it.

Mr. SMITH of Michigan. It covers it.

Mr. SMOOT. That covers it.

Mr. STONE. I should like to ask the Senator a question. A director of a national bank may be a director in one other or two other banks?

Mr. KERN. In two other banks or trust companies, provided they are not competing and get the consent of the Federal Reserve Board.

Mr. STONE. He may be a director in two.

Mr. KERN. In two. They are limited to two.

Mr. STONE. I wish to say to the Senator that recently I received two letters from officers of important national banks in my State concerning this proposed provision of law. The gentlemen writing me are officers of large national banks. They were not friendly to this proposed legislation, and I am suggesting to the Senator from Indiana and to the Senate what was said to me in these letters. It was said that in all large cities there are certain important banks which more or less cooperate and establish a community of interests. They work in concert with a view to controlling certain things—for example, the organization of a local board governing the local reserve banks. If an officer or director of one of these national banks, acting in concert, though not in combination, but with a sort of gentlemen's understanding, may be a director in a large trust company organized under the laws of the State and should take a like position in some other State institution, a State bank of any kind, it would simply strengthen this rather secret though perhaps not illegal kind of understanding between them, made with a view of controlling the banking and monetary force of a great community.

Mr. KERN. They must get the consent of the Federal Reserve Board.

Mr. STONE. I know; that is according to the language of the bill read, but if you authorize it to be done and change the law about to go into operation to that effect presumably the Federal Reserve Board will not intervene with an objection to such an arrangement as that proposed. If it should, then the bill accomplishes nothing.

I am not pressing the objection against the bill of the Senator from Indiana, but I am suggesting what important bankers in some of the leading cities of my State have suggested as likely to be a danger resulting from this legislation.

Mr. SHAFROTH. Mr. President, when the Clayton Anti-trust Act was passed it was aimed and directed against interlocking directorates in banking institutions. It was thought to be a very excellent provision with respect to that, inasmuch as great abuses had occurred by reason of the combination of a great many banks, especially in large cities, where there had been refusal of credits and where a great many other things had occurred to the detriment of legitimate enterprises in the United States.

The conditions that obtained under the Federal reserve act made it so that even where banks were of a noncompetitive nature they would be in such a position that they could not cooperate with each other by reason of the fact that some of the directors were in the directorates of the other bank and that was prohibited by the Clayton Act.

Mr. STONE. May I ask the Senator from Colorado a question?

Mr. SHAFROTH. Yes, sir.

Mr. STONE. What does the Senator understand to be noncompetitive as between banks in the same town or city?

Mr. SHAFROTH. Well, it is very hard, of course, to say that any bank is noncompetitive with another bank in the same city; but at the same time trust companies are supposed to be noncompetitive as against national banks. Their rules and regulations are such that they are not competitive except in a very limited measure. On that account they are mentioned here specifically.

Mr. POMERENE. Mr. President, may I call the attention of the Senator to the phraseology of that act which allows this where there is no substantial competition between the banks?

Mr. SHAFROTH. Yes; that is true. The words "substantial competition" are used. They recognize that there is some competition, even if they are near the same place; but there were a great many objections on account of the fact that a bank in a city would have a correspondent out in a country town, and there was hardly any, if any, competition that could exist, and yet they felt that there ought to be some limit to cooperation in management between the large city bank and the small country bank which would make the country bank stronger. To make this privilege unlimited, however, would be reestablishing many of the abuses that the original law was intended to prevent. So the committee, after consideration of the matter, concluded to limit the privilege by preventing a man being a director at the same time in more than two banks. The main objection to interlocking directorates was on account of combinations that existed in banks of large cities; and inasmuch as under this bill only two could be a party to such interlocking directorships, it would so limit the practice as to make it harmless. So it seems to me that it remedies a great objection to the Federal reserve act, by reason of granting the limited privilege which is contained in the bill.

Mr. POMERENE. Mr. President, the brief report which accompanies this bill fully sets forth the reasons which actuated the committee in reporting the bill. I suggest that, without reading it, the report be incorporated in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The report referred to is as follows:

Mr. OWEN, from the Committee on Banking and Currency, submitted the following report:

The Committee on Banking and Currency, to which was referred Senate bill 4432, "To amend section 8 of an act entitled 'An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes,' approved October 15, 1914," having carefully considered the same, recommends that the bill be amended by striking out the comma after the word "bank" on line 12, page 1, and by striking out on line 3, page 2, the words "one or more" and inserting in lieu thereof the word "two," and as amended the committee recommends that the bill pass.

The effect of the passage of this bill will be to permit the Federal Reserve Board to authorize a director of a member bank to serve as a member of the board of directors of two other banks, banking associations, or trust companies, if such other bank, banking association, or trust company is not in substantial competition with such member bank.

It was represented to the committee that the rigid enforcement of the so-called Clayton antitrust law, with respect to interlocking direcorates, would work a great hardship in many cases where men of great banking experience were serving on the boards of more than one bank, and where there was no substantial competition between the banks for which they were rendering this service.

Realizing that the purpose of the passage of the Clayton antitrust law, in so far as it affects banks, was to prohibit a practical monopoly of credits through the interlocking directorates of competing banks, the committee is of the opinion that that purpose can be as well served by granting this permission to those banks which are not in substantial competition with each other, requiring, however, that the Federal Reserve Board shall first give its permission, and limiting the discretion of the Federal Reserve Board in the matter to specifically two other banks.

It frequently happens that there are several banking institutions under the same roof having practically the same personnel on the several boards of directors, but the banks in nowise competing with each other, as, for instance, a national bank and a trust company, the trust company being authorized to do business of a nature which a national bank would be prohibited from doing under the national-bank act and a State bank with a different line of business under State laws.

The Federal Reserve Board was requested to consider this bill and report thereon to this committee, and the board's report is made a part hereof, as follows:

FEDERAL RESERVE BOARD,
Washington, March 8, 1916.

MY DEAR SENATOR: As requested in yours of February 26, the bill introduced by Senator KERN to amend section 8 of the Clayton Act, which is now before your committee, has been submitted to and considered by the board.

It appears that under this bill the restrictions contained in the Clayton Act relating to interlocking directorates will not prohibit an officer, director, or employee of a member bank, or a class A director of a Federal reserve bank, who first procures the consent of the Federal Reserve Board, from being an officer, director, or employee of one or more other banks, if such other banks are not in substantial competition with the member bank.

This amendment, if adopted, will give some elasticity to the provisions of the Clayton Act which prohibit directors of other banking institutions from serving as directors of member banks under certain conditions. It would seem to be desirable to have this discretionary power vested in the board, since in many instances the enforcement of the provisions of the Clayton Act will result in depriving a member bank of the services of a director because of his connection with other banking institutions, even though his serving on both boards would not be violative of the spirit of the act.

It is the opinion of the board, however, that some limitation should be placed upon this discretionary power, and it is suggested that the bill should be amended so as to provide that "the Federal Reserve Board shall in no case authorize a director of a member bank to serve on the boards of more than two other banking institutions or on more than one other such institution located in the same city or town." It is also suggested that the comma appearing after the word "bank" at the beginning of line 12, page 1, of the bill be eliminated to avoid ambiguity. As the bill now reads it might be contended that the qualifying sentence "who shall first procure the consent of the Federal Reserve Board" relates to class A directors of Federal reserve banks and not to officers, directors, or employees of any member bank.

While the board realizes that it will be difficult in some instances to determine whether or not two or more banks are in substantial competition, it is prepared to assume this responsibility should this bill become a law. In the opinion of the board, the amendment appears to be a desirable one from many standpoints.

Respectfully,

C. S. HAMLIN, *Governor.*

Hon. ROBERT L. OWEN,
United States Senate, Washington, D. C.

Mr. SUTHERLAND. Mr. President, I am quite in sympathy with this bill, but I want to suggest one or two changes in its phraseology. The first is in line 3, on page 2. The semicolon after the word "bank" evidently should be a comma, because what immediately follows is parenthetical, being the words "who shall first procure the consent of the Federal Reserve Board, which board is hereby authorized, at its discretion, to grant, withhold, or revoke such consent from being an officer," and so on.

Mr. KERN. What is the Senator's suggestion?

Mr. SUTHERLAND. The semicolon in line 3 should very obviously be a comma.

Mr. KERN. I think the Senator is right about that.

Mr. SUTHERLAND. Then, in line 7 I suggest that the words "not more than" should be inserted, because literally, while the law would not properly be construed in that way, the provision is that he may be a director "of two other banks" and not of "one other bank."

Mr. KERN. If the Senator will move those amendments I shall agree to them.

Mr. SUTHERLAND. I move that the bill be amended in the particulars which I have stated.

The VICE PRESIDENT. Without objection, the amendments are agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

CONTRIBUTORS OF THE ELLEN M. STONE RANSOM FUND.

Mr. POMERENE. Mr. President, I ask unanimous consent for the present consideration of the bill (S. 3606) for the relief of contributors of the Ellen M. Stone ransom fund. I do not believe there will be any debate on the subject.

Mr. SMOOT. I object to taking up bills on the calendar until we take up the calendar in its entirety.

Mr. POMERENE. I did not understand the remark of the Senator from Utah.

Mr. SMOOT. I am perfectly willing that the bill to which the Senator refers should be passed; I have not the least objection to it; but if we allow Senators to pick out bills upon the calendar and get them considered and passed, we shall never reach the consideration of the calendar.

Mr. POMERENE. Mr. President, this bill relates to the relief of the contributors of the ransom fund of Miss Ellen M. Stone. It has passed the Senate at least twice, and perhaps oftener.

Mr. SMOOT. As I have said, I favor the bill, and I have voted for it three times. I believe in it absolutely. I think it ought to be passed, but I simply say that there are other bills upon the calendar that ought to be passed in the same way. I want the Senator from Ohio to help us get to the consideration of the calendar under Rule VIII of bills to which there is no objection, and then we shall pass his bill at that time.

Mr. POMERENE. We could have passed this bill while we have been discussing it, and I really think that the honor of this Government is involved in it.

Mr. GALLINGER. This bill has passed the Senate three times, if not four times, Mr. President.

Mr. POMERENE. Yes.

Mr. SMOOT. I think that is true.

Mr. POMERENE. I hope the Senator will withdraw his objection to the bill. It is not very often I present a request of this kind, but my heart is somewhat in this bill.

Mr. SMOOT. Mr. President, everybody knows the object of the bill, and it is so just that I shall not object to its consideration now; but I shall object to giving unanimous consent for the consideration of any other bill.

Mr. SIMMONS. Mr. President, I shall myself object to the consideration of any other bill except the unfinished business after this bill is passed. I do not, however, object to the consideration of this bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 3606) for the relief of contributors of the Ellen M. Stone ransom fund. It directs the Secretary of the Treasury to return to such contributors, or, in the event of the death of any such contributor, to the legal representative thereof, as may file their claims within one year from

the passage of this act, the money subscribed by such contributor to pay the ransom for the release of Miss Ellen M. Stone, an American missionary to Turkey, who was abducted by brigands on September 3, 1901, the said total sum not to exceed $66,000.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

DUTY ON SUGAR.

Mr. SIMMONS. Mr. President, if it be necessary to do so, notwithstanding the unanimous-consent agreement, I ask unanimous consent of the Senate to now proceed to the consideration of the so-called sugar bill.

The VICE PRESIDENT. The Chair is ready to construe the unanimous-consent agreement that at any moment when there is an objection to action being taken on any other matter it is the duty of the Chair to lay House bill 11471 before the Senate under the unanimous-consent agreement. The Chair now lays that bill before the Senate.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 11471) to amend an act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913.

The VICE PRESIDENT. The question is on the amendment reported by the Committee on Finance.

Mr. WORKS. Mr. President, I offer the amendment which I send to the desk to the amendment reported by the committee.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. After line 2, on page 3, at the end of the proposed committee amendment, it is proposed to insert the following:

That on and after the passage of this act there shall be levied, collected, and paid upon the following articles when imported from any foreign country into the United States, or into any of its possessions, the rates of duties herein provided, as follows:

1. Lemons, limes, grapefruit, shaddocks, pomelos, 1 cent per pound.

Mr. WORKS. Mr. President, I want in the beginning to express my thanks to the Senator from North Carolina [Mr. SIMMONS], who is in charge of the bill, for his courtesy in allowing the bill to come over until to-day in order that I might present this amendment. I shall endeavor not to abuse his courtesy by taking up any great length of time in the discussion of the amendment which I have offered. It is a matter with which the Senate should be quite familiar. I feel very kindly to my friends on the other side of the Chamber, and I am offering them the opportunity, by presenting this amendment, to right a great wrong that has been done to the fruit growers of my State.

At the time the present tariff law was before the Senate for consideration and enactment there was a tariff of one cent and a half a pound on lemons. By the Underwood bill the tariff was placed on an entirely different basis, being levied by the box and not by the pound. The intention was, I believe, to allow what would be equal to half a cent a pound, but the result was to reduce the tariff even below that amount. It is somewhere between thirty-five and forty one-hundredths of a cent.

I charged at the time this matter was before the Senate during the consideration of the Underwood bill that it was being supported by a paid and corrupt lobby that had misled Members of Congress by false representations, and that the proposed reduction in the tariff on lemons was the result of misinformation brought about in that way. I discussed the merits of the tariff on lemons at considerable length at that time, and attempted to prove—and think I did prove—that a duty of at least 1 cent a pound was absolutely necessary for the protection of the industry in my State. I am not going to undertake now to discuss the merits of the question as I did then. Many of the Members of the Senate are familiar with the discussion that took place at that time. I am going to confine myself at the present time to the discussion of the question of the lobby which has, I think, brought about that unjust reduction in the tariff.

Of course, it was maintained by gentlemen who were interested as paid lobbyists to have lemons put on the free list that the reduction was in the interest of the consumer; but they were, in fact, acting for foreign importers of lemons into this country, made up largely of representatives of the Sicilian growers in Italy.

I want, Mr. President, in the beginning—for I do not desire to repeat what I said at that time—to insert in the RECORD as part of my remarks an extract from the speech I made at that time, bearing upon that particular question.

The VICE PRESIDENT. Without objection, permission to do so is granted.

The extract referred to is as follows:

"Therefore some one else must be interested in reducing the tariff besides the consumer. But it sounds better in the public ear to cry out against injustice that they pretend is being done the poor consumer. And this false cry is convincing some unthinking people, who do not investigate the question for themselves, that the price of lemons to the retail purchaser has actually been increased by the tariff.

"Mr. President, it is not the man who buys his lemons in this country that is affected, nor is it the consumer in this country that is complaining of the tariff. He has no reason to complain. It is the importer, the promoter, the broker, and others who deal in foreign lemons who are making this fight for free lemons or a reduced tariff. The importers in New York and the exporters in Sicily have levied tribute at different times on every box of lemons imported into this country to raise a fund to fight the tariff, and, unfortunately, Members of Congress have been found who have been willing to make the fight for the foreign importer and foreigners who make their living by handling the foreign product here, against their own countrymen and upon the specious but wholly unfounded claim that it is done in the interest of the domestic consumer. Over one-half of the imports of lemons into the United States are controlled by 11 New York Italian importers, as will be seen from the following statement showing the receivers of foreign lemons at New York City and the percentage of importations handled by each during the period November 1, 1911, to October 31, 1912. The first 11 firms controlled 51.3 per cent of the total imports. About 90 per cent of the total imports are received in the port of New York. The names of the importers sufficiently disclose their nativity. The table is as follows:

Receivers of foreign lemons in New York and percentage of imports handled by each from Nov. 1, 1911, to Oct. 31, 1912.

All other importers handled less than one-tenth of 1 per cent each.

"The means resorted to to arouse prejudice against the domestic lemon industry and the people that are behind the movement to reduce the tariff is very well shown in an article

written by Agnes C. Laut in a late issue of the Sunset Magazine. It was written, I am informed, on her own initiative and upon her own investigation of the facts, and not at the instance or at the instigation of interested parties. She says:

"How many people who know about the picturesqueness of the citrus groves in sunny California also know about 'a slush fund' of $200,000 a year manipulated by the Lemon Trust of Italy to smash the system of cooperation that sustains those citrus groves of the Southwest? How many know about 'rebates' of 5 cents a box on every sale of Italian lemons auctioned off in New York to create a 'lobby' fund for the purpose of smashing California lemons? How many know that when Collector Loeb, of New York, and Wickersham, of Washington, and the Fruit Exchange of New York went after that 'rebate' among the fruit brokers—which is contrary to New York law—'the rebates' on sales were discontinued and a 'rebate' given by the foreign steamship companies on every box of lemons shipped from Italy in order to knock the tariff off that protects California lemons? You see the point, don't you—ships that fly a foreign flag can not be prosecuted by the United States Government for 'rebating' to an Italian trust, and the Italian trust uses its 'rebate' fund ($50,000 it amounted to in three months) to tamper with legislation in Washington.

"There are still funnier features to this human-nature side of the citrus industry. When the Lemon Trust of Palermo, which consists of some 60 Italian firms primarily controlled and directed by 11 men with headquarters in New York—not many of whom are American citizens—laid out its campaign to capture the markets of the United States, it realized that it must first of all smash—utterly smash—the citrus growers' union of California. Why? Because the citrus growers' union has wiped out all speculators, all brokers. It deals directly with the jobber. It has its own salaried salesmen on every market in the world. It sells almost from farm to table—or straight into the hands of the jobber who caters to the retailers, whereas the Lemon Trust of Italy is purely a speculative concern. In the days before there was a California citrus league to deal direct with buyers the fruit brokers of New York have depressed prices by throwing a glut of Italian fruit suddenly on the market, then buying up every box of available lemons and oranges in America. Then, presto, up leaped prices from 10 cents and 50 cents and $1 a box to $6 and $8 and $11 a box. Since the citrus growers of California formed their cooperative league to deal directly with the buyer such wild fluctuations of prices have been unknown. The ruling price has been created wholly and solely by supply and demand. Only two years ago, when the California supply of lemons had been exhausted, the Italian lemon brokers of New York, in order 'to jack up' prices, deliberately shipped out of the country a cargo of 800,000 pounds.

"Now, the citrus growers of Italy had several very important advantages over the citrus growers of the Southwest.

"They not only got 'rebates' on auctions, which were against the law, and 'rebates' on steamship freights, which were contrary to law but could not be punished, but they also received 'rebates' from the customs, owing to alleged decay. It has been usual, and rightly so, for the United States customs to allow 'rebate' of duties charged on all fruits that subsequently showed decay. Oddly enough the samples of Italian fruits examined by the customs appraiser ran such a high percentage in decay that Collector Loeb investigated. It was found that as much as $200,000 in a few months had been allowed as 'rebate' duty on decayed fruit when the fruit was not decayed at all.

"The next advantage possessed by the Foreign Fruit Trust was in the way of freight tariffs. The freight rate on California citrus—oranges and lemons—runs 82 to 84 cents plus refrigeration and precooling charges, or, say, about 90 cents a box to points east of the Rockies. The freight rate from Italy to points east of the Rockies runs 30 cents less 6 cents of a 'rebate' on all shipments over 1,000 boxes.

"Yet another point. Wages in Italy are only one-third wages in California.

"Now, to equalize conditions California had asked duties of 1½ cents a pound on lemons, 1 cent a pound on oranges. If you figure out 330 lemons to a box—fewer oranges—and 70 to 75 pounds to the box, the duty runs from 3 to 4 cents a dozen. Has the price been pushed up by the duty for the eastern consumer? It has uniformly ruled lower. There has been no more sudden jumping of the price up from a few cents a box to $6 and $8 and $11. Another point: In Canada citrus fruits enter duty free; yet the price of oranges and lemons rules in Canada a few cents a dozen—6 to 10—higher than in the United States. Why? Not the extra freight, for the freight rate is the same from California to Montreal as from California to New York. Why, then, is the price slightly higher in duty-free Canada than in the United States with duties of 1 cent and 1½ cents a pound? Because in Canada the prices are controlled by the fruit brokers' rings and the Foreign Trust. In the United States, as long as the citrus grower deals directly with the buyer, eliminating speculators' profits, the price is kept purely on a basis of supply and demand. High prices rule only during seasons when frosts have touched the groves, and these seasons of high prices, such as the current year of 1912–13 is bound to be, are only a third the high prices formerly prevailing under the manipulation of the Foreign Fruit Trust.

"Now, I am not a high-tariff advocate, but a free trader; but this strikes me as one of the exceptions that proves the rule. It strikes me as a little anomalous that a foreign fruit trust should set itself to do three things to a purely domestic American industry:

"First. Jack up and control prices on one of the great staple necessities of living.

"Second. Create 'a slush fund' by illegal rebates to smash a growing American industry.

"Third. Write an agreement with a firm of Wall Street lawyers to give them half that 'slush fund' if they could 'induce' Congress to remove the duty equalizing conditions for California fruit growers as against Italian.

"Now, for the funny features of the Foreign Fruit Trust's manipulations. 'Barkers' and 'posters' began mysteriously to appear in such summer resorts as Coney Island, Atlantic City, etc., calling on passers-by 'to smash the California Fruit Trust.' Petitions were circulated through the crowd for signatures against the duty that protected California fruit. An agent of the California cooperative union saw these petitions to Congress being signed by hundreds of youngsters—a foreign rabble—not over 10 and 12 years of age. Now, if there is one thing the California Citrus Growers' League is not it is a trust. Its selling is a direct transaction from producer to jobber, and it takes not a cent of profit to its managers, but only a deduction for salaries, turning 97 per cent of the jobber's price back to the shipper, less the freight charges. Yet the 'barkers' and 'posters' represented California fruit growers as a 'trust.'

"It is only fair to say that the attorney and representatives of the foreign dealers deny the accuracy of this statement, in some particulars, especially as to the size of the fund raised to influence legislation. But the size of the fund is not so material. That such a fund was raised, in the manner stated, and for the purpose indicated, can not be denied. And I am assured that it would have been larger if these conspirators against the best interests of our country had not fallen out among themselves. It is in this way and for this purpose that the effort to arouse public sentiment has been carried on and the aid of politicians seeking votes procured.

"The temptation for some Members of Congress to contend for free lemons is great in some quarters, notably in some of the New York congressional districts, and, in fact, in the whole State of New York, because of the large Italian vote there which can be easily reached by this means. There are other sections in this country where similar conditions exist and where like results may be reached by favoring the countrymen of this class of voters. It may mean the gain or loss of a congressional district or a whole State in more than one of the States in the Union.

"I am not here to say that any Member of Congress, in this body or elsewhere, would submit to this temptation. But any Senator who will take the pains to investigate the whole subject with a view of arriving at the truth will be forced to the conclusion that there is no just or even plausible reason for reducing the tariff on lemons other than that of political gain to individuals or to a political party.

"The extent to which tribute was laid upon lemons imported into this country to raise the funds to employ lobbyists and influence action in favor of free lemons in the interest of the importer of the foreign product is more clearly shown by an extract I have taken from a letter of a man interested in the sale of lemons in the New York market to my predecessor in office, Hon. Frank P. Flint. The letter was written January 11, 1911. In it he says:

"Now as to the article which appeared recently in McClure's Magazine, that any reader would know is an output of the importers and paid for by them. As I advised you under date of June 25 last, the importers levied an assessment of 5 cents per box on every box of foreign lemons to create a fund which they aimed to so expend as to secure legislation that would reduce the present tariff on lemons, and the amount collected to date now amounts to, in round figures, between sixty and seventy-five thousand dollars. The special committee in charge of this fund is Scortino, Dominici, and Zito, who have employed Messrs. William C. Beers and Harrison Osborn, both located in this city, to disburse said fund in any way they think advisable without rendering an account therefor. It was under the supervision of these last two men that this magazine article was manipulated, and up to date out of this 5-cents-per-box fund there has been turned over to these gentlemen, Beers and Osborn, a total of about $23,000. On the 9th instant there was a meeting of the Fruit Importers' Union, and some of the members called upon Beers and Osborn for an accounting of the money turned over to them, and they replied by saying that their agreement was that they should make no accounting whatsoever, and they declined to do so. Funds are advanced to Beers and Osborn in lump sums of two, three, or five thousand dollars. I will note here that effort was first made to get the Outlook to publish the article which appeared in McClure's, but the Outlook refused to publish it.

"I suppose Senators are fully aware that Osborn and Beers have been carrying out their part of the bargain by which this great industry of my State was to be sacrificed in the interest of foreigners, for they have been lobbying here diligently and persistently for months for free lemons. Near the close of the last Congress they did get lemons on the free list in the House, but they were saved in the Senate. It was learned before this time that the lemon importers of New York and the exporters of Palermo had organized to bring about a reduction of the tariff on lemons and, if possible, remove the tariff entirely. They were most active in this effort. In addition to the raising of funds necessary to carry on the campaign by levying on every box of lemons imported and the employment of lobbyists, as I have stated, they stamped on every box of their lemons 'If lemons were free of duty this box would cost you $1.20 less.' This was a plain falsehood, and known to be so, because the full tariff on lemons was only $1.12 a box. But aside from this, we have ample and unanswerable proof that the claim was not made in good faith. No one believed that the whole or probably any part of the tariff would go to the consumer in the way of cheaper lemons. This last winter the California crop of lemons was mostly destroyed by an unusual and destructive frost. As a result very few domestic lemons went to New York and other eastern cities. It practically gave the market to the foreign product, just as it will if the proposed reduction of the tariff becomes a law. What was the result?

The following table giving the quantity of foreign lemons delivered in the New York market and the prices received shows:

	Boxes.	Price per box.
Nov. 1, 1909, to June 17, 1910	938,210	$2.74
Nov. 1, 1910, to June 17, 1911	884,456	3.29
Nov. 1, 1911, to June 17, 1912	987,270	2.71
Nov. 1, 1912, to June 17, 1913	1,139,164	4.36

"It will be noticed that because of the short crop in California from November 1, 1912, to June 17, 1913, there was an increase of foreign lemons over the highest number of any previous year for the same time of 150,000 boxes, and the price to the consumer was increased $1.65 a box. This shows how the lemons will be $1.20 a box higher if the California lemons are driven out of the market by an unjust tariff as they were temporarily by cold weather. But the work of the enterprising foreign dealers did not stop with the efforts I have disclosed. They raised the cry that the high tariff was robbing the sick and the poor, and that it was being done at the instance of a powerful trust amongst the fruit growers in California. This cry was echoed on the floors of Congress. When it was declared with melting sympathy that the high price of lemons to the sick in the hospitals was caused by the tariff, and these unfortunates should be protected by Congress, an investigation was instituted in 15 of the largest hospitals in the city of New York to see how this might be. The number of patients in each and the number of boxes of lemons used for the year previous was ascertained, and it was shown that they had used four-fifths of one lemon a year for each patient. It is only just to say that this included day patients as well as more permanent ones. But if we exclude them, possibly the hospitals used on an average 1 full lemon a year for each of its patients.

"I may call attention to another effort of the foreign dealers to accomplish what they were striving for. At Brighton Beach, N. Y., and, as was stated by the men engaged in it, at other places, a strenuous effort was made to secure signers to petitions to Congress for free lemons. At one of the stands in the crowd flaming red posters were posted containing the following:

"(Poster.)

"The high cost of living concerns you!

"A petition to Congress asking for the repeal of the duty on lemons.

"California produces 40 per cent of the supply of lemons used in the United States. The Payne-Aldrich tariff bill put a duty of $1.20 per box on lemons, which is a big advantage to the Lemon Trust in maintaining the present high prices. Lemons are absolutely needed in various ways for medicine, food, and flavoring purposes. The independent dealers are trying to have the present tariff repealed, and, if successful, are pledged to reduce the cost accordingly, thus making lemons cheaper.

"They want your assistance in their efforts and respectfully ask you to sign the petition to Congress to take this burdensome duty off an article that is an everyday necessity.

"Sign the petition for lower prices.

"Men employed for the purpose were on hand with bundles of petitions, as follows:

"(Petition.)

"———, 1911.

"*To the House of Representatives of the United States,*
"*Washington, D. C.*

"GENTLEMEN: We, your petitioners, residents of ———, respectfully request the repeal of the burdensome duty on lemons which was enacted by the Payne-Aldrich bill into a law, at the expense of the great masses of population on the Atlantic seaboard, for the purpose of doubling the wealth of 10 or a dozen millionaires of California and also for the purpose of paying the wages of tens of thousands of Japanese soldiers, who exclusively monopolize the labor of the California lemon orchards, thus depriving American laborers of opportunity of labor and wages.

"Respectfully, yours, "——— ———.

"In this way signers to the petitions, many of whom were children, were obtained to be forwarded to Congress; how many I do not know.

"These varied and persistent efforts of lobbyists and others had their effect. Some people, even in Congress, began to believe at least some of the mendacious things they said. On August 3, 1911, an amendment was offered to the tariff bill then pending placing lemons on the free list. It was offered by the chairman of the Committee on Ways and Means. It was solemnly asserted in support of the amendment that the tariff had been increased 'at the demand of the California Lemon Trust'; that is, was 'just about as clear an example of the giving of special privileges by tariff rates as it is possible to obtain'; that lemons to many people of foreign birth and descent are a necessary of life; and that 'the only purpose of the increase of the tariff was to raise the price of lemons in the markets of the East and increase the profits of the California Lemon Trust.' These assertions could not very well have been further from the truth. The increase was not made on demand of the California trust. There is no such trust, and never has been. The increase was not made upon the demand or even at the request of the fruit growers of California or anyone interested in the industry in the State. I do not know whether lemons are a necessity to people of foreign birth or not. On that question I give way to the superior knowledge of the gentleman who made the assertion, whose constituency is largely made up of Italians, who have their own peculiar reason for wanting lemons on the free list in the interest of their countrymen. The amendment passed the House, but was defeated in the Senate. In conference the House stood firmly to their amendment. It was again asserted:

"It is going to drive the Sicilian and the Italian lemon out of the American market, and the people of this country and the hospitals and eleemosynary institutions that require lemons at the sick bed are going to be placed in the hands of one of the most drastic trusts that exists in the United States.

"Solemn words of warning, dire predictions, and high-sounding claims of a most 'drastic trust' were these. But the warnings were not needed, the predictions were unfounded, and the assertion of a trust was untrue.

"But, Mr. President, the people who had misled good men into the belief by the influence of the lobby, false petitions, and misrepresentations that these things were actually true were not ungrateful although, temporarily at least, the efforts in their behalf had failed.

"As another potential means of securing free lemons, the Italians of New York formed a political organization. It was known as the 'National Italian Democratic League.' This political organization was prompt to show its appreciation of the efforts made in the interest of importers of foreign lemons. It is said to have contributed large sums to the late Democratic campaign, but this I have not been able to verify. The league gave a magnificent banquet at the Waldorf-Astoria within a few days after a Democratic House had voted to remove the tariff on lemons. The chairman of the Committee on Ways and Means, who offered the amendment striking off the tariff, was the guest of honor on that auspicious and delightful occasion, and other members of the Democratic Party, favorable to free lemons, and also the chairman of the Democratic congressional committee and other distinguished Members of the House were not absent; and, last but not least, Mr. Harrison Osborne, the paid lobbyist already mentioned and with whom doubtless the other gentlemen were well acquainted, was conspicuous on the happy occasion.

"The gathering was presided over by Giovanni Dominici, whose name sufficiently indicates the place of his nativity and who happened to be one of the leading lemon importers and who, with many others present, was deeply interested in free lemons. I have here a beautiful picture of the assembly; it shows Mr. Dominici as presiding and the distinguished chairman of the Ways and Means Committee as the guest of honor on his right. If the CONGRESSIONAL RECORD were only an illustrated publication I would ask to have it inserted in connection with my remarks.

"Now, Mr. President, no one believes—certainly I do not—that any of these distinguished gentlemen present on this great occasion, and whose duty it was to legislate justly and without prejudice against the interests of my people, would allow themselves to be improperly influenced by this touching evidence of the regard and appreciation of the Italian importers for the men who had so valiantly striven in their interest. But, sir, on the face of it, it did look bad for the California fruit growers. I am sorry it occurred.

"The following interesting account of the banquet was given in the Fruitman's Guide, of New York, in its issue of August 26, 1911:

"ITALIAN DEMOCRATS DINE—BANQUET IN HONOR OF O. W. UNDERWOOD AT WALDORF—SICILY LEMON IMPORTERS CREDITED WITH PULLING WIRES FOR LOWER LEMON TARIFF—DINNER GIVEN IN A HURRY.

"NEW YORK, *August 25, 1911.*

"Sicily lemon importers and other Italian importing interests seemed in a hurry to pay their respects to members of the Ways and Means Committee of the House of Representatives, for they made OSCAR W. UNDERWOOD, chairman of the committee, a guest of honor at the first annual dinner of their political organization, held in the Waldorf-Astoria last Wednesday night. The particular political organization of the Italian importers is styled the National Italian Democratic League. This dinner, it seems, was a decidedly hurried affair. It is stated that the whole affair was planned and executed inside of 48 hours. It was originally intended to be in honor of all the Democratic members of the Ways and Means Committee, but Mr. UNDERWOOD was the only one who got there. Several of his colleagues in the House sat at the speaker's table, however.

"Giovanni Dominici, one of the leading lemon importers of the city and president of the Italian League, presided at the banquet. Besides he and Mr. UNDERWOOD, there were present these Congressmen: C. Y. Fornes, of New York; F. E. Wilson, of Brooklyn; Jefferson M. Levy,

of New York; JAMES T. LLOYD, of Missouri, chairman of the Democratic national congressional committee; Martin W. Littleton, of Long Island; and W. I. McCoy, of New Jersey. Joseph Auerbach was one of the speakers. Among others present were ex-Justice Gildersleeve; Antonio Succa; Justice Russell, of special sessions; G. Solari, president of the Italian Chamber of Commerce; S. Sailta, the lemon broker; and former Coroner Peter Acitelli.

"OSCAR W. UNDERWOOD, the guest of honor, was the principal speaker. He made a speech whacking Mr. Taft for signing the Payne tariff bill and turning down the bills offered by the Democrats in the extra session of Congress. He applauded the President's stand on reciprocity. The Italians cheered Mr. UNDERWOOD'S speech and the band played 'Dixie.' Mr. UNDERWOOD is from Alabama.

"There were several members in the trade who received invitations to attend, but who found at the last moment that they could not possibly go. In view of the fact that some secrecy attended the hurried plans for the dinner, and because of the fact that a strong working interest is active for a further reduction in the duty on Sicily lemons, certain members of the trade are busy attaching unusual significance to the entertainment provided for the Democrats. It is openly asserted that the Italian element here is looking to the Democratic Party for help, and that wires are being pulled in the hope of action at the next session of Congress on the lemon tariff. Importers generally deny the imputation expressed in the conviction of the trade. The National Italian Democratic League is less than one year old, but it seems to be more or less of a mighty precocious infant.

"I protest earnestly against making this great industry of my State the victim of selfish partisanship or the greed for political gain. If it can be shown to the satisfaction of any Senator who desires to act wholly upon the facts as they exist that the present tariff should be reduced as a matter of right and justice, I have nothing to say against his action in voting against this tariff. That being shown to his satisfaction, it is not only his right but his plain duty to vote for a reduction of the tariff. As I said in the beginning, the question is one of right and justice and not of politics or expediency, and should be so treated."

Mr. WORKS. I then mentioned, without any present proof on the subject, that a combination had been formed by the importers of foreign lemons to reduce the tariff upon home-grown lemons; that their first intent and purpose was to place lemons upon the free list; that they contracted with the gentlemen, who undertook the task of bringing about this reduction, for a certain amount of money if they succeeded in placing lemons upon the free list, a lesser amount if they succeeded in reducing the tariff to half a cent a pound, and a still lesser amount if it was made something higher than that. Now, Mr. President, we have the positive evidence of the truth of the charges that were made by me at that time.

These worthy gentlemen have fallen out amongst themselves, and Mr. Beer, who was hired by the importers to bring about a reduction in the tariff, has brought suit against the importers as an organization to recover $75,000, which he claims to be due him on account of services rendered by him to bring about that reduction in the tariff. It is also claimed, amongst other things, that there was $140,000 raised by the importers for the purpose of paying the expenses of the efforts that were to be made by the man whom they had hired to lobby this thing through. It was one of the most corrupt efforts to control legislation that has ever happened; and in that connection and as showing what the extent and purpose of it was, I desire to have read an article from the Fruitman's Guide, of New York, which gives the particulars of the contract that was entered into, the amount of money that was raised for the purpose, and other information, which, I think, the Senate would like to have.

The actual amount of collections and expenditures is set out in the report that was made by the gentlemen who had this matter in charge. It shows upon its face that there was collected for the purpose of carrying on this propaganda $96,661.71. As I have said, the claim now is that the actual amount collected by Beer and Osborne, the two men who were acting in the interests of the foreign fruit growers, was $140,000, instead of $96,000, and that in some way or other that money has vanished. I will ask, Mr. President, to have this statement read by the Secretary.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and the Secretary will read.

The Secretary read as follows:

[From Fruitman's Guide, New York, Apr. 1, 1916.]

FUSS AMONG IMPORTERS—BRINGS OUT TALE OF COSTLY LEMON LOBBY—FIGHT TO HAVE TARIFF ON SICILY FRUIT REDUCED SAID TO HAVE COST $140,000, WITH REPUBLICANS IN CHARGE OF MATTERS.

NEW YORK, *March 31.*

We reprint, with no apologies to our readers, and with a good deal of inward amusement the following story scare-headed on the front page of the New York Sun of Wednesday:

Internal dissensions in the Fruit Importers Union, an organization of importers of citrus fruits from Sicily, have brought forth the revelation that a fund—said by one side to be $140,000 and by the other to be little more than $100,000—was raised to obtain a reduction of the duty on Sicilian lemons in the Underwood Tariff Act.

The entire troubles to-day are a sequence to that successful campaign, through which the duty was lowered from $1.20 a box to about 35 cents.

Now, William C. Beer, a man of many activities, has brought suit for $75,000 balance due on his promotion contract, which led up to the reduction of the tariff, and various members of the union are demanding an accounting of the expenditures in the campaign. They are also calling for an annual meeting and election, when, they declare, a new set of officers will be elected and a thorough investigation made.

* * * * * * *

On the other hand, there is a hint that the California lemon growers are stirring up all the muss in order to have the Sicilian lemon duty restored. There is a bill for that purpose before Congress now.

* * * * * * *

The men engaged in the business of importing the citrus fruits of Sicily into the port of New York are banded together as the Fruit Importers Union. This body has been in existence about 35 years and is incorporated under the laws of the State of New York. Frank Zito is president; Carl Braun, first vice president; S. Amoroso, second vice president; and P. Sciortino, treasurer. The board of trustees consists of the officers, J. T. Cuccio, G. Calabrese, V. Porcasie, and G. Lauricelli.

BEER KNOWS PUBLIC MEN.

Mr. Beer, who lives in Yonkers, is a lawyer, with an office at 71 Broadway, but it is not as a lawyer that he has attracted the most attention. Years ago he was regarded as the confidential man of the president of a big insurance company specially charged with keeping a lookout on things at Washington and at Albany. Betimes he was reported as representing, also at Washington, various other men and institutions of large affairs.

* * * * * * *

On November 15, 1915, when Beer sued for the $75,000 he tried to attach property of the defendants, the two Sicilian companies, the Fruit Importers' Union, and Harrison Osborne, a lawyer. The two foreign associations were supposed to have on deposit with Kountze Bros. a letter of credit for $16,000. In an affidavit in the attachment proceedings Mr. Beer went a little more into detail.

TELLS OF PROMISED $60,000.

"It was provided," he said, "by the terms of the said agreement that the defendants were to pay the plaintiff and the said Osborne the sum of $15,000 as a retainer, together with all expenses incurred by the plaintiff and the said Osborne in endeavoring to obtain the aforesaid revision and general reduction of the said duty and an additional sum of $60,000 in the event that the duty on Italian lemons, either through act of Congress or any other function or instrumentality of the United States Government, was reduced to the rate equal to the rate of duty provided in the so-called Wilson Tariff Act."

Mention is made in the affidavit of a supplementary agreement made in October, 1913, that in case the tariff was cut from $1.20 a box to 35 cents they were to have the $60,000.

They went to work. The affidavit describing their labors says that they frequently appeared before the Ways and Means Committee and the Senate Committee on Finance, hired speakers, and sent out millions of pieces of "literature."

"We can only say about this suit of Mr. Beer that we are surprised," said S. Amoroso, second vice president of the Importers' Union yesterday. "Why should we be sued for $75,000 or $110,000? Why has it not been paid?

"We did raise a fund amounting in all to about $140,000 to have the tariff on Sicilian lemons reduced, and we did hire Mr. Beer to have it done. In the United States the importers, by paying 5 cents a box on lemons imported, raised $105,000, and the Sicilian societies raised $35,000 more. Now that it is all over we are asked for $75,000 more.

"What has become of the $140,000? We do not know. We have repeatedly asked for an accounting and have not received it. We have demanded it, and it has not been given to us. We are told to keep quiet, not to raise a row.

"We have gone at it now in another way. The election of officers is held at the annual meeting set down for January. This annual meeting was not called. On March 24 a dozen or more members served notice that according to the laws of the State they will call an annual meeting, and at that time we will endeavor to elect new officers, who will investigate everything."

President Zito would say little yesterday. "All has been fair and honorable," he said. "I can say nothing more."

Mr. Beer presented his interpretation of the situation last night. His suit, he said, will soon be settled by the Sicilian societies at Palermo.

"And I will be glad to get out of it," said Mr. Beer. "I do not want any more trouble like this."

He explained that he and Mr. Osborne were retained to engineer a campaign of education and to prevail upon Congress to reduce the duty. The agreement was well defined and the prices satisfactory.

"I do not mind saying that beginning with 1910 we accomplished some mighty effective work."

There are 2,000,000 voters of Italian blood in this country, he explained, and his first work was to get every one of them stirred up. Documents were sent to them favoring the Italian fruit growers, and letters, papers, "missionaries," speakers, and postal cards were used.

"In 1910," he said, "the effect of this movement was shown in the votes of close districts. All the Italians voted for the Democrats, and the Democrats realized it."

In the presidential campaign of 1912, Mr. Beer said, the Italians were in full swing for Woodrow Wilson. "We organized the Italian Democratic League," he said, "and had branches all over the country. We did nothing but preach Democracy to them.

"I am a Republican except where my client's interests are concerned, and I want to say that the effectiveness of our work was well known and recognized.

"No $140,000 ever came to me. As a matter of fact all that was raised was a little more than $100,000, and not all of that came to us. What we had, however, we spent like water, and we helped to elect Woodrow Wilson. We had a right to expect some gratitude."

The Italian societies wanted to quit contributing, and did so at the end of the 1912 campaign. Then Mr. Beer said he tried to show them that the fight was not over, but, failing in this, had to pay out money from his own pocket. He said that he had been trying to get back his money ever since.

"Mr. Amoroso is wrong when he says there has been no accounting of the fund," he concluded. "There has been a full accounting. Every dollar I spent was accounted for, and the accounting of the trustees was unanimously approved. Mr. Amoroso himself signed a paper approving all their actions."

Hays, Herschfield & Wolff, who are counsel for the defendants in Mr. Beer's suit, said yesterday that they did not know of a discontinuance of the suit. They expected to file their answer to it in April.

SANTI AMOROSO TALKS.

When interviewed by the Guide, Santi Amoroso, of Fiorita & Amorosa, 90 West Broadway—no connection with the other S. Amoroso, be it understood—had this to say:

"From the start I never approved of the expenditure of any money to work for the reduction of the lemon tariff, for the reason that when they proposed to collect a large sum of money to employ Beer, I argued that it was useless, because if the Democrats got in it was their main plank to reduce the tariff all along the line, and if the Republicans won their program was protection anyhow. So that to spend money to secure a cinch or throw away in a surely lost fight was, to my mind, useless either way."

"Why is it," went on Mr. Amoroso, "that Beer entered into a written contract with the Importers' Union that he was to get $110,000 if lemons were put on the free list, $75,000 if the duty was set at 25 cents a box, and $50,000 if the duty went above 25 cents but not over 50 cents? Why shouldn't he live up to the contract set forth in black and white, when under its very terms he and Osborne were entitled only to $50,000, seeing that the duty was put at 35 cents, and with a 15 per cent duty on shooks the total tariff per box became 40 cents?

"All told, despite my protests, there was collected $94,000, plus $10,000 that came from the Shippers' Association in Italy in response to a cable that not a penny of the original $94,000 was left. That makes $104,000. Besides this amount the Shippers' Association of Palermo, Sicily, remitted by cable through Kountze Bros. another $36,000, for which Beer, I am willing to go on record as stating, gave his receipt. So there you have a total of $140,000. And what I want to know is:

"How much was actually paid to Beer? What did the board of directors, at the time that G. Dominici was president and Frank Zito vice president, do with the balance?

"I have continually asked the members of this administration to give an accounting to the members of the union, and they have repeatedly answered me: 'Most of this money was paid to Beer.' They told me that Beer had made an accounting to them which was satisfactory, but they, on their part, were not in a position to give particulars. Strange that there should be reason for such sacredness of secrecy regarding some intimate details and strange that, if Beer's accounting with them was satisfactory, that he should have ultimately found it necessary to sue for $75,000.

"As soon as I heard of the Beer suit I told the administration that my lawyer had advised me the shoe was on the other foot, and the probability was that a refund was coming to the union from Beer, under the terms of his written contract, instead of a balance to Beer from the union. We were presented with letters from Beer to the board of directors intimating that he would withdraw his suit. But, as a matter of fact, all these suits and discontinuance are sheerest pantomime. What we want is an accounting made in a proper way to the board of directors and the membership. I and those with me will be completely satisfied the moment that Beer and the members of the administration responsible for his employment will give a full accounting with vouchers for the sum of $140,000, because, in any case, everything is bound to come out in the wash."

V. Porcassi, who is extremely level headed and conservative, does not agree with all Amoroso has to say and thinks that gentleman is too impulsive and aggressive. "The old administration owes it to its own dignity and self-respect," he said, "to cast all the light it can on this matter and clear up everything beyond all shadow of doubt. My own opinion is that while there may have been some injudicious expenditures and useless extravagances, the old administration will be found to have acted honestly and in the main for the best interests of the importers as they saw them. Any mistakes they have made will, I think, be found to be mistakes of judgment. And one of their biggest mistakes is hesitating so long from letting everyone know just what was done with every penny of the money—whether wisely or foolishly spent."

The Fruit Importers' Union, through President Zito, has submitted the following statement:

THEIR FINANCIAL STATEMENT.

"The following is a summary statement of the receipts and disbursements in connection with the campaign and general office and labor expenses. Accounts were rendered at every monthly meeting to the Fruit Importers' Union, showing the various expenditures and payments to all attorneys and agents in all possible detail, including traveling expenses, hotel bills, salaries, fees, printing, office rent, etc. The accounts as thus rendered were examined by a committee of the Fruit Importers' Union, consisting of Cappadonia, Zito, and Amoroso, in October, 1913, and approved. In September, 1913, the general assembly of the Fruit Importers' Union gave a vote of confidence to the trustees for their work in connection with the tariff reduction and authorized them to continue to collect money to pay the obligations incurred in connection with the same.

Cash received from July, 1910, to August, 1913.

Per tax of 5 cents per box collected by auctioneers, Sicilian lemons:	
Brown & Seccomb, from July, 1910, to March, 1911	$12,854.55
Connolly Auction Co., from July, 1910, to March, 1911	27,557.79
H. Harris & Co., from July, 1910, to March, 1911	663.29
Philadelphia Auction Co., from July, 1910, to March, 1911	1,583.08
N. O. Fruit Auction Co., from July, 1910, to March, 1911	1,494.54
	44,153.25
Per tax of 2 pence per box from Agenzie e Lega, Sicily:	
Lega Agrumaria, from May, 1911, to September, 1912	20,206.60
Simp. Spence & Y., from May, 1911, to September, 1912	3,502.94
Hirzel, Feltman & Co., from May, 1911, to September 1912	8,195.46
Lloyd Sabudo, from May, 1911, to September, 1912	2,104.58
Hamburg-American Line, from May, 1911, to September, 1912	488.17
White Star Line (Boston), February, 1912	697.40
White Star Line (New York), May, 1912	703.90
New York Fruit Exchange, one-half expenses tel. May, 1910, to July, 1913	303.27
Tax on boxes from several of Messina	1,284.38
	37,846.70
Per tax seven-eighths out of 100 from auctioneers and importers, Sicilian lemons:	
Connolly Auction Co., November, 1912, to August, 1913	$5,243.99
Fruit Auction Co., November, 1912, to August, 1913	2,213.49
Brown & Seccomb, November, 1912, to August, 1913	5,968.23
Connolly Auction Co., night permits	407.38
Brown & Seccomb, night permits	445.48
Fruit Auction Co., night permits	395.14
From importers p: seven-eighths of cent paid us directly	348.05
	15,021.76
Total	96,661.71
Cash received in general	96,661.71
Campaign expenses $77,622.23	
General expenses of Fruit Importers' Union, Aug. 13, 1913 15,076.87	
	92,699.10
Balance in bank	3,963.61

NEW YORK, *October 2, 1913.*

We, the undersigned members of the finance committee, have examined the books of the Fruit Importers' Union and have found accounting correct and to our entire satisfaction.

GIUSEPPE CAPPADONIA.
FRANK ZITO.
S. AMOROSO.

They also submit the following letter, dated September 15, 1913:

"Members of the general assembly of the Fruit Importers' Union in their meeting of to-day have voted on the motion of Mr. Fortunato Marciano D'Arsi as follows:

"Mr. D'Arsi moves that the members of the assembly give a vote of confidence to the board of trustees of the Fruit Importers' Union for having so wisely conducted the difficult negotiations for the reduction of the tariff on imported lemons, and at the same time to authorize them, the said board of trustees, to complete the possibility of the collection to pay the obligations assumed (at their own convenience) to the lawyers, collaborators who assumed to obtain the reduction of tax on imported lemons.

"G. Dominici, Frank Zito, G. Lasagna, B. Musacchia, P. Sciortino, Mannino & Manzella, G. Cirincione, A. Di Gristina, F. M. D'Arsi, A. Figano, G. Puccio, F. D'Anci, J. G. Cuccio, P. Tranmontana, G. Genova Pizzo, Fillippo Maniscalco, S. Amoroso & Co., D. Landolfi, G. Calabrese, P. Castiglione, P. Brucato, agent; P. Maniscalco, Giuseppe Cappadonia, F. R. Fiorita, Santi Amoroso, S. Motisi, G. Saitta, F. Di Marco, C. Procita, Ciro Greco, L. C. Marino, Lemon Importing Co., Pietro Scoglio, F. Zito Musacchia, De Luccia & Co., B. Follina, S. Di Blasi, F. Antioco, Lorenzo Zerillo, V. Porcasi, G. De Lutio, S. Cangialosi, Carl Braun, G. Brandina, R. Moleti, A. Del Canto."

The S. S. Amoroso, whose signature is appended to these documents, is not to be confused with the Santi Amoroso.

Mr. WORKS. Mr. President, it is perfectly clear from the statement of facts contained in this article that however much or little effect it may have had upon the legislation, the fruit growers of my State were attempted to be made the victims of one of the worst and most widespread and corrupt propaganda that has ever taken place in an effort to control and influence legislation. I take it for granted that the tariff on lemons was reduced upon the theory that it was for the betterment of the consumer and upon the Democratic policy of a tariff for revenue only, and I am not raising any question of the good faith of anybody who had anything to do with the actual passage of the bill. No one can tell to what extent the misrepresentations—for there were misrepresentations, numbers of them—made by these paid lobbyists may have had upon Members of Congress who were acting conscientiously and upon a belief in the truth of those representations.

In fact, Mr. President, the reduction of the tariff on lemons was of absolutely no benefit to the consumers. It lost to the Government about $2,000,000 a year in revenue. If any advantage to anyone has resulted from it the money has gone into the pockets of the importers, who have raised this large sum of money, through the assessment upon the fruit as it came to this country, for the purpose of influencing legislation and reducing the tariff on lemons. The foreign lemon growers were always able to compete with the domestic growers even when there was a tariff of 1½ cents a pound upon lemons, and the Government was deriving large revenue from that source.

I have not asked in this amendment for a duty of 1½ cents a pound, but for a duty of 1 cent. I think I was able to show, in the remarks I made when the question was under consideration by the Senate before, that it cost the domestic grower upward of a dollar a box more to lay down the lemons in the eastern market than it cost the foreign grower to place them in the same market, resulting principally from the higher wages, but also from the higher freight rates and various other things that entered into the cost of the lemons as they were laid down in the market.

The proposition in this amendment of the committee is to place sugar upon the dutiable list. I suppose that is done for the purpose of increasing the revenues of the Government, which is very much needed, and not because the Democratic Members of the House or the Senate have changed their minds

as to the principle that should control the levying of these tariffs.

Now, lemons may be placed in the same list, Mr. President. There is no reason why lemons should not have the protection as an incident to the levying of the tariff for the purpose of raising the necessary revenue that is needed by the Government. Lemons and sugar often go together, and this is a time when they should not be separated. [Laughter.]

In connection with the information that I have already furnished, I want to include in my remarks an editorial from the Oakland Tribune bearing upon this same question, and also to submit a table showing the amount of revenue derived by the Government from the tax upon lemons from the year 1898 down to 1912, which will indicate the amount of money which has been derived by the Government from foreign lemons.

The matter referred to is as follows:

[From the Oakland Tribune, Thursday, Apr. 6, 1916.]

LEMON GROWERS VICTIMS OF LOBBY.

When the Underwood tariff bill was before Congress and the lemon growers of southern California, representing one of the many industries of the State singled out for attack in that Democratic measure, were desperately fighting to prevent a reduction of duty on citrus fruits, it was openly charged by the Republican Members of the California congressional delegation that the importers of Sicilian lemons were back of the demand. It was hinted that a large fund had been raised by these foreign importers. This was promptly and vehemently denied by the Democratic members of the Ways and Means Committee.

A suit recently filed in New York brings to light startling facts that are proving most disconcerting to the administration. The action was brought by William C. Beer, and is for $75,000, said to be the balance due on his "promotion contract" which led up to the reduction of duty on California lemons from 1½ cents to one-half cent.

Over $140,000 was raised to assist in writing into this bill, "in the interest of the consumer," a reduction in one single item among thousands. How much the others cost the foreign importers is not disclosed.

It likewise develops that these importers of lemons from Sicily carried on a successful propaganda whereby 2,000,000 Italian votes were turned to Woodrow Wilson in 1912.

S. S. Amorosa, second vice president of the Importers' Union, in an interview in the New York Sun, frankly admits the raising of $140,000, but declares he does not know what became of the money or how much went into the Democratic campaign fund. Says Mr. Amorosa:

"We did raise a fund, amounting in all to about $140,000, to have the tariff on Sicilian lemons reduced, and we did hire Mr. Beer to have it done. In the United States the importers, by paying 5 cents a box on lemons imported, raised $105,000, and the Sicilian societies raised $35,000 more. Now that it is all over, we are asked for $75,000 more.

What has become of the $140,000? We do not know. We have repeatedly asked for an accounting and have not received it. We have demanded it and it has not been given to us. We are told to keep quiet, not to raise a row."

Mr. Beer talks as freely as the officers of the Importers' Union:

"I do not mind saying that, beginning with 1910, we accomplished some mighty effective work.

"In the Presidential campaign of 1912 the Italians were in full swing for Woodrow Wilson. We organized the Italian Democratic League and had branches all over the country. We did nothing but preach Democracy to them."

The lemon growers of Southern California who are complaining bitterly of the effects of the reduction of duty at least have the satisfaction of learning how it was done and what it cost. They should be charitable, however, and remember that Wilson needed the 2,000,000 votes and Beer the money. After all, the joke is on the consumer, for the importer had to raise the price of lemons to get back the $140,000, and the "common people," in whose interest the Democratic orators spoke so eloquently and feelingly, are, as usual, paying the bill. In the meantime, what has become of the Democratic lobby investigating committee?

Imports of lemons entered for consumption in the United States during years ended June 30, 1898, to 1910, inclusive.

Year ended June 30—	Rate of duty.	Quantity (pounds).	Value.	Duty.
1898[1]	1 cent per pound	133,347,050	$2,521,985.32	$1,333,470.50
1899[1]	do	208,634,448	4,399,160.72	2,086,344.48
1900[1]	do	159,384,389	3,655,946.85	1,593,843.89

[1] Imports and Duties, 1894 to 1907, by W. W. Evans, compiled under the direction of the Committee on Ways and Means, from annual reports on Commerce and Navigation.

[2] Department of Commerce and Labor, Bureau of Statistics. Imported merchandise entered for consumption in the United States, and duties collected thereon, 1908, 1909, and 1910.

[3] July 1 to Aug. 5, 1909; act of 1897.

[4] Aug. 6, 1909, to June 30, 1910; act of 1909.

The VICE PRESIDENT. The hour of 1 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The SECRETARY. A bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. POMERENE. Mr. President——

The VICE PRESIDENT. Does the Senator from California yield to the Senator from Ohio?

Mr. WORKS. I yield.

Mr. POMERENE. Is the Senator able to furnish us any information as to the dividends which have been paid by the lemon growers during the last five or six years?

Mr. WORKS. No, I am not; but I think there is an altogether exaggerated idea of the profits that are made by the lemon growers of California. That matter was very fully discussed when the subject was before the Senate before, and if the Senator desires to have my views upon the question he will find them in the address I delivered at that time. I did not intend to go into a discussion of the merits of that question now. I believe the Senator from Ohio was here, and I hope he heard what I said upon that subject when it was before the Senate upon the passage of the bill.

Mr. POMERENE. I am not sure I heard that, but I have in my possession—not here, but at my office—a letter which I received four or five years ago from one of the leading citizens of Columbus in which he reported to me a statement made by one of the lemon growers who was a guest at his home at that time. He stated that his company had a paid-up capital stock of 33⅓ per cent, and during the year previous they paid a dividend of 25 per cent on the authorized capital.

Mr. WORKS. Mr. President, I should doubt the correctness of that statement. Of course there are some lemon growers, just as there are some orange growers, in California who make large profits. The great majority of them do not. Lemons and oranges are sold through agencies of the growers. Usually they are not stock companies, as the Senator from Ohio says, who deal with this industry except in that way. Each grower of oranges or lemons, as the case may be, is accounted to for the amount of money that is coming to him. Sometimes the account is on the wrong side of the ledger—very frequently so.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER (Mr. JOHNSON of Maine in the chair). Does the Senator from California yield to the Senator from Colorado?

Mr. WORKS. I yield.

Mr. THOMAS. I should like to ask the Senator if he has made any investigation of the extent to which the lemon and orange growers of California and Arizona are protected by the transportation rates of the country.

Mr. WORKS. I do not think they are protected at all, Mr. President, but quite the contrary.

Mr. THOMAS. Unless changes have been made recently, the freight rate upon citrus fruits from the Pacific coast is 84 cents a box, as I recall, to Denver and common points, and that is the same rate for all the country east of Denver and common points, with the single exception of Florida; that is, the rate is the same from Los Angeles to Denver that it is from Los Angeles to Boston. The rate upon these fruits from New York and seaboard points to Denver and common points is $1.36. The consumer in my section of the country is, therefore, obliged to pay the freight that is actually a burden plus the freight rate from the seaboard to those points—84 cents plus $1.36. I do not know whether the growers of California receive that benefit or not, but I do know that the consumers in the great Middle Western portion of the country pay it to somebody, and there is a protection to somebody that is more effective and ought to be more profitable than the rate which the Senator asks in his amendment to this bill.

Mr. WORKS. Mr. President, I may say in reply to what is said by the Senator from Colorado that the shippers of fruit in California have had a great deal of trouble over this question of rates.

Mr. THOMAS. I am aware of that.

Mr. WORKS. There has been a good deal of litigation. The railroad companies imposed upon them rates which they regarded as unjust, and long litigation took place between the growers and the railroad companies which was finally determined in favor of the growers.

Mr. THOMAS. That had reference, did it not, to the fact that the railroad companies sought to absorb the increased tariff?

Mr. WORKS. It was suspected at the time that there was an attempt on the part of the railroad companies to take advantage of the increased rate of tariff that was imposed upon

foreign lemons, but whatever the motive was the court finally decided it against the railroad companies.

Mr. THOMAS. I am not aware of any litigation based upon the particular feature of the transportation considerations to which I directed the Senator's attention.

Mr. WORKS. But the Senator may be perfectly assured that there is no agreement between the railroad companies and the shipper, because they have been at war on the subject of rates for many years past.

Mr. President, I think I have said all that I desire to say.

Mr. LIPPITT. Mr. President, yesterday a vote was taken in the Senate upon the amendment to the sugar bill which had been proposed by the Senator from Massachusetts [Mr. LODGE] in regard to a duty upon dyestuffs. I had supposed that under the unanimous-consent agreement no vote would be taken upon that question until to-day. I was in the Senate yesterday at the time it was decided to take up the pension bill and inferred that that proceeding meant that further action upon the sugar bill would not be resumed until to-day. Therefore I was not aware that the dyestuffs amendment had been taken up for debate until I had notice by the announcement of the bells in the Office Building that a vote was being taken upon it. I had intended to make some remarks upon that question which I was unable to make for that reason. I therefore am going to take a few minutes to present to the Senate some facts in regard to that situation which were not brought out in the discussion yesterday, and which I think are of great moment in the consideration of it, and of vital importance to the industries of the United States.

I am not altogether sorry that circumstances were such that I was unable to speak yesterday upon this subject, because the vote which was taken upon that amendment would undoubtedly not have been influenced by any remarks that I might have been able to make. It was a strict party vote. It represented the different ideas and conceptions which the two great parties have in this country in regard to assisting American industry. By a solid vote of the Democrats in this body, called for in that language by the distinguished Senator from Alabama [Mr. UNDERWOOD], who during the time the Democrats have been in power has been their leader upon all tariff matters, they put themselves upon record as unwilling to do anything to meet one of the most remarkable industrial situations that has ever arisen in this or any other country. On the other hand, the Republicans of this body by a unanimous vote, with one single exception, put themselves upon record as being willing to take some action that would establish here a new industry and would take advantage of the only opportunity that has occurred to establish that industry in 40 years, and one which is not liable to reoccur after the termination of the present great European conflict.

Mr. President, this question of dyestuffs is a very technical question. It is one of chemistry, and the chemistry of dyestuffs particularly is probably as intricate a commercial question as exists. I am not going at this time to undertake an analysis of the technical situation or of the technical history of this subject. What I want to call attention to particularly is the strategic situation which exists, not only in America but in the other countries of the world, in regard to this product, and to show what some of those other countries are doing to take advantage of this great opportunity while America, under the control of the administration in power, although having admitted through its Secretaries and officials the great necessity for some action, allows this great opportunity to go by neglected.

Before I go into the particular phase of this subject which I want to discuss I should like to correct a statement which, probably inadvertently, was made by the Senator from Alabama [Mr. UNDERWOOD] yesterday. In the few remarks which he made he said that the duty upon dyestuffs was 30 per cent. The Senator from Alabama, of course, is perfectly familiar with that schedule. The facts of the case are that there is a duty of 30 per cent upon coal-tar products not otherwise provided for. That is a "catchall clause." As a matter of fact, the principal ingredients of which they are composed and the dyestuffs themselves are mostly either upon the free list or have a very small duty.

There are three chief colors, I would say, Mr. President, which constitute an enormously large percentage of the entire production of colored fabrics in the world. The one that ranks the highest is black. Then comes blue, and then the various shades of red. The foundation for the modern black dye is anilin oil, and the duty upon anilin oil under the present tariff is 10 per cent.

Blue, under present conditions, is produced by synthetic indigo, a substitute for the vegetable dye which was discovered and made a commercial product in Germany some years ago. Synthetic indigo is on the free list.

Red itself and many of the shades of red which pass under other names, is produced by alazarin. Alazarin is now and has been on the free list for many years.

So, as a matter of fact, the statement that there is a duty of 30 per cent on dyestuffs, while correct as applying to some small proportion of them, does not fairly represent the situation of that industry. The fact is that the great bulk of the modern high-grade dyestuffs either come into the country free or with a very small duty.

Mr. President, this question of dyestuffs is in itself a very small question. The total consumption of dyestuffs in the United States certainly does not exceed $20,000,000. It has frequently been estimated by some of the officials who have been writing and reporting upon this subject within the last year that the total consumption does not exceed $15,000,000, but even at the larger figure it is not a very large amount in comparison with the great industries of the United States.

Of that $20,000,000 or $15,000,000, whichever it may be, about $3,000,000 worth is produced in the United States and the balance is imported from Germany. But that $20,000,000 of dyestuffs applies to an enormous amount of American products. The three great textiles of cotton, silk, and wool, as measured in their values at the mill door, reach about a billion and a half of dollars annually, but the product as it comes from the mill door is not the form in which it is sold to the consumer. Woolens are manufactured into clothes and in a $25 suit of clothes there perhaps is not more than $4 or $5 worth of cloth.

Cotton is manufactured into a great variety of products. Your collar, for instance, which sells at 12½ cents does not contain more than 3 or 4 cents in value of cloth. Women's clothes, manufactured in large quantities sold over the retail counter, run into very large figures as compared with the value of the cloth they contain.

In the same way these dyestuffs also appertain to large values in the paint industry, in leather, in the paper industry, and in a great variety of minor products.

I believe, Mr. President, that I am not exaggerating, but, in fact, rather understating than otherwise the facts in the case when I say that this $20,000,000 of dyestuffs affects not less than $4,000,000,000 worth of the annual turnover of American business. The situation as it exists to-day is that that great business of four billion or more of dollars is hampered, is in distress, from the difficulty of supplying itself with this very minor article.

I will not delay the Senate by attempting to quote exhaustively the figures that are now being paid for dyestuffs, but I will say that the advances are not measured in hundreds of per cent, but in thousands. Barrels of dyestuffs that before the war cost less than $250 are now being sold in this country for from $6,000 to $7,000, and even at that it is impossible to get more than a few scattering pounds here and there as they come into the market from the changing requirements of those who are fortunate enough to have any at all. We are rapidly approaching a point where many of the industries of America will have to run short time from lack of this product, and it is extremely unfortunate that that situation should exist at a time when we have such great possibilities for foreign trade.

Under the conditions that now exist in foreign markets there is an opportunity for American manufacturers to get their goods introduced there that has never before existed. It is being taken advantage of in a very large way. As an indication of how great that field is, I may say that in the cotton industry, where England and France and Belgium and Germany have been in the habit of exporting annually about $700,000,000, their product has been so reduced that to-day they are exporting less than $400,000,000. In other words, during the last year there has arisen a scarcity of cotton goods alone in those markets amounting to more than $300,000,000, which in itself is some 40 per cent of the entire production of those fabrics in the United States. Our ability, however, to take advantage of that opening is materially reduced by the fact that we have not this minor constituent of dyestuffs.

Mr. President, this situation has been recognized, as I have said, by the representatives of the present administration. The Secretary of Commerce, Mr. Redfield, has made several public announcements in regard to it, recognizing its seriousness. He appointed a special investigator, Mr. Thomas H. Norton, who has made a report to the Department of Commerce and has written several articles in the papers in regard to it. Dr. Edward E. Pratt, Chief of the Bureau of Foreign and Domestic Commerce, under the Department of Commerce, has called attention to it in the most emphatic way. They have all of them insisted upon the necessity of America meeting this situation.

Dr. Pratt, in an article which he contributed to the magazines some time last summer—I have not the exact date—speaking almost in an official way, if I can judge from his language, says:

In Washington this matter has had serious attention because its importance merits the most careful and painstaking study. Action should not be based on impulse or sentiment, but on hard facts and experience wherever we can get them. Action should then be fast and certain. This matter has been thoroughly discussed by the officers of the Department of Commerce and the Federal Trade Commission, and they have agreed substantially on these points, namely:

1. That foreign concerns should be permitted to exercise no privileges in this country or against concerns in this country which are prohibited to domestic concerns. In other words, what we call unfair competition shall not be permitted any more to foreign concerns than to domestic concerns.

I want the gentlemen who are listening to me, if they will, to bear that statement in mind, for what I propose to show in a few minutes is that this dyestuff industry is controlled by the most complete and domineering and dictatorial monopoly that exists in the entire world. I venture to say, sir, that there has never been a monopoly in this country that in the slightest degree compared with it, and it is with reference to that fact that I presume that statement was made, and the foundation for it I shall shortly hope to present to the Senate.

2. That this or any new industry which aims to place us in an independent position industrially among the nations of the world shall be given a fair chance.

Recommendation will be made by the Department of Commerce that Congress, in whose hands this matter ultimately rests, shall pass such legislation as will, beyond peradventure of a doubt, accomplish these objects.

That was the Democratic promise that was made upon this question some nine months ago. Congress has now been in session for four months and a half. No such recommendations as that then promised have been made. No steps have been taken by any of the responsible members of this administration either in Congress or out of it to meet this very dangerous situation, and when steps looking toward a solution are taken by the Republicans they are voted down by the unanimous vote of the Democrats of the Senate—a situation whose importance has been set before the country in the strongest possible language by their own Democratic associates, and the Congress of the United States, under the control of the present administration, refuses to deal with, either on their initiative or on the initiative of their opponents.

Mr. President, I said a minute ago that the German dyestuff industry was a monopoly. I want to call attention to that situation as it is reported upon by Dr. Thomas H. Norton, special agent of the Department of Commerce. The same facts that he presents to Congress can be found in many other publications. He did not discover them. They have been well known in all the counting rooms of America that deal with the industries which they affect for many, many years. I doubt, however, if the Members of the Senate really appreciate the full meaning of the situation. Practically, as I have said, all the finer high-grade dyestuffs that are used in America come from Germany. The German dye industry, while it is nominally, I think, operated by several different corporations, is practically a unit.

That statement has been made by Dr. Norton in that very language. It has also been made by Mr. Pratt, who says:

Commercially, the coal-tar chemical industry of Germany is a unit. Prices, terms, and conditions of sale, market competition, export policies, are determined and fixed by the industry as a whole. In addition the industry received from the Government the most favorable treatment in the matter of regulation, taxation, tariff protection, and conventional arrangements with other countries.

I might add that, in addition to these items which Mr. Pratt has mentioned, the German Government has for years put in the service of this dyestuff industry a great force of Government chemists to conduct the numerous and exhaustive chemical experiments which are necessary to bring it to perfection.

The condition of this German industry is like this: Anyone who is interested in looking it up will find an account of it on page 34 of the report of Dr. Thomas H. Norton, entitled "Dyestuffs for American Textile and Other Industries." There are 22 German establishments. The combined capitalization of them is $36,700,000. They paid in 1913 $11,600,000 in dividends, or 21.74 per cent upon their nominal capital; but, in addition to paying those dividends and in addition to having their capital of over $36,000,000, these industries have been for years turning back into their plants an enormously large amount of earnings, which do not appear in their capital account, but which have built up their plants to such an extent that their real valuation, according to Dr. Norton's report, is $400,000,000, although their capital is only $36,700,000.

To get an idea of the size of those establishments without going into this report in all its details, I should like to call attention to what is said here about the Badische Anilin Co., the principal producer of these articles. Dr. Norton says that it covers about 500 acres of land, with a water front of one mile and a half on the Rhine. The buildings themselves cover 100 acres. Transportation between the several hundred buildings is effected by 42 miles of railway. Power is generated and transmitted by 158 boilers and 386 steam engines. They employ 8,000 operatives. That is one of the factories. These factories are combined into units. There are two groups of them of three units each, which work in complete harmony with each other and with the other independent and smaller factories that are not included in those particular organizations.

So far as foreign markets are concerned, they act as one single unit. Their prices are made in consultation with each other and with the approval of the German Government. To see how that operates and to what extent they are ready to go in order to meet competition, Dr. Pratt, in the address to which I have already referred, gives a statement of what has happened in this country during the two or three years before the war.

As I have said, there is a duty of 10 per cent upon aniline oil. That duty encouraged certain people to undertake the manufacture of that product. A company called the Benzol Products Co. was established in New York. They built their factory, produced an oil of merchantable quality, and started to distribute it among the consumers of this country. Immediately the price of aniline oil from Germany was dropped from the price at which it had been selling in this country of 10.9 cents per pound to 9.9 cents per pound; in other words, the instant competition appeared in this country in that article, the German manufacturers—the German monopoly, and a world monopoly, for it controls these articles and has controlled them up to this time not only in Germany and America but in England and France and Japan and in every other country of the world—the instant an attempt was made to manufacture one of their products in this country they put their prices down to meet the tariff that had been put on it; and, as the article goes on to state, a representative of their company notified the officers of the Benzol Products Co. that if they continued to manufacture aniline oil the price of it would be put at such a point that it would be impossible for them to continue. Rather than face that disastrous competition they abandoned its manufacture.

Mr. President, it is not necessary for me to go on and accumulate all the evidence that I might put into the RECORD in regard to this undenied fact. I could gather together a very large amount of testimony going to show the absolutely monopolistic character of this industry in Germany, and I could put into the RECORD many instances of a similar kind to the one I have stated, but one is enough to show the methods which have been pursued and the character of the monopolistic organization which the Democrats of the United States Senate yesterday voted to continue to have control of more than $4,000,000,000 of American industries.

What has been done here, the action that was taken yesterday, is very different from what is being done to-day by other nations equally interested in this question. The two great nations that so far as textiles go—that industry being the largest consumer of dyestuffs—are the particular competitors of America, so far as she is able to enter into foreign markets, and are the competitors with her, one of them for years in our own market and the other one a potential and threatening competitor for the future, are England and Germany. I want to call attention to what has been done in England in this matter.

England did not wait for a year and a half after this emergency presented itself and this opportunity began to open up to get relief from this situation. As long ago as the 7th of January, 1915, the American consul at Manchester reported the circumstances in regard to the formation of an English Government-aided company to manufacture dyestuffs. He states that the Government agreed to advance to such company £1,500,000—$7,500,000—bearing interest at the rate of 4 per cent, for the purpose of assisting private capital to meet and solve the situation.

A little later on, on February 18, 1915, he reports that, on further investigation, the Government decided that its proposition had not been liberal enough, and it made a new proposition in which it undertook to loan the company a large amount of capital, but with no provision in regard to a sinking fund, and with the right to pay a dividend of 6 per cent on the private capital that was invested in the company before the Government money was returned to it.

Later on still other arrangements were made. The result of it all was that on November 9, 1915, the consul at Huddersfield reports that in England they were then building new works that would eventually employ 10,000 operatives and would mean an addition to the population of the city in which the enterprise was situated of perhaps 35,000.

On March 28 the same gentleman reports that over 1,000 men are now engaged at work changing the form of the land and

erecting buildings of various kinds for this purpose. In other words, England, the moment that she saw the situation in which her great industries were going to be placed as a result of this war, took up the question energetically, prepared a plan for its solution, the Government interested itself in it, put the great force of her credit behind it, gave it every encouragement, and England to-day is in a fair way to be free forever from the dyestuff monopoly.

Japan, equally foresighted, equally interested in the situation, takes the same course. On March 3 the New York Times reported that—

> The Japanese Government has granted a subsidy to concerns manufacturing dyes, and a large company with a capital of $4,000,000 has been formed to engage at once in making dyes. The capital stock of this company, in view of the Government sanction, is oversubscribed 870 times, according to a dispatch received from Consul General Skidmore at the Bureau of Foreign and Domestic Relations.

This, then, is the situation in which we in America find ourselves: A great opportunity for the establishment of a subsidiary industry that would help to make an enormous volume of our business self-sustaining, repeated statements in recognition of that situation by representatives of the administration, conferences with people engaged in those industries in New York and elsewhere, and absolutely nothing done to take advantage of it.

In the situation in which we are the instant this war is over America will go back to the old thraldom. Other great Governments, such as England and Japan, more enlightened, not afraid of helping the industries of their countries, not afraid of seeing and knowing that a private industry makes a profit, have taken exactly the opposite course, and their subjection is over.

Mr. President, I wanted to present this phase of the situation to the Senate, and I wanted to have these facts in regard to this industry in the RECORD, and so I have taken this opportunity of presenting them to the attention of the Senate and to the country.

Mr. WILLIAMS. Mr. President, this is a very grave question, and one which in time will demand very serious consideration. The fore part of the speech made by the Senator from Rhode Island [Mr. LIPPITT] was totally useless. He seems to have thought that it was worth while to consume the time of the Senate and the country in proving that the Republicans were a protectionist party and that the Democrats were not. I should think almost everybody in the United States knew that by now, and that proof was totally unnecessary. The question of dyestuffs presents a great many facts. There is involved in it, not necessarily and alone, a question of protection or of revenue. The Democratic Party in its own time and at its own convenience, and after knowledge and not before knowledge, will solve it to the best of its ability.

The Democratic Party certainly is not going upon the theory that a permanent fiscal policy of the United States Government ought to be laid down in answer merely to a temporary war emergency condition, because almost any civilized nation may hope for about 20 years of peace while it has one year of war, and to mold a permanent fiscal system in accordance with the emergency of war times is to forget the interest of the people during times of peace—that is, during the normal and natural life of civilized man.

If German scientists and chemists can produce dyestuffs cheaper than we can, and can furnish them to our textile manufacturers cheaper, and if that increased cheapness can be carried on to our consumers, then, of course, every Democrat who believes in the principle that it is not the business of the Government to hothouse unfit competitors, would take the position that it was not necessary in peace times that there should be a duty upon dyestuffs, unless it was discovered that there was about it a monopolistic and unfair competition feature which it was necessary to face, totally independent of the question of protectionism and of revenue, but in the interest of our national industrial independence. If that shall be demonstrated, then I take it that the Democratic Party, which has produced more constructive legislation in 3 years than the Republican Party has ever produced in 15, will at the proper time undertake to meet the danger. Whether it shall meet it, Mr. President, by an increased duty, put on avowedly for the purpose of meeting unfair competition by a foreign monopoly, or whether it shall meet it by giving the Trade Commission extended power, so that it may deal with every unfairly competitive transaction on American soil by anybody, whether a domestic or a foreign concern, or whether it shall meet it by both methods, is a thing which we will decide after knowledge, and not before knowledge—and we are not apt to rely for our knowledge solely and entirely upon interested parties.

Mr. President, that the administration is already looking into the matter has been demonstrated by the Senator from Rhode Island. He has read from two reports of employees of this administration. Moreover, the Democratic members of the Finance Committee have already had one hearing, at which Dr. Pratt appeared, representing in a way the Government, at which the attorney of very many textile and dyestuffs concerns appeared, at which a man representing the great chemical industries of the country appeared, and at which very many interesting facts, or alleged facts, whichever they may be, were disclosed.

The Senator from California [Mr. WORKS] this morning illustrated the evils of the whole protectionist system without knowing it. He proved that there had been raised a slush fund in New York by importers to decrease the duties and to try to have certain commodities put upon the free list. If he had had the evidence and had been willing to do it, he could probably have disclosed also that there had been a slush fund raised by the producers of citrus fruit for the purpose of increasing or maintaining duties.

Mr. WORKS. Mr. President——

Mr. WILLIAMS. One word more. At any rate, I know, because I was chairman of the subcommittee dealing with this matter, that we received letters, telegrams, and literature, which must have cost money, on both sides, and that there was seemingly an organized propaganda upon both sides, behind which money had to be placed in order that it might have reached the magnitude which it did reach. Now, I yield to the Senator from California.

Mr. WORKS. Mr. President, I think if the Senator from Mississippi will inquire into the facts he will find that there was no slush fund raised to hire paid lobbyists to represent the interests of the fruit growers of California. They were represented here by one of their own number.

Mr. WILLIAMS. I do not know if "slush fund" is the proper term, or whether "paid lobbyists" were employed or not, or whether merely so-called attorneys and "representatives" were employed, or whether merely men had their passage paid here and their hotel bills paid while they were here; but I think the Senator will agree with me that the citrous-fruit industries were amply represented upon the ground.

Mr. WORKS. Mr. President, I think I know something of the matter about which the Senator is talking. I was myself trying to represent the fruit growers, I thought in a proper way, on the floor of the Senate.

Mr. WILLIAMS. I am not talking about that.

Mr. WORKS. I was aided in securing the necessary figures and information from just one gentleman, who was at the head of what is called the Fruit Exchange, and obtained my information from him. I know he was not here as the paid representative of anybody, and I think I know that nobody else was here under pay to represent the interest of the fruit growers.

Mr. WILLIAMS. Nor their expenses paid?

Mr. WORKS. Nor their expenses paid.

Mr. WILLIAMS. Nor any counsel employed?

Mr. WORKS. Nor any counsel employed; but the Senator is right in saying that there was a good deal of money wasted by the fruit growers of California in telegrams and things of that sort, which I tried to discourage.

Mr. WILLIAMS. Mr. President, I was not mentioning this for the purpose of arguing the citrous-fruit question; I was mentioning it for the purpose of showing that essentially and necessarily the system of having the Government hothouse private industries into profits which, without legislation, they would not enjoy, brings about two divergent interests—one that of the importer, who wants the stuff to come in with as little duty as possible, and the other that of the producer who wants it protected upon the statute books with as high a duty as possible; and that they too often raise immense amounts of money and send people here to Washington to "represent" them. Thank God, for the most part, they are robbed by the scoundrels whom they send! They may find out after a while that they are "paying too dear for their whistle."

Now, I do not know whether this man Beer came here or not. I was chairman of the subcommittee which dealt with agricultural products. The other two members of it were the late Senator from Indiana, my friend, Mr. Shively, and the Senator from Oklahoma [Mr. GORE]. I do not recall that Beer ever appeared before the subcommittee, and he never appeared before the entire committee. The Senator from Oklahoma, whom I have consulted, does not recall that he ever appeared before the subcommittee. I have been trying to get, if I could, an index of the men who did appear before the committee and the subcommittees, but I have not obtained it as yet.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from North Carolina?

Mr. WILLIAMS. Certainly.

Mr. SIMMONS. At the request of the Senator, I sent over and secured an index of those who appeared before the committee, and the name of the man he has mentioned does not appear to be on the list.

Mr. WORKS. Mr. President——

Mr. WILLIAMS. Mr. President, I will yield to the Senator in a moment. Now, what did you expect of this man? The Senator from California and I are the sort of men who can talk to one another, even here politically, with perfect candor. I should not be a bit surprised if they did raise a slush fund and if this fellow came down here and "gallivanted" and "sloshed" around Washington and pretended to his employers that he had been able to influence legislation. It happens nearly every time a tariff bill is up that men come here, representing manufacturers and importers, and "slosh" around Washington, and, I expect, afterwards blackmail the people who send them here for all that they can get. It just shows that there is essentially and necessarily accompanying a system of legislative hothousing of private industries into profits which they would not enjoy without legislation, a large degree of resultant corruption or attempt at, or more frequently pretenses of, successful corruption on both sides.

Mr. WORKS and Mr. LIPPITT addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from California?

Mr. WILLIAMS. Yes; I yield.

Mr. WORKS. Mr. President, the Senator from Mississippi has had a long and varied experience in Congress. Would he expect a paid lobbyist like Mr. Beer to appear before his committee or any other committee of the Senate to be heard?

Mr. WILLIAMS. I would not expect him to do anything, except perhaps to get him an expensive room, and make out like he was dispensing various hospitalities to various people, and go on back to where he came from and collect what they promised him. That is about what he did, I reckon, and that is about what many another fellow representing some producer of some description, who has been able to persuade the producer that he possessed immense influence at Washington, also did. There have been investigations enough in the past to show that away back yonder, at any rate, this sort of thing went on pretty freely.

Mr. President, I think you will find before you are through with it that not only the Democratic but the Republican Party, having adopted the general principle that we must put an end to monopoly and to unfair competition by approximate monopolies, will find means to check even a foreign monopoly which resorts to unfair competition upon American soil; and when it comes to that, I am with the Senator from Rhode Island entirely. I may not be with him in thinking that the best way to do it is through a tariff; but I think when we undertake to stop unfair competition by American concerns we ought also to stop unfair competition by foreign concerns when the unfair competition occurs on American soil.

Mr. LIPPITT. Mr. President——

Mr. WILLIAMS. And I have no doubt that in the wisdom of Congress that can be worked out in the course of time.

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Rhode Island?

Mr. WILLIAMS. One word, and I will. But that is a different thing from making of this bill a vehicle for consideration of duties on dyestuffs and oranges and lemons and probably later shoe buckles and everything else in the world. This bill contains one simple proposition—to continue the present decreased sugar duties for four years longer. We decline to make it a vehicle for all other alleged reform measures. We have, rightly or wrongly—and we are in power and have the responsibility—taken the position that we were going to put through this particular bill without embarrassing it with other questions. If that be treason, we have committed it, and the supreme court that sits in judgment upon both of us—the people of the United States—can decide upon it. But if it be treason, it will not be the first time that sort of treason was ever tried in the United States, because I remember that several times when the Republicans wanted to put through special tariff legislation they never allowed us to put any other sort of tariff legislation upon the bill.

Now I yield to a question from the Senator from Rhode Island.

Mr. LIPPITT. I was only going to say that the Senator from Mississippi says that in due time, and some time, his party will attend to this matter. The conditions are that this situation has gone on already for more than a year and a half; that his party have been in power in this Congress, doing little or nothing, for four months and a half, and they have not shown the slightest inclination even to study the question. The committee to which he refers——

Mr. WILLIAMS. I yielded to the Senator for a question.

Mr. LIPPITT. I should like to ask the Senator, then, when this time is going to arrive?

Mr. WILLIAMS. I yielded to the Senator for a question, and the Senator has asked it in a very affirmative and assertive manner. The Senator knows as well as I do that no legislation that we could pass at this moment could cure this particular trouble until after the war in Europe is over.

Mr. LIPPITT. If I may be allowed, I will say to the Senator that I know just the contrary. These reports are full of testimony that if legislation——

Mr. WILLIAMS. The Senator's only proposition thus far propounded to this body is—what? It is, in an emergency, where we can not get dyestuffs at any reasonable price, or when we can not even get them at all, to do what? To raise the duty so that such few dyestuffs as we can get shall cost more. Now, that is all. The Senator knows that the only immediate effect of this sort of legislation for the next one or two or three or four years, until American dyestuff plants could be built up, would be to increase the present existing difficulty and not to remove it at all—to increase the cost and the scarcity of dyestuffs.

But I rose merely to say this: When you were in power you did things at your convenience, as your wisdom dictated convenience; and when we are in power, with less pretense of wisdom, we shall do things at the time we see fit, as our approximation to wisdom dictates to us. I say "approximation to wisdom" because we do not pretend to have perfect wisdom, and never have, and in that respect we have differed somewhat, as a party, from you. There is not one of you who in his heart does not know that you would be doing just the same thing. There is not one of you who does not know that that is what you did do when you were in power.

Mr. GALLINGER. Mr. President——

Mr. WILLIAMS. You never allowed us to dictate your bills. You never allowed us to dictate your tariff legislation. You never called us in to say: "Old fellow, do you think we are putting it too high?" I used to hear, day after day and day after day, from Thomas B. Reed and from David B. Henderson and from JOSEPH G. CANNON, in tones that were dictatorial—which are not what I am using now—the expression, "We are running this Government, and we know how to run it, and we do not ask your advice."

Mr. LIPPITT. Yes; but they said they knew how to run it.

Mr. WILLIAMS. Yes; that was a part of the unsuccessful egotism—later disapproved by the people. Now, we have never gone so far as to say that we did not ask your advice. We have only gone so far as to say that we shall not submit to your dictation.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from New Hampshire?

Mr. WILLIAMS. Yes; I yield to a question from the Senator.

Mr. GALLINGER. I want to ask my good friend the Senator from Mississippi a practical question. The Senator has denounced, as he so often denounces, protection. How does the Senator square that with the proposed action that he and his party are going to take continuing high-tariff rates on sugar for the next four years, when they have denounced it as a fraud upon the people of the United States?

Mr. WILLIAMS. Why, Mr. President, I answer it in two ways. In the first place, it is not a "high protective" rate; and if the Senator from New Hampshire asserts that in that assertion I am in error and it is a high protective rate, then my rejoinder to his reply would be that the rate which he and his party had fixed was 25 per cent higher, and that if this present rate be a protective rate then he and his party stand convicted of having given unnecessary protection, and even a Republican confesses that unnecessary protection is robbery.

Mr. GALLINGER. Mr. President, if the Senator will permit me, the retort "You are another" does not constitute much of an argument.

Mr. WILLIAMS. I did not retort that "you were another." I retorted that this was not "a high protective" duty.

Mr. GALLINGER. But the Senator and his party thought it was so high that it ought to be entirely dispensed with, and they legislated in that direction. Now they take the back track, and they admit that it is right to continue the duty on sugar for four years longer.

Mr. WILLIAMS. I had said that the answer was twofold. I gave the first part of it, and now I will give the second.

The reason why we are continuing the duty for the present is that we are convinced that for four years longer we will need the revenue that grows out of it. As far as I am concerned individually, I have always thought that sugar was an appropriate subject for a revenue duty—the least onerous of all consumption taxes. But if it is thought that any duty at all upon sugar is protection, and therefore that all duties should be wiped out, certainly that argument does not go to the extent that in a time of revenue emergency we can not tax for a limited time an article to get a needed revenue—the necessity being confessed upon that side of the Chamber as well as upon this—because there may go with it a modicum of incidental protection. Call it, like the stamp tax and the tax on perfumery, a "war tax"—that is, a tax rendered needful by decrease of normal revenue, due to the war in Europe.

Mr. GALLINGER. Mr. President, if the Senator will permit me further, the Senator argues that there is no protection in the duty on sugar.

Mr. WILLIAMS. I said it was not "a high protective" duty. That was the language the Senator used.

Mr. GALLINGER. Not high; but is it not a protective duty? If the Senator thinks otherwise, I would refer him to the Senators from Louisiana, who say that taking off the duty has absolutely ruined their industry.

Mr. WILLIAMS. Yes; the Senators from Louisiana went further than that, if the Senator will excuse me. They said when we put the duty down and reduced it that we reduced it so far below the revenue point that it would lay waste all the fields of Louisiana. If the Senator selects the Senators from Louisiana as his witnesses, they have testified that the present duty is not a protective duty, but a duty under which the sugar-cane planters must absolutely go to the cultivation of something else than sugar cane or bankrupt.

Mr. GALLINGER. And I will ask the Senator if he does not think that would have happened had it not been that the European war stopped the exportation of sugar from Germany?

Mr. WILLIAMS. I frankly do not know.

Mr. GALLINGER. The Senator ought to know.

Mr. WILLIAMS. I frankly do not know; but, if the Senator wants my opinion, I do not believe there is any protection for the Louisiana cane-sugar producers under the present rate of duty. I think there is protection for the beet-sugar man; but when the cane-sugar man must put a fourth of his crop under the ground in order to raise a new crop he stands at a disadvantage from the very jump of 25 per cent, and when he raises less sugar to the ton of cane than the man who raises his cane in the Tropics, then he stands also at that disadvantage; all of which goes to prove the statement which I made a moment ago, that this is a revenue duty. The Senator has proven it for me, and made me help him.

Mr. GALLINGER. Mr. President, I take issue with that statement. I have proved nothing for the Senator, because I think his mind is not in such shape to-day that anything could be proved to him that he has not preconceived. Now, I will ask the Senator why it was that the Senators from Louisiana appealed to this side of the Chamber to save them from the disaster that they said the Democratic Party was visiting upon them by putting sugar upon the free list?

Mr. WILLIAMS. Why, because they said that the reduction which we made, in the first place, left them no protection, that they could not compete with Cuba, and it would lay waste their fields; and they said, in the second place, that of course, a fortiori, the same result would follow after the expiration of three years when sugar went upon the free list. The Senator, of course, heard the Senators from Louisiana as well as I did.

Now then, we need the revenue. This is as little onerous a way of getting it as any other duty upon consumption. We feel that we may not need it for longer than four years, and therefore we extend the duty for four years. If we shall find that we then need it longer, we can then further extend the period. That seems to me to be a very simple proposition from my standpoint. Now, of course, I understand that from your standpoint, if the object sought were the protection of the sugar-cane planter, there ought to be a higher duty, if what the Louisiana Senators and their constituents say be well founded; and I confess that I am not a very good judge as to whether it is or is not. I rest absolutely satisfied, however, that the beet-sugar producer does not need this duty—not as high a duty as this, at any rate, and perhaps none at all—because there is no more reason why an American farmer can not raise sugar beets in competition with a German farmer than there is reason why he can not raise potatoes or Indian corn or wheat, or almost anything else that is purely an agricultural product and not an exotic. Sugar cane is an exotic, and that is the reason why it costs more; it does not even go to seed in this climate.

I did not get up for the purpose of talking about that, however. I got up just for the purpose of saying that I did not want the vote of yesterday on the dyestuff proposition to be misconstrued. The country all understands that we—the Democratic Party—undertook to pass this bill, and that we undertook to save ourselves from embarrassment and perhaps from mistake by shutting off all matters alien to it, and that if Senators upon this side yesterday had been in favor of the amendment offered by the Senator from Massachusetts [Mr. LODGE] they still would have voted it down as an amendment upon this bill. I do not mean by that that they were in favor of it. I do not think they were. For myself, I have not yet been convinced that the way of meeting this dyestuff difficulty is through increased tariff duties. I am rather of the opinion that we can meet it better by other legislation, though my mind is not closed. I do think there is one justification for a protective tariff now and then, and that is the national defense when a foreign monopoly, protected and legislatively fostered by a foreign government, is proven to be threatening American industrial independence. Even John C. Calhoun went that far.

Mr. SIMMONS. Mr. President, I rise to address myself to the amendment offered by the Senator from California [Mr. WORKS].

On yesterday, Mr. President, when an amendment was offered by the Senator from Massachusetts [Mr. LODGE], which was an identical copy of a House bill now pending before the Ways and Means Committee of the House and now under consideration by the committee, as I am advised, and the subject matter of which has received consideration already from certain majority members of the Finance Committee, I appealed to the Senate not to sustain the amendment, first, because on account of the importance of the matter it ought to be fully investigated and considered by the Finance Committee of the Senate and come before the Senate in the regular way. I gave this lack of opportunity for adequate investigation, either by the Finance Committee or by the individual Members of the Senate, of the rates which were proposed in the amendment as one good reason why this rider should not be adopted.

I think if the Senator from Rhode Island [Mr. LIPPITT] had been here yesterday and had heard the statements made by myself and other Senators on this side, especially the Senator from Missouri [Mr. STONE], with reference to this subject, he would not have reached the conclusion which he seems to have reached that by the vote yesterday this side of the Chamber had foreclosed all purpose to deal with this subject in a proper, regular, and prudent manner.

Mr. LIPPITT. Mr. President, if the Senator will allow me, I will ask the Senator if he does not think that by reading the printed RECORD I can find out what was said just as certainly as though I had been here? And I have read all the debate that occurred yesterday.

Mr. SIMMONS. I did not think, when I heard the Senator, that he had read the discussion here yesterday, because I thought if he had read it he would not have pursued the line of argument and made the statements which he did make. If the Senator has read the discussion, I confess I can not understand why he should have made such a broad statement as he has made.

Mr. President, I thought it was made very clear to the Senate on yesterday that this matter was being seriously investigated, and that we were conferring with the people who are interested both as the producers and as the consumers of these dyestuffs. Not only that, but I specified a conference held by three or four majority members of the committee with the representatives of a large committee of nine appointed, as I understood, three from the consumers and three from the manufacturers and three from other interests that are incidentally concerned. I stated that in that conference we were given to understand that neither the producers nor the consumers asked for what the Hill bill proposed.

Not only that, but I made it clear that in that conference these gentlemen did not think an increase of the tariff duties in the present law without further legislation would meet the requirements of that industry. The present rate is substantially the rate of the old bill—not altogether, but upon coal-tar dyestuffs and colors the present law prescribes substantially the same rates as those of the Payne-Aldrich law.

The industry did not flourish before the new tariff. It has not developed as rapidly as one would wish under the new tariff. However, on account of the conditions that have existed here during the last two years the production of dyestuff in this country, according to the Statement of Mr. Pratt, the Chief of the Bureau of Foreign and Domestic Commerce, has trebled in quantity, and new factories are constantly going up in different parts of the country.

These gentlemen claimed that other legislation than a change in tariff rates was needed to relieve them. They contended that under the conditions that existed anterior to the war this industry could not have flourished in this country if the tariff had been twice as high as it was. They said what the Senator has said, and what I referred to yesterday—that there had grown up in Europe, chiefly in Germany, a great international trust that had absolutely controlled the output and the price of dyestuffs throughout the world; that it was backed by such immense capital and such perfect organization and system in its method of control of world trade that whenever an industry started in this country they had, by the application of the well-known methods of the trusts—that of underselling and practically giving away, if it was necessary—destroyed every effort to build up the industry. These gentlemen said that as long as that monopoly continues and was permitted to practice these trust methods in this country there could be no permanent development of the dyestuff industry, without regard to the rates of tariff that may be placed upon it for protection against foreign competition.

What they desire more particularly, as I understood them, than an increase of the tariff rate was some effective legislation by which this Government could take hold of a foreign trust through the courts and through administration, just as it can now under the laws take hold of a domestic trust, and suppress and defeat its efforts and schemes for strangling and destroying competition.

Mr. President, they were accompanied by the representative of this great bureau in the Department of Commerce, and in consultation with him, I will say to the Senator from Rhode Island, I have now prepared a bill which I think will meet that phase of the situation, a bill which, if it is enacted into law, will subject this foreign monopoly to the same control, through the Department of Justice and the Federal Trade Commission, which is now given to them in dealing with domestic trusts.

Mr. LIPPITT. Mr. President——

The PRESIDING OFFICER (Mr. VARDAMAN in the chair). Will the Senator from North Carolina yield to the Senator from Rhode Island?

Mr. SIMMONS. Yes.

Mr. LIPPITT. I am very glad to hear the Senator's statement, and I should like to ask him, in view of the fact that this Congress is drawing toward its close, that it is crowded with work, why, with a situation which the Senator's own language now admits requires a remedy, it was not taken up and dealt with in the early days of this Congress and not left to a time when we know there will probably be no chance for legislation of the kind to be passed.

Mr. SIMMONS. The Senator knows perfectly well that Congress has before it many questions of the greatest urgency. The Senator knows that the shipping bill is one of the greatest urgency in connection with our international trade.

Mr. LIPPITT. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Rhode Island?

Mr. SIMMONS. We have not been able to reach that as yet.

Mr. LIPPITT. I can not allow that assertion to be put in my mouth. I consider the shipping bill far from being an emergency. I have no sympathy with it at all.

Mr. SIMMONS. The Senator is so abnormal in his views in the Senate that I probably did make a mistake when I classified him either with the Members on this side or with some Members on the other side. I think, without any reference to the character of the bill which we discussed at the last session, there is hardly anyone in the Senate, except the Senator from Rhode Island, who does not believe that it is of the greatest urgency and importance that there should be legislation by Congress to enable this country measurably to control its own ocean transportation and to protect itself against the condition of transportation upon the high seas which exists to-day.

I did not intend to get into this line of discussion, and I regret that I have been led into it, but I assure the Senator from Rhode Island, as I assured the Senate on yesterday when he was absent, that, so far as I am concerned and so far, I think, as Senators on this side of the Chamber are concerned, we are deeply interested in this question, and we desire in the best way our judgment dictates to meet the situation. But we are not going to meet it pell-mell, without consideration and without investigation. Certainly we are not going to be forced into voting for a bill introduced in the other House and not even referred to a committee of this body which does not meet our views as the proper method of dealing with the question, and does not, as I understand it, meet the views of the industries concerned.

Now, Mr. President, just a word about the amendment introduced by the Senator from California. The Senator has read a letter here, to which my friend the distinguished Senator from Mississippi [Mr. WILLIAMS] has alluded, with reference to some man coming up here from New York for the purpose of trying to improperly influence legislation. I do not desire to say anything more about that than to suggest to the Senator from California that it might be well, in view of the statements made in the document he has had read, for the Senator to bring that matter to the attention of the lobby committee of the Senate. If the statements of that document are true, it would be a proper subject for inquiry by that committee.

It is true, as the Senator says, that we changed in the present law both the rate and the method of taxing lemons and oranges and grapefruit and many other things that come under that same general category. We changed from the pound basis of taxing lemons to the package basis because of certain representations made to us by the department with reference to administration, and so on, favorable to a change in the method. But while it is taxed by the package, I think the rate fixed is substantially the pound rate; that it is a pound basis measured by the supposed capacity of the different packages.

Mr. WORKS. I wish to say to the Senator I was not complaining about the change in the way of levying the tax so much as I was of the reduction. It may be that there are sufficient reasons for changing the basis of fixing rates. I do not know about that.

Mr. SIMMONS. I will state to the Senator that the main reason was to avoid the necessity of weighing every package, in the first place, and to avoid claims for damage, which were constantly arising under the pound provision. There were administrative reasons. Our change of the method did not affect the rate we fixed; that is, we fixed substantially the pound rate. We determined about how many pounds of lemons a box of certain dimensions would contain, and we tried to fix the tariff upon that box upon the basis of half a cent a pound.

Mr. WORKS. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Carolina yield further to the Senator from California?

Mr. SIMMONS. I do.

Mr. WORKS. I wish to ask the Senator from North Carolina whether it was true as reported that the purpose was to fix the rate at half a cent? It turned out afterwards that in taking the basis that was taken they really reduced it below that amount quite a little.

Mr. SIMMONS. I am not able to say whether that was the practical effect or not. I know that such was not intended.

The Senator complains that the rate we fixed was not sufficient, and he wants to have it increased. Mr. President, that raises the issue as to every one of the items in the present law that is not upon the free list. Senators on the other side who believe in protection want the duty raised above that fixed in the present act. I do not suppose I could name a single item that is now upon the dutiable list in regard to which Senators on the other side would not say the rate is too low and ought to be raised higher. They would be just as ready with reasons why increases should be made as the Senator from California is with reasons why the duty on lemons should be raised, and if we are to open the door to amendments to increase each rate a Senator on the other side thinks affords insufficient protection, may we not expect a general attempt by amendment to this bill intended to meet a particular situation to revise the whole tariff system?

Mr. WORKS. Mr. President, the Senator says that probably Senators on this side would desire to increase the rate on every item.

Mr. SIMMONS. I will say many; I will not say every one.

Mr. WORKS. I want to call the Senator's attention to the fact that in the amendment I have offered I have not included oranges. I have omitted them for two reasons. I try to be consistent about the matter. I do not believe the people of the orange counties of California need any such protection as the lemon growers, and I am satisfied that the Government would make very little revenue out of oranges if the rate were increased. So I omitted oranges from my amendment, although they are included in the rates as they were adopted under the old tariff act and under the act that is now in force.

Mr. SIMMONS. The point I intended to make was that if upon a bill of this character and purpose we begin to amend by adding something, if we begin to amend by raising the rate on one article, you open wide the doors to like amendments on other articles. For that reason both the Democratic and the Republican Parties have established the precedent in our tariff legislation that where it was necessary to make some change in the

tariff by reason of extraordinary conditions the doors would be closed so far as the majority party could close those doors to amendment, because amendments lead to revision, and revision of a tariff law, complicated as that subject is, ought never to be made by the process of sudden amendment in the consideration of a bill foreign to the subject of those amendments, without having an opportunity to have those matters investigated by the committees of the two Houses.

Mr. President, I do not think the Senator's constituents have fared so very badly in the matter of the duty on lemons as he thinks. According to the statistics, the importation of lemons during the calendar year 1914, the first year after the present law went into effect, was over a million dollars less than during 1913, the year before it went into effect.

Mr. President, without any reference to the amendment, but because I think it would be bad practice to open the doors in the way I have indicated, I hope that the amendment offered by the Senator from California will not prevail.

Mr. POMERENE. Mr. President, a few minutes ago, while the Senator from California [Mr. WORKS] was discussing his amendment, I made a statement to the effect that I had been informed several years ago that the profits in lemons in California were very great, and that in one particular company, about which I had been given some data, which had a paid-in capital of 33⅓ per cent of the subscribed capital, there had been a dividend of 25 per cent on the entire authorized capital stock. In other words, it was the equivalent of an earning of 75 per cent on the investment.

This matter of a tariff upon lemons was very thoroughly discussed some years ago in the Senate.

Mr. WORKS. Mr. President——

The PRESIDING OFFICER. Will the Senator from Ohio yield to the Senator from California?

Mr. POMERENE. Yes.

Mr. WORKS. Is the Senator able to give the name of the company to which he refers?

Mr. POMERENE. I can not give it now, but I will be glad to furnish it to the Senator later on. I have it at my office.

Mr. WORKS. I do not know of any fruit company organized on that basis in California.

Mr. POMERENE. I have the information, and I will be very glad to give it to the Senator.

Mr. UNDERWOOD. If the Senator from Ohio will allow me——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Alabama?

Mr. POMERENE. I do.

Mr. UNDERWOOD. If the Senator will refer to Mr. Powell's testimony before the Ways and Means Committee a few years ago, I think he will find that Mr. Powell represented not a company but a shipping association made up of the lemon growers of seven counties of California who were engaged in the business.

Mr. POMERENE. Can the Senator give us some information as to the profits?

Mr. UNDERWOOD. No; I do not think I can. There were some statements made. The question which was before the Ways and Means Committee was as to whether Mr. Powell did not represent a monopoly. He denied the proposition that it existed. It was asserted by others.

Mr. POMERENE. My information came from such a source that I have no doubt about its correctness.

In the year 1909 this matter was being considered by the Senate. At that time the bill was before the Senate, and it provided for a duty of $1 per box on lemons. The Finance Committee of the Senate reported the bill out and recommended an increase to $1.20 per box. In other words, the duty before was 80 cents a box. The increase proposed in the Senate bill was 50 per cent. The duty under the McKinley Act was 25 cents a box; under the Wilson Act 30 cents a box; under the Dingley Act 1 cent a pound, which was the equivalent of about 80 cents per box.

Senator Flint, then representing the great State of California, was insisting upon the adoption of this increase. Senator Root, of New York, opposed it. He then made the statement before the Senate that it cost on an average $2.42 per box to deliver lemons in New York from foreign countries. At that time the lemon growers of California were delivering lemons in New York at $2.32 per box. For the information of the Senate, I desire to send to the desk the forty-fourth volume of the CONGRESSIONAL RECORD, and I ask the Secretary to read just a small extract from the discussion of that subject upon page 2570. I ask the Secretary to read the portion which I have marked.

The PRESIDING OFFICER. The Secretary will read as requested.

The Secretary read as follows:

Mr. ROOT. Will the Senator excuse me? I shall be through in a moment.

The foreign lemons are, the Senator from California will agree with me, inferior to the California lemons. Now, you have the lowest cost at which a box of foreign lemons has for the past 25 years been laid down in the city of New York, under the present duty, at $2.42; and the cost which the lemon growers of California declare themselves they can lay lemons down for is $2.32; that is to say, taking the lowest figures for the foreign lemons and their own figures for California lemons, those California lemons meet the foreign lemons at the water's edge on the Atlantic with the advantage of 10 cents a box. Then, when you go into the great markets of America, the moment you start to carry your foreign lemons into the towns and cities of America, you begin to add the freight from the seaboard to the interior.

Mr. President, the sworn testimony before the Committee on Ways and Means is that the average cost of foreign lemons in the city of New York during the year 1907 was $3.26 a box, against which the Californian could put his lemons there at $2.32 a box; and that the average cost of foreign lemons in the city of New York, laid down on the dock in New York, during the year 1908 was $2.86 a box, against which the Californian could put his lemons there at $2.32 a box.

Mr. FLINT. Mr. President——

Mr. ROOT. One moment, if you please.

There are here produced the invoices and the affidavits of purchasers of lemons within the present month, costing, laid down on the dock in New York, $2.59, against which the Californian puts his lemons there at $2.32——

Mr. FLINT. Mr. President——

Mr. ROOT (continuing). And still, with that advantage at the extreme eastern edge of the country, the lemon grower of California asks that a 50 per cent increase in duty be made.

Mr. FLINT. Does the Senator from New York believe that statement?

Mr. ROOT. I do.

Mr. FLINT. The Senator believes that the lemons from foreign countries cost—how much did he say?

Mr. ROOT. The minimum amount is $2.42 per box.

Mr. FLINT. And in this market they are now selling their lemons for a dollar and fifteen cents and a dollar and eighty cents a box.

Mr. ROOT. The foreign lemons are all sold at public auction upon their arrival. They come in different grades; I do not know the grades to which the Senator refers. The importers have to take their chances on the price going up or going down, the demand being greater than the supply, or the supply being greater than the demand, as their lemons come in. They put them up at auction and sell them for what they will bring. They are sometimes as high, as the Senator has just stated, as $9 a box, and sometimes as low as the Senator has just stated; but the evidence is uncontradicted that the lowest price for which lemons have ever been introduced into the port of New York during the existence of the Dingley rate was $2.42 a box. It stands to reason that unless, putting the high price at auction and the low price at auction together, the average return is more than $2.42 a box, the importers have got to go out of business and leave the market solely to the California fruit grower. (CONGRESSIONAL RECORD, May 31, 1909, Vol. 44, part 3, page 2570.)

Mr. POMERENE. Mr. President, the duty under the present act is one-half a cent per pound or 40 cents per box on the average, and I do not think it would be charged that Senator Root would look at this matter from a biased standpoint.

Mr. SMITH of Michigan. Mr. President, I desire to say a word about this bill before it becomes a law. I am very much surprised that the Senate Committee on Finance should change the form of this remedial legislation when the House of Representatives, which has the constitutional right to originate legislation of this character, has provided otherwise.

The feature in this controversy which most disturbs me is the well-known fact that immediately after the European war broke out England sought this hemisphere for her sugar supply. Coincident with her entry into the war she placed a six months' order in Cuba for her immediate sugar supply. That order greatly increased the price of sugar in Cuba to the consumer. If any one thing more than another has been calculated to warn us against the danger of depending upon a foreign country for any given article of necessity, the present sugar situation demonstrates this admirably. The moment England placed this order with Cuba the price increased by leaps and bounds, and I believe it is strictly within the bounds of truth to say that the excess price for sugar which England was then obliged to pay amounted to over $100,000,000.

It is a well-known fact that we produce only about 16 per cent of our beet sugar here; that Louisiana, Hawaii, and Porto Rico furnish us 20 per cent; and that we buy about 50 per cent of our sugar in Cuba; but if the world is to depend upon Cuba for sugar, from whom are we to get a reasonable and fair supply at a reasonable and fair cost?

There are 77 sugar factories in the United States that cost over $100,000,000. These sugar factories are the direct result of the protection of the Government. They would not have been built at all had it not been for the tariff. There is not a Senator on the other side of the Chamber who will gainsay that statement.

I am going to repeat what I said, and I am going to address myself directly to the chairman of the Senate Committee on Finance [Mr. SIMMONS]. I say that of the 77 sugar factories in the United States, costing upward of $100,000,000, there is not one of them that would have been built had it not been for the

duty on sugar prescribed by our law, and there is not a Senator on the other side who would have the temerity to rise in his place and dispute that statement.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Colorado?

Mr. SMITH of Michigan. I shall yield in a moment. They are all to be suspended on a thread and kept alive by Executive favor. Now, I cheerfully yield to the Senator.

Mr. THOMAS. Mr. President, is the Senator's enumeration confined to beet-sugar factories?

Mr. SMITH of Michigan. Yes.

Mr. THOMAS. The Senator says those factories cost $100,000,000.

Mr. SMITH of Michigan. I said these 77 factories cost $100,000,000. I think they cost more than $100,000,000.

Mr. THOMAS. I should be greatly interested if the Senator would give me the source of his information.

Mr. SMITH of Michigan. I will try to do that if the Senator from Colorado will listen.

Mr. SMOOT. Those factories cost more than that.

Mr. SMITH of Michigan. Yes; they cost considerably more. I was very moderate in my statement.

Fourteen sugar factories were put out of business when this law was passed in 1913, while 20 new factories were established in Cuba. If we are legislating against our own countrymen and in the interest of island sugar planters, then this is very good legislation; but otherwise it is very faulty legislation, and it ought not again to receive the sanction of the American Congress. Twenty sugar factories in Cuba have been built under the stimulus of this unwise law.

Mr. THOMAS. I understood the Senator from Michigan to say that these 77 factories were beet-sugar factories.

Mr. SMITH of Michigan. Yes.

Mr. THOMAS. There are no beet-sugar factories in Cuba.

Mr. SMITH of Michigan. The Senator is facetious.

Mr. THOMAS. Well, perhaps we did not understand each other.

Mr. SMITH of Michigan. We do not understand each other, I will say to my friend from Colorado. I said that as a result of your free-trade legislation you have increased the sugar factories of Cuba; you have closed 14 sugar factories in the United States; and if it was not for the domestic sugar industry the present price of imported sugar would be almost prohibitive to the American people. Sugar costs 9 cents a pound now in England, while in Germany, which produces its own sugar, pays less than 6 cents a pound.

Mr. THOMAS. The Senator made a statement a few moments ago, and it was to that statement my inquiry was directed. His statement was that 77 sugar factories had been constructed—and I understood him to say under the benign influence of the protection system—costing $100,000,000.

Mr. SMITH of Michigan. Yes; they cost over $100,000,000, I will say to the Senator.

Mr. THOMAS. My question was, whether the Senator's enumeration was confined to beet-sugar factories?

Mr. SMITH of Michigan. Certainly.

Mr. THOMAS. Then, do I understand that another consequence of the legislation which the Senator from Michigan is criticizing is the construction of 14 other sugar factories in Cuba?

Mr. SMITH of Michigan. No; I said 20 new sugar factories had been built in Cuba since your free-sugar law was passed.

Mr. THOMAS. Twenty-two factories, instead of 14.

Mr. SMITH of Michigan. Probably.

Mr. THOMAS. Well, I recall that two years ago the Senator from Michigan, in discussing this question, emphasized the fact that the wages of labor in Cuba were 10 cents a day.

Mr. SMITH of Michigan. No; I think not. Did I say 10 cents a day?

Mr. THOMAS. Oh, yes.

Mr. SMITH of Michigan. The Senator from Colorado said that wages in Colorado in the beet fields were twenty-odd cents a day.

Mr. THOMAS. Twenty-five cents.

Mr. SMITH of Michigan. Twenty-five cents a day; and I was very much shocked by that statement, as were my colleagues on this side of the Chamber.

Mr. THOMAS. My remark was prompted by the remark of the Senator from Michigan, which did not shock but which surprised me, that wages in Cuba were 10 cents a day. I immediately investigated my statement, and I found that I had understated the amount of wages in Colorado, but the Senator from Michigan has never corrected his statement.

Mr. SMITH of Michigan. No; because it was not necessary. I think I was correct, but my figures were based on an inspection made long before.

Mr. THOMAS. That may be; but the Senator made it just the same.

Mr. SMITH of Michigan. I am frank to say to the Senator——

Mr. THOMAS. I know, but——

Mr. SMITH of Michigan. Pardon me. I am frank to say to the Senator that while his statement was rather shocking to Senators coming from beet-sugar States, I never understood that the price of labor in our beet fields was anything like 25 cents a day. I can not understand such conditions in Colorado; but my own experience and observation in Cuba led me to believe that they were employing peon or semislave labor, very poorly paid, sometimes averaging not more than 10 or 20 cents a day. If that correction is any satisfaction to the Senator from Colorado, I am glad to make it.

Mr. THOMAS. Why, Mr. President, I am not asking for a correction. I might say, however, that a correction coming two years afterwards is an extremely belated one; but, even if it were necessary, I am not asking for any correction whatever.

Mr. SMITH of Michigan. Is there any doubt in the Senator's mind that sugar can be produced in Cuba at a less cost than it can be produced in any other part of the world?

Mr. THOMAS. Oh, the Senator misunderstands, perhaps, the purpose of my reference to it. That purpose was this—and I think I will be able to demonstrate it as soon as I get some memoranda on the subject—my purpose was to remind the Senator from Michigan of a statement he made two years ago in reference to the rate of wages. He is now making a statement that 77 beet-sugar mills in this country were erected at a cost of over $100,000,000.

Mr. SMITH of Michigan. Yes.

Mr. THOMAS. I think I shall show in a few moments that he is quite as much in error with regard to the actual capital invested in this business as he was with regard to the wages in Cuba two years ago.

Mr. SMITH of Michigan. Well, I should be very glad to be corrected by the Senator from Colorado, whose accuracy of speech is a matter of common knowledge to us all. I think, however, that I am well within the actual cost when I say that there is more than $100,000,000 invested in beet-sugar factories in the United States to-day. I say also that some of these factories were closed by reason of your free-trade legislation three years ago, while others were very seriously menaced. The stock of some of these companies dropped as low as 20 to 30 cents on the dollar, when the European war suddenly gave a great impetus to the sugar business and remedied the error into which you had consciously or unconsciously fallen.

I think now that if your courage were equal to your intelligence, and you were to act without any fear of criticism because of statements that were made when this legislation was passed, Senators upon the other side would take away the threat contained in this bill and give the sugar industry of the United States a little relief from the constantly irritating policy of our Government.

There is no doubt whatever of the capacity of Cuba to furnish all the sugar we will need; but if it had not been for our domestic sugar production, the price of sugar to the American consumer would have been much higher than it has been during the last two years, and the domestic producers have not taken advantage of the extraordinary opportunity to force the prices up as the result of the European war.

Cuba has a sugar productive capacity of more than 5,000,000 tons a year. Under the arrangement between the sugar-producing nations of the earth, there could not be a ton of Cuban sugar exported to any European country. The Brussels convention absolutely prevents the sale of that sugar into any European country. The almost limitless production of Cuba must be arrested if the United States is to produce her own sugar. You can not stimulate American production by holding the sword of Damocles over the sugar industry of America for four years more. You will by this law encourage the sugar industry in Cuba, and you will discourage the development of the sugar industry of the United States. Such a result would be deplorable in the extreme. Our laws should assist in the diversification of employment and production as far as possible, and if we would be truly independent we must produce on our own soil every article necessary to our comfort and happiness. To depend upon others for the necessaries of life lessens our freedom and independence as a Nation. The European war furnishes us ample object lessons.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Utah?

Mr. SMITH of Michigan. I do.

Mr. SUTHERLAND. Has the Senator from Michigan any doubt that immediately after the 4th of March next a Repub-

lican Congress and a Republican President will proceed to resolve this doubt in favor of American industries?

Mr. SMITH of Michigan. Well, Mr. President, the very confident way in which my honored friend from Utah presents that question carries with it an almost irresistible conclusion upon my part that after the 4th of March things will be different here.

Mr. THOMAS. Does the Senator from Michigan base his opinion upon the result of the recent Michigan primary? [Laughter.]

Mr. SMITH of Michigan. No, Mr. President; not wholly. I can not say that I do; that was not a party test. I had hoped the Senator would let that pass in silence [laughter], as I am very willing to do. But when one is so desperately driven as is the Senator from Colorado, to fortify a statement which he made two years ago in debate, I do not wonder that he is willing to hide his logic behind a little automobile incident in my State and imagines he is safely obscured from the rest of the world. I knew, however, the other side would not let that incident pass in silence. However, I still have a duty to perform, and in behalf of the people of Michigan I protest against this bill.

I think there is much in the suggestion of the Senator from Utah [Mr. SUTHERLAND]; in fact his observation does him credit, that a Republican Congress and a Republican President will rectify this error, and my State will contribute her full share in accomplishing that result; but the thing that interests me most is the courage and frankness displayed by the majority in the House of Representatives, which seems to have taken judicial notice of the tendency of the times, as contradistinguished from the brand of courage exhibited here.

The Democrats of the House of Representatives, who had upward of 190 majority in the last Congress, but whose majority has now been cut down to less than 25, have recognized the trend of American public opinion and have not hesitated to publicly acknowledge the defenseless position which they occupied two years ago on this question. Yes; I think a Republican Congress will rectify this error, but the Senate should abandon forever its un-American policy of free trade in sugar.

Mr. President, Senators now want a tariff commission. They did not want one very badly before they enacted the last revenue tariff law, but after placing that law on the statute books, then they wanted a tariff commission to hold it there. That tariff commission is to look at these questions judicially and without political bias; and yet the House of Representatives, which, under the Constitution, originates revenue legislation, has voted to repeal the sugar provision of the Underwood law, which would otherwise go into effect on the 1st of May, and the Senate, instead of falling in with the wholesome purpose and spirit of the House, now, by subterfuge and indirection, seeks to delay the final penalty of death for four years more.

Imagine, if you can, putting this industry in irons for four years and expecting it to thrive. Our rival will thrive under this legislation. The Cuban planter is happy; Cuba thrives, and from her we take 50 per cent of our supply; there is great activity there, and our producers are correspondingly depressed in contemplation of this legislation, and it ought not to pass.

If the countries now at war place the burden of their sugar supply upon Cuba for a very much longer period of time, Senators will realize the advantages of home production and the wisdom of protection to this industry.

I think England is paying 9 cents for sugar to-day, while under her flag she has vast possessions in Australia, New Zealand, South Africa, and the islands of the sea, from which she could draw her sugar supply if she would abandon her policy of free trade and look to the domestic welfare of her people. Her great difficulty to-day, in my judgment, in raising troops for the war in which she is engaged grows out of the fact that she has been so regardless of the individual rights and privileges of her citizenship. I tell you, Senators upon the other side and upon this side, that country gets the best enlistments and the most efficient service from her citizens which shows the most solicitude for its own people. Look at the war situation in Europe. The countries which have been solicitous about the individual welfare of their citizenship are the countries whose people spring like magic into the trenches and fight their battles, and that country gets the fewest enlistments and the least support in her time of trouble which shows the least solicitude for her people.

Take the country to the north of us, where every eighth man has enlisted in the war. Why? Because her Government is so helpful to the individual citizen, protecting its people in their employments and occupations.

Take Germany, with her marvelous industrial and commercial development, unequaled perhaps anywhere in the world, unless it be here in America—Germany is so solicitous about the welfare of her people that you find it difficult to buy a foreign product for personal wear anywhere in Germany. You will look over the shops of Berlin in vain for American goods. They protect their people in their employments, and they get in return for it a willingness and a desire to serve the Government in time of distress.

Great Britain will not long come to this hemisphere for her sugar supply, and the artificial development of the Cuban sugar industry due to the war will finally cease, the vast bulk of Cuban sugar production will be thrown back upon us, and if the bars are down, if our tariff shall have been repealed, if we have free trade in sugar, the vast sugar development of Cuba, which now only supplies us with about 50 per cent of our necessities, will in the years to come make such inroads upon our domestic production that our factories will not be able to survive. Senators know this, and yet blindly serve their party rather than their country. And when there has been taken away from domestic producers the markets which they have previously enjoyed, the price of sugar, as in the case of every other commodity, will be increased just in proportion to the desire of the industry which supplies us.

No, Mr. President; this is not a good policy. If you favor free sugar, then perhaps this is a good way to bring it about; but if you are in favor of the domestic industry, this is a very poor way to treat it. The millions of dollars which have been invested in the industry are entitled to the protection and solicitude of our Government, and if we can not get it from the party now in power we must, in the language of the Senator from Utah, look hopefully at least to the time when the party will be given power which believes in the doctrine of protection to American industry and American labor.

Mr. WEEKS. Mr. President, it is not my purpose to discuss the amendment which is pending, although I am glad to bear witness to the fact that I think it is entitled to the support of the Senate. I happened to be in southern California a year ago and had visual evidence of the condition of the lemon industry. For example, I visited one grove which had a productive capacity of about 15,000 boxes. Mostly the lemons were on the trees, and when I inquired the reason for it I was told that it hardly paid to pick them; that the last shipment of a thousand boxes from that grove to the Middle West netted but 18 cents a box. If that is the general condition of the lemon industry in California, the amendment which the Senator offers is entitled to the support of everyone.

But I want more particularly to speak, in a general way, about the pending bill, making some observations which apply to it, and in order that I may not take the time of other Senators unduly I have reduced what I desire to say to paper.

The 1912 platform of the Democratic Party included this declaration:

> We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses. * * * We demand a return to that simplicity and economy which befits a democratic government.

The exigency which now confronts us, and which the provisions of the pending bill are to be used to overcome, illustrates how completely the Democratic Congresses during the last three years have failed to carry out this pledge. When the Government was turned over to the dominant party on March 3, 1913, there was $149,000,000 in cash in the Treasury. Three years later, the 4th of last March, figuring the daily reports as they were figured in 1913, this amount of cash had been reduced to $44,000,000. Whatever way the Treasury statement is figured, that is the exact result. If the bank-note retirement fund and balances in the hands of disbursing officers are transferred and carried as they were under the old method of making reports, the Government had available funds in the Treasury amounting to $58,000,000 on the 4th of March, 1913, and on that basis there would have been on the 4th of March of this year a deficit in the Treasury of nearly $6,000,000. Under present conditions, therefore, the Treasury is not in any degree prepared to meet the drain which will be made on it, and this legislation should be passed even if there were no other reason than the revenue requirements.

Let me call attention briefly to some of the financial acts of this administration which have caused this condition. The total appropriations for the last seven fiscal years are as follows:

1910	$1,028,506,570.94
1911	976,742,924.46
1912	979,382,852.53
1913	967,123,359.06
1914	1,053,542,981.41
1915	1,116,118,138.55
1916	1,114,937,012.02

In other words, instead of the economy which the Democratic Party promised the people, the appropriations have been increas-

ing at leaps and bounds and the appropriations for next year must be very materially greater than ever before, even in the years immediately preceding.

This deplorable condition of the Treasury to which I have called attention exists, notwithstanding the fact that there has been raised from an income tax during the last two years $69,298,696.94, none of which was available until the present administration came into power; $82,292,336.66 from a corporation tax, which is greatly in excess of any amount available from that source before the 4th of March, 1913; and $107,456,002.11 has been raised under the provisions of the war-revenue law between October 22, 1914, and the 1st of March, 1916. In other words, the internal-revenue taxes have very materially increased. They were for the eight months ending February 29, 1912, $195,000,000; for the eight months ending February 28, 1913, $207,000,000; for the eight months ending February 28, 1914, $210,000,000; for the eight months ending February 28, 1915, $216,000,000; and for the eight months ending February 29, 1916, $262,775,774. In other words, there has been a steady increase in the amount of revenue obtained from taxes levied directly against our people, which demonstrates the fact that if there has been any falling off in revenue due to the war or for any other reason the decline has resulted from loss of receipts at the customhouses.

Let us see what those receipts have been, and for that purpose, in order to bring them down to date, I will take the same periods for customs receipts that I have for internal-revenue receipts. For the eight months ending February 29, 1912, the customs receipts amounted to $202,000,000; for the eight months ending February 28, 1913, $222,000,000; for the eight months ending February 28, 1914, $199,000,000; for the eight months ending February 28, 1915, $138,000,000; and for the eight months ending February 29, 1916, $131,000,000. As a matter of fact, there has been a decrease in customs receipts in the last three years from those collected under the Republican law of about 35 per cent.

During the discussion of this bill, and, in fact, during the last two years, it has been charged that this falling off in receipts was due to the war; that is, the presumable decrease in importations. Let us see whether there is any basis for that contention. The value of imports for the calendar year 1912 were $1,818,000,000; in 1913, $1,792,000,000; in 1914, $1,789,000,000; and in 1915, $1,778,000,000; in other words, the imports for the last calendar year are 1½ per cent less than they were during the year 1913, the last calendar year a Republican tariff was on the statute books during the entire year, while customs receipts decreased over 39 per cent.

It is not difficult to find the cause for this decrease in receipts. It is not on account of lack of importations, but it is because the rates imposed by the present law have been so reduced that the receipts, even with the increased internal revenues, are insufficient to maintain the Government. To prove this statement let me give a few examples of the falling off in revenue over and above what it would have been if the rates imposed by the Payne-Aldrich tariff had been continued and the importations were the same. The losses in revenue for the six months ending December 31, 1915, on wool were $15,000,000; on sugar, six and a half millions; on live animals, three and a half millions; and on burlaps, three and a half millions—twenty-eight and a half million dollars loss of revenue receipts on these four articles which were put on the free list as the duty reduced by the Underwood bill, every one of which is selling at a higher price than they were when the tariff was reduced. If to these figures were added the loss of revenue on other articles which were put on the free list, it would be found that the total loss of revenue for the calendar year 1915 from the free-list source is about $70,000,000, and I think it will be difficult to find a single article on which the price has been reduced as a result of this reduction and loss of revenue.

The real trouble is that the average rate of duty on imports has been so greatly reduced by the Underwood bill that his law is not a good revenue producer. For example, the importations for the month of January, 1916, were $184,000,000—the largest volume of goods ever brought into this country in any January—and from these importations were collected $15,500,000, or an average rate of duty of only a little more than 8 per cent; whereas in January, 1913, three years ago, when the Payne-Aldrich bill was in effect, with only $163,000,000 of importations, we collected duties amounting to $29,000,000, or about 18 per cent of the total importations; so that if the same rate of duty had obtained in January, 1916, that was in force in January, 1913, the revenues collected, instead of being fifteen and a half millions, would have been about $34,000,000. If this rate were carried through this calendar year it would make a difference in the amount of revenue collected of substantially $185,000,000. Therefore, the troubles with which we have to deal are twofold—one, an unheard of extravagance and total volume of expenditures, and, the other, a totally inadequate revenue law.

Having in mind this unprecedented condition of the Treasury, in my judgment, no Senator can afford to vote against the bill which is now pending. The failure of this bill to pass would not only mean that nearly $50,000,000 of revenue would have to be raised from some other source, but it would mean the complete annihilation of the sugar-producing industry in the United States as soon as the war is over. I am not going into any very comprehensive discussion of the sugar industry and its necessities, because I wish to assume that without any regard to that phase of the subject this bill is going to become a law, so that temporarily, at least, these interests will be partially protected, although, of course, it is assumed that if the Democratic Party is to remain in power another period of four years it must, if it carries out its pledges—not a certainty, by any means—put sugar on the free list. Therefore, new capital is not going into the sugar-producing industry in the United States, and, as far as possible, we will see interests now so involved changing their activities to some other field.

The present war has been the best illustration which could be found to demonstrate the desirability of producing our own sugars. In 1914 there were planted in the United States 580,000 acres; in Germany, 1,317,000 acres; in Russia, 1,790,000 acres; in Austria, 1,065,000 acres; and in France, 534,000 acres. If Germany, Russia, and Austria had not developed their beet-sugar industries so that they could more than produce enough for their own needs, and as a result had to depend on foreign production, there would have been greater suffering from this cause than from the loss of any food product. The one great country in Europe which has produced substantially no sugar in the immediate past is Great Britain. The four countries, the acreage of which I have referred to, raised enough sugar before the outbreak of the war so that they had about three and a half million tons available for exportation. When the war came on it was necessary for Great Britain to obtain another than this usual source of supply, which greatly stimulated the sugar-raising industry in Cuba, where at least 10 additional sugar factories have been constructed and an enormous increased acreage has been planted, all of which will be in active competition with our producers at the end of the war.

I think I should call attention to the statement made by the Senator from Michigan [Mr. SMITH], that not producing its own sugar has resulted in sugar selling at this time at 9 cents a pound in Great Britain; while Germany, which does produce its own sugar, is supplying the needs of its people at 5 cents a pound.

Cuba has been the great foreign source of supply for the United States, in addition to which the production on United States territory is about as follows: Louisiana and Texas, 200,000 tons; beet-sugar production, 750,000 tons; Porto Rico, 350,000 tons; Hawaiian Islands, 575,000 tons; Philippine Islands, 120,000, or a total of 1,195,000 tons. The sugar consumed in the United States aggregates about 3,750,000 tons, which would necessitate our buying one and three-quarter millions of tons; but the great increase in the demand for Cuban sugars has made the price sufficiently high since the outbreak of the war to protect our home producers. It is for that reason, and solely for that reason, that there has been a recovery from the great depression which took place when the Underwood bill became a law.

It may not be out of place to call attention to the fact that sugar can be produced in Cuba for from 1½ to 2 cents a pound. The duty on Cuban sugars under the present law, deducting the 25 per cent preferential, is 1.01 cents per pound. Transportation from Cuba to this country costs about 0.15 cent per pound. Therefore, assuming that it costs 2 cents a pound to produce sugar in Cuba, Cuban sugars can be delivered in this country at not exceeding 3.16 cents per pound.

The cost of producing cane sugar in the United States, as shown by a report made in 1913 by the Department of Commerce in its Miscellaneous Series No. 9, averages 3.65 cents per pound for the years 1909 and 1910. It would therefore seem that the Cuban product, with the duty now imposed, has an average benefit of 0.49 cent per pound over the cane sugar produced in the United States, and under the best recent conditions, under the Payne-Aldrich bill, which carried a duty of 1.348 cents per pound on Cuban sugars, it had an advantage of 0.15 cent per pound over domestic cane sugars. This would seem to be a complete demonstration of the fact that if it were not for the war the producing of cane sugar in the United States would necessarily have to be discontinued.

To some degree—a varying degree, to be sure—these figures will apply to the beet-sugar production, and unless we wish to

put ourselves in the position of depending on foreign production, which may become unavailable at any time, we must give sufficient protection to our home industry to enable a continuance of the raising of enough sugar for our own needs. If this war has taught a single lesson which is of value, it is that all of our similar industries should have sufficient protection to enable us to become independent of the rest of the world. This would conform to the policy of protection for which the Republican Party stands.

A declaration which has frequently been made by those responsible for the conduct of the Government under the Democratic Party is that no American industry should be injured, and yet the course which that party has taken in the case of sugar would not only injure the industry but will under normal conditions destroy it. This is an industry which has been carried on for many years under many difficulties but its development has been of material benefit not only directly to those engaged in it but to the people of the country as well, for it has modified and will serve to make equitable the prices which may be charged for sugar in the United States.

It is true that the States where cane sugar has been produced have universally supported the Democratic Party and the theory which is governing that party in the course which has been taken relating to this great industry; but that does not affect me in the fealty which I have for the principle involved and its value to all of our people. I look with great apprehension on the methods which are being followed by the dominant party, which will result in the destruction of vested capital. The passage of the armor-plate bill, the threatened action of the Post Office Department relating to the tube service, and in many other ways it is being demonstrated from day to day that the party in power has no consideration for those who have been responsible for the building up of industries which are of importance to the capital and labor involved in them and to the country at large.

The raising of revenue from a duty on sugar is the most easily collectible and the least burdensome duty which can be imposed. Therefore, from the standpoint of protection of those engaged in it, from the standpoint of the Treasury, and from the standpoint of the users of sugar, it is essential that not only shall this bill pass but that a sufficient duty shall be imposed in the future to not only temporarily raise the revenue which the Government requires, but to put the sugar industry on a stable foundation so that there may be encouragement to invest capital in it, thereby increasing the production, developing the great areas which we have available for that purpose, and by the competition resulting give to our people a stable and reasonable price for the sugars which they need.

Mr. VARDAMAN. Mr. President, I wish we could have more patriotism and less partisan politics discussed upon the floor of this Chamber. That which is best for the American people is the best thing the Democratic Members of this Congress could do if they would serve well their party. A public office is a public trust and not a private perquisite or a partisan political asset. Its function is to serve, and to serve all the people, without regard to vocation, section, or geographical lines. The benefits of government should be distributed as nearly as possible equally among all the people, and its burdens should be borne by all the people in the proportion that they are able to bear them.

I can not vote for the amendment offered by the Senator from California [Mr. WORKS], and I expect to vote for the amendment proposed by the Finance Committee; but whether that amendment shall be adopted or defeated, Mr. President, I shall not be able to give my assent to this bill. I can not vote to tax the prime necessities of life for the purpose of raising revenue to be devoted to the building of battleships that are not needed, the organization and equipping of armies that are not necessary, and furnishing markets for the output of the mills manufacturing munitions of war, when the only beneficiaries will be the owners of the stock of the mills.

I have very little sympathy with the program of preparedness which a majority of my own party, and practically the entire membership of the Republican Party in this Chamber, have substantially agreed upon; but if I favored enlarging the Army and the Navy at this time, and agreed to all the details of the program for armament, I should be unwilling to raise the money for that purpose, or a portion thereof, by putting a tax upon the sugar that goes into the laboring man's coffee or sweetens the milk that feeds the famishing babe. I can not give my consent to have the strong hand of the Government take from the pockets of poverty the hard-earned pennies, under the guise of making preparations for defense against an imaginary foe, and use it to swell the coffers of the rich, the manufacturers of munitions of war, and enlarge the Army and Navy, which I do not believe are needed at this time.

If this extraordinary expense is to be incurred, I submit it ought to be met by levying tribute upon the luxuries of life, rather than upon the necessities of life, and especially not upon an article of such universal consumption as sugar. It should be met by an income tax upon the larger fortunes, by a tax upon inheritances, by doubling or quadrupling, if necessary, the tax upon fine cigars, wines, fermented and intoxicating liquors. The $43,000,000 to be raised by the tax on sugar could easily be supplied by taxing the luxuries, and thereby put the burden upon those best able to bear it, and in some instances upon those who will derive pecuniary profits from the purposes for which this tax is to be levied. Double the tax on fermented liquors alone and you could raise the great sum of $75,000,000, and nobody would be injured thereby. Really it would be a benefit. The drinker would get less beer, the dealer would get his profit, and the Government would get the revenue.

To vote for this bill would violate my sense of duty to my constituents, and would be nothing short of a betrayal of my interpretation of the Democratic platform; and, more than that, it would involve the repudiation of a very sacred obligation which I assumed when I became a Member of this body. The emergency to be met by this measure is not of such a character as to justify me in making that sacrifice. The bill ought to be defeated.

Mr. CUMMINS. Mr. President, I feel that it is my duty to say a word upon the amendment presented by the Senator from California [Mr. WORKS]. I had hoped to say it in the presence of the distinguished junior Senator from Alabama [Mr. UNDERWOOD], for I shall find it necessary to refer to him in the course of what I am about to say.

When the present tariff law was in course of consideration the Senator from Alabama, in a speech delivered, I think, in New York—although I am not sure with respect to the place, nor am I entirely certain with regard to the time—but wherever it was and whenever it was, he attempted to describe the tariff bill that was then about to be proposed by the administration. He described it as a "competitive tariff bill"; and, inasmuch as he is not here, I hope the Senator from North Carolina [Mr. SIMMONS], who, as I remember, practically adopted the phraseology, will give the subject attention.

I do not know precisely what the Senator from Alabama meant by the word "competitive," but I have always assumed that he intended to say to the people of the country that the tariff law then about to be passed was one which would permit the producers of the United States to enter the markets of the United States upon substantially even terms; that is to say, with regard to anything that our natural resources enabled us to make, that those who made the finished product in America should be able to enter the markets of America and fairly and substantially compete with their rivals or competitors in other countries.

Mr. UNDERWOOD. Mr. President, if the Senator from Iowa will yield——

Mr. CUMMINS. I yield to the Senator from Alabama, because I have just expressed my disappointment that the Senator from Alabama was not in the Chamber when I began, although I yield only for a question, under the rule.

Mr. UNDERWOOD. I do not wish to deprive the Senator from Iowa of the floor; but it will take me probably a few minutes to make a statement, if he desires me to do so, of what I understand is a competitive tariff.

Mr. CUMMINS. I should be delighted to hear the statement, but I can not so far yield as to lose the floor.

Mr. UNDERWOOD. If it interrupts the Senator, I will wait until he gets through, and then I will take the floor.

Mr. CUMMINS. It will not. If the Chair will assure me that I may retain the floor, I will yield for any statement or discussion.

The VICE PRESIDENT. The Chair is giving no assurances.

Mr. CUMMINS. But as the Chair remarked to me the other day—not the present occupant of the chair, but another—that it was not the business of the Chair to protect Senators in their rights in this respect, I shall be compelled to adhere to the rule. But I will repeat so much of what I have said as to inform the Senator from Alabama with respect to the point of my present suggestion.

I said that, about the time the bill which bears his distinguished name was on its passage, he, in a speech delivered, I think in New York, in describing what the Democratic Party was about to do in respect to the tariff, said that it was about to enact a competitive tariff, or a tariff of competitive characteristics, or some phrase of that sort. I was delighted to read

that description of the tariff law about to be passed, because it meant to me, whatever it may have meant to the people of the country, that the Democratic organization had abandoned the fallacy, the folly of a tariff for revenue alone and had taken on, though possibly mildly, the real purpose of an import duty. I feel sure that I have not misunderstood either the Senator from Alabama or the Senator from North Carolina, because throughout the entire discussion upon the tariff law of 1913—and I happened to bear some part in it myself—there was the constant claim upon the part of Democratic Senators that the duties that were attached to the various competitive commodities were duties that would equalize, here and abroad, conditions that have some relation to the cost of production.

The duty on lemons presents a rather familiar subject to me; and I am appealing now to the Senator from North Carolina and the Senator from Alabama, both experts in all the various and complicated subjects which are embraced within a tariff law, to stand by the oft-repeated assertion that it was intended to give to the country a competitive tariff, or in substance a competitive tariff; and from that standpoint I desire to say a word with regard to the duty on lemons.

I had something to do with the discussion or debate with regard to the duty on lemons in 1909. A group of Senators on this side of the Chamber believed that the proposed duty of a cent and a half a pound was too high, and they voted against the increase from a cent a pound under the Dingley law to a cent and a half a pound under the Payne-Aldrich bill. They voted against the increase because the members of this group had painstakingly entered upon an investigation with respect to the cost of producing lemons in this country as compared with the cost of producing lemons in the countries with which we must and do compete. The investigation was, I am sure, an unprejudiced one, and I know it was a careful one.

I rose simply for the purpose of reminding the Senate of the result of the investigation that was carried on in 1909 by those Senators who had much complaint to make and who, notwithstanding adverse criticisms that were poured upon them, did make complaint with regard to many of the duties of the Payne-Aldrich tariff law.

I, of course, have not the statistics of the investigation before me at this moment, because I had not the least idea of discussing the question. I did not know that my friend from California [Mr. WORKS] intended to introduce or offer an amendment of this sort until I reached the Chamber this morning. But I can tell Senators the result of the investigation. The result of it was that it cost the lemon growers in California, or in any part of the United States, more than a cent a pound in excess of the cost in Europe; but we did not believe, nor do I believe now, that it is fair to equalize these conditions as to the market of New York. I believe that the lemon growers of California must be content with the general market of the country and can not fairly ask to be insured entry into the market of New York upon the eastern seaboard as against the growers in Europe who have the advantage of a freight rate that is only a small proportion of the freight rate established between California and the Atlantic coast.

A cent a pound represents no more than the difference between the cost of production at the places of production. No one can question that proposition. If under normal conditions the lemon growers of California meet the lemon growers of Europe in the markets of New York on even terms as to price, the producers abroad will either reap a very large profit or the producers at home will reap no profit at all.

Now, that is not true with regard to some intermediate markets, probably. That particular subject is a little difficult to discuss, because the freight rate from the Pacific coast to the Atlantic and to intermediate points is the most illogical, absurd, and unjust arrangement of cost of transportation that the normal-mind can conceive. I do not intend to put my vote upon any duty on the hypothesis that the adjustment now existing will permanently remain. It is impossible that it shall remain. But there is no possibility that there can be any freight rate given to the producers in California that will put them upon a parity with the producers in Europe, so far as the market of New York is concerned, and when you have attached a duty of 1 cent per pound to the imports of lemons you have but fairly and reasonably equalized the difference between the cost of production in the great intermediate markets of America. If the law which we are now amending is intended to do what I understand the Senator from Alabama [Mr. UNDERWOOD] and the Senator from North Carolina [Mr. SIMMONS] to attempt, I can not conceive how they can conscientiously and logically repeal the duty of 1 cent per pound upon this article. If, of course, the Senators on the other side repudiate the whole element of equalization, if they discard now the word "competitive," which they formerly used to describe the tariff, then my argument, my appeal rather, I know will fall upon deaf ears.

I rose simply for the purpose of making it sure that 1 cent per pound is not too much to equalize these conditions. I voted for 1 cent per pound in 1909, whereas a majority of my associates voted for one cent and a half per pound. I have not changed my mind with regard to the subject, and I intend to vote for 1 cent per pound now. I sincerely hope the amendment will prevail.

Mr. SIMMONS. May I ask the Senator a question?

Mr. CUMMINS. I yield for a question.

Mr. SIMMONS. If the Senator believes the reduction of the duty from 1 cent a pound was such as to interfere with the California lemon producers holding and controlling the American market, how does the Senator reconcile that position with the actual results, as shown by the importations of 1913 and 1914, which I will now read. The importations in the calendar year 1913—that is, nine months under the Aldrich rate and three months under the new rate—were $6,413,847. In 1914, when the new rate of one-half cent a pound was in force, the importations were only $5,227,845. Would it not appear from these facts that certainly during the first year of the reduction they were not only able to hold the American market, as they had held it before under the old rate of 1 cent a pound, but that they were enabled to increase their hold on the American market?

Mr. CUMMINS. Mr. President, the question put to me by the Senator from North Carolina, while I am sure it is entirely sincere and in good faith, betrays the fallacy of many an argument against protection. I have heard the like asserted oftentimes, and my reply is that tariff duties are not the only factor in price. With any tariff duty the result suggested by the Senator from North Carolina might be seen. The tariff is but one element which enters into the cost of production, if I may use that term for a foreign producer, including his rate of transportation. I can easily conceive a situation in which the importations might have been practically nothing during the succeeding year. The lemon growers of Europe might have found better markets elsewhere. I do not know anything about the crop which resulted in the importations of 1914, either abroad or in California.

It seems to me that when the result of a particular tariff duty is considered, it must be considered over a reasonably long period of time in order that you may be able to observe just what effect that factor, namely, the tariff duty, has had in the amount of importations or in the market price, either one.

All that I know is that it costs more to produce lemons in California than it does in Europe. I do not believe the Senator from North Carolina will dispute that proposition. I know the freight rate from California to New York is greater than the freight rate from Spain or Sicily or any of the lemon-growing countries to New York. If the imports of 1914 were less than the imports of 1913, the latter year being under a lower tariff, all that I can say and all that I will say is that there were other conditions which governed the trade in lemons during that year. It might just as well be said that the reduction in the duty on sugar had no effect upon the price of sugar. That is no argument. You reduced the duty on sugar. You have not reduced the price of sugar, although I am frank enough to say that under normal conditions the reduction of the duty upon a given article ought to reduce the price.

Mr. HARDWICK. Will the Senator pardon just one suggestion?

Mr. CUMMINS. I yield for a question.

Mr. HARDWICK. I will put it in the form of a question, so as not to embarrass the Senator. The Senator knows, does he not, that before the European war the reduction we did make in sugar was reflected in the price?

Mr. CUMMINS. Precisely. That entirely overcame whatever effect the reduction in duty might otherwise have brought about. What the war did for sugar something else did for lemons in that particular year.

Mr. UNDERWOOD. Mr. President, the Senator from Iowa [Mr. CUMMINS] has asked me to explain what was meant when I stated in a speech some years ago that we intended to write a competitive tariff. I belong to that school who believe that it is wrong to levy a tax on the American people for any other purpose than the purpose of raising revenue to support the Government. I admit when you levy a tax at the customhouse you impede importations; to some extent, at least, you stop competition; and, no matter what the tax may be, in almost every case there is an incidental protection that grows out of it. But if the tax is levied for the sole purpose of raising revenue, it is not put on the statute books for the purpose of taxing dollars out of one man's pocket and putting them in the pocket of another

man. The strong arm of the Government is not used for making the few rich at the expense of the many.

I think that that is the position of my party, in the main. There may be some who belong to the same faith that I do who do not subscribe to this doctrine; but, as I understand the position of my party, its historic position is that it will not levy taxation on the American people except for the purpose of raising revenue to carry on the functions of the Government. As I understand the position of the party of the distinguished Senator from Iowa, it is that the Government of the United States has the inherent right to levy taxes, not merely for the purpose of raising revenue but for the purpose of protecting the profits of the producers in this country.

When the Democratic Party came into power and it became necessary for it to rewrite the tax laws of the country a mere cursory examination disclosed the fact, and subsequent careful analysis confirmed it, that there were a large number of taxes levied at the customhouse by the Republican Party that were so high that they prohibited the importation of foreign goods entirely. Well, in many instances there may have been a few dollars that crossed the customhouse. Great schedules, when you averaged them, showed that there was not 1 per cent of importations into the United States as compared to a hundred per cent of American consumption. Therefore, a tariff of that kind was like a mountain range with high peaks that were impossible to climb, impossible to pass, and low valleys through which your tides of importation flowed. It merely meant one thing, that a tariff of that kind was written for the purpose of favoritism, of building your tariff wall so high that in one favored industry there could be no competition, and raising your revenue from another source by leaving it low enough for the tide of importation to flow through and thus afford some revenue at the customhouse. In other words, you had built a sentiment in this country based on favoritism of the few, and that few of your selection.

Without intending to reflect in any way upon the members of your party or upon your party itself, it has always seemed to me that a system of favoritism of that kind, going into the pockets of the American people, using the power of the Government for the purpose of making rich a selected few, was but graft by the Government of the United States.

When we came to write a tariff bill there was no desire to tear this wall down in a night and to destroy or disrupt American industry. We deemed it far better to lower the house in which King Tariff lived with a jackscrew than to cut it down with an ax. Therefore we did not make radical reductions in schedules where there was a possibility of reasonable competition; but, when we said we would have a competitive tariff, that did not deny the principle that we would have a revenue tariff, but it sustained that principle, because, unless you allowed the flow of importations to come through the customhouse, there could be no collection of revenue at the customhouse. Where your tariff wall was built so high that by it you prohibited importations, there was no revenue; and when we said we proposed to have a competitive tariff, we declared in favor of lowering that wall which you had built so high as to prohibit importations to a point where reasonable importations could come over and the Government of the United States could have an opportunity to collect its revenue at the customhouse. In other words, our effort was not to lower the wall in one instance and to keep it high in other instances; it was not to build a wall for favoritism, but to allow reasonable importations all along the line, which meant reasonable competition and the collection of a reasonable amount of revenue at the customhouse. So I say again, that a competitive tariff means a tariff that will collect revenue.

I do not contend that in the first writing of this bill, although we did reduce the tariff wall at almost every point, with some few exceptions, that we made reductions in some articles that were sufficiently low to bring about competition. I think we made mistakes in some instances, although we did not reduce far enough to bring about competition; but that was a mistake of the head and not of the heart. It was a mistake because of the fact that we wanted to be careful in the progress we made toward the Democratic position, and not to injure any legitimate industry in reaching the final point at which we drove.

Now, as to the question before the Senate. It is as good an illustration of killing the goose that lays the golden egg, of greed destroying itself, or attempting to destroy itself, as ever was evidenced in writing tariff legislation in this country. Under the Wilson bill there was a tariff on lemons of half a cent a pound. This California industry was not driven out of existence; it was growing and developing, but not to the extent it did later, for it was comparatively new. There are only seven counties in the United States that are directly involved in this industry of growing lemons. I do not mean to say that lemons are not raised in some other counties. Possibly you might find a lemon tree in lower southern Alabama or in Florida, but there are but seven counties in California whose product constitutes the lemon industry of the United States. For those seven counties, when the Dingley bill was written, you raised the tax on the American people from a half cent to 1 cent a pound on lemons. It was not a languishing industry; it was not a destroyed industry; but to endeavor to give it an opportunity to monopolize the American market as far as it was possible to do so you raised the tax to every household in this land; aye, more, every hospital and sick bed was required to bear the burden of an additional half a cent a pound for the lemons of America in order that you might make prosperous—no, not prosperous, but that you might increase—the land values in seven counties in the United States and then capitalize those land values on a basis of a return that was derived from the taxing power of the Federal Government and claim that they could not prosper afterwards if they could not get the same return. But that condition existed for 16 years—a tax of a cent a pound on lemons. The industry developed; the orchards grew and expanded; the price of lands increased; but the greed of the producer was such that he did not want three-fourths of the American market absolutely his own, he wanted it all. He wanted to develop more land and more trees and make the American people pay the price of his development by increasing the tax laid at the customhouse.

I was a member of the Ways and Means Committee when the Payne tariff bill was written; and the testimony before that committee showed at that time that, under the duty of a cent a pound on lemons, the California lemon producer had the absolute control of the market from the Pacific Ocean to the Allegheny Mountains; that, because of the inland freight rates going back, the foreign lemon could not enter that territory at all; so that the California lemon grower had the sole right to exploit the American people.

But that is not all. If there had been competition in these seven counties whereby the American consumer would have had a competitive chance to buy this great necessity of life, it would not have been such a crime; but those seven counties were organized with a shipping association, so that every carload of lemons that went out of them, eastward bound or northern bound, went out under the direction of one agent, and, as the testimony showed, if the agent directed a carload of lemons to go to the market of Rochester, N. Y., because he thought that was the best market in which to sell that particular carload of lemons, that being the market where he thought he could get the best price, and it was demonstrated before the carload got to Chicago that lemons had come down in the Rochester market and lemons had gone up in the Pittsburgh market, by wire he diverted the car to the highest-priced lemon market.

Do not think that I say that the men who had this product to sell did not have the right to sell it in the highest market they could find; I am not complaining about that. What I complain about is that there are those who insist that the strong arm of the Government of the United States should be used for monopolistic purposes, to exploit the American people in a necessary food product. That was the condition—a practical monopoly of the American market to the Allegheny Mountains from California.

Then, when the Payne bill was written the price paid to California for its passage was that the tax on lemons should be raised from a cent to a cent and a half a pound. That rate was written into the law, and lemons thoughout this entire broad land at once went up and in some places lemons on the street were selling as high as 5 cents a piece. What was the result? The Payne bill remained on the statute books for four years; and at the end of those four years, when the Democratic Party came into power, it was flooded with petitions from all over the United States for a reduction of the tax on lemons; it was demanded that lemons should be placed on the free list, and that the American people should no longer be exploited in this way.

Examine the files of the Ways and Means Committee, as they may be found in the Capitol to-day, and you will find hundreds and hundreds of petitions from hospitals of this land protesting against this unjust tax that was imposed not for the purpose of giving the lemon growers a reasonable control of the American market but that the intention in levying the tax was to give them the exclusive control of the American market for their product, and to drive the foreign lemon entirely from this continent—and they mighty nearly did it—and to put that additional tax in the pockets of people who lived in but seven counties in the United States, allowing them to exploit 100,000,000 people.

I believe the question came before the Ways and Means Committee that a reasonable amount of revenue could be derived from a duty levied upon lemons. I opposed putting them on the free list, because I thought they were a legitimate subject of revenue, and I stood at that time for the tax, which had been the tax under the Wilson bill, a tax of half a cent a pound, and that is the law to-day; and there is no reason in the world, in my judgment, why special interests should be allowed to-day to exploit the American people in order to put additional profits in their own pockets.

Mr. WORKS. Mr. President, I offered my amendment with the hope that the Democratic Members of the Senate might do justice to one of the greatest enterprises in my State. The amendment is in entire harmony with the object and purpose of the amendment of the committee as it relates to sugar. There is no difference between the two as a matter of principle. The only difference is that in the case of the amendment offered by the committee the time when sugar shall remain on the dutiable list is limited to four years, while my amendment is unlimited in that way. It has been suggested by the Senator from North Carolina that the amendment was inappropriate coming at this time. I say this, because it seems to me it is entirely consistent with the object of the bill that is now before the Senate.

It has been said that the remedy might be obtained by direct legislation not connected with the legislation now before the Senate. Unfortunately for the lemon growers of California, that is absolutely impossible. Does anybody suppose that the Democratic Party is going to reopen the tariff controversy in any effort that may be made to do justice to one single industry? Certainly not.

So far as the tariff that was placed upon lemons by the Wilson bill is concerned, there were not enough lemons raised in California at that time to supply California alone, and there could in fact be no real competition between the lemon growers of California and the foreign importers. When the amount of the duty was increased to 1 cent, as has been mentioned by the Senator from Alabama, the competition that had been made from time to time had shown conclusively that that did not meet the additional cost of producing the lemons themselves, as has been said by the Senator from Iowa [Mr. CUMMINS]. The freight upon lemons from California to the eastern coast is more than twice as much as the amount necessary to be paid by foreign producers to lay them down at the same place, so it is a simple question as to whether the industry shall be or shall not be protected by a tariff.

The Senator from Alabama [Mr. UNDERWOOD], very consistently with his views on that subject, insists that it should not be done, because he does not believe in protecting industries. His idea is that the only object and purpose of levying a tariff is to produce revenue. The truth about it is, Mr. President, that the duty of one cent and a half levied upon lemons was not prohibitive. It did not prevent competition on the part of foreign importers. They continued to bring in their lemons just as they had before; and, so far as I know, there was no lessening of the amount of lemons produced by foreigners.

Mr. UNDERWOOD. Mr. President, if the Senator will allow me to interrupt him, I have not the figures at hand, but I can find them. If the Senator will examine the importations of lemons at the customhouse after the passage of the Payne bill, he will find that there was a very great reduction in the amount of importations.

Mr. WORKS. Like the Senator from Alabama, I am not as familiar with the figures now as I was when this matter was before the Senate before. At that time I made a very exhaustive examination of the whole situation, and produced here in the Senate the figures showing the conditions. The Senator may be right. I should not want to say that he is not, with my limited memory about what the conditions were at that time. But after the reduction in the tariff there was no reduction in the price of lemons to the consumer. Shortly after the tariff took effect, the lemon growers in California were almost put out of business by the most disastrous frost that we have ever had in that State. They were practically unable to supply any lemons for the eastern market; and the result was that lemons went up in the eastern market to $5 and $6 a box, and continued at that price until there was some competition as between the lemon growers in the State of California and the foreign producers. That shows us what would be the result if we were to reduce the tariff to such an extent as to put the lemon growers of California out of business so far as the eastern market is concerned. It would simply give that market to the foreign growers, and the result of it would be a price for lemons that never has been known heretofore.

With respect to the question of monopoly, that has been talked about a good deal in the Senate. There is not any monopoly in dealing with lemons or any other fruit in California—nothing like it. The organization known as the Fruit Exchange is simply the agent of the individual shippers of fruit. The shipper is allowed to fix his own price. He is allowed to designate at any stage where the oranges or lemons owned by him shall be marketed. It is not within the control of the organization that does the shipping of the fruit, but it is left entirely to the individual grower. If he shall determine the price at which the lemons shall be sold, that is binding upon the Fruit Exchange; and if he designates at any time where the lemons shall be marketed, even when they are in transit, under the contract that is made between the Fruit Exchange and the individual grower the fruit must be taken to the point designated by him. He has absolute control over the situation, and always has had.

Mr. UNDERWOOD. Mr. President, will the Senator allow me to ask him a question?

Mr. WORKS. Certainly.

Mr. UNDERWOOD. The Senator is correct about the contract, that it is optional with the shipper or grower as to whether he shall direct where the car shall go and the price at which it shall be sold, or whether he shall leave it to the agent of the association; but knowing that the agent of the association can control it in his interest, as I understand the testimony that came out, practically in every instance it is left to the agent of the association to direct where the car shall go and the price at which it shall be sold.

Mr. WORKS. Mr. President, I have not any doubt that where the grower is satisfied that his interests are being looked after by his agent he will not interfere, but there is no monopoly connected with it, because he has at all times the right to control not only the price but the market at which his goods shall be sold.

A good deal has been said, and it has been repeated by the Senator from Alabama [Mr. UNDERWOOD], and he has stated it a good many times, to the effect "that the result of it was to raise the price of lemons to the invalid in the hospital and to various other institutions." That information was furnished by this very lobby that I have been talking about; and I produced, in a speech which I made here in the Senate when that matter was up before, some of these communications that came from hospitals and which were procured by those very same gentlemen who were being paid as lobbyists to gather that information and produce it in the Senate. There is not any truth in it, Mr. President. The price of lemons was not increased to the consumers in the hospitals or anywhere else as a result of the legislation which took place at that time. That is simply one means of prejudicing the minds of Senators against this kind of legislation. The demonstration has been made here by the figures, as I have said before, showing conclusively that there can be no equal and fair competition as between the growers of lemons in California and those in Sicily, for example, unless some such rate of tariff as this is provided. It is simply a question of preserving the right of the shippers of California to sell their fruit in the eastern market. It may be true that they may ship their lemons part way between California and the East and sell them there, but that would leave the eastern market open to the foreign growers and would result in just the condition that I have mentioned—an enormous increase in the price of lemons to the consumers in that market.

I have no time further to discuss this question, and I am not disposed to do so. I have simply referred very briefly to different matters that have appealed to me, without any investigation into the details that were once very familiar to my mind, and I leave the matter to the consideration of the Senate.

Mr. SMOOT. Mr. President, I intended during the day to make a few remarks upon the sugar schedule, but I shall not do so at this time. I simply desire to refer to one or two statements made by the Senator from Alabama [Mr. UNDERWOOD].

The Senator stated that not more than 1 per cent of the importations under one of the great schedules of the Payne-Aldrich bill was allowed to enter this country, as compared with 100 per cent of the consumption of the country. I know of no such great schedule under the Payne-Aldrich bill, and I have been trying to think of the schedule to which the Senator referred, but I can not.

Mr. UNDERWOOD. Mr. President, I did not understand what the Senator said. Was he asking me a question?

Mr. SMOOT. No; I stated that I could not call to mind any great schedule under the Payne-Aldrich law which allowed but 1 per cent of importations as compared with 100 per cent of consumption.

Mr. UNDERWOOD. I can name it to the Senator, if he desires.

I do not know how it is this year, but at the time the bill was being written one such schedule was the iron and steel schedule, taken as a whole. Not in the separate items, but taken as a whole, it will show 1 per cent of importation as to the amount of consumption in this country.

Mr. SMOOT. Mr. President, I thought perhaps the Senator would refer to the iron schedule. I have not the time now to go into the details and give the reasons, but the Senator knows them as well as I do, and I think every Senator here is familiar with the reasons for the small per cent of importations under the iron and steel schedule, but they are more than 1 per cent.

Mr. UNDERWOOD. I will say——

Mr. SMOOT. But, Mr. President, I want just for the few moments that are left me to refer to the statement made by the Senator in defining the present tariff act—a tariff act for revenue—and the Republican belief in a tariff that prohibits importations. I say to the Senate that the rates in the Payne-Aldrich bill were such that they allowed goods to come into this country; the importations did come into competition with goods manufactured in this country, and in many cases very sharp competition at that; and not only did the rates act as a protection to American industry, but the bill raised a great part of the revenue to pay the expenses of the Government.

Now, I want to call the attention of the Senate to what the present tariff act is doing by way of raising revenue.

During the calendar year of 1912, under a Republican law, on $1,818,000,000 of imports we realized $326,340,000 of customs revenues, or an average rate of duty on all imports of but 18 per cent. During 1913, nine months under a Republican and three months under a Democratic law, on $1,792,600,000 of imports we realized customs revenues in the sum of $310,800,000, or an average rate of duty of 17.4 per cent. For 1914, five months of war, our imports totaled $1,789,250,000, and the duty collected upon those imports was only $241,250,000, or an average duty rate of but 13.5 per cent, while for 1915, the full war period, our imports amounted to $1,798,600,000, and the duty collected amounted to only $198,606,000, or an average duty rate of 11.1 per cent.

These figures indicate that while the imports fell off slightly over 2 per cent, comparing 1915 with 1912, the duties fell off 39 per cent; and compared with 1913, the imports fell about eight-tenths of 1 per cent, while the duties fell off 36 per cent. In this respect things are going from bad to worse. During the month of January last we imported goods to the value of $184,000,000, but the duty collected thereon was only $15,544,000, or an average rate of duty for the month of 8.4 per cent.

If the object in passing the Underwood-Simmons bill was to collect revenue, Mr. President, it has been a complete failure, not because the importations have not come into this country, for the importations are almost equal to those under the Payne-Aldrich bill, but ever since it became operative the average percentage of duty collected has been falling lower and lower, until in the month of January of this year the average rate of duty upon all goods imported into this country was but 8.4 per cent.

The Senator from California [Mr. WORKS] spoke of one matter which was referred to by the Senator from Alabama to which I wish to refer, and that was the high price of lemons immediately after the passage of the Payne-Aldrich bill. I thought every one in the United States knew the reason for the increase. I did not think the question would ever be raised again in this body, where it had been discussed upon two occasions that I remember since then. As the Senator from California [Mr. WORKS] says, there was nearly a total destruction of the California crop of lemons by the greatest frost that was ever known in the history of California; and as a result of loss of the lemon crop of California the importers dictated the price at which lemons should be sold.

As compared with the rate of half a cent under the Wilson bill, the increased rate of 1½ cents under the Payne-Aldrich bill was an increase of 1 cent, which I thought at the time was too high, and so stated; but at a cent a pound it would have amounted to only about 48 cents a case, and, with about 200 lemons to a case, the increase would have amounted to about a quarter of a cent on a lemon; and it was impossible to say that on account of that quarter of a cent increase lemons had increased 5 cents apiece.

Therefore, Mr. President, it seems to me that in presenting this amendment the Senator from California is doing nothing but what, as a representative of that great State and that industry within the State, he ought to do; for I have not heard a Senator upon the floor of this Chamber claim at any time that lemons could not be produced in Spain and other parts of the world cheaper than they can be produced in California.

As far as the valuations of lemon lands in California are concerned, every increase of price to the actual grower of lemons in that State means an additional tax upon him. It means an additional cost to him in raising his lemons. The grower is not the man who is asking for increased land values, and I do not for a moment believe that that was the object the California lemon growers had in asking for an increase in the tariff rate on lemons.

There may have been a few real estate speculators in California who had that idea, who wanted the increase, thinking that would result in an increase in land values; but the great body of lemon growers in the State of California was not particularly interested by an increased value of the lands.

The VICE PRESIDENT (at 5 o'clock p. m.). Under the unanimous-consent agreement the five-minutes rule is now in force.

Mr. SIMMONS. Mr. President, debate is limited to five minutes?

The VICE PRESIDENT. To five minutes under the agreement.

[Mr. SIMMONS addressed the Senate. See Appendix.]

Mr. SMOOT. Mr. President, in order that the Senate may know where some of the increased importations come from, whether they are from Europe or some other country, and from which we get our revenue, I want briefly to call attention to a few of them.

There was an increase in imports under the leather schedule of 55 per cent.

The cotton schedule increased from 36,735,303 square yards, with an import value of $6,712,274, in 1912–13 to 56,713,780 square yards, valued at $10,896,575, in 1913–14.

Cutlery imports advanced from $1,596,319 in 1912–13 to $2,594,511 in 1913–14, an increase of 62 per cent, dropping to $1,505,499 in 1914–15, nearly all of it coming from Great Britain.

The fish schedule increased 23 per cent.

I am not going to give the figures; I will just give the percentages.

The manufactures of wool rose from $8,870,101 in 1912–13 to $29,239,274 in 1913–14, an increase of 231 per cent.

The manufactures of silk increased 22 per cent, or from $22,473,237 in 1912–13 to $27,445,039 in 1913–14.

Print paper increased 72 per cent.

Manufactures of vegetable fibers, linen, hemp, and so forth, increased over 7 per cent.

I could go on and tell you of other increases, and also increases in the imports of the products of the farm, but I will just mention a few of them.

The imports of meat and dairy products increased from $12,460,501 in 1912–13 to $40,545,512 in 1913–14 and dropped to $30,431,210 in 1914–15.

Wool increased from $13,997,460 to $38,118,561 and to $54,240,425 for the three periods, respectively.

Cattle, hogs, sheep, fowls, and so forth, increased from $8,649,917 to $22,943,695, dropping to $17,981,670 for 1914–15.

Agricultural products, breadstuffs—including grains, oats, and so forth—vegetables, hay, seeds, and so forth, increased from $37,436,473 in 1912–13 to $71,924,646 in 1913–14. They were $45,918,050 in 1914–15.

Mr. President, the fact is, the items that I have mentioned here increased from $269,469,580 in 10 months of 1912–13 to $425,843,720 in 1913–14, an average increase of 58 per cent.

As far as the revenue is concerned upon these items, anyone can figure the rates provided for in the Payne-Aldrich law and the rates provided in the Underwood-Simmons law, and he will find where a great loss of revenue to the Government is accounted for.

I admit, Mr. President, that there has been a great increase in the articles under the free list, and necessarily so, because the free list was greatly extended in the Underwood Tariff Act. No matter whether the war continues or whether it does not continue, the importations under the free list will show an increase, and no revenue whatever is received from them in order to pay the expenses of maintaining the Government.

Mr. GALLINGER. Mr. President, I have been so anxious that the legislation should proceed as rapidly as possible that I have taken very little time in discussing any question before the Senate during this session, and I am not going to depart from the decision I reached in that regard.

I want simply to say, Mr. President, that I shall vote for the bill as it passed the House when it reaches that stage. I shall vote for the amendment the Senator from California [Mr.

WORKS] has submitted, because I believe the duty that is asked for lemons raised in this country is not an extravagant duty.

Mr. President, I simply want to add a request that some statistics which I have in printed form and very brief be inserted in connection with my remarks, and I shall occupy no further time if that request be granted.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

The difference between Republican and Democratic management of the Nation's finances is this: The Republicans made it a practice to put into the Treasury each month $2,000,000 more than they took out, while the Democratic practice is to take out each month $2,000,000 more than they put in.

These figures have been determined by a study of the official reports of the Secretary of the Treasury for the period beginning with August, 1897, when the Dingley law went into effect, down to the first day of the present year. During that time Republican revenue laws (the Dingley bill and the Payne bill) were in operation for 194 months and a Democratic revenue law (the Underwood bill) was in operation for 27 months.

The total ordinary receipts of the Treasury during the period of Republican management of the Nation's finances reached the colossal sum of $9,677,952,080—an average of $49,886,351 per month.

During the same time the total ordinary disbursements of the Government, as authorized by Republican legislation, amounted to $9,293,083,392—an average of $47,902,492 per month.

This average monthly surplus under Republican control, therefore, was $1,983,859.

During the 27 months while Democratic legislation has controlled the revenue and expenditure the total Treasury receipts have been $1,579,648,049—a monthly average of $58,505,483.

In the same time Democratic Congressmen have voted away $1,621,908,077—a monthly average of $60,070,670.

Accordingly, the average monthly deficit under Democratic control has been $1,565,187.

Moreover, the Republican revenue laws which produced these results were so drawn that $22,967,653 per month was customhouse receipts, and was paid by foreigners, while $22,534,842 per month came from internal-revenue receipts, and was paid by our own people. Under the Democratic system only $19,023,760 per month was taken from foreigners at the customhouses, while the enormous sum of $34,116,302 per month was wrung from our own people by vexatious and oppressive taxes upon incomes, vocations, enterprise, and thrift. Those American citizens who have recently been wrestling with the clumsy and confusing income-tax blanks or who have been constantly licking stamps for telegraph and telephone messages and for other necessary business transactions will be interested to know that under Democratic revenue legislation our own people contribute $1.79 to the National Treasury for every dollar that the foreigner pays, whereas under Republican revenue laws the foreigner paid $1.02 as against each dollar contributed by American citizens.

And yet there are those who think the tariff will not be an issue in the campaign of 1916.

Mr. PHELAN. Mr. President, I do not like any discussion respecting the interests of my State to pass without expressing at least a word. The Senator from Alabama [Mr. UNDERWOOD] has reminded the Senate that of all the States California is exclusively interested in the production of lemons, and that seven counties in that State produce all the lemons that are produced in the United States.

It seems to me that while it was inopportune to introduce this question at this time, yet the senior Senator from California in presenting his amendment touched the weakest feature of the Underwood tariff law when he undertook to make a change in the tariff affecting lemons. The reduction of the tariff from 1 cent to one-half cent affected the revenues of the Government by about $800,000, as I judge in looking over the figures on the desk of the chairman of the Finance Committee of this body. Therefore, lemons may be regarded as a source of revenue which should not be ignored.

In California during the last two years, on account of my position or changed position as a candidate before the people I investigated the subject of the tariff with respect to California products. I found that none of our horticultural products, neither raisins nor oranges nor prunes, required any higher tariff than they then enjoyed; but I did find and declared then that the lemon industry needed an additional tariff of a quarter or half a cent in order to enable the industry to thrive and supply the American market in part with lemons. I am still of that opinion.

Not anticipating this discussion to-day I have not come here nor have I risen until now under the five-minute rule to discuss in any detail the question; but I do know that lemons are productive of a very considerable tariff; that we have lost $700,000 or $800,000 by the reduction, and that the lemon is indeed a luxury and therefore not a necessity of life. The British orders in council but yesterday levied an embargo upon all our preserved fruits regarded as a luxury and denied them to the people of those countries now in a necessitous condition. Therefore, it would be no particular burden if the price of lemons were advanced a quarter or half a cent a pound, if indeed that were the result of the tariff.

The condition to-day in the markets of the world—aye, more particularly, in the markets of America, which is more serious—is that the price of lemons is at the lowest ebb, because they are dumped from Italy and Sicily upon the markets of New York. We are contemplating legislation to prevent dumping, which is a great injustice to legitimate industry; and there is no more effective way of preventing dumping in this country than to levy a slight additional tax. I would not say this of any other fruit.

Mr. President, I am committed in principle to the policy of my party in putting a low tariff upon the articles which are enumerated in the schedule. I am opposed to a high tariff, because it is a gross injustice to the consumers. But in this case the Democratic Party, as I understand it, has always considered in levying a revenue tariff that we should also take into consideration the incidental protection, so called, which may accrue. At any rate, that principle is not ignored. But in this case, by levying 1 cent instead of half a cent, we would derive revenue and possibly save what I declare to be a struggling and hardly now a thriving and self-supporting industry—the lemon industry—slender as it is in the State of California.

The VICE PRESIDENT. The question is on the amendment of the Senator from California [Mr. WORKS] to the amendment of the committee.

Mr. WORKS. I call for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I am paired with the junior Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the senior Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. GALLINGER (when his name was called). I have a general pair with the senior Senator from New York [Mr. O'GORMAN]. That Senator is absent from the Chamber, and hence I will withhold my vote. If privileged to vote, I would vote "yea."

Mr. SUTHERLAND (when his name was called). I have a general pair with the Senator from Arkansas [Mr. CLARKE], who is absent. On that account I withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. GOFF] to the Senator from Maryland [Mr. LEE] and vote "nay."

Mr. WILLIAMS (when his name was called). Transferring my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the junior Senator from New Jersey [Mr. HUGHES], I vote "nay."

The roll call was concluded.

Mr. UNDERWOOD. I have a general pair with the junior Senator from Ohio [Mr. HARDING], who is absent to-day. I transfer that pair to the senior Senator from Tennessee [Mr. LEA] and vote "nay."

Mr. LEWIS. Mr. President, I wish to announce that the Senator from Maryland [Mr. LEE] is called away on official business, but he is paired with the Senator from West Virginia [Mr. GOFF].

The Senator from New York [Mr. O'GORMAN] is called away on official business, and he is paired with the Senator from New Hampshire [Mr. GALLINGER].

The junior Senator from Kentucky [Mr. BECKHAM] is called to his home on official business, and is paired with the Senator from Delaware [Mr. DU PONT].

This announcement may stand for the remainder of the day.

Mr. MYERS. I have a pair with the Senator from Connecticut [Mr. MCLEAN], but I transfer that pair to the Senator from South Dakota [Mr. JOHNSON] and vote "nay."

Mr. KERN. I desire to announce the unavoidable absence of the Senator from West Virginia [Mr. CHILTON]. He is paired with the Senator from New Mexico [Mr. FALL]. If he were present, the Senator from West Virginia would vote "nay."

Mr. CURTIS. I desire to announce the following pairs:

The Senator from New Mexico [Mr. CATRON] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from Idaho [Mr. BRADY] with the Senator from Florida [Mr. FLETCHER].

The result was announced—yeas 29, nays 44, as follows:

YEAS—29.

Borah	Dillingham	Norris	Sterling
Brandegee	Gronna	Oliver	Wadsworth
Burleigh	Jones	Page	Warren
Clapp	Kenyon	Phelan	Weeks
Clark, Wyo.	Lippitt	Poindexter	Works
Colt	Lodge	Sherman	
Cummins	McCumber	Smith, Mich.	
Curtis	Nelson	Smoot	

NAYS—44.

Ashurst	Gore	Kern	Myers
Bankhead	Hardwick	La Follette	Overman
Broussard	Hollis	Lane	Pittman
Bryan	Husting	Lewis	Pomerene
Chamberlain	James	Martin, Va.	Ransdell
Culberson	Johnson, Me.	Martine, N. J.	Reed

Robinson	Simmons	Stone	Tillman
Saulsbury	Smith, Ariz.	Swanson	Underwood
Shafroth	Smith, Ga.	Taggart	Vardaman
Sheppard	Smith, Md.	Thomas	Walsh
Shields	Smith, S. C.	Thompson	Williams

NOT VOTING—23.

Beckham	Fall	Hughes	O'Gorman
Brady	Fletcher	Johnson, S. Dak.	Owen
Catron	Gallinger	Lea, Tenn.	Penrose
Chilton	Goff	Lee, Md.	Sutherland
Clarke, Ark.	Harding	McLean	Townsend
du Pont	Hitchcock	Newlands	

So the amendment of Mr. WORKS to the amendment of the committee was rejected.

The VICE PRESIDENT. The question now is on agreeing to the amendment reported to the bill by the Committee on Finance.

Mr. SIMMONS and Mr. SMOOT called for the yeas and nays, and they were ordered.

The Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). Repeating the announcement as to pairs made on the previous roll call, I vote "yea."

Mr. CURTIS (when his name was called). I am paired with the junior Senator from Indiana [Mr. TAGGART]. If the Senator from Indiana were present, I should vote "nay."

Mr. GALLINGER (when his name was called). Repeating the announcement made by me a moment ago as to my pair, I will withhold my vote. If privileged to vote, I should vote "nay."

Mr. SUTHERLAND (when his name was called). Repeating the announcement with respect to my pair which I made on the previous vote, I withhold my vote.

Mr. KERN (when Mr. TAGGART's name was called). I desire to announce the unavoidable absence of my colleague [Mr. TAGGART]. He is paired, as already stated, with the Senator from Kansas [Mr. CURTIS]. If my colleague were present, he would vote "yea."

Mr. TILLMAN (when his name was called). Repeating the announcement which I made a little while ago in regard to the transfer of my pair, I vote "yea."

Mr. UNDERWOOD (when his name was called). Repeating the announcement that I made in reference to my general pair on the last vote, I vote "yea."

Mr. WILLIAMS (when his name was called). Mr. President, repeating the announcement which I made upon the last roll call, I vote "yea."

The roll call was concluded.

Mr. CURTIS. I desire to announce the pair of the Senator from New Mexico [Mr. CATRON] with the Senator from Oklahoma [Mr. OWEN,] and the Senator from Idaho [Mr. BRADY] with the Senator from Florida [Mr. FLETCHER].

Mr. MYERS. I have a pair with the Senator from Connecticut [Mr. MCLEAN]. I transfer that pair to the Senator from South Dakota [Mr. JOHNSON] and vote "yea."

Mr. KERN. I desire to announce the unavoidable absence of the Senator from Florida [Mr. FLETCHER], of the Senator from Maryland [Mr. LEE], and of the Senator from West Virginia [Mr. CHILTON], all of whom are paired, and all of whom, if present, would vote "yea."

Mr. SMITH of Michigan. I desire to announce the unavoidable absence of my colleague [Mr. TOWNSEND]. He is paired with the Senator from Florida [Mr. BRYAN]. If he were present, my colleague would vote "nay."

The result was announced—yeas 40, nays 32, as follows:

YEAS—40.

Ashurst	Johnson, Me.	Reed	Smith, S. C.
Bankhead	Kern	Robinson	Stone
Bryan	Lewis	Saulsbury	Swanson
Chamberlain	Martin, Va.	Shafroth	Thomas

So the amendment of the Committee on Finance was agreed to.

Mr. GORE. Mr. President, I desire to say that I shall not occupy the five minutes allotted to me under the unanimous-consent agreement; but I am not convinced that the pending bill has been cast in the best possible form, either from the standpoint of the taxpayer or from the standpoint of the Treasury of the United States. Under the pending bill a duty of 1 cent a pound is continued on imported sugar for a period of four years. That means that under the pending bill the American people must part with $40,000,000 a year to the producers of domestic sugar; it means that the producers of sugar within the jurisdiction of the United States will continue to receive a bounty or a protection of $40,000,000 each and every year that this duty is continued.

The question arose in my mind as to which would be better from the standpoint of the taxpayer, since the taxpayer must in any event part with this $40,000,000, whether or not when he parts with this $40,000,000 it would be better for the $40,000,000 to go into the treasury of the sugar producers or into the Treasury of the United States. My own conclusion was that it would be better, infinitely better, for a famished Treasury and infinitely better for the American taxpayer that this $40,000,000, instead of passing from his pocket into the pockets of the sugar producers, should pass into the Treasury of the United States, for I know, as every Senator knows, that this $40,000,000, and $160,000,000 more, must be raised by this Congress in order to meet present deficiencies and prospective expenditures.

By levying an excise tax of 1 cent a pound on domestic sugar, corresponding with the customs duty on imported sugar, $40,000,000 would be passed into the Treasury of this country, and would not continue to be paid to the producers of sugar. This would have obviated the necessity of raising that $40,000,000 from some other source by a tax upon some other subject, upon some other article of taxation. Not only that, sir, but it would not have increased the price of sugar to the consumer in the slightest measure. The duty of 1 cent a pound is added to the price of sugar by the domestic producer; and a countervailing excise tax would not have added to that price a single tithe of a cent.

The question, and the only question, involved is this: Whether the Government of the United States or the producers of domestic sugar should realize this munificent sum of $40,000,000 when it is parted with by the consumer. Mark you, the $40,000,000 a year must be rendered up by the consumer in either event, and I venture to believe that it should have been rendered up to the Treasury, to the Government, to the people themselves, in the form of public revenue, rather than in the form of private revenue to the producers of sugar. The excise tax might have been temporary, if you please; it might have been limited to the period of the war; it might have been made to terminate when the interruption of our revenues resulting from the war had passed with the coming of peace. For the present the producers of sugar do not need protection; pending the war they will not need protection; for the present they are prosperous. No evil could have resulted from such an excise tax. It would have averted or diminished the evils of increasing taxation, and, by decreasing the burden, it would have assumed the character of a blessing to the taxpayers. Under the pending bill the burden of $40,000,000 is continued with no compensating advantage, with nothing that bears even the substance or the semblance of a blessing.

We must all deplore the necessity for increased revenues and increased taxation, coming in part at least from circumstances over which we can exert no sovereignty. The people will not wince beneath taxes and expenditures that are inevitable, but their burden should be made as easy to be borne as possible.

It seems to me that the principles of sound public finance, that the principles of justice, and that the exigencies of the times would have dictated the imposition of an excise tax of 1 cent per pound on domestic sugar to countervail the customs duty of 1 cent and allow this $40,000,000 to be covered into the Treasury of the United States, thus serving as a protection and as a benediction to the taxpayers of this country. A majority of my colleagues, however, differ from me upon this proposition, and I defer, at least for the present, to their collective wisdom; but I felt obliged to register my views upon this point at this time, and may take occasion at some future time to elaborate my views more fully upon this subject.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The VICE PRESIDENT. The question is, Shall the bill pass?

The bill was passed.

The VICE PRESIDENT. The Secretary will state the proposed amendment to the title.

The SECRETARY. It is proposed to amend the title so as to read:

An act to amend sections 177 and 178 of an act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913, relating to the duty on sugar, molasses, and manufactures of sugar.

Mr. SIMMONS. Mr. President, I think that should read "paragraphs" instead of "sections." I will ask the Secretary to read it again.

The Secretary read as follows:

An act to amend sections 177 and 178 of an act entitled, etc.

Mr. SIMMONS. Now, I will ask the Secretary to read the body of the bill.

The Secretary read as follows:

That the third proviso of paragraph 177 of the act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes"——

The VICE PRESIDENT. The title seems to be sufficient. If it amends the paragraph, it amends the section. Without objection, the title as amended will stand.

Mr. SIMMONS. Very well. Now, I move that the Senate request a conference with the House of Representatives on the bill and amendment, the conferees on the part of the Senate to be appointed by the Chair.

The motion was agreed to; and the Vice President appointed Mr. SIMMONS, Mr. STONE, and Mr. LODGE as the conferees on the part of the Senate.

Mr. SMOOT. Mr. President, I should like to call the attention of the Senator from North Carolina to the fact that I think the title of the bill ought to be changed. It should read "paragraphs 177 and 178 of section 1 of the tariff act."

Mr. STONE. What is the difference?

Mr. SMOOT. There are only two sections of the tariff act, one the dutiable-list section and the other the free-list section.

Mr. SIMMONS. I think it ought to be changed, and the title amended so as to read "paragraphs 177 and 178."

The VICE PRESIDENT. The change will be made, and the title as amended will stand.

The title was amended so as to read: "An act to amend paragraphs 177 and 178 of an act entitled 'An act to reduce tariff duties and to provide revenue for the Government, and for other purposes,' approved October 3, 1913, relating to the duty on sugar, molasses, and manufactures of sugar."

Mr. KERN. I move that the Senate adjourn.

The motion was agreed to; and (at 5 o'clock and 40 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, April 12, 1916, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

TUESDAY, *April 11, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., delivered the following prayer:

O Thou God and Father of us all, ever near to uphold, sustain, and guide those who put their trust and confidence in Thee, help us with high resolves and consecrated hearts to move on day by day in the grand eternal march of existence as individuals and as a nation to higher and nobler attainments under the spiritual leadership of the world's great Exemplar. Amen.

The Journal of the proceedings of yesterday was read and approved.

INDIAN APPROPRIATION BILL.

Mr. CARTER of Oklahoma. Mr. Speaker, I ask unanimous consent to discharge the Committee of the Whole House on the state of the Union from further consideration of the bill H. R. 10385, the Indian appropriation bill, disagree to all the Senate amendments, and ask for a conference.

Mr. FITZGERALD. It is already reported.

The SPEAKER. The gentleman from Oklahoma [Mr. CARTER] asks unanimous consent to discharge the Committee of the Whole House on the state of the Union from the further consideration of the bill H. R. 10385, the Indian appropriation bill, disagree to all the Senate amendments, and ask for a conference. Is there objection?

There was no objection.

The SPEAKER. Mr. STEPHENS of Texas, the chairman of this committee, is not physically able to attend the conference. He has the grippe, and because there are so many various things in the bill the Chair will appoint five conferees on the part of the House, whose names the Clerk will report.

The Clerk read as follows:

Mr. CARTER of Oklahoma, Mr. KONOP, Mr. HAYDEN, Mr. CAMPBELL, and Mr. NORTON.

PENSIONS.

Mr. RUSSELL of Missouri. Mr. Speaker, I ask to take up the bill (S. 3984) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of said soldiers and sailors, and agree to the conference report.

The SPEAKER. The Clerk will report the conference report.

The conference report was read as follows:

CONFERENCE REPORT (NO. 512).

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill S. 3984, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its amendments numbered 6, 7, 10, 13, 14, 17, 18, 19, 20.

That the Senate recede from its disagreement to the amendments of the House numbered 1, 2, 3, 4, 5, 8, 9, 11, 12, 15, 16, 21, and agree to the same.

ISAAC R. SHERWOOD,
JOE J. RUSSELL,
JNO. W. LANGLEY,
Managers on the part of the House.

CHARLES F. JOHNSON,
WM. HUGHES,
Managers on the part of the Senate.

The statement is as follows:

STATEMENT.

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on certain amendments of the House to the bill (S. 3984) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors submit the following written statement in explanation of the effect of the action agreed upon by the conference committee and submitted in the accompanying conference report as to each of the said amendments, viz:

Amendment No. 1: Senate concurs. The rate proposed is justified by the evidence and soldier's rank.

Amendment No. 2: Senate concurs. The rate proposed is justified by the evidence and soldier's rank

Amendments Nos. 3 and 4: Senate concurs. The proposed beneficiaries being in soldiers' homes and properly cared for, no increase above present pensions is warranted.

Amendment No. 5: Senate concurs. Proposed pension is warranted by the evidence on file.

Amendment No. 6: House recedes. The evidence justifies proposed increase.

Amendment No. 7: House recedes. Claimant's physical and financial condition as shown by the evidence fully justify proposed increase.

Amendment No. 8: Senate concurs. The facts in the case do not warrant allowance of pension.

Amendment No. 9: Senate concurs. The rate proposed is justified by the evidence and soldier's rank.

Amendment No. 10: House recedes. The proposed increase is justified by the facts in the case.

Amendment No. 11: Senate concurs. Soldier's short service at close of war does not justify allowance.

Amendment No. 12: Senate concurs. The evidence in the case justifies the proposed increase.

Amendment No. 13: House recedes. The evidence in the case fully justifies the proposed pension.

Amendment No. 14: House recedes. The proposed increase is justified by the evidence in the case.

Amendment No. 15: Senate concurs. The rate proposed is justified by the evidence and soldier's rank.

Amendment No. 16: Senate concurs. The rate proposed is justified by the evidence in the case.

Amendment No. 17: House recedes. The increase of pension proposed is justified by the facts in the case.

Amendment No. 18: House recedes. The proposed increase of the soldier's pension is warranted by the evidence on file.

Amendment No. 19: House recedes. The circumstances of the case justify the increase proposed.

Amendment No. 20: House recedes. The increase in soldier's pension is justified by the evidence in the case.

Amendment No. 21: Senate concurs. The proposed increase is justified by soldier's long service and helpless physical condition.

ISAAC R. SHERWOOD,
JOE J. RUSSELL,
JNO. W. LANGLEY,
Managers on the part of the House.

The conference report was agreed to.

Mr. RUSSELL of Missouri. Mr. Speaker, I also ask for the same order on the bill S. 4399, with similar title.

The conference report was read as follows:

CONFERENCE REPORT (NO. 513).

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill S. 4399, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its amendments numbered 1, 2, 4, 5, 6, 7, 9, 12, 13, and 14.

That the Senate recede from its disagreement to the amendments of the House numbered 3, 8, 10, and 15, and agree to the same.

Amendment numbered 11: That the Senate recede from its disagreement to the amendment of the House numbered 11, and agree to the same with an amendment as follows: Restore the matter stricken out by the amendment, and on page 12, line 24, after "month," insert "in lieu of that she is now receiving."

ISAAC R. SHERWOOD,
JOE J. RUSSELL,
JNO. W. LANGLEY,
Managers on the part of the House.

CHARLES F. JOHNSON,
WM. HUGHES,
Managers on the part of the Senate.

The conference report was agreed to.

RIVERS AND HARBORS.

Mr. SPARKMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, with Mr. SHERLEY in the chair.

The Clerk read as follows:

St. Francis River, Ark. and Mo., commencing at the head of what is known as the "sunk lands," at or near the town of St. Francis, in Clay County, Ark., and extending to the foot of said "sunk lands," at or near the town of Marked Tree, in Poinsett County, Ark.; and in making such examination and survey the engineer or engineers having the same in charge shall take into account and make report upon any proposition by local interests for participation in the expense of said project in connection with the reclamation of contiguous lands or other lands subject to overflow by said stream.

Mr. BURGESS. Mr. Chairman, I offer an amendment, which I send to the Clerk's desk.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. BURGESS: Amend page 39 by striking out all of lines 1 to 7, inclusive, and insert in lieu thereof the following:

"St. Francis River, Ark. and Mo., commencing at the head of what is known as the 'sunk lands,' at or near the town of St. Francis, Clay County, Ark., and extending to the foot of said 'sunk lands,' at or near the town of Marked Tree, Poinsett County, Ark.; and in making such examination and survey, which shall be thorough and complete, the engineer or engineers having the same in charge shall also prepare plans, specifications, and make estimates of the cost of said improvement, and define the channel or course of said canal, and shall take"——

Mr. MANN. Mr. Chairman, I make the point of order on the amendment, which, by the way, is not properly presented. It is not in the form the gentleman wants, evidently. The amendment as reported reads to strike out lines 1 to 7. I suppose the gentleman means lines 1 to 11.

Mr. SPARKMAN. It should be "1 to 7, inclusive."

Mr. MANN. Does the gentleman mean to leave in lines 8, 9, 10, and 11?

Mr. BURGESS. Yes.

Mr. MANN. I tried to follow it and I thought it did not.

Mr. SPARKMAN. I suggest——

Mr. MANN. This is for a canal?

Mr. BURGESS. No.

Mr. MANN. Does it not use the word "canal" in there?

Mr. BURGESS. It does not.

Mr. GARNER. I will say to the gentleman from Illinois that this is prepared by the Engineer Corps of the Army.

Mr. MANN. I do not care who prepared it.

Mr. GARNER. I agree that the gentleman does not care whether the Engineer Corps of the Army prepared it or not, but they are supposed, at least, to know for what purpose they use the language in which the amendment is offered.

Mr. MANN. Let us have the amendment reported again.

Mr. BURGESS. Let the Clerk read the paragraph as it will read if amended.

The Clerk read as follows:

St. Francis River, Ark. and Mo., commencing at the head of what is known as the "sunk lands," at or near the town of St. Francis, Clay County, Ark., and extending to the foot of said "sunk lands," at or near the town of Marked Tree, Poinsett County, Ark., and in making such examination and survey, which shall be thorough and complete, the engineer or engineers having the same in charge shall also prepare plans, specifications, and make estimates of the cost of said improvement, and define the channel or course of said canal, and shall take into account and make report upon any proposition by local interests for participation in the expense of said project in connection with the reclamation of contiguous lands or other lands subject to overflow by said stream.

Mr. MANN. It apparently refers to a survey for a canal.

Mr. BURGESS. The word "canal" ought to be stricken out and the word "channel" put in.

Mr. MANN. The word "channel" is in there, and the word "canal," too.

Mr. BURGESS. Yes.

Mr. MANN. However, I withdraw the point of order.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas [Mr. BURGESS].

The question was taken, and the amendment was agreed to.

Mr. RUSSELL of Missouri. Mr. Chairman, I desire to ask unanimous consent to extend my remarks in the RECORD by inserting a statement that I made on this amendment, just adopted before the Committee on Rivers and Harbors.

The CHAIRMAN. The gentleman from Missouri desires to extend his remarks in the RECORD as indicated. Is there objection?

There was no objection.

Following is the statement referred to:

STATEMENT OF HON. JOSEPH J. RUSSELL, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MISSOURI.

Mr. RUSSELL. Mr. Chairman and gentleman of the committee, I will not abuse the courtesy of the committee by detaining you for any great length of time. I will be brief. I would not care to add anything, or attempt to do so, to the very clear statement that has been made by the gentleman from Arkansas, Mr. CARAWAY, if it was not for the fact that a very important constituency of mine and a very large constituency is very deeply interested in the matter that is now under consideration. Mr. CARAWAY and I held several joint meetings, three in my district, before we came here last fall, upon the invitation of people interested in this project, and they were very largely attended, showing a very deep interest of the people of that section in this proposed improvement. The improvement of the St. Francis River has been a matter agitated for a long time. It was always, however, heretofore asked as improvements usually are for navigable rivers, simply for money from the Government to improve the river. This is on a different plan. This was rather based upon a plan that was followed in the reclamation of the arid plains of the West. That was based upon the idea of improvement to be made upon Government lands, and was justified, I think, mainly upon the ground that it would be improving Government lands. So Mr. CARAWAY developed this thought that here are 52,000 acres of Government land that have never been surveyed and which, as I understand, belongs to the Government to-day. They are entirely waste lands that are a menace to the health of the people of that country.

Mr. BOOHER. Would not that land, after it is reclaimed, be known as swamp and overflow land?

Mr. RUSSELL. I do not know, but think perhaps it would.

Mr. BOOHER. Would it not then absolutely belong to the school fund of the State of Missouri?

Mr. RUSSELL. My understanding is that unsurveyed land in lakes like this still belongs to the Government. I am not sure about that point.

Mr. BOOHER. I wish you would look up that point, because the law in Missouri is that all swamp and overflow lands belong to the school fund.

Mr. RUSSELL. My understanding is that the Government conveyed to the State of Missouri only such lands as were surveyed.

The CHAIRMAN. Was that land granted to the State of Missouri upon the same terms that the land was granted in some other States, for internal improvement?

Mr. RUSSELL. No; I think not.

Mr. BOOHER. Swamp and overflow lands are given by the Government to the State of Missouri for the school fund.

The CHAIRMAN. Well, the reclaimed lands in Florida were given to the State for the purpose of internal improvements.

Mr. RUSSELL. The sixteenth section in the State of Missouri was given to the school fund and the swamp and overflow lands were conveyed in 1850 to the State of Missouri, and in turn they were conveyed to the counties for reclamation purposes.

Mr. BOOHER. I think you are mistaken about that. I think it was unconditional. There is a great deal of that land in my district in Missouri, and it was always understood that it was an unconditional conveyance by the Government to the State for school purposes.

Mr. RUSSELL. No; I differ with you.

Mr. BOOHER. And it was sold up there for from $1.25 to $2.50 an acre.

The CHAIRMAN. What is the nature of these lands? What kind of lands were they? Were they entirely overflowed?

Mr. RUSSELL. Entirely under water. A regular bog, if not covered with water. It is impenetrable. It is what they call the "spreads" of the river. It has above there a defined channel, and when it gets down to a certain part of the river it spreads. These lowlands were made, as I understand, by the earthquakes of 1811–12.

Mr. HUMPHREYS. The act of 1850, known as the swamp and overflow land act, conveyed all the wet lands to the States to be used by them for the purpose of constructing levees and drains.

Mr. RUSSELL. That was for reclamation purposes and not for schools.

Mr. HUMPHREYS. And what was wet land was afterwards determined upon a survey to be in a section where a majority of the land was wet.

Mr. RUSSELL. Do you understand that the lakes that were not surveyed were embraced in that transfer?

Mr. HUMPHREYS. That is my understanding, though I would not give it as an opinion.

The CHAIRMAN. Judge, if you will consult the Interior Department, they can tell you exactly how it stands.

Mr. RUSSELL. Mr. CARAWAY investigated it, as I understand, and he says that it is claimed that it is Government land. He said he got it from the Government authorities.

Mr. BOOHER. He said that the Supreme Court of the United States had decided it so far as the lands in Arkansas were concerned.

Mr. RUSSELL. Yes, sir. The Supreme Court of the United States determined that similar land in Arkansas is Government land.

The CHAIRMAN. This discussion pertains to the legal status of those lands and that can best be determined by the department.

Mr. RUSSELL. Well, they are certainly public lands. They certainly belong to the county or the State or the Government, and we understand that they belong to the Government. They are waste lands and of no benefit to anybody. We had some doubts when this bill was introduced, whether this committee would take jurisdiction of it, and the chairman suggested it was doubtful whether this committee had jurisdiction. We thought that probably the Committee on the Public Lands was the proper committee. The Speaker held it under consideration for several days and finally he said it was more a subject for this committee than any other committee of the House, because the St. Francis River is a navigable stream. The Arkansas end of this river is a navigable stream and you appropriate money every year to improve it. You formerly appropriated money for the improvement of the Missouri end of this river, and that is a navigable stream. At this session of Congress three bills have been passed authorizing the erection of bridges over this navigable stream. When you undertake to improve the channel between the two ends of a navigable stream, it is certainly a proposition of navigation of which this committee would have jurisdiction. Now, this is not asking, however, that the Government shall appropriate money for this improvement without any hope of its return, but the truth is, as we confidently believe, and it is so provided in this bill, that the Government shall be paid back every dollar it puts into it. Now, if the Government can improve this stream for navigation and can at the same time reclaim 50,000 acres of land for the benefit of the whole country, it looks like it is a splendid business proposition. I can state with perfect confidence that if it was possible for this land to be conveyed to a private company for the improvement here proposed, I could organize a company in that country in 10 days that would take the title to these lands and make this improvement and they would double their money upon the investment. These 52,000 acres of land, if they are drained—and they can be drained, because the engineers say they can—would be worth to-day, without any improvement whatever, at least $25 per acre, and that is approximately double the amount that it would cost to make the improvements. When drained they would be worth $100 per acre.

Mr. KENNEDY. Judge, would it require a pumping station for dredging purposes?

Mr. RUSSELL. Oh, no. There is a sufficient natural fall to drain these lands. You heard them speak of the sunken lands in New Madrid County. A private company took possession of some of the swamp lands and have begun to reclaim them, and out where I hunted ducks when I was a boy, where the water was 6 or 8 feet deep all the year around, is now growing corn. There is a sufficient natural fall to drain this entire body of lands, and by canalizing this river between the two navigable ends of it I have no doubt but that it will drain them.

Mr. SWITZER. What is the fall of the river between the two ends?

Mr. RUSSELL. My recollection is that the fall is about 18 inches to the mile.

Mr. KENNEDY. About how many miles?

Mr. RUSSELL. About 80 miles through the spreads of the St. Francis River, I understand.

The CHAIRMAN. Eighteen inches to the mile is a pretty good fall.

Mr. RUSSELL. Of course, I may be mistaken about that. I got that information from somewhere.

The CHAIRMAN. A foot a mile is a pretty good fall.

Mr. RUSSELL. I know that the sunken lands in New Madrid County are probably about the same as the sunken lands in Dunklin County. They have been reclaimed by canalizing the Little River. The St. Francis River is a fair-sized river, and will drain all these lands. What we are asking is that you give us this survey, not an ordinary survey going up and down the river to determine whether you are going to spend a large amount of money in the improvements, but a survey to ascertain whether it can be done, and what it will cost to do it, as a preliminary step to this improvement. I hope that this committee at least hold that it has the power to do that. If this committee has not got jurisdiction of this question, then there is no committee in the House that has. They say the Public Lands Committee can not do it, because they have no authority to appropriate any money to make a survey.

The CHAIRMAN. Oh, it is within our province to improve a stream, and I think incidentally to thus improve it in connection with drainage or reclamation schemes.

Mr. RUSSELL. I was just going to say that if this committee had no jurisdiction of it, then there ought to be some committee somewhere that will have jurisdiction. Not only these lands are under water, but thousands of acres of land adjacent to them, owned by private parties, are overflowed as a result of the clogging of this stream.

The question of flood prevention and the question of drainage are very important questions in our section of the country, but in this particular case you can base your action upon the fact that the St. Francis River is a navigable stream. Both ends are being navigated, and the Government claims ownership by not allowing us to build a bridge across the river without first obtaining permission from Congress. To show our good faith and our desire not to impose upon the Government the expenditure of a large amount of money, we guarantee that it will not cost you a cent, because it will pay for itself out of the lands reclaimed.

The CHAIRMAN. That is practically the same kind of a proposition that we put up to the engineers sometimes to determine whether an improvement of a river can be properly connected with water-power development. As a separate proposition, this committee has nothing to do with the development of water power, but when we can link it up with a stream for the purpose of navigation, we can do it, and have done it frequently.

Mr. RUSSELL. Well, the chairman of this committee has had so much experience that I do not need to say to him that this is a proposition of navigation. Here is a navigable stream, and we are simply asking to connect the upper and lower St. Francis River by canalizing that stream through these spreads, and I hope that this committee will find that they not only have jurisdiction but that they also have the disposition to help us to get this $25,000, which I understand the engineer states it will cost to make a thorough examination, investigation, and report. Let us know whether it can be done or not, what it will cost to do it, so that we may obtain further legislation necessary to enable us to proceed.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask the same privilege, not with respect to this item, but on the bill.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] asks unanimous consent to extend his remarks in the RECORD on the bill. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Livingstone Channel, Detroit River, Mich., with a view to securing increased width.

Mr. SCOTT of Michigan. Mr. Chairman, right at that point I desire to offer three amendments. I will take them up separately.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Michigan [Mr. SCOTT].

The Clerk read as follows:

Amendment by Mr. SCOTT of Michigan: After line 2, page 40, insert: "Thunder Bay River, Mich., with a view of clearing the channel and providing suitable breakwater to protect the same."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The gentleman from Michigan offers another amendment, which the Clerk will report.

The Clerk read as follows:

Amend by inserting the following:

"Harbor at Mackinac Island, Mich., with a view of extending the east breakwater a distance of 400 feet."

Mr. SPARKMAN. Mr. Chairman, where is that to come in?

The CHAIRMAN. As a new paragraph, right after the amendment which has just been adopted, which follows line 2, on page 40. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the next amendment offered by the gentleman from Michigan.

The Clerk read as follows:

Amendment following the amendment just adopted:

"The Les Cheneaux Channels, Mich., with a view of deepening and widening the same on the northeast side of La Salle Island from a point opposite Reibers Point to Cedarville, thence south on the southwest side of La Salle Island to Rocky Reef; also the channel on the northeasterly side of Marquette Island between said island and the mainland; also the channel leading into Hessel between Grover and Wheeler Island and Haven Island."

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. SPARKMAN. We have no objection to that, Mr. Chairman. In fact, we had in mind to offer that as a committee amendment.

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. MOORE of Pennsylvania. Mr. Chairman, I desire to discuss the amendment.

The CHAIRMAN. The gentleman from Pennsylvania is recognized.

Mr. MOORE of Pennsylvania. Mr. Chairman, I am heartily in favor of the amendment, and I desire to see it go into the bill. I think it is a proper thing to consider at this time, particularly in view of the freight congestion on the Great Lakes, and in my time I desire to have read by the Clerk as much of this article as he can read—an article from one of the newspapers this morning, bearing upon the question of freight congestion on the Great Lakes.

The Clerk read as follows:

[From the Philadelphia North American.]

HUNDRED MILLION TONS LAKE FREIGHT WAITING—CONGESTION WITHOUT A PARALLEL IN INLAND-WATER HISTORY—NAVIGATION BACKWARD.

CLEVELAND, OHIO, *April 10.*

Congestion of freight waiting to be moved on the Great Lakes has brought about a situation unparalleled in inland-water history, according to a statement issued to-day by the Lake Carriers' Association head-

quarters here. The volume of grain and iron ore freight under contract, says the statement, has now reached 100,000,000 tons.

The congestion has been caused partly because of a great increase in the demand and partly because of the backwardness in the opening of the navigation season. It will probably be May 1 before navigation is under way.

Ships that have been idle for years are being hurriedly made ready to enter trade again.

Employment will be given thousands of seamen who have been out of the service for years, and wages will be higher, it was announced.

Mr. MOORE of Pennsylvania. I want to show that there is a congestion of freight traffic on the Great Lakes, and that great business is anticipated. At the same time I wish to have the Clerk read this article, showing that there is also a congestion on the railroads of the country, and that some of them may not be able to carry the tremendous lake tonnage that is now organizing.

The Clerk read as follows:

[From the Public Ledger, Philadelphia, Pa.]

FREIGHT TIE-UP ALARMS ROADS—PRESIDENTS OF TRUNK LINES MEET TO DISCUSS EMERGENCY MEASURES—GENERAL EMBARGO MAY HAVE TO BE DECLARED—P. R. R. REPORTS 13,151 LOADED CARS STALLED ON VARIOUS SIDINGS.

NEW YORK, *November 30.*

The presidents and vice presidents of railroads having freight terminals on the Atlantic seaboard met to-day in the executive offices of the Pennsylvania Railroad to consider what might be done by united action to relieve the present freight congestion in eastern ports. From the fact of this meeting and the results announced it was learned, first, that all of the Atlantic ports are threatened with more serious congestion than now exists, and, second, that a general embargo may be declared by all of the affected railroads upon certain commodities of export trade.

The railroads will do everything possible to avoid such an embargo, it was said after the conference of executives, but that it may be inevitable was admitted by C. C. McCain, chairman of the Trunk Line Association, of which each of the railroads represented in the meeting is a member. The means for deciding upon the definite steps to be taken by the railroads was provided at the conference in the appointment of a committee to meet daily to act upon the situation as immediate needs require.

Those present at the conference were: A. H. Smith, president of the New York Central; F. D. Underwood, president of the Erie; E. B. Thomas, president of the Lehigh Valley; William H. Truesdale, president of the Delaware, Lackawanna & Western; W. W. Atterbury, vice president of the Pennsylvania; William G. Besler, president of the Central Railroad of New Jersey; Daniel Willard, president of the Baltimore & Ohio; James H. Hustis, president of the Boston & Maine; and Carl R. Gray, president of the Western Maryland.

Each of the presidents will designate some operating official to serve on the committee, which will meet in the offices of the Trunk Line Association here. Similar committees will consider the situation in other ports.

Mr. MOORE of Pennsylvania. Now, it is evident, Mr. Chairman, that the railroads are in great distress as to whether they can carry the freight that is originating in various parts of the country. Enough has been shown in these two articles to demonstrate the wisdom of improving the waterways of this country in order to have reasonable facilities to carry the great freight that is now being created.

Mr. MADDEN. Does the gentleman from Pennsylvania certify to the correctness of those articles?

Mr. MOORE of Pennsylvania. I am going to ask for an extension of time, if the gentleman will not object to it, and then I may be able to inform him.

Mr. MADDEN. Well, I would like to be informed.

Mr. MOORE of Pennsylvania. Now, I send to the Clerk another article, showing the dangers of navigation around Cape Hatteras.

The Clerk read as follows:

BRAZILIAN STEAMER IN DANGER OFF CAPES—"GUAJARA" IN TOW OF UNITED FRUIT VESSEL, BUT MAY HAVE TO BE ABANDONED.

NORFOLK, VA., *April 9.*

In a water-logged condition and momentarily in danger of foundering, the Brazilian steamship *Guajara*, said to have passengers aboard, is floundering in rough seas off Hatteras in tow of the United Fruiter *Sixaola*. The fruiter is trying to make Hampton Roads with the disabled steamship and has asked for assistance. Tugs have been rushed south, but will be unable to reach the scene for hours.

The *Sixaola* reports the position of her tow 302 miles south of Scotland Light. This would place the two steamships somewhere off Cape Hatteras. The last message from the *Sixaola* at noon to-day reported the *Guajara* had 12 feet of water in her hold. She had removed all passengers and reported that there would be no loss of life, as the crew of the *Guajara* will be taken off when danger becomes imminent. The wireless has been unable to raise the *Sixaola* since noon.

The fruiter was within 10 miles of the distressed steamship when she heard and answered the distress calls sounded on the siren. The *Guajara's* wireless was out of commission, and she was being kept afloat by constant use of the pumps.

Mr. MOORE of Pennsylvania. That, Mr. Chairman, shows the harrowing conditions that at times prevail outside of Cape Hatteras. In the last few days we have had a very serious storm along the Atlantic seaboard, I advise my friend from Illinois [Mr. MADDEN], since it may not yet have penetrated into the interior country which he represents.

Mr. MADDEN. If the gentleman from Pennsylvania ever gets his inland-waterway project so constructed that it will carry off the fog from the sea, I will not object. [Laughter.]

Mr. MOORE of Pennsylvania. Some day when the gentleman or some member of his family on a voyage up or down the coast passing Hatteras escapes shipwreck by reason of the inland waterway he may have reason to thank God that some one in this House had the foresight to propose one of the most beneficial projects ever pending before the American Congress. It appears that this ship, crippled and water-logged, was rescued by a Government vessel off Cape Hatteras—the point that we are trying to avoid by an inland waterway which the gentleman opposes and which he will not understand. I want to see life and commerce go through this inland waterway safely and without danger.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to proceed for five minutes. Is there objection?

Mr. MADDEN. I shall be constrained to object.

Mr. MOORE of Pennsylvania. Mr. Chairman, if the gentleman objects, I shall avail myself of the privilege of speaking later.

Mr. FOSTER. Mr. Chairman, if this would be the last I would be in favor of giving the gentleman five minutes more now. [Laughter.]

Mr. MOORE of Pennsylvania. I appreciate the heartlessness of gentlemen from the interior. I ask unanimous consent to proceed for five minutes, Mr. Chairman.

The CHAIRMAN. Is there objection to the gentleman's request?

Mr. MADDEN. I object.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Michigan [Mr. SCOTT].

The amendment was agreed to.

Mr. SCOTT of Michigan. Mr. Chairman, I do not wish to take up the time of the House, but I desire to secure unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

MESSAGE FROM THE SENATE.

The committee informally rose; and the Speaker having resumed the chair, a message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 4856. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

The message also announced that the Senate had passed without amendment joint resolution of the following title:

H. J. Res. 171. Joint resolution to continue in effect the provisions of the act of March 9, 1906.

RIVERS AND HARBORS.

The committee resumed its session.

The Clerk read as follows:

Red Lake, Minn., and Red River from its outlet at Red Lake to its junction with the Red River of the North at Grand Forks, N. Dak., with a view to devising plans for regulating works whereby the level of said lake and the flow of said stream may be controlled in the interest of navigation and report to what extent the owners of land reclaimed thereby should contribute toward the improvement.

Mr. BLACK and Mr. BURGESS rose.

The CHAIRMAN. The Chair recognizes the gentleman from Texas [Mr. BURGESS], a member of the committee.

Mr. BURGESS. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. BURGESS: Page 40, amend, by striking out all of paragraph in lines 3 to 9, inclusive, and inserting in lieu thereof the following:

"Red Lake, Minn., and Red River from its outlet at Red Lake to its junction with the Red River of the North at Grand Forks, N. Dak., with a view to devising plans for regulating works whereby the level of said lake and the flow of said stream may be controlled in the interest of navigation, and in making such examination and survey any proposition by local interests for participation in the expense of said project shall be taken into consideration."

Mr. MOORE of Pennsylvania. Mr. Chairman, I desire to discuss this amendment. I think it is entirely proper. It may be that storms will arise upon this body of water sometimes and it may be that some members of the family of some Member of Congress who is opposing the improvement of inside waterways may be in distress on this lake in a vessel out of sight of land. This frequently happens on the Atlantic seaboard.

Mr. MADDEN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I do not yield. I desire to say in this connection, however, that the gentleman from Illinois [Mr. MADDEN], who has sought to interrupt me, has been more than persistent in his opposition to the improvement of our inside coastal waterways and seems to have an almost ghoulish delight in seeing human beings carried to the bottom.

Mr. MADDEN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I say that because the gentleman is not willing that a little money shall get away from his post-office building in Chicago for the improvement of waterways along the Atlantic coast line——

Mr. MADDEN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I yield to the gentleman.

Mr. MADDEN. I should like to know whether the gentleman is now talking in his capacity as a Representative from the State of Pennsylvania or in his capacity as president of the Atlantic Deeper Waterways Associations, or in his capacity as the editor of the magazine that advocates this inland waterway?

Mr. MOORE of Pennsylvania. The gentleman is just as jocular, now that lives are going to the bottom of the sea, as he is on other occasions. The gentleman seems to think that he makes a strong point when he reflects upon those who are endeavoring to improve the channels of the waterways of our country. What does the gentleman say about the free rural delivery magazine in which his handsome face often appears——

Mr. MADDEN. Never.

Mr. MOORE of Pennsylvania. He is the champion of the rural carriers of the country, who have taken away upward of $45,000,000, which no gentleman from the country dare speak about, due largely to the gentleman's influence in the Committee on the Post Office and Post Roads.

Mr. MADDEN. Will the gentleman yield again?

Mr. MOORE of Pennsylvania. No; I do not yield to the gentleman. He has plenty of time in which to answer. He refused to give me five minutes a little while ago, when I was discussing the advisability of the Government doing something to save life and save property along the Atlantic seaboard.

Mr. MADDEN. I thought the gentleman needed a little time for reflection.

Mr. MOORE of Pennsylvania. The gentleman is still desiring to send people to Davy Jones's locker. He likes to see poor sailors go down to the bottom of the sea. He likes to see the passengers on helpless ships carried out where they can not be recovered even by the revenue cutters of the Government.

I send to the Clerk's desk a paragraph from another paper that may have some influence on the hide of the gentleman from Illinois. [Laughter.]

The Clerk read as follows:

BARGE CREWS IN PERIL—STORMY SEAS ENDANGER CRAFT ON JERSEY COAST.

NEW YORK, *April 8.*

High seas to-day endangered the crews of five barges off the New Jersey coast. The Southern Pacific liner *Momus*, bound south, sighted three barges drifting shoreward off Barnegat. The tug that had been towing them, the *Defiance*, of Baltimore, put into Sandy Hook Bay for assistance. The crews, three men from each barge, were taken on board the *Momus*.

Later the Old Dominion liner *Madison* encountered two barges in distress off Long Branch. The crew of one was taken aboard, and the Coast Guard cutter *Mohawk* was summoned to the other's assistance. The *Madison*, meanwhile, was standing by.

Mr. MOORE of Pennsylvania. Mr. Chairman, 17 men went out of my section some time ago in barges that might have gone through the inside passage to Boston, if the gentleman from Illinois and others had been generous enough to vote a little money to cut those channels open. Those 17 men lost their lives. Somebody is maintaining the families of those 17 sailors now.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MOORE of Pennsylvania. I ask unanimous consent to continue for five minutes.

Mr. MADDEN. I object.

The CHAIRMAN. The gentleman from Illinois objects.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word. The gentleman from Pennsylvania undertakes to lead the country to believe that he is the only man in the House, in fact, the only man in the country, who is anxious to conserve life and property and to advance the commercial interests of the Nation. He has taken up more time of the House to say nothing, during the consideration of this bill, than any man whom I have known during all the years of my membership in the House. The expense to the American people of the time occupied by the gentleman from Pennsylvania on the floor of the House during the consideration of this bill would almost build the inland waterway of which he seems to be the earnest advocate. [Laughter.] He assumes to make us believe that the construction of this canal would advance the interests of the Navy in case of war. I understand that the depth of the canal is to be only 9 feet. Most of the battleships in the Navy draw anywhere from 25 to 30 feet, hence it will be seen how absurd his statement is.

Mr. SHERWOOD. Twenty-six feet.

Mr. MADDEN. The only thing that this canal could be useful for would be to carry the fog from the sea, and that would not be of much commercial advantage. Now, the gentleman seems to be very much perturbed because, forsooth, the rural letter carriers get consideration from the House to do them the justice to which they are entitled. He says that my picture has been printed in the Rural Delivery Magazine as the champion of the rural carriers' cause. I am proud of my interest in the cause of the rural carriers. Why does he oppose them? If he can find a copy of the Rural Delivery Magazine with my picture in it, I wish he would bring it here, and I will give him a thousand dollars for every copy he brings. There is an opportunity for him to make money. He says we lose $45,000,000 a year on the Rural Delivery Service, and complains about it. I think it is better to pay 45,000 men the money that is necessary to deliver intelligence to the people of America at a loss of $45,000,000 than it would be to spend $45,000,000, or any other sum, for the construction of a waterway that would be of no use after it was constructed.

I do not think that anybody in the House takes the gentleman from Pennsylvania seriously except himself. He has no conception of fact, or ever attempts to state facts in connection with any discussion of a question. The membership of the House has learned to discount what he says before he gets halfway through. He made a statement the other day to the effect that when all the membership were in their seats an amendment was defeated, and was adopted only when the membership was in their offices. The truth of the matter is there were only 60 men in the House when the amendment was defeated and 140 in the House when adopted. In asking him the question whether 140 was more than 60, the gentleman was unable to calculate and did not reply.

All this flubdub and balderdash that the gentleman suggests for the consideration of the House has made it weary, and the time for consideration and proper discussion of questions is at hand.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, I desire to oppose the amendment.

The CHAIRMAN. The gentleman from Pennsylvania has been once recognized on this matter, and other gentlemen are claiming recognition.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in five minutes. Is there objection?

Mr. MOORE of Pennsylvania. I object.

Mr. SPARKMAN. Mr. Chairman, I move that all debate on the paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida moves that all debate on the paragraph and amendments thereto close in five minutes.

The motion was agreed to.

[Mr. SMITH of Minnesota addressed the committee. See Appendix.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas.

The amendment was agreed to.

The Clerk read as follows:

Harbor of refuge at Evanston, Ill.

Mr. MOORE of Pennsylvania. Mr. Chairman——

Mr. BURGESS. Mr. Chairman, I offer the following amendment to come in after the next paragraph.

Mr. MOORE of Pennsylvania. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MOORE of Pennsylvania. I rose in time, and was going to move to strike out the word "Illinois."

The CHAIRMAN. The Chair understands. The Chair properly gave recognition to the gentleman from Texas, a member of the committee; and it was not until the amendment was offered that the Chair was aware of the point to which the amendment was offered. If the gentleman from Pennsylvania desires recognition, he will be now recognized. The Chair has been more than considerate of the gentleman.

Mr. MOORE of Pennsylvania. Mr. Chairman, I have no prejudice against the State of Illinois, and have no desire to

strike out this State or any other State. It is a great State and is well represented by able gentlemen in this House.

Mr. MADDEN. The gentleman does not have to state that; we know it.

Mr. MOORE of Pennsylvania. The gentleman admits it; he is fond of admitting that which it is not necessary to prove. I am sorry the gentleman is about to leave the Chamber, although I do not expect to say very much about him.

Mr. MADDEN. I am here and shall remain here.

[At this point Mr. MOORE of Pennsylvania replied to Mr. MADDEN. His remarks were ordered stricken from the RECORD.]

Mr. MADDEN. Mr. Chairman, I ask that the words be taken down.

Mr. MOORE of Pennsylvania. I withdraw them.

Mr. MADDEN. I ask that the words be taken down.

The CHAIRMAN. The Clerk will report the words taken down.

The Clerk read the words.

Mr. MADDEN. Mr. Chairman, I object to the language that the gentleman uses, and I move that it be stricken from the RECORD.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] will take his seat until the matter is disposed of.

Mr. MANN. Mr. Chairman, I suppose the Chair would be glad to be advised as to the proper procedure in the matter?

The CHAIRMAN. The Chair would be glad to hear the gentleman from Illinois.

Mr. MANN. If the Chair will look at page 327 of the Manual, at least that is the page of the copy which I hold in my hand, under paragraph 745, which relates to words being taken down, he will find a footnote, the third paragraph of it, to the effect that while the disorderly words are spoken in Committee of the Whole they are taken down as in the House and read at the Clerk's desk, whereupon the committee rises and reports them to the House.

The CHAIRMAN. The gentleman is quite right, and under the rule announced the committee will rise.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12193, the river and harbor appropriation bill; that during the debate a question arose as to language used by the gentleman from Pennsylvania [Mr. MOORE] and a demand was made by the gentleman from Illinois [Mr. MADDEN] that the same be taken down; whereupon the words were taken down and read from the desk; and that he accordingly reported the fact to the House.

Mr. MADDEN. Mr. Speaker, I move that the language of the gentleman from Pennsylvania be stricken from the RECORD.

The SPEAKER. The question is on the motion of the gentleman from Illinois that the language of the gentleman from Pennsylvania be stricken from the RECORD.

Mr. MOORE of Pennsylvania rose,

The SPEAKER. For what purpose does the gentleman rise?

Mr. MOORE of Pennsylvania. Simply to say that I am heartily in favor of the motion, and that the words were spoken facetiously.

The SPEAKER. The question is on the motion of the gentleman from Illinois that the words be stricken from the RECORD.

The question was taken, and the motion was agreed to.

So the words were ordered to be stricken from the RECORD.

Mr. STEENERSON. Mr. Speaker, the words have not been reported, have they?

The SPEAKER. They were reported from the desk in the Committee of the Whole.

Mr. MOORE of Pennsylvania. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MOORE of Pennsylvania. The motion having been put, was it subject to debate?

The SPEAKER. Of course, it was subject to debate; but it is too late to debate it now.

Mr. MOORE of Pennsylvania. That is true; but I rose to make what I thought was a proper statement, and I observed that the Speaker immediately dropped his gavel.

The SPEAKER. As the Chair understood it, the gentleman from Pennsylvania said that he was heartily in favor of the motion.

Mr. MOORE of Pennsylvania. I am not sure that that was taken down, and I desire it to be known that I had no purpose—and I think I am entitled to say it now, if the Speaker will permit—to reflect in any manner whatever upon the gentleman from Illinois [Mr. MADDEN], who may have taken it in that way. He opened the discussion and led me to say what I did say in the same facetious manner in which he spoke. I want it understood that I had no desire to reflect upon the gentleman, and I thought I ought to have the chance to say that before the motion was put. [Applause.]

The SPEAKER. The Chair was merely trying to expedite business. The explanation is just as good after the motion as before. The committee will resume its sitting.

The committee resumed its sitting.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] is recognized for three minutes remaining.

Mr. MOORE of Pennsylvania. Mr. Chairman, I send to the Clerk's desk an extract from one of yesterday's papers which I desire to have read in my time.

The Clerk read as follows:

SEASICKNESS ON "MAYFLOWER"—SEVERE STORM CUTS SHORT WEEK-END TRIP OF PRESIDENTIAL PARTY.

President Wilson returned here late yesterday on the *Mayflower*, cutting short a week-end trip down the Potomac because of a snowstorm. The *Mayflower* docked at the navy yard here shortly after 4 o'clock.

The President's party had a very rough trip. A severe storm was encountered shortly after 2 o'clock yesterday morning in the Chesapeake, and the *Mayflower* soon began to rock. Several members of the party became seasick.

Mr. MOORE of Pennsylvania. Mr. Chairman, the reports in this morning's paper indicate that the President is better, and I am very glad that he is. I wanted this read for the benefit of the gentleman from Texas [Mr. CALLAWAY], who brought seasickness into this discussion a day or two ago. The gentleman may not clearly understand this inland waterway situation, but the President was sailing on an inland waterway, a part of this intracoastal chain about which so much has been said. There is so much water in parts of this intracoastal chain that it is possible even for the President of the United States to be a little perturbed on its surface, if a storm breaks loose. I want to say that there is much more at the bottom of this project than some gentlemen are willing to believe, and some day we hope to impress Congress with the truth of that fact.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn.

There was no objection.

Mr. GREEN of Iowa. Mr. Chairman, I move to strike out the last two words. The trouble with my friend from Pennsylvania [Mr. MOORE] is about the same as that with his inland-waterways proposition. He lacks terminal facilities, and if some one will provide in this bill something that will enable him to reach some definite point and stop debate, I think it will be unanimously approved by all those present. [Applause and laughter.]

The Clerk read as follows:

Missouri River from the city of Florence, Nebr., to the northern limits of Decatur, Nebr.

Mr. BURGESS. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 40, after line 12, insert: "San Joaquin River and Stockton Channel, Cal."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Texas.

The amendment was agreed to.

The Clerk read as follows:

Black John Slough, Cal.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word, being the word "California." The gentleman from Iowa [Mr. GREEN] seems to have some trouble with the question of terminal facilities, and indulges in the same line of thought that the gentleman from Illinois [Mr. MADDEN] did a little while ago. He thinks I occupy a great deal of time on the floor of this House. I do not yield up my right to occupy time on the floor of the House whenever I think it necessary as a Representative of the people in my district and throughout the country. If I have something to say with respect to a great project like that of the Atlantic intracoastal waterway, I propose to say it, no matter how many votes there may be in the Middle West or other sections of the country against it. It is one of the things I came here to advocate, and I intend to stand by my guns. I do not propose that the gentleman from Iowa [Mr. GREEN], or the gentleman from Illinois [Mr. MADDEN] shall stop me when I am undertaking to properly represent the people who send me here.

Mr. HEFLIN. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. HEFLIN. I want to say to my friend from Pennsylvania that although he does speak frequently he always speaks well, and he has something to say when he does speak. [Applause.]

Mr. MOORE of Pennsylvania. I thank the gentleman from Alabama for that statement and I thank the House for its applause. I have never unduly wasted the time of this House, and whenever I have had a project I have come out into the open with it. I have not come into the House under cover with any project I may have deemed worthy.

I noticed yesterday that when the gentleman from Iowa [Mr. GREEN], who now follows the lead of the gentleman from Illinois in criticizing me about consuming time, had discovered that we were approaching a subject affecting appropriations for the State of Iowa he wanted my "terminal facilities" established immediately. He did not desire me to go into various districts of the State of Iowa to show how much the individual Members were asking for appropriations for public buildings.

I note also that the gentleman from Illinois [Mr. MADDEN] objects sometimes to our speaking with respect to matters that concern us, because it grates on his ears. I have not observed that the gentleman from Illinois has ever hesitated to take up the time of this House whenever he wanted to do so; yet there have been times when the gentleman from Illinois, who objected so much to my facetious references in debate a little while ago, and which I immediately withdrew when he objected, wants to say something he does not even wait to pay his respects to the Chair. He "butts in," and in an overbearing, domineering manner obtains the attention of the House and goes on with what he has to say. And I notice he never fails to say what he pleases about Chicago and the great State of Illinois. He has that right. I have the same right in respect to a State greater than Illinois, both in population and in wealth, and which has an interest in every kind of legislation that comes up. Gentlemen who occupy much time in behalf of their own States have no right to find fault with me for doing what I can for mine in this House. I am at least on the job to the extent of my ability. [Applause.]

Mr. GOOD. Is there anything about the State of Pennsylvania or the great city of Philadelphia that remains unsaid that the gentleman would like to say now?

Mr. MOORE of Pennsylvania. Yes; there is a great deal that remains to be said about that city. It has never received too much attention in the House. I have often told the gentleman, and I repeat it now, that if it had not been for the city of Philadelphia there would have been no State of Iowa.

The Clerk read as follows:

Siuslaw River, Oreg., from Acme to the entrance.

Mr. BURGESS. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 40, line 19, before the word "channel," insert "harbor at and."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Hoquarton Slough, Oreg., from Tillamook City to head of navigation on Tillamook Bay, to provide for a straight channel.

[Mr. SMITH of Minnesota addressed the committee. See Appendix.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Everett Harbor, Wash.

Mr. BURGESS. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Texas offers an amendment which the Clerk will report.

The Clerk read as follows:

Page 41, after line 3, insert:
"Lake River, Wash."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas.

The amendment was agreed to.

The Clerk read as follows:

SEC. 4. That there shall be printed 1,500 copies of the index to the annual reports of the Chief of Engineers, United States Army, from 1866 to 1917, inclusive, to include the reprinting of House Document No. 740, Sixty-third Congress, second session, covering the period from 1866 to 1912, inclusive, authorized by section 6 of the river and harbor act approved July 25, 1912, the additional information covering the period from 1912 to 1917, inclusive, to be furnished by the Secretary of War.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Illinois reserves a point of order on the paragraph.

Mr. MANN. This provides for printing 1,500 copies of an index. Who would get the copies?

Mr. SPARKMAN. I suppose they would take the usual course and go to the document room.

Mr. MANN. It does not provide for printing it as a House document. If it did it ought to come through the Committee on Printing. Out of what fund would the printing be paid for?

Mr. SPARKMAN. That I can not state myself. We have been passing similar provisions for some time past and I suppose it would be paid for in the usual way.

Mr. MANN. The gentleman remembers that in the river and harbor act of 1912 or 1913 there is a provision authorizing the printing to be paid out of the river and harbor appropriations. I take it that the department does not consider that they could print this index under that provision; otherwise, they would not be asking for this. Now, there is a printing allotment for the War Department and a printing allotment for Congress. If this is printed as a congressional document, of course it would be printed out of the congressional allotment. I suppose that the War Department wants this, not the Members of Congress.

Mr. SPARKMAN. I have a letter here or memorandum, I will say to the gentleman, from Col. Taylor, which explains the reason for the provision. He sent this amendment to the committee, and it was inserted at his request. I would like to have the memorandum read for the information of the House.

The CHAIRMAN. Without objection, the letter will be read.

The Clerk read as follows:

In view of the vast amount of work involved in revising the old index and collating the material for bringing it down to 1912, the date authorized by law, it is found that the index in question will be nearly four years out of date at the time of its final completion. This delay could have been much reduced had there been trained employees available for the duty. With a part of the force now employed it would be possible to make much more rapid progress on work of this character, and it has been estimated that the index could be brought down to date and completed to include the annual report for the year ending June 30, 1917, within a very limited time after the issue of the 1917 report. That would give within a year an index up to date of the latest report published at a minimum of labor and expense. In order that this may be done at the least possible expense authority therefor should be given at this time in order that the present document may be retained in type, and thus avoid resetting of the material involved, which constitutes a very large item of the expense of the publication.

Mr. MANN. Mr. Chairman, I withdraw the point of order.

The CHAIRMAN. The point of order is withdrawn.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Washington moves to strike out the last word.

Mr. HUMPHREY of Washington. Mr. Chairman, we have now finished the reading of this bill, and I am one Member that does not believe that this bill ought to be defeated. If we do that, there are a great many Government works that are going to be seriously damaged.

On the other hand, I realize the conditions of the country to-day. The gentlemen on this side of the aisle and gentlemen on the other side may not agree as to the reasons, but we all do agree to this one proposition, that we are facing an empty Treasury; that we have to do something to raise money to meet expenses of government. We do not agree, of course, as to the cause.

Now, in view of the facts, and speaking as one Member who has a great many projects in this bill in my own section of country on the Pacific coast, I do believe that we could well afford to do as we have done in the last two bills that have passed, and reduce the appropriations in this bill to an amount sufficient to prevent injury to existing projects. In view of the demand that is made in different parts of the country for preparedness, it does seem to me that there is not the necessity for continuing a good many of these projects that would justify us in making so great an appropriation at this time. As one member of the Committee on Rivers and Harbors I am going to favor a motion to recommit, reducing the amount to $20,000,000, which will be sufficient to care for all existing projects and prevent damage until we can have another river and harbor bill.

In that motion to recommit I want to call the attention of the committee to one or two provisions that have not heretofore been in either one of the bills we have passed. Here is one new provision:

For preservation and maintenance of existing river and harbor works and for the preservation of such projects heretofore authorized as may be most desirable, in the judgment of the Chief of Engineers,

in the interest of preparedness for national defense and in the interest of commerce and navigation.

Now, the words "in the interest of preparedness for national defense" are inserted for the first time.

Then I call attention to this provision also:

That the allotment from the amount herein appropriated shall be made by the Secretary of War upon the recommendation of the Chief of Engineers: *Provided further*, That the Chief of Engineers shall use his judgment as to which project he will recommend to be improved, and to what extent.

Now, heretofore there have been considerable criticisms in making these lump-sum appropriations that the Chief of Engineers distributed it pro rata, so that if there was a bad project it got its proportion the same as if it were a good project. In this motion to recommit we insert the language, "In the judgment of the Chief of Engineers as to which particular project shall be improved."

Mr. McLAUGHLIN. Mr. Chairman, will the gentleman yield. Is the time limited?

Mr. HUMPHREY of Washington. Yes; but I may ask for five minutes more.

Mr. McLAUGHLIN. In one of these provisions, giving a lump sum to be used in the discretion of the Chief of Engineers, it was provided that all unusued appropriations could be used by them, with the idea that the engineers could use the unused portion upon the project for which the appropriation was definitely made; but they did not do that. They took all unused appropriations and diverted them and used them where they pleased, which would seem to me an improper course. Would this give them such authority?

Mr. HUMPHREY of Washington. No. That was in the last bill. The gentleman is right. But there is no such authority given in this bill.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. HUMPHREY of Washington. I ask unanimous consent, Mr. Chairman, to proceed for five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. SHERWOOD. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. SHERWOOD. Is this to leave it to the Board of Engineers or to the Chief of Engineers?

Mr. HUMPHREY of Washington. It is really left to the Secretary of War, upon the recommendation of the Chief of Engineers; but that means the recommendation of the board, the Chief of Engineers acting finally. It places it with the Secretary of War, and the purpose of this motion to recommit is hereafter to let these expenditures be made in accordance with the recommendation of the Chief of Engineers, and then he is required at the next session of Congress to make a report and give his reasons why he recommended that certain of these projects be improved.

Mr. SPARKMAN. Mr. Chairman, there was so much confusion back there that I did not just catch the gentleman's amendment or motion to recommit.

Mr. HUMPHREY of Washington. If I may have the attention of the House I will read the part wherein it differs. First I will read:

For the preservation and maintenance of existing river and harbor works, and for the prosecution of such projects heretofore authorized as may be most desirable, in the judgment of the Chief of Engineers, in the interest of preparedness for national defense and in the interest of commerce and navigation, and most economical and advantageous in the execution of the work: *Provided*, That allotments from the amount hereby appropriated shall be made by the Secretary of War upon the recommendation of the Chief of Engineers: *Provided, further*, That the Chief of Engineers shall use his judgment as to which projects he will recommend to be improved and to what extent.

That is the new part of it.

Mr. HUMPHREYS of Mississippi. Will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. HUMPHREYS of Mississippi. Under the language of the gentleman's motion the Mississippi River would get nothing whatever. Is that the gentleman's intention?

Mr. HUMPHREY of Washington. Oh, no; the Mississippi River is provided for. I did not read that part of it, but it is covered further down in the motion. I am reading the exception, the new part that we put in. It follows the language of the last bill, with the exception that I have read. The Mississippi River is taken care of.

Mr. HUMPHREYS of Mississippi. What the gentleman has just read omits all reference to the Mississippi River, and I wondered if he intended to leave that out.

Mr. HUMPHREY of Washington. Not at all.

Mr. SPARKMAN. Does the gentleman propose to reduce the total of the bill to $20,000,000?

Mr. HUMPHREY of Washington. Twenty million dollars.

Mr. HULBERT. Under the form of the motion as the gentleman has just read it, it would not make any recommendation whatever for the East River, because that is not a project heretofore provided for, is it?

Mr. HUMPHREY of Washington. It would make provision for the East River if the engineers thought it worthy of improvement.

Mr. HULBERT. Does not that motion provide that the engineer in his discretion may only apply this money to those projects which have heretofore been provided for?

Mr. HUMPHREY of Washington. Yes; it does.

Mr. HULBERT. Does not that exclude the East River, which it is claimed is a new project, now adopted for the first time?

Mr. HUMPHREY of Washington. It certainly would exclude it.

Mr. HULBERT. So that the effect of that motion, if adopted, would be to exclude the provision which the President wrote to Congress and asked to have included in the bill.

Mr. HUMPHREY of Washington. I refuse to yield further.

Mr. CULLOP. I would like to ask the gentleman from Washington a question.

Mr. HUMPHREY of Washington. I yield to the gentleman from Indiana.

Mr. CULLOP. Will the motion to recommit, which the gentleman has read, contain the provision of the gentleman from Iowa with reference to the letting of contracts to private contractors?

Mr. HUMPHREY of Washington. No; I understand the gentleman is going to offer that as an amendment to the bill.

Mr. CULLOP. But if the motion of the gentleman from Washington is adopted, it will strike out the bill, and therefore strike out that provision.

Mr. MANN. No; the motion to recommit covers only the first section.

Mr. HUMPHREY of Washington. It would not strike that out, because the motion to recommit only applies to striking out the first section, and would leave in the bill the language to which the gentleman refers.

Mr. CULLOP. I did not understand that it related only to the first section.

Mr. HUMPHREY of Washington. The balance of the bill would not be affected. Now, I simply want to say this, that I think under existing circumstances Congress can not afford at this time to appropriate more than is necessary to prevent loss to these river and harbor projects; and as one man who has always been in favor of river and harbor projects, who believes in them now, and as representing the Pacific coast, I am going to vote at this time for this motion to recommit. We have followed this course in the last two river and harbor bills, and I do not believe we can go before the country and justify an expenditure for continuing a good many of these projects, and I sincerely hope that the Republicans, at least, will let the responsibility rest upon the other side of the aisle, if they are going at this particular time, in the condition of the National Treasury, to vote $40,000,000 when $20,000,000 will prevent any damage to existing projects.

Mr. STEENERSON. What becomes of the surveys?

Mr. HUMPHREY of Washington. They are in the bill.

Mr. STEENERSON. This does not cut them out?

Mr. HUMPHREY of Washington. No.

Mr. SPARKMAN. Mr. Chairman, I have listened with surprise to the remarks of the gentleman from Washington. After the long service of the gentleman on the Committee on Rivers and Harbors, his distinguished career in this House, the opportunity thus afforded him for observing all the details of this class of legislation and of learning not only the importance of this great work to the country, but the necessity for even more than we are appropriating in this measure, I did not expect to see him supporting a motion to cut the aggregate of the bill in half or to any other sum below that fixed by the committee after nearly three months of the most painstaking care and deliberation, because the gentleman ought to know, as I can assure this House, that the estimates were cut as low by the committee as was practicable to carry on the work as it ought to be done. Not only that, but I am surprised he should favor a lump sum to be allotted by the War Department, thus taking from this House the right of selecting the projects to be improved and to turn that legislative function over to the engineers.

We accepted the provisions of the bills of 1914 and 1915, not from choice, but because we were compelled to do so or have

no bill. As a matter of fact, a majority of this House at that time was opposed to any such legislation, and only voted for the Senate provision because of the absolute necessity for prosecuting the work of river and harbor improvement, even though the sum was not sufficient to carry on the work as it should have been done. In my judgment, a majority of the House is now opposed to such legislation, and very properly so. If the Members here are not competent to select the projects to be improved and to fix the amount to be appropriated to be expended upon each during the next fiscal year, they had better resign and go home and let others be sent here to take their places.

Now, Mr. Chairman, I am not at all frightened by the condition of the United States Treasury, because it is only temporary and not indicative of our financial strength. This country, the richest, the most powerful, the greatest in the world, is certainly able not only to provide for any reasonable increase in the strength of the Army and Navy demanded by the necessity for national preparedness, but to furnish at the same time the necessary money to carry on this great work of river and harbor development, together with such other works of internal improvement as may be needed.

More than 40 years ago France, after having gone through a disastrous war, which cost her a large portion of her territory and enormous sums of money, including a war indemnity of $1,000,000,000, entered upon one of the greatest systems of waterway development she had ever undertaken, a system of improvements that has cost her almost one-half of what this country has expended on rivers and harbors during its entire history. If, then, France in the hour of her adversity and in the face of those great expenditures, could find the money to undertake and carry on works of improvement of such magnitude, how much more easily can this great country, with its wonderful resources, with more than twice the population, with more than fourteen times the continental area, and more than three times the national wealth of France, find money enough to carry on these great works of internal improvement and, at the same time, make every reasonable preparation for the defense of the country. [Applause.] It is idle to assume that we can not.

Why, Mr. Chairman, the wealth of this country exceeds that of Great Britain and Ireland, France, and Russia by more than $12,000,000,000, while the great resources of the American national banks exceed by $3,000,000,000 the aggregate resources of the banks of England, France, and Russia, the Reichsbank of Germany, the Bank of the Netherlands, the Swiss National Bank, and the Bank of Japan. This bill carries a little less than $40,000,000, about one twenty-fifth of what would be the normal Government expenditure for the coming fiscal year; but, of course, this amount will perhaps be increased quite largely by reason of the proposed enlargement of the Army and the Navy. Supposing $150,000,000 are thus added, then the amount for rivers and harbors for the same period will be about one-thirtieth of the whole outlay for all governmental purposes. This, however, is a small sum as compared even with the aggregate cost of the Army and Navy, pensions, and fortifications, and is an infinitesimally small amount when compared with the enormous wealth and wonderful resources of our country. Assuredly, out of the abundance of this great wealth we can find the comparatively small sum necessary to keep our river and harbor work going on until it is all completed. The growing commerce of the country requires it and the people demand it.

He makes an egregious mistake who thinks the people are not behind the agitation for the continued improvement of our rivers and harbors. The action of this House whenever one of these bills has come before it demonstrates that fact, and the Members who vote for it by such overwhelming majorities are, in doing so, but voicing the sentiments of their constituents.

And why do the people want these improvements? Not simply for the purpose of having money expended in their respective communities. They can only be benefited by the use of the improved waterways for the purposes of commerce and navigation, and the very fact that they ask for these improvements shows that they believe they would derive a benefit therefrom commensurate with the outlay. The critics, however, of this class of work say the people are deceived, or do not know what they want. But, being on the ground and familiar with the resources and the necessities of the locality, are they not more likely to be right than one coming from some section of the country remote from that where the improvement is demanded, as is the case with most of those who condemn river and harbor legislation? In fact, most of them either reside in localities where no navigable waterways exist or where that class of work has been practically completed. But in either case they are usually unacquainted with the localities and the necessities of the people in which the work they criticize is to be carried on.

If those who condemn legislation of this kind so unsparingly would visit the sections of our country where this work is required and witness the development going on in those regions they would change their views quite radically, or at least would become more tolerant of the efforts of those who believe in and are urging that class of improvement.

Mr. Chairman, I regret exceedingly the efforts being made either to kill this bill outright or to make it of as little use as possible by reducing the amount carried to a point that would make it of little value.

There is no justification for these efforts no matter what the motive behind them. This bill can not be wholly without merit, even assuming, which I do not admit, that some of it is bad. Aside from one or two who are seemingly opposed to all river improvement, and the wild and loose language used by a few others, only a few items have actually been subjected to criticism, and these the House has had the opportunity of eliminating, but without doing so. Each motion to that end has been voted down overwhelmingly and the committee's action sustained.

The trouble is that few Members have the time, or, at least, do not take the time to go over and study the reports upon projects for which appropriations are made so as to be able to judge each for himself as to the merits or demerits of a given proposition. Members are too prone to give heed to the loose language of some one who, though no doubt honest in his views, has also gained his information secondhand, or has merely made a superficial study of the items he would criticize. One Member, for instance, states that some river, without mentioning it, requires to be dredged 8 or 10 feet before water is reached. Another, that millions are wasted on shallow creeks with scarcely any commerce to show for these vast expenditures. Now, neither of these statements is correct. Nor do they even approximate correctness. There can be no such items found in any of the projects now on the books or in this bill, and the streams called "creeks," for which appropriations are made, are the most useful from the standpoint of tonnage and the value of the commerce accommodated by them, while the cost is relatively insignificant. There are, for instance, 16 so-called creeks appropriated for in this bill, costing to date $1,023,044, with appropriations in the pending measure aggregating $375,785, but accommodating a commerce of 5,189,912 tons, valued at $183,034,500. The total number of creeks treated to date by the Federal Government are 34 in all, costing only $2,141,820, but which accommodate a freight tonnage of 6,430,969, valued at $196,531,247.

Now, the consideration of these figures, if you can induce a critic to consider them, would dispel the illusion under which some gentlemen here and elsewhere are laboring. Certainly, a system of waterways, whether called creeks or sloughs, costing so little to improve, but of such great value to the commerce of the country, should not be used as illustrations to condemn a measure like this. But such is the case, nevertheless, and the future perhaps will show no improvement in that regard.

Mr. Chairman, it is a little early to discuss the proposed motion to recommit, but I do hope that when the House comes to act upon it the motion will be voted down, for if it should not be defeated we need not bring another river and harbor bill before this House. Two emasculated lump-sum bills have recently come back to us from the Senate, and the House has reluctantly accepted them, because a majority of the Members did not want to see the work on our rivers and harbors stop, but I think the limit of patience on the part of the people has about been reached. And if this amendment is adopted, I fear that the only thing Members here would feel encouraged to do hereafter would be to let some committee—that of the Appropriations, for instance—bring in a bill with a lump sum of a few millions for the engineers to allot as they may see fit. This might suit a few of the Members here, but not many, I hope and believe; at least I for one am opposed to such methods—not that I fear the engineers, but such a system would be un-American and partially at least an abandonment of our legislative functions.

Now, Mr. Chairman, to reduce the amount carried in the bill would result in great loss to the Government—a loss the magnitude of which would increase almost geometrically with the extent of the reduction. When the bill of 1914, with a lump sum of $20,000,000, was enacted early in October of that year, there was a large balance on hand, but even then a loss of nearly a million dollars resulted. Now, there is only a very small balance on hand at this time, and even this will perhaps be exhausted by the end of this fiscal year. If, therefore, a reduction should be

made, such as is suggested in the motion just read, the loss would be many times larger than that which resulted from the bill of 1914. Are gentlemen ready to assume any such responsibility? I trust not. [Applause.]

Mr. MANN. Mr. Chairman, I am not averse to river and harbor improvements or other internal improvements. The committee has brought in a bill covering a large number of individual items amounting to an appropriation in the neighborhood of $40,000,000. A motion to recommit will provide for striking out section 1, covering the individual items and proposing to appropriate $20,000,000 to be expended practically at the discretion of the Corps of Engineers. It seems to me that $20,000,000 at this time is a sufficient appropriation for us to make. Twenty million dollars is much more than the average appropriations which have been made, even in recent years, if we go back a few years. Twenty million dollars will take care of the active work that is going on so that the force will not become disorganized or disintegrated. Twenty million dollars will advance the river and harbor work. You can not finish all the river and harbor improvements to-morrow at best. If we appropriate the entire sum provided, and double it up, the work will not be completed when that sum has been expended. And just now, owing to conditions unnecessary to relate, we are a little short of revenue and have a great demand in addition to the ordinary expenditures. We might properly say that we do not endeavor to complete everything at once, but we will keep our force organized, we will keep the work going on, but we will not try to do it all in a year's time.

Twenty million dollars is no small sum. It is quite a bunch of money itself. I think we can afford to say to the country that we have taken fair care of the river and harbor improvements, we have provided $20,000,000, and in view of the condition of the Treasury we have not tried to spend all of our money which we will need for other purposes.

I hope that the substitute proposed in the motion to recommit may meet with approval on both sides of the House. We might as well do it now in the House as to do it when it comes back from the Senate, as we have done for two years in succession—abdicate and practically abandon our province of appropriation and yield to the Senate, because they were right.

Mr. LONGWORTH. Will the gentleman yield?

Mr. MANN. Yes.

Mr. LONGWORTH. Does the gentleman recall the amount of the bill last year as it came from the Senate?

Mr. MANN. Twenty million dollars.

Mr. SPARKMAN. Twenty-five million dollars in cash, and the authority to the engineers to use $5,000,000 more.

Mr. MANN. It was $20,000,000 the year before that.

Mr. FESS. Will the gentleman yield?

Mr. MANN. Yes.

Mr. FESS. The gentleman has no doubt that the force will not be disorganized under this proposed appropriation?

Mr. MANN. The force will not be disorganized.

The CHAIRMAN. There were one or two paragraphs passed over by unanimous consent, and the Chair assumes that the committee would like to consider those now.

Mr. GOOD. Mr. Chairman, on line 17, page 12, I offered an amendment as a new paragraph, with the understanding that it was to be offered at some place in the bill that would be appropriate.

The CHAIRMAN. There is a provision in the bill passed over earlier than that that the gentleman refers to. His amendment will be considered when reached. Under the order of the committee the committee will return to page 7, line 9.

Mr. GOOD. Mr. Chairman, I had not concluded my parliamentary inquiry. I desire to offer this amendment at the close of the bill.

The CHAIRMAN. The gentleman will be given an opportunity to offer his amendment at the close of the bill. The gentleman from Florida [Mr. SPARKMAN] offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, page 7, after line 9, by inserting the following:

"That Alba B. Johnson and Samuel M. Vauclain and the Baldwin Locomotive Works, abutting property owners upon Crum River, where the same empties into the Delaware River, be, and they are hereby, authorized to change and divert the present course and channel of Crum River and to straighten same, under the direction and supervision of the Secretary of War, from the right of way of the Philadelphia & Reading Railway Co. to the low-water line in the Delaware River, and that the said river shall be of the width of not less than 100 feet at mean low water; and that hereafter the said Crum River, as so straightened, shall be a public navigable stream, and the present course and channel of the said river from the right of way of the Philadelphia & Reading Railway Co. to the low-water line in the Delaware River shall be abandoned and vacated when the above-mentioned new channel shall have been completed to a depth of 4 feet at mean low water, with a bottom width of 62 feet, and with a width of 100 feet at mean low-water level, and the Government shall have acquired such right, title, and interest in and to the bed of said new channel as will assure the public the right to the perpetual use of said channel for all the purposes of navigation and commerce."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida.

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The Chair suggests that the next point for consideration in the bill is on page 12, at line 17.

Mr. HUMPHREYS of Mississippi rose.

The CHAIRMAN. For what purpose does the gentleman rise?

Mr. HUMPHREYS of Mississippi. Mr. Chairman, I ask unanimous consent to address the committee for five minutes.

The CHAIRMAN. If the gentleman will permit us to finish the bill first, the Chair will entertain his request later.

Mr. HUMPHREYS of Mississippi. I thought the bill had been concluded.

The CHAIRMAN. Does the gentleman from Iowa desire now to offer his amendment?

Mr. GOOD. Mr. Chairman, there are two amendments pending, and I wish to offer another amendment, which is general in nature, which applies to all of the bill, at the end of the bill.

Mr. SWITZER. Mr. Chairman——

The CHAIRMAN. For what purpose does the gentleman rise?

Mr. SWITZER. I would like to be recognized to speak in opposition to the proposed motion to recommit.

The CHAIRMAN. The motion to recommit is not before the committee.

Mr. MANN. Mr. Chairman, I ask unanimous consent that the gentleman from Iowa [Mr. GOOD] be permitted to withdraw his two amendments pending and offer an amendment, which is of similar import, as a general amendment, as section 5 of the bill.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the gentleman from Iowa may withdraw his two amendments now pending and offer in lieu thereof a new section, section 5, of similar import. Is there objection?

Mr. MOORE of Pennsylvania. Mr. Chairman, reserving the right to object, those amendments were passed, were they not? They are not pending.

Mr. MANN. They are pending. I am not speaking of the amendments which were passed.

Mr. MOORE of Pennsylvania. Very well.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none, and the Clerk will report the amendment.

The Clerk read as follows:

Amend, on page 42, by inserting at the end of section 4 a new section, as follows:

"SEC. 5. That no part of the funds herein appropriated shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of doing the work by Government plants."

Mr. SPARKMAN. Mr. Chairman, since the gentleman from Iowa offered his amendment the other day, I have received a letter from the Chief of Engineers——

The CHAIRMAN. Does the gentleman from Iowa desire recognition at this time?

Mr. GOOD. Mr. Chairman, I am perfectly willing that the gentleman from Florida should proceed.

Mr. SPARKMAN. Mr. Chairman, I was going to suggest that I have a letter which I have received from the Chief of Engineers since the gentleman from Iowa offered his amendment the other day, and I ask unanimous consent that it now be read from the desk for the information of the House.

The CHAIRMAN. Without objection, the Clerk will read.

There was no objection.

The Clerk read as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, April 10, 1916.

Hon. S. M. SPARKMAN,
Chairman Committee on Rivers and Harbors,
House of Representatives.

SIR: 1. This is submitted in reply to your verbal request that I submit a statement of my views as to what will be the effect upon river and harbor works if an amendment should become a law, which has been proposed to the pending river and harbor bill, and which reads:

"That no part of the funds herein appropriated shall be used for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of doing the work by Government plant."

2. I beg to say that the question is a very complicated one and, with such consideration as I have been able to give to it, I am unable to advise you what the effect of the proposed provision would be, other than that it is certain to raise many questions which will be difficult to solve and to cause serious delay to the works.

3. The operation of Government plants for carrying on a portion of the river and harbor work has had a very beneficial effect in regulating contract prices; and, conversely, contractors working alongside of Government plants have had a beneficial effect upon the operation of these plants, in inducing a spirit of competition which it would be difficult to instill if Government plants alone were used. In many cases the

character of work is such that it can only be done advantageously by Government plant, and for those cases the practice of the Engineer Department has been always to provide sufficient plant. In general it may be said that the practice of the Engineer Department has been to provide as much Government plant for each district as was considered economical and as could be operated without so interfering with private contract work as to have a tendency to drive private contractors out of business.

4. The use of Government plant is economical only when the work is of exceptional character, which requires that a special plant be provided therefor of a kind that is not used by contractors generally, or where the work is of a nature which permits of the regular operation of the plant for a sufficient length of time to allow of the absorption of the first cost of the plant without unduly raising the unit price. An example of a special plant may be seen in snag boats. Snagging work, practically without exception, is done by Government plant. Work of this kind requires special plant, and it is difficult to estimate or specify with certainty what or how many snags must be removed. Experience demonstrates that the cost of a certain type of plant will be a given amount per month, and in that time, on the average, a certain amount of work will be done. From this can be deduced the average cost of snagging per mile of river under the conditions existing upon any particular stream, but conditions may so vary in different sections of the streams that the cost of clearing one mile may be many times that of clearing another mile, and under these circumstances it would be practically impossible for a contractor to eliminate enough doubts as to the work required to permit him to submit a reasonable bid. The only thing that he could safely do would be to make an estimate high enough to cover the worst possible conditions.

5. While contract prices on any particular improvement may be higher than the cost of doing a portion of the work by Government plant, it does not necessarily mean that that work could be carried on entirely by Government plant at reasonable speed at a less price than it could be done by contract, or that the contractors are making excessive profits. At the present time it is believed that contracts are let a prices which are as low as will permit the contractors to maintain their plant and make any profit whatever. This is due partly to the regulating effect which has been caused by Government plant and partly to the small amount of Government work which has been available for contractors in the past few years.

6. Contractors have many expenses which the Government does not have. For instance, whenever proposals are opened, there are usually several bidders. Only one gets the contract. The expenses which the others have undergone in making their investigations and in the preparation of the bids is an expense which must be considered by them and charged up against some other work if they are to maintain their establishments. Each bidder must take into consideration the cost of getting his plant on the work and getting it from the work to the place where it is regularly kept, or to some other contract job. The cost of the transfer of plant includes not only the cost of towage, but the cost of marine insurance, an item which the Government does not have to consider in its work. Also, in figuring the price to the contractor, the interest on the cost of the plant, its depreciation, and cost of maintenance while not employed, marine insurance, employer's liability, etc., must all be considered.

7. If a small amount of Government plant, such as can be continuously and hence economically operated, is provided, it may take years to finish a work which could be completed by contract very rapidly. Take as an example the inland waterway from Norfolk to Beaufort. Without increasing the Government plant which is now in use on that waterway, it would probably take 15 years to complete the improvement without provision for maintenance, and if an attempt be made to maintain it as well, the canal probably never could be finished, as the present plant will be fully occupied in maintenance work as the canal approaches completion. If it is partly done by contract, it could be completed in four years or less. To complete it in a reasonable time with Government plant would involve at least three times the plant which is now employed. The cost of this plant would be large, and there would be a long delay in procuring it, probably at least two years, unless second-hand plant be purchased. When the work is completed, there would be little or no use for the greater part of this plant on that improvement. If no additional work for this plant could be found, the cost of its maintenance would be a constant heavy charge against the improvement, or else it must be disposed of, and under the circumstances it would be of little, if any, value, and would probably be only worth the price of so much junk. It is doubtful if work for such plant could be found on other improvements, as it is assumed that, in order to complete other improvements, it would be necessary to have provided all of the plants required, and there would then be no further use for the plant which had been provided for the particular improvement mentioned. Therefore in order to obtain a comparison of the cost of doing the work by Government plant and contract it would be necessary to charge to the work the entire cost of all the new plant to be provided.

8. If the policy of doing all Government work by Government plant is to be followed, it is believed that the most economical and advantageous way of doing the work would be to provide a plant, not for each particular work but to provide a large plant which would be available to all Government work, this plant to be distributed as the needs of the various works demanded, even though the Government would then become involved in some of the expenses which are now borne by contractors, which, with the relatively small amount of plant now used, are not necessary. This would involve a very large initial expenditure and the organization of a large special force of employees to care for the maintenance and distribution of this plant as needed. The overhead charges for supervision of such a plant would be large, since the special organization would have to be maintained whether the plant be idle or at work. This organization at the present time is replaced by independent contractors, who, when not engaged on Government work, obtain much work from private parties. Being engaged upon both public and private work a large portion of the overhead charges for a contractor's plant is derived from private sources.

9. It is hoped that after consideration this amendment will be dropped out on its merits. Should it be deemed necessary to consider it more fully, it is suggested that instead of the amendment proposed provision be made for such a study of the problem as will enable Congress to have some data upon which to base action, and with this end in view I would suggest that instead of the proposed amendment an amendment along the following lines be substituted therefor:

That the Chief of Engineers shall at the next session of Congress report the amount and cost of the plant required for carrying on all river and harbor improvements by Government plant, and the rate at which the plant proposed would enable the work to be done.

Very respectfully,

W. M. BLACK,
Chief of Engineers, United States Army.

Mr. SPARKMAN. Mr. Chairman, I would like to see now if we can not agree as to the time necessary to discuss this item. I do not suppose much time will be required.

Mr. GOOD. I think we ought to conclude on this side in 20 minutes or half an hour.

Mr. SPARKMAN. Suppose we make it 20 minutes on a side.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this amendment and all amendments thereto may end in 40 minutes, 20 minutes to be controlled by the gentleman from Iowa and 20 minutes by himself. Is there objection?

Mr. SWITZER. Mr. Chairman, reserving the right to object, I desire to have five minutes in which to oppose the amendment.

Mr. SPARKMAN. I think I can take care of the gentleman.

Mr. HULBERT. Mr. Chairman, reserving the right to object, I desire to have five minutes.

Mr. HUMPHREYS of Mississippi. Will the debate be confined to this particular amendment, or to the motion to recommit?

Mr. SPARKMAN. On this amendment.

Mr. HUMPHREYS of Mississippi. I would like to have five minutes at least in which to discuss the motion to recommit.

Mr. SPARKMAN. That will come up later.

Mr. BARNHART. I would like to have five minutes.

Mr. MANN. I suggest that the gentleman from Florida make it 30 minutes on a side.

Mr. SPARKMAN. Then, Mr. Chairman, I will amend my request by making it one hour.

The CHAIRMAN. The gentleman modifies his request and asks unanimous consent that debate be limited to one hour, 30 minutes on a side. Is there objection?

There was no objection.

Mr. GOOD. Mr. Chairman, the long letter which was read from the Clerk's desk might have been made a very brief letter, and the whole story told, if Gen. Black had stopped with the following sentence:

> At the present time it is believed that contracts are let at prices which are as low as will permit the contractors to maintain their plants and make any profit whatever.

That is the meat in the coconut, as viewed from the standpoint of the engineers. What are the facts? Take the one case of the inland waterways. The cost to the Government to do this work at the Government plant is 4.3 cents per cubic yard, place measurement, but by far the larger part of the work is done by contract where it costs more than 7.5 cents per cubic yard, place measurement. Gen. Black says that that represents only a reasonable profit, yet it is almost 100 per cent more than the cost of doing the work by the Government plant. Is that what he calls reasonable profit? Every man who has studied this question knows that Government costs are nearly if not always more than private costs in the production of a given article. The amendment which will be offered as a substitute provides for an investigation to find out what the plants will cost to do the work by the Government. I am not asking that the Government go into this work. I do not believe that is necessary. I am only asking that the profits be reduced to about 40 per cent basis on actual cost. We know that these private contractors are in a combination to fix prices and divide the contracts. Who are the members of this association that meet and pass resolutions? They are the Dredge Owners' Protective Organization, with headquarters over here in Baltimore. Let us see what they do, and let us see whether or not you on that side can afford to throw open a bill carrying $40,000,000 for the unreasonable greed for gain of this kind of an organization.

Here is what they said:

> During the past year your board have especially taken up for consideration the question of its department for fixing prices on work and the allotment of work through the commissioners of that department, and have carefully studied the problems which present themselves in connection with that line of work.
>
> Starting, as it did, in the desire to combine against outsiders, it has ended in combining against itself; and instead of its members standing together to promote the business of dredging in all its general and important details, as above mentioned, we behold a spectacle of members quarreling one with another over the division of work.

Gen. Black says there is competition. They say there is no competition, but that in their dredgers' association they are quarreling over a division of the work—over a division of the spoils. They say in their annual convention by their resolutions that they want a pool established; that they want to quit

quarreling among themselves; that they want to promote river and harbor improvements, and to divide the contracts and fix the price. I can not take the time to read their resolutions, but that is their purport.

My amendment is aimed at putting a stop to that kind of vicious practice. Now, what do we start with? We start with the cost to the Government for doing the work by a Government plant. The Army engineers can estimate what it is going to cost the Government to do any work appropriated for in the bill with the Government plants. And every Government official and every Member of Congress who has investigated that question will tell you when it comes to the question of costs it costs the Government more than a private concern.

Now, we start with the cost. Here is the way it would be applied. Take the inland waterways for example. My proposition provides that if it would cost the Government $1,000,000 to do that work they could not pay to a private concern more than $1,250,000. Is not that profit enough? And then you add to that profit the difference the private manufacturer makes over the high cost to do the work by the Government. Hence, you will be giving the private contractor more than 35 per cent profit.

This is not the only bill that you gentlemen on that side of the House are going to vote for which will contain this provision. Here is the report made by the gentleman from Kentucky [Mr. SHERLEY] from the Committee on Appropriations reporting out the fortifications bill. Section 4 of that bill is as follows:

That except as expressly otherwise authorized herein no part of the sums appropriated by this act shall be expended in the purchase from private manufacturers of any material at a price in excess of 25 per cent more than the cost of manufacturing such material by the Government, or where such material is not or has not been manufactured by the Government at a price in excess of 25 per cent more than the estimated cost of manufacture by the Government.

My amendment follows that provision. I have been liberal. I did not provide in the amendment that where the Government had a plant it should not pay more than 25 per cent in excess of the cost to do the work by Government plant, but we provided it should not pay more in any case than the estimated cost to do the work. You are going to vote for that proposition.

Mr. MANN. If the gentleman's amendment goes in, it will be construed, I take it, by the same department of the Government as the amendment in the fortification bill?

Mr. GOOD. Absolutely. It goes to the War Department, and if we are going to put a limit on the small manufacturers, more than 700 of them in the United States manufacturing to-day some parts of munitions of war, I say to you we can not refrain from putting a limit on this secret organization that in its secret convention passes a resolution declaring that they must have a pool; that they must quit quarreling among themselves; that they must divide the contracts; that they must have a pool to fix the price.

Mr. SWITZER. Will the gentleman yield?

The CHAIRMAN. Will the gentleman from Iowa yield to the gentleman from Ohio?

Mr. GOOD. For a question only.

Mr. SWITZER. Does your amendment mean 25 per cent in excess of the estimated price at the time the project is adopted?

Mr. GOOD. The estimated cost to do the work at the time the contract is let. It could have no other construction, it seems to me. That will be the only reasonable way to construe it. But the War Department will make the estimate, the same department that will make the estimate for manufacturing munitions of war. If you turn down this amendment, you say to the dredge owners' organization that the members of that organization may go on with contracts for the Norfolk & Beaufort Canal and other projects in this bill, aggregating $40,000,000, with no limit placed on their profits on such work; that we favor their combination; that we favor this trust; that we favor this secret organization, that can by the bill reach its hand into the Public Treasury and extract therefrom many millions of dollars in excess of a reasonable price for doing Government work.

Mr. CRISP. Will the gentleman yield?

Mr. GOOD. I yield.

Mr. CRISP. Will the gentleman kindly state what provision of the bill his amendment applies to? Does it only apply where the Government has a plant?

Mr. GOOD. No; it would apply to all of the provisions carried in this bill.

Mr. CRISP. The small items in the bill, as well as the others?

Mr. GOOD. Yes; all the items in the bill.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. GOOD. For a question.

Mr. MOORE of Pennsylvania. Does the gentleman understand that his two amendments, one in respect to the Norfolk & Beaufort Canal and the other with respect to the Savannah Harbor, are eliminated?

Mr. GOOD. No; not at all. If this is adopted, it simply applies to all of the items in the bill on the same principle that we have applied to the inland waterways and Savannah Harbor.

Mr. MOORE of Pennsylvania. Does the gentleman remember the questions I put to the gentleman from Illinois [Mr. MANN] at the beginning of this bill?

Mr. GOOD. No; and I can not yield further.

Mr. MOORE of Pennsylvania. I want to know if he holds to his amendment to the Savannah Harbor item?

Mr. GOOD. I hold to both the amendments. I could not do otherwise. I could not take them out, even if I desired.

Mr. MOORE of Pennsylvania. If this general amendment is defeated, then the gentleman will insist on the two amendments we passed?

Mr. GOOD. Certainly.

Mr. MOORE of Pennsylvania. Then there was a misunderstanding.

Mr. GOOD. Mr. Chairman, how much time have I consumed?

The CHAIRMAN. Twelve minutes.

Mr. GOOD. I reserve the balance of my time.

The CHAIRMAN. The gentleman from Iowa reserves the balance of his time. The gentleman from Florida [Mr. SPARKMAN] is recognized for 30 minutes.

Mr. SPARKMAN. Mr. Chairman, I yield five minutes to the gentleman from Ohio [Mr. SWITZER].

Mr. SWITZER. Mr. Chairman, the proposition that has been discussed by the gentleman from Iowa [Mr. GOOD], who has just taken his seat, is exclusively an engineering one. It is very intricate. There is something involved in all of these projects throughout the entire country with which no doubt many or all Members on the floor of this House are wholly unacquainted. You have heard the statement of the Chief of Engineers, I believe. He says that it is not a workable proposition. So far as the Ohio River is concerned, I honestly believe, although I have no engineering knowledge, that the effect of adopting this provision will be to hold up the work on that river that is proposed to be done by the $5,000,000 appropriation to be carried on this bill for at least two years.

There are many things that this committee has not taken into consideration. Recollect that the contractor who puts a dam and a lock across the Ohio River has put from $100,000 to $200,000 into equipment. When he starts in to construct that dam, on account of frequent rises in the river his plant may be washed out and flooded, and weeks and weeks are consumed in pumping out the water. If the contractor has two or three good years he gets through with the work and makes some profit. If there are two or three years of high water he frequently goes into the hands of a receiver. Recollect that the elements of chance against him there are great.

Now, if you drive the engineers into a situation where they can not make an estimate but what some man can come on the floor of the House, if they make a liberal estimate, and criticize them, the effect will be that no contract will be let; and in the $5,000,000 project for the Ohio River in this bill, in order to start three or four locks and dams in the river, at least $1,000,000 will have to be invested in equipment. Recollect 15 dams are already constructed and 20 are in process of construction; and, when the few remaining dams are completed, what will become of this equipment? There will be nothing saved. Most of the equipment will practically have to be sold as junk.

Mr. GOOD. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. SWITZER. Yes.

Mr. GOOD. The same provision will apply to the procurement of all ammunition and supplies for the Army when we are just entering upon a big program for preparedness.

Mr. SWITZER. Mr. Chairman, the gentleman's illustration does not apply to the Ohio River. Read this report. The gentleman has some knowledge himself of these propositions, by which he undertakes to make comparisons, but, of course, in the main he relies upon the War Department. But it is upon things that you can easily estimate. Those plants are in operation in the country. You know what can be done. But when you go to a great river and start to go down into the bed of that stream you do not know when the rises are coming; you have an element to contend with that is wholly absent from the things and matters with which the gentleman compares it.

So far as making a profit down here on this Beaufort Canal is concerned, the gentleman says there is no competition. Why, there were three private contracts there last year. One was at 9.48 cents per cubic yard. Another was 6.9 cents per cubic yard,

and another was 5.9 cents per cubic yard. There must have been competition. Recollect, the composition of the soil and the material to be removed may differ in different parts of this canal. Also bear in mind that the dredging equipment necessary on these private contracts costs that contractor at least two or three hundred thousand dollars. He has to take that equipment to the work. There is a deterioration. His money is invested. If he has no contracts for a few months afterwards, his overhead charges go on. He has to remove his plant to some place else or sell it as second-hand or worn-out equipment.

Now, I am also informed by the same authority whence the letter came that it is not desirable, in the view of the engineers, for the Government to invest too many millions of dollars more in dredges and additional equipment of this kind. I think that the amendment that is suggested is the one that should be accepted. There should be some investigation made by these engineers who know about the proposition. I do not know about it, except as to the elements and conditions along the Ohio River. But there ought to be some investigation and some report made here for this body to consider before there is undertaken to be tacked onto this bill an amendment that may strangle for the next two years a great project like that on the Ohio River. [Applause.]

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. GOOD. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. MADDEN].

The CHAIRMAN. The gentleman from Illinois is recognized for five minutes.

Mr. MADDEN. Mr. Chairman, there ought not to be much trouble about understanding the importance of the adoption of this amendment. It is a simple business proposition, and the House ought to be in that frame of mind that would enable it to deal in a business way with a business question. Local conditions and local interests ought to be brushed aside, and the great general question given serious consideration. It is said to cost now 4.3 cents a cubic yard for the excavation of the material from the prism of the Beaufort Canal. Add to that the overhead charges, and you probably have about 5 cents a cubic yard as the cost to the Government for the work. Adopt the amendment suggested by the gentleman from Iowa [Mr. GOOD] and refuse to let contracts where the cost will be in excess of 25 per cent above the estimated cost to the Government, and the chances are that we would have contracts let for this class of work at about 6¼ cents a cubic yard. Six and a quarter cents a cubic yard for the excavation of material, such as is required to be excavated from the Beaufort Canal, would probably yield the contractor about 35 per cent profit; and no one will deny that 35 per cent is at least a reasonable profit. Why do I say 35 per cent? Because everybody knows that it will be less expensive for the contractor to do the excavating than it is to the Government.

Will this amendment embarrass any project? I apprehend not. If the conditions are such that the application of this amendment will be embarrassing, there can be some other remedy found; but in every case where it is possible to apply the provisions of this amendment, it is our duty to apply them. If we speak for the American people and speak justly in their behalf we can not fail to adopt this amendment, for it is a simple business proposition that every man in this House would apply, if he was applying it to his own business. And the conduct of the Government of the United States should be considered as our own business, because we are here speaking for 100,000,000 American people, every one of whom is a stockholder in this great business corporation of which we are directors.

If we fail to adopt protective measures when we enact appropriation bills, if we fail to conserve the moneys which we appropriate, by refusing to adopt amendments which will enable the Government to do the work at a reasonable cost, we have not spoken as true representatives of the stockholders in the great corporation of which we stand here as directors.

The CHAIRMAN. The gentleman's time has expired.

Mr. SPARKMAN. I yield five minutes to the gentleman from Pennsylvania [Mr. COSTELLO].

Mr. COSTELLO. Mr. Chairman, I am opposed to the amendment offered by the gentleman from Iowa [Mr. GOOD], because I believe it impracticable and another way of restricting, if not defeating, the purpose of the bill. Conversing with the gentleman from Illinois [Mr. MADDEN] on these amendments as to its impracticability, he stated that he had been in the contracting business for many years.

Mr. MADDEN. But never took any Government work.

Mr. COSTELLO. Well, the same rule will apply as to a fair profit, you will admit, whether it is Government work or private work. There are no two projects in this river and harbor bill that are alike.

Mr. MADDEN. That is true.

Mr. COSTELLO. Therefore why not establish a rule that we may say that they, the contractors, should be satisfied with less than 25 per cent. For my part I do not believe there is any dredging company or others employed in this character of work that make 25 per cent. My friend from Iowa [Mr. GOOD] cited the case of the Beaufort Canal, wherein the contractor received an amount for the work performed by him which was about double the cost of work performed by the Government plant on this same canal. I remember when the engineer appeared before the committee on this project. He was questioned as to this particular case. I have endeavored to find the statement he made about this matter, but have been unable to do so. My recollection is that when the question was asked the engineer to explain the difference between the cost of work performed by the Government plant and that performed by the private contractor he stated that the contractor's work required the removal of sunken obstructions, old piling or revetment, or some work of that kind, which added to the cost of the work performed by the contractor.

Now, as to the comparison which the gentleman made as to the reason for the adoption of his amendment concerning work in munition plants. The Government plants making munitions is probably one of the best investments which the Government has made, because we are able by them to establish a standard of workmanship for the private contractor to comply with. It also establishes the cost by which we are able to judge whether the contractors make a fair or unfair profit. But in munition manufacturing, by a system of jigs and gauges and special machinery, the work goes on day by day making the same articles as nearly alike as is possible for any two things to be made. That is why we are able to say to the contractor who bids for Government work of this kind: "You shall not make more than 20 per cent." The difference in the propositions contained in the rivers and harbors bill, where there are probably no two alike, and where probably one-third are not capable of estimate, many of them, no doubt, are done on a basis of cost plus a certain per cent or on a per diem basis. How can we regulate the cost of work of that kind? If we start out with the presumption that our engineers are not fair with the Government, and if they are not fair, how are we going to stop them from estimating so that the contractor will not make 50 per cent? And how are we going to stop the contractors from combining with an amendment of this kind? This looks to me like an amendment to encourage a combination of contractors to enable them to make a profit of 25 per cent.

Mr. GOOD. I yield five minutes to the gentleman from Indiana [Mr. CULLOP].

Mr. CULLOP. Mr. Chairman, this amendment, as I understand it, is a limitation on the expenditure to private contractors, limiting the amount to 25 per cent above the estimate of what the Government could do the work for. Here is a latitude of 25 per cent between the private contractor and the Government in the construction of the work on rivers and harbors. Now, 25 per cent on any work, in any business, is a handsome profit, much larger than is usual, and larger than capital expects as an ordinary rule. If the legitimate business of this country could clear 25 per cent on its capital invested it would be an enormously profitable venture and would create great activity in business affairs. As a rule, it is content with much less. The purpose of this amendment is to prevent the dredging association from pooling the interests in bidding on public work and fixing a price to suit itself. Now, here is what the association says in its circular on this matter:

> The association should, on the other hand, favor the creation of pools in each district formed upon the lines of other successful business arrangements of like character.
>
> The association as a whole will then confine itself to legitimate business of acquiring work and promoting the resources of members for doing work, leaving to the separate pools the business of dividing up that work at good prices.

This is a splendid arrangement proposed by this association to control the price in the letting of public work. Pool the interests of all, determine in advance who should have the job, and arrange the bids accordingly. There would under such an arrangement be no opportunity for competition. The dredging association would profit and the public would suffer. Now, by the adoption of the amendment offered by the gentleman from Iowa [Mr. GOOD] this feature of contracting for the public work would be regulated and the public protected; not as much, however, as I would prefer, because I think a margin of 25 per cent profit is too large; it is much larger than usually made in legitimate business. The amendment is surely a step in the right

direction, because from a reading of the circular of the dredging association it is clear what its purpose is; it is clear its object is to pool the interests of all its members so it can fix the price to be paid for all work let to private contractors. By so doing it will avoid competition in bidding and regulate the price to suit its selfish desires. No other construction can be given the language and no other motive could be attributed to it. It clearly states the purpose. Under such circumstances the public is at the mercy of the association, and hence the public interests would necessarily suffer. The Government in making the estimates for which it could do the work necessarily would take into consideration every element of cost which could enter into it, and hence the interests of the private contractor would in no wise be endangered and the public would be protected. It is a fair and just proposition to the private contractors. In fact, a most liberal one. It is a worthy regulation.

This bill, if passed, carries for all the projects embraced in it appropriations aggregating $40,000,000. Now, if all this work was let to private contractors, the limitations placed on it by this amendment would make it possible for private contractors to get for work $40,000,000 which could be done by the Government for $30,000,000. This ought to be satisfactory, even to avaricious demands of this dredging association. Remember this is for, and will be expended during, the coming fiscal year if this bill becomes a law. Now, it would seem that this is liberal, and our river and harbor enthusiasts surely ought to accept it without much serious objection. It would appear reasonable that in order to carry out their plan they should want to have the work done as cheaply as possible in order to provoke as little objection as possible.

Now, I believe it is the common experience of all that private contractors do work at less cost than the Government does it. This, I think, as a general rule, is true, and why is the private contractor able to do so? The answer is, he is more economical in what he does, more diligent and industrious in order that his profits may be correspondingly increased. But if this amendment is rejected with this association pooling the interests of all its members, then the public is left without protection from its avaricious disposition to exploit the Public Treasury.

This is not the only bill proposing a limitation on the cost of public work done by private contractors. The fortifications bill, now pending on the calendar of the House for consideration, has incorporated in it a similar provision, which, in my judgment, is wise, for the protection of the rights of the public in the expenditure of their money. It is as follows:

SEC. 4. That except as expressly otherwise authorized herein no part of the sums appropriated by this act shall be expended in the purchase from private manufacturers of any material at a price in excess of 25 per cent more than the cost of manufacturing such material by the Government, or, where such material is not or has not been manufactured by the Government, at a price in excess of 25 per cent more than the estimated cost of manufacture by the Government.

Now, if the committee having the preparation of that important measure in charge deemed it advisable to incorporate such a provision for the protection of the public interest, why should the great River and Harbor Committee oppose the adoption of such a provision on the limitation of expenditures in this measure? It is not consistent procedure, in my judgment, on its part. Its adoption can do no harm, and will surely do much good. As the representatives of the people in both the levy of taxes and the expenditure of the same after they have been collected we should, in my judgment, make all reasonable safeguards for the protection of the public interests, and in so doing we will best promote the public welfare. [Applause.]

Mr. SPARKMAN. Mr. Chairman, I yield five minutes to the gentleman from North Carolina [Mr. SMALL].

Mr. SMALL. Mr. Chairman, after all, the criterion of successful work, whether it be public or private, depends upon the capacity and integrity of the men who perform it. I do not understand that any Member of the House will seriously question either the capacity or integrity of the Army engineers. I take it further that whatever statement may be made by the engineers regarding their experience in work is entitled to the confidence of the House.

Here is attempted to be set up a standard for the performance of certain public works by private contractors. If it is practical to set up that standard, and if as a result of setting it up economy will be effected, then it is a wise amendment and ought to be adopted; but if it is impracticable and not applicable to the public work in mind and economies will not be effected, then it ought not to be adopted.

Now, the Chief of Engineers says:

I beg to say that the question is a very complicated one, and with such consideration as I have been able to give to it, I am unable to advise you what the effect of the proposed provision would be other than that it is certain to raise many questions which will be difficult to solve and to cause serious delay to the work.

In a number of following paragraphs he endeavors to fortify that general statement he has made. If we give faith and credit to this expression of opinion upon the part of the Chief of Engineers, this is an unwise amendment. I can understand why a Member from the interior, who thinks his constituents are not interested in the river and harbor improvement, might favor it. I can understand how gentlemen who are seeking to get in the limelight by opposing river and harbor appropriations, if there are such, should favor this amendment. This amendment, in the opinion of the Chief of Engineers and of serious Members of the House who discussed it a few days ago, will militate against the administration of the river and harbor bill. If it will, it is an unwise amendment.

As the gentleman from Pennsylvania [Mr. COSTELLO] said, the difference between river and harbor improvements in the construction of fortifications with necessary munitions is that with fortifications materal to a certain extent is standardized, and the officials of the War Department may make specifications, but you can not standardize river and harbor work, because the work differs even in the same river and different parts of the same harbor. There are different kinds of work from snagging to excavation, and there are various kinds of excavation, and in attempting to fix the standard for the cost of this work by private contractors it is rendered impracticable simply by reason of the varying conditions in that class of work.

[The time of Mr. SMALL having expired, he was given two minutes more.]

Now, Mr. Chairman, I am sorry that just at this particular moment there is not a larger membership present, because this is a serious matter, and the amendment ought not to be adopted if it will injure the administration of the river and harbor improvement. The Chief of Engineers suggests, however—and as a whole it is a modest letter, recognizing fully the prerogative of the House in matters of legislation—that if the House should be in favor of experimenting with this idea to secure work by private contract that it might adopt some such amendment as this: "That the Chief of Engineers shall at the next session of Congress report the amount and cost of a plant required for carrying on river and harbor improvement by a Government plant, and the rate at which the plant proposed will enable the work to be done."

In a conference of several Members of the House who desire that this matter shall be decided wisely it is suggested that that amendment be considered by the committee as a substitute with this addition: "And he shall also report the advisability of establishing a standard for river and harbor improvement by private contract, and the relative cost of such work by Government plant and by private contract."

I shall at the proper time offer that as a substitute for the amendment offered by the gentleman from Iowa [Mr. GOOD]. That will give to the House at the next session full information upon which it can base its action intelligently with a view to the best and wisest course in harbor improvements. [Applause.]

Mr. GOOD. Mr. Chairman, I yield three minutes to the gentleman from Tennessee [Mr. SIMS].

Mr. SIMS. Mr. Chairman, I am in one way opposed to this amendment. Public work done for the benefit of the Government, paid for out of the taxpayers' pockets, should yield no profit to anyone. What does the taxpayer get back for the money that we are paying for these river and harbor improvements? Nothing, except in an indirect way. There should be no more profit accruing out of Government contracts for this work than out of the Postal Service. I do not know whether or not this is a wise amendment, but I know that it looks in the right direction. We do not levy and collect taxes simply in order that other people who pay but little, if any, taxes may reap enormous profits out of the expenditure of the money. Why should the county own its own road-building machinery? Why not let the work of improving your county roads out at private contracts? There is just as much reason and common sense in one as in the other. The county pays the taxes with which to build and maintain its own highways, and buy and own their own machinery, to the end that the taxes shall go as far as possible. River and harbor improvements are going to last as long as the country lasts. Why not encourage the Government investment in machinery and equipment for the purpose of doing river and harbor work? We are going to keep on digging canals and dredging rivers and swamps for the rest of time, which will be paid for out of the public taxes, and it is done in order that privately owned transportation facilities may make more money out of their business than they can now.

Reduce the grades on a railroad so that one engine will do twice as much as it did before the grade was reduced, and increased profits follow. When we deepen the channel of a river and enable people to use a larger and greater draft vessel with the same crew and equipment we have simply enabled the owners of such vessels to make more money at Government expense than they could otherwise have made. Let the Government do this work and let the people get the most for the money they have to pay.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. SPARKMAN rose.

Mr. SLAYDEN. Mr. Chairman, I would like to ask the gentleman from Florida [Mr. SPARKMAN], who has had long experience in these public works—and some of us have had experience and have had some observation with other classes of public works, notably the sort referred to by my friend from Tennessee [Mr. SIMS]—if he does not believe that if we can induce honest, competitive bidding, we can get public work of this kind done more cheaply than the Government itself can do it?

Mr. SPARKMAN. I would not like to say that it can be done by contract any more cheaply than the Government can do it, but I think the tendency is in the direction of having it done as cheaply. It is even now largely a question of competition between the bidders themselves and between them and the Government.

Mr. SLAYDEN. Is it not generally recognized, in fact has it not almost become a proverb, that such works done by the Government are more costly than when done privately by contract? A business man can conduct his business more cheaply than the Government, can build railroads and highways more cheaply.

Mr. SPARKMAN. That is true, I think, in many cases. Of course in some instances the Government does its work in the improvement of rivers and harbors more cheaply than it can be done by contract.

Mr. SLAYDEN. Mr. Chairman, it is not the question of whether they do it cheaply, but comparatively.

Mr. SPARKMAN. I have known of some cases where it was done more cheaply by private contract.

Mr. SLAYDEN. I think that is nearly always the case.

Mr. SPARKMAN. Mr. Chairman, as much as I sympathize with any and all efforts to reduce the cost of Government work, I really do not think this amendment ought to be adopted. We are too much in the dark, as was clearly shown by the reading of the letter from Gen. Black. Gen. Black made his statement as clear as it could be made. He is a man who has had a great deal of experience—more than 30 years of experience—in Government contracting and in doing river and harbor work with Government plants, and yet he is unable to say what the effect of this amendment would be, except that, in his judgment, it would not have a beneficial effect. I will tell you what, in my opinion, ought to be done, and I would vote for such a proposition. I would be willing to vote for the substitute suggested by Gen. Black with an addition such as shown me a while ago by the gentleman from North Carolina [Mr. SMALL], which would permit the engineers during the balance of this year to make an investigation and, having done so, to report to Congress what their opinion is as to what should be done in the matter of limiting the price of contract work. Then we will have something before us to go upon. We will have at least the opinion of the Engineer Department and the basis for that opinion, whatever it may be. We have not any such thing now, and we are traveling in the dark. I am not prepared to say that we have been paying more to contractors or are paying more now than we ought to pay. I know in days gone by we did, but the plants we have already constructed have had the effect of materially reducing the cost of that class of work, so that now the work is being done very cheaply.

Gen. Black calls attention to some of the elements that enter into the cost of doing such work by private contractors. One, for instance, is the cost of insurance, which is quite an item from which the Government is exempt, because it carries its own insurance and pays nothing to insurance companies to insure its plant. These private contractors not having unlimited means, as Uncle Sam practically has, so far as the work he undertakes to do is concerned, deem it wise to insure their plants, and that adds very materially to the cost and, of course, to the amount of a bid by one of them. Again, it would be very difficult under the amendment for the Government engineers to determine just what the cost is going to be in a given case, and, as Gen. Black says, it is going to interfere very materially with the engineers in their efforts to obtain contracts.

Mr. FESS. Mr. Chairman, before the gentleman takes his seat will he yield for a question?

Mr. SPARKMAN. For a question; yes.

Mr. FESS. I heard the letter read from Gen. Black, which rather impressed me. There is a general view that will spread over the country, if we refuse to accept the proposed amendment of the gentleman from Iowa [Mr. GOOD], which would make a differentiation of 25 per cent, that we are working in the interest of the private contractors.

And yet at the same time here we have an amendment suggested by Gen. Black which would certainly give an opportunity to make this investigation. I would vote for an amendment of that sort.

Mr. SPARKMAN. I think that ought to be adopted, or something like it.

Mr. GOOD. Will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. GOOD. I would suggest to the gentleman that, instead of offering it as a substitute, he offer it as an amendment to the amendment, so that during the current year they can not give the private contractors more than 25 per cent of the estimated cost of doing the work, and at the opening of another year we will have the information.

Mr. SPARKMAN. I want to reserve five minutes, Mr. Chairman, and I would like the Chair to inform me when I have consumed all but five minutes.

As I said a while ago, I sympathize with the gentleman in his efforts to reduce the cost of such work, and I will be glad to do anything I can in that direction, if I know just how to do it, but as yet I do not know just what to do; and I think some such provision as Gen. Black suggests ought to be adopted, so that we may have the opinions of the engineers on the subject after an investigation.

Mr. GOOD. If it was simply offered as an amendment to my amendment, would not that meet all the objections which the gentleman has to my amendment?

Mr. SPARKMAN. The trouble would be then, if there is any danger in what the gentleman is trying to do—I am not saying there is—the injury would be done before we would know whether we are right or wrong. It would be like hanging a fellow and trying him afterwards.

Mr. COOPER of Wisconsin. Will the gentleman yield?

Mr. SPARKMAN. I will.

Mr. COOPER of Wisconsin. On the 6th of this month—last Thursday—the gentleman from Iowa [Mr. GOOD] read what I thought amounted to an ironclad agreement of dredgers and a dredgers' association to hold up the Government and get the bids that they might make for Government work. Now, is there any such agreement as that made?

Mr. SPARKMAN. I do not know of any myself.

Mr. COOPER of Wisconsin. Have they denied it?

Mr. SPARKMAN. I do not know as to that. I could not say to my friend. I know nothing about it.

The CHAIRMAN. The gentleman from Florida [Mr. SPARKMAN] has five minutes remaining.

Mr. GOOD. I yield five minutes to the gentleman from Wisconsin [Mr. LENROOT].

Mr. LENROOT. Mr. Chairman, if there was any partisanship in this matter, from a partisan standpoint, I might wish that this amendment that is now pending be rejected, because I know of no one thing that has come before the Congress this session that would do more to defeat a Member that votes against this amendment than that vote. But, Mr. Chairman, there is no partisanship in this, and I do not wish to discuss it from that standpoint. I do want to say this, however, with reference to the amendment suggested by the gentleman from North Carolina [Mr. SMALL] that I understand is to be offered as a substitute for this amendment.

Mr. Chairman, I have observed a great many times that when there is a proposition before a legislative body that certain Members do not desire to have a square vote upon, there always comes an offer of an amendment in the form of a substitute to investigate and report, and that accomplishes two purposes. It puts the main proposition asleep with a hypodermic injection, and, secondly, it affords Members an opportunity to sidestep, and duck, and dodge the question.

Now, in reference to this proposition, I do not know of any reason why this amendment that is now pending should not be voted upon. If this House desires to adopt it they should be permitted to do it, and the proposition of the gentleman from North Carolina, carrying out Gen. Black's suggestion, can be offered as an amendment afterwards and separately be adopted. Let this House have an opportunity to squarely vote upon the proposition, and do not give the Members an opportunity to sidestep, dodge, or duck on this proposition. That is fair.

I want to say, irrespective of this, you will have to vote on the roll call on two propositions when we get into the House. Now, Mr. Chairman, a curious situation has developed here—that most of those who spoke so earnestly against this amendment have upon other occasions opposed Government ownership because they have said it always costs the Government more than it does under private ownership. Here they oppose this amendment because they say if we give private owners a profit of 25 per cent more than the Government cost it will not give a fair return to the private operator. These gentlemen blow hot and they blow cold. I have agreed with them that in most instances it does cost the Government more, and when we say that a profit exceeding 25 per cent over the Government cost will not be allowed we are giving not only a fair profit but we are really giving an excessive profit to private individuals, and there can only be one justification for the defeat of this amendment, and that is that Members are more interested in the profits of dredging companies and private contractors than they are interested in the United States Treasury, which we are sworn here to protect.

Now, Mr. Chairman, the gentleman from Florida [Mr. SPARKMAN] and the committee have stood very properly in the past for a certain number of Government dredges in order to regulate this matter of private competition, and it has done much in that regard. But I want to call attention to this Beaufort Canal. We have a Government dredge there, and they can do $200,000 worth of work annually. We appropriate in this bill $1,000,000, that is proposed to be expended this year. Now, with that Government dredge only doing $200,000 worth it will have no effect whatever upon what the price of the dredging trust will be for the $800,000 worth of work to be done unless we have a limitation of this kind in this bill. And that will do it. But the presence of a Government dredge will not.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SPARKMAN. Mr. Chairman, I yield four minutes to the gentleman from New York [Mr. HULBERT].

Mr. HULBERT. Mr. Chairman, the proposed motion of the gentleman from Massachusetts to recommit is apparently offered with the view of conserving the resources of the Treasury in order that a greater amount may be applicable to the plan of the national defense.

It states that the money may be expended "under the direction of the Secretary of War and the supervision of the Chief of Engineers for the preservation and maintenance of existing river and harbor works, and for the prosecution of such projects heretofore authorized as may be most desirable in the judgment of the Chief of Engineers in the interest of preparedness for national defense."

I asked the gentleman from Washington [Mr. HUMPHREY], when he was addressing the House upon this particular motion, whether or not it would preclude the improvement of the East River, which was impressed upon this House by a letter from the Secretary of the Navy and by a communication from the Commander in Chief of the Navy himself, and the gentleman from Washington replied that it would. Is not, therefore, the gentleman inconsistent? Does not his motion defeat the very purpose he would have you believe it would serve? Because, while he professes it to be in aid of preparedness, no one doubts that a large number of the projects to which this money will be allotted have nothing to do with preparedness, while the one item in the whole bill which most directly aids preparedness will be eliminated altogether. To "save" 50 per cent of the amount appropriated by this bill the gentlemen are willing to sacrifice the item to give at least one navy yard a free entrance for first-class ships the destruction of any one of which upon the reef to be removed would be equal to the amount "saved," and thus takes no account of the value of this improvement from a commercial standpoint. The present improvement of the East River was adopted in 1868, and so antiquated are the provisions of that project adopted in 1868 that as far back as 1912 the Chief of Engineers reported that it would be a waste of public funds to further improve the East River to the depth of 26 feet only, and recommended the adoption of a project to deepen the channel to 35 feet. And yet in spite of the great commercial advantage to be gained from this river transportation—$1,500,000,000 worth of commerce per annum—to say nothing of the necessity for national preparedness, from 1912 down to the present time, 1916, upon that great waterway, there has been one single Federal appropriation of $140,000 upon condition that the city of New York appropriate double that amount. I mentioned the fact the other day that the city of New York and local interests have appropriated over $40,000,000 for the improvement of the East River and $105,000,000 for the Hudson River. That is, we have spent $40 to every dollar contributed by the Federal Government for the East River and $100 to $1 for the Hudson River. Now we think it is time to give us a square deal.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. HULBERT. Mr. Chairman, I ask leave to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. SPARKMAN. Mr. Chairman, I yield one minute to the gentleman from North Carolina [Mr. SMALL].

The CHAIRMAN. The gentleman from North Carolina [Mr. SMALL] is recognized for one minute.

Mr. SMALL. Mr. Chairman, I offer this as a substitute, to which I ask the attention of the House; a substitute for the amendment offered by the gentleman from Iowa [Mr. GOOD]:

That the Chief of Engineers shall at the next session of Congress report the amount and cost of the plant required for carrying on all river and harbor improvements by Government plant and the rate at which the plant proposed would enable the work to be done; and he shall also report upon the advisability of establishing a standard for the cost of river and harbor improvements by private contract and also as to the relative cost of such work by Government plant and by private contract.

The purpose is to secure full information, in order that the House may act intelligently upon that proposition.

The CHAIRMAN. The time of the gentleman from North Carolina has expired. All time has expired. The Clerk will report the amendment offered by the gentleman from North Carolina [Mr. SMALL].

The Clerk read as follows:

Substitute offered by Mr. SMALL for amendment offered by Mr. GOOD: At the end of the bill insert as a new section the following:

"That the Chief of Engineers shall at the next session of Congress report the amount and cost of the plant required for carrying on all river and harbor improvements by Government plant and the rate at which the plant proposed would enable the work to be done; and he shall also report upon the advisability of establishing a standard for the cost of river and harbor improvements by private contract, and also as to the relative cost of such work by Government plant and by private contract."

Mr. LENROOT. Mr. Chairman, I make the point of order that the substitute offered is not germane to the amendment offered by the gentleman from Iowa. I would like to be heard, if the Chair desires it.

The CHAIRMAN. The Chair will hear the gentleman.

Mr. LENROOT. Mr. Chairman, the point I make is that the amendment proposed by the gentleman from Iowa [Mr. GOOD] relates to, and is a limitation upon, the appropriations made in this bill. This substitute has nothing whatever to do with, and would not affect in the least degree, any of the matters to which the amendment proposed by the gentleman from Iowa relates. It calls for an investigation and report as to future action, but it can have no possible bearing upon matters covered in this bill.

The CHAIRMAN. The gentleman from North Carolina is recognized.

Mr. SMALL. Mr. Chairman, the amendment offered by the gentleman from Iowa [Mr. GOOD] seeks to fix a method or a standard of cost on certain classes of work done in the administration of the river and harbor act. This substitute directs an investigation by the Chief of Engineers, with a report to the next Congress, on the subject matter involved in the original amendment. The original amendment touches upon and embraces the manner of expenditure of the public moneys appropriated in this bill. The substitute directs the Chief of Engineers to make an investigation upon the same subject.

Mr. LENROOT. Mr. Chairman, will the gentleman yield?

Mr. SMALL. Certainly.

Mr. LENROOT. Is there anything in the substitute for the amendment that calls for any action with reference to the subject matter, namely, the items appropriated in this bill?

Mr. SMALL. It calls for an investigation and a report by an administrative officer of the Government.

Mr. LENROOT. As to future action of Congress, does it not?

Mr. SMALL. In order to enable Congress to base its future action.

Mr. LENROOT. Therefore it could not affect a single item in this bill.

Mr. SMALL. That is not necessary in order to make it germane. The point, as I understand it, governing the question of whether this substitute is germane or not is as to the subject covered by the amendment and by the substitute.

Mr. GOOD. Mr. Chairman, will the gentleman yield?

Mr. SMALL. In one moment. As I said, the amendment seeks to direct the manner of the expenditure of the money. The substitute authorizes the investigation of the manner of the expenditure of the subject matter of this bill.

Mr. CULLOP. Mr. Chairman, will the gentleman yield?

Mr. SMALL. Yes; I yield.

Mr. CULLOP. The amendment of the gentleman from Iowa applies only to the expenditure of the money appropriated in this bill, does it not?

Mr. SMALL. Certainly.

Mr. CULLOP. Then your substitute has no application. You would have to suspend all of the work for at least one year, would you not, and have no result whatever from this appropriation during the coming fiscal year?

Mr. SMALL. Mr. Chairman, unless I am incorrect, the gentleman commits the same error in thinking that this substitute, in order to be germane, must suspend or control or regulate in some way the expenditure of the money appropriated in this bill.

Mr. LENROOT. Mr. Chairman, will the gentleman yield there?

Mr. SMALL. It does not suspend, but it directs an investigation into the very question contemplated by the amendment itself.

Mr. LENROOT. If the gentleman will yield right there, my point was not that it was not germane to the bill, but that it was not germane to the amendment. Of course, the gentleman can offer it, and it will be in order as a separate proposition, but it is in no sense a substitute for the pending amendment. If an amendment is pending, I take it that it would not be in order to offer as a substitute something that related to an entirely different subject, while it might be offered independently as a separate amendment. Now, the amendment relates to items in this bill. The substitute has no relation to and does not refer to the items in this bill. Of course, a substitute is an amendment in the nature of a substitute.

Mr. SMALL. Mr. Chairman, the amendment is intended to affect the methods of the expenditure of the appropriations in this bill. The substitute directs an investigation of the methods of expenditure.

Mr. CULLOP. Not in this bill.

The CHAIRMAN. The amendment offered by the gentleman from Iowa [Mr. GOOD] is an amendment proposing to limit the expenditure of any moneys contained in the bill for work to be done by contract, where the price shall be in excess of 25 per cent of the estimated cost of doing the work by the Government. The substitute offered by the gentleman from North Carolina undertakes to have the Chief of Engineers report to the next session of Congress touching the general subject of work on river and harbor improvements, work done by the Government and work done by private contractors.

Mr. LENROOT. May I make one suggestion to the Chair?

The CHAIRMAN. Certainly.

Mr. LENROOT. If here was a section of the bill relating to one subject, and a substitute was offered relating to an entirely different subject, it seems very clear to me that the Chair would hold that that was not in order, and I suggest that this is exactly the same principle.

The CHAIRMAN. It does not occur to the Chair that the same principle is involved. Here are two amendments, both relating to the subject of contracts and Government work. They are in that sense dealing with the same particular subject. One undertakes to deal with it by fixing a limitation upon the moneys to be expended in this bill; the other undertakes to deal with the same subject matter by having a report made to Congress.

Mr. MANN. Mr. Chairman, I take it that the matter under consideration is the Good amendment. Rule XVI, page 343 of the Manual, provides:

> And no motion or proposition on a subject different from that under consideration shall be admitted under color of amendment.

On page 343, under the note, it says:

> Under the later practice an amendment should be germane to the particular paragraph or section to which it is offered.

Of course that is a well-known proposition.

The CHAIRMAN. The amendment of the gentleman from Iowa [Mr. GOOD], in the form of a limitation, relates to the question of contracts and of Government work. To that an amendment in the nature of a substitute is offered by the gentleman from North Carolina [Mr. SMALL] calling for a report upon that subject matter. The Chair would be glad to have any authority to show that such a substitute is not in order.

Mr. MANN. The Chair desires authority for the proposition that a substitute should be germane to the amendment. Of course a substitute is an amendment. The subject under consideration is the Good amendment. Any amendment to that must be germane to that amendment. The fact that it may be germane to the bill is not sufficient.

The CHAIRMAN. The Chair would like to hear the gentleman as to its germaneness to the Good amendment.

Mr. MANN. I confess to the Chair that I have not given careful consideration to that question.

The CHAIRMAN. The Chair is ready to rule.

Mr. HARRISON. Mr. Chairman, I would like to call the attention of the Chair to the fact that in the Sixty-third Congress when the District of Columbia appropriation bill was under consideration, an amendment was offered, I think by the gentleman from Georgia [Mr. CRISP], relating to the half-and-half plan in the District of Columbia, placing a limitation on the appropriations carried in that bill, and the gentleman from Alabama [Mr. UNDERWOOD] offered a substitute, as I recall it, providing for the appointment of a commission to investigate the whole situation and report back on that proposition to a future Congress. It was then held that the substitute was in order.

Mr. LENROOT. Will the gentleman yield there?

Mr. HARRISON. Yes.

Mr. LENROOT. I should like to call attention to the distinction between that case and this. That related to a specific proposition, the half-and-half amendment, which was proposed to be acted upon in the original proposition. The amendment related to that very thing. This substitute does not relate at all to the amendment proposed by the gentleman from Iowa [Mr. GOOD], which relates to the items in this bill. The substitute relates only to the future course of Congress with reference to the general subject of contracts.

Mr. HARRISON. This question is on all fours with that question. Why? Because, instead of adopting the course suggested by the gentleman from Iowa [Mr. GOOD], which affects these appropriations immediately, the proposed substitute asks for a commission to consider and investigate and report on the question.

Mr. LENROOT. It is not on the same subject at all.

The CHAIRMAN. While not entirely clear in its mind on the point of order, the Chair thinks the substitute offered is sufficiently germane to the amendment to bring it within the rule, and overrules the point of order.

The question is on the substitute offered by the gentleman from North Carolina [Mr. SMALL].

The question being taken, the Chairman announced that the ayes appeared to have it.

Mr. LENROOT and Mr. GOOD demanded a division.

The committee divided; and there were—ayes 78, noes 88.

Mr. SPARKMAN. Mr. Chairman, I ask for tellers.

Tellers were ordered, and the Chairman appointed Mr. GOOD and Mr. SPARKMAN.

The committee again divided; and the tellers reported that there were 98 ayes and 102 noes.

So the substitute was not agreed to.

The CHAIRMAN. The question now is on the amendment offered by the gentleman from Iowa.

The question was taken; and on a division (demanded by Mr. SPARKMAN) there were 113 ayes and 73 noes.

So the amendment of Mr. GOOD was agreed to.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, I ask unanimous consent to address the House for five minutes.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent to address the House for five minutes. Is there objection?

There was no objection.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, I want to speak in opposition to the amendment to be proposed by the gentleman from Washington [Mr. HUMPHREY]. That amendment proposes to strike out the section of the bill which carries appropriations for various items and substitutes a lump sum of $20,000,000.

Mr. Chairman, in my opinion, if this amendment is agreed to, it will be the end of river and harbor bills so far as they are made up by the Committee on Rivers and Harbors in this House. I think the House had just as well understand that when it votes. For the past two years the bill has been killed in the Senate and we have had only lump-sum appropriations. If this bill takes that same course, while I am not a prophet nor the son of a prophet, I have no doubt whatever that it is the end of river and harbor bills so far as they may be made up by a committee of this House.

Now, gentlemen, let us see what this proposition is going to do. I will give one illustration which will show just what would happen to all other projects of the country. Take the Ohio River, which, so far as the commerce is concerned, is the greatest river project carried in the bill. Last year, with a lump-sum appropriation of $30,000,000, the Ohio River received

an allotment of $3,000,000. With a lump-sum appropriation of $20,000,000, as proposed in this amendment, that river will receive $2,000,000. Five million dollars is carried in the bill. What is that project? It has been singled out by those who champion the defeat of river and harbor legislation as the worst in the bill. The Pittsburgh district, at the head of the Ohio River, creates more tonnage than any other district on the face of the earth—100,000,000 tons of freight go out to the seaboard annually. Much of that is of a heavy character such as would naturally and economically and inevitably seek transportation to the sea by river if that river were available for commerce.

This past winter we saw what could happen by failure of the river and harbor improvements. At one time there were congested in the port of New York 60,000 loaded box cars waiting to unload. The tonnage increases in the Ohio Valley annually, much of it heavy traffic that would go down the Ohio to the sea for export if the river were available. There is no busier valley on this continent.

[The time of Mr. HUMPHREYS of Mississippi having expired, by unanimous consent he was given five minutes more.]

Mr. HUMPHREYS of Mississippi. There are few busier valleys in the world than the Ohio Valley. The value of our exports from this country increases annually, and the proportion of these exports which originate in the Mississippi Valley increases annually. There were produced in that great valley last year $15,000,000,000 of manufactured and agricultural products, every pound affected in its value by the cost of transportation to the sea.

We have provided for the improvement of the Ohio River upon a plan that will require 10 or 12 years to complete. You gentlemen on this side had just as well make up your minds to this fact, that if this river and harbor bill fails—and the other two that you attempted to pass under this administration have failed—you may make up your mind to face this fall on the stump the assertion that the Democratic Party is incapable and incompetent to frame a river and harbor bill. [Applause.] That will be the effect of it.

Now, as I say, the annual value of the products of that great valley is $15,000,000,000. Every pound of it is affected in its value by the cost of transportation to the sea. Here we have undertaken to improve the Ohio River which would enable it to empty into the Mississippi River where a channel is already provided. This will delay that project many years. It has already been delayed over the original expectation and contemplation of the original project from two to four years—it has been delayed ever since the Democratic Party has been in power. I want you on this side of the Chamber to understand that. It has been delayed four years in ultimate completion, and if this motion prevails it will be delayed two years more. Every man who lives in that great valley is dependent on the transportation facilities by water to the sea. Seventy-five per cent of the freight that crosses the intermountain country and goes to the Pacific Ocean is produced in the northern States of the Mississippi Valley. Since the Panama Canal was completed steamships have reduced the rates from 20 to even 50 per cent from Atlantic ports through the canal to Pacific ports. What happened? The railroads refused to meet those rates. The result was an immediate falling off in the business from the States of the Mississippi Valley, and it will come to pass in the near future that instead of 25 per cent originating on the Atlantic seaboard there will be 75 per cent originate there and only 25 per cent in the States of the central valley. This is a proposition to destroy this bill, and that is all it means. Do not misunderstand it. And that will mean that the people of the Mississippi Valley who paid their share of the cost of the Panama Canal will not only be denied the blessings that ought to flow from its construction, but the fact will be that the canal will prove to have been a curse instead of a blessing, because it will put them out of business where they can not compete with the Atlantic seaboard. [Applause.]

But we of the valley are not alone to be affected. If this bill is defeated it will hamper and seriously injure the transportation facilities of all sections. Works which should be pushed to completion will be abandoned for another year. Harbors which are now too small to accommodate the demands of commerce will remain inadequate and many rivers which should be maintained in their present channel capacity will fill with logs and sand bars.

Think of the tonnage which is actually borne on the rivers and harbors under improvement now and provision for which is carried in this bill. Last year, in spite of the depression due to the war, the tonnage floated on the rivers provided for in this bill amounted to 337,000,000 tons, and on the harbors 533,000,000 tons. Compare this with the tonnage which it is estimated will pass through the Panama Canal in normal times—10,000,000 tons—and with that passing through the Suez Canal—20,000,000 tons—and you will appreciate what you are asked to do by this amendment.

The inland traffic of the United States exceeds in value the aggregate value of the international commerce of all other nations of the earth combined, and I do hope the Democratic Party can not truthfully be charged next fall with a deliberate failure to make adequate provisions for its transportation. [Applause.]

Mr. AYRES. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman form Kansas asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington rose.

Mr. SPARKMAN. Mr. Chairman, I move that the committee do now rise and report the bill with amendments to the House with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. MANN. Mr. Chairman, before the gentleman does that I ask unanimous consent that the gentleman from Washington may have three minutes in which to address the committee.

Mr. SWITZER. Mr. Chairman, I would like to have three minutes.

Mr. CALLAWAY. Mr. Chairman, I want five minutes.

Mr. MANN. Then I suggest to the gentleman from Florida that he proceed with his motion.

Mr. SPARKMAN. Mr. Chairman, I renew the motion.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12193, the river and harbor appropriation bill, and had directed him to report the same back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. SPARKMAN. Mr. Speaker, I move the previous question on the bill and amendments to final passage.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment? [After a pause.] If not, the Chair will put them en gross. The question is on the amendments.

The amendments were agreed to.

Mr. MANN. Mr. Speaker, I ask unanimous consent that the two so-called Good amendments, on pages 9 and 11, be reconsidered, and that they be considered as disagreed to.

The SPEAKER. The Clerk will report the amendments.

The Clerk read as follows:

Page 9, at the end of line 12, change the period to a colon and insert: "*Provided*, That no part thereof shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of the doing of the work by a Government plant."

Mr. MANN. Mr. Speaker, the other amendment is the same.

The SPEAKER. The gentleman from Illinois asks unanimous consent that the two so-called Good amendments to the bill, on pages 9 and 11, which the Clerk has reported, be reconsidered, and that they be considered as disagreed to. Is there objection?

There was no objection, and it was so ordered.

The SPEAKER. The question now is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

Mr. TREADWAY. Mr. Speaker, I move to recommit the bill with the following instructions, which I send to the desk and ask to have read.

The Clerk read as follows:

Mr. TREADWAY moves to recommit the bill to the Committee on Rivers and Harbors with instructions to report back forthwith with the following amendment: Strike out all of section 1 after the enacting clause and insert the following:

"That the sum of $20,000,000 be, and the same hereby is, appropriated out of any moneys in the Treasury not otherwise appropriated, to be immediately available and to be expended under the direction of the Secretary of War and the supervision of the Chief of Engineers, for the preservation and maintenance of existing river and harbor works, and for the prosecution of such projects heretofore authorized as may be most desirable in the judgment of the Chief of Engineers in the interest of preparedness for national defense and in the interest of commerce and navigation, and most economical and advantageous in the execution of the work: *Provided*, That allotments from the amount hereby appropriated shall be made by the Secretary of War upon the recommendation of the Chief of Engineers: *Provided further*, That the Chief of Engineers shall use his judgment as to which projects he will recommend to be improved and to what extent: *Provided further*, That allotments for the Mississippi River from the Head of Passes to the mouth of the Ohio River shall be expended under the direction of the Secretary of War in accordance with the plans, specifications, and recommendations of the Mississippi River Commission as approved by the Chief of Engineers: *And provided further*,

That at the beginning of the next session of Congress a special report shall be made to Congress by the Secretary of War showing the amount allotted under this appropriation to each work of improvement and the reasons therefor."

Mr. TREADWAY. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The question was taken.

Mr. CULLOP. Mr. Speaker, I demand the yeas and nays.

Mr. SPARKMAN. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 148, nays 199, answered "present" 6, not voting 80, as follows:

YEAS—148.

So the motion to recommit was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. ASHBROOK (for motion to recommit) with Mr. GOULD (against).

Mr. KREIDER (for motion to recommit) with Mr. COLEMAN (against).

Mr. TAGUE (for motion to recommit) with Mr. SCULLY (against).

Mr. HILLIARD (for motion to recommit) with Mr. EAGAN (against).

Mr. FOCHT (for motion to recommit) with Mr. GARLAND (against).

Mr. MCKENZIE (for motion to recommit) with Mr. FITZGERALD (against).

Mr. SLOAN (for motion to recommit) with Mr. LOBECK (against).

Mr. JOHNSON of South Dakota (for motion to recommit) with Mr. MILLER of Delaware (against).

Mr. FREEMAN (for motion to recommit) with Mr. OLIVER (against).

Mr. SHALLENBERGER (for motion to recommit) with Mr. BENNET (against).

For the session:

Mr. DEWALT with Mr. MCFADDEN.

For two weeks from March 30:

Mr. SABATH with Mr. NORTH.

From April 8 to April 15:

Mr. VAN DYKE with Mr. MUDD.

Until further notice:

Mr. HOUSTON with Mr. GUERNSEY.

Mr. WALKER with Mr. HASKELL.

Mr. HENRY with Mr. HAYES.

Mr. GALLAGHER with Mr. SNYDER.

Mr. PATTEN with Mr. FAIRCHILD.

Mr. MORRISON with Mr. HUMPHREY of Washington.

Mr. WM. ELZA WILLIAMS with Mr. GRIEST.

Mr. STEPHENS of Mississippi with Mr. SWIFT.

Mr. LIEBEL with Mr. SUTHERLAND.

Mr. MCANDREWS with Mr. HILL.

Mr. BYRNS of Tennessee with Mr. BEALES.

Mr. BURNETT with Mr. DYER.

Mr. CALDWELL with Mr. EMERSON.

Mr. DECKER with Mr. LANGLEY.

Mr. GOODWIN of Arkansas with Mr. MOONEY.

Mr. HART with Mr. MORIN.

Mr. KITCHIN with Mr. SLEMP.

Mr. LAZARO with Mr. PARKER of New York.

Mr. ASWELL with Mr. POWERS.

Mr. MCDERMOTT with Mr. NICHOLS of Michigan.

Mr. STEELE of Pennsylvania with Mr. MEEKER.

Mr. LEWIS with Mr. MOSS of West Virginia.

Mr. WILSON of Florida with Mr. BENNET.

Mr. YOUNG of Texas with Mr. FARR.

Mr. SUTHERLAND. Mr. Speaker, I wish to vote "nay."

The SPEAKER. Was the gentleman in the Hall listening?

Mr. SUTHERLAND. No; I was not in the Hall listening.

The SPEAKER. The gentleman does not bring himself within the rule.

Mr. HUMPHREY of Washington. Mr. Speaker, I am paired with the gentleman from Indiana [Mr. MORRISON]. I voted "present." I understand if he were present he would vote "yea," and I wish to change my vote to "yea."

The name of Mr. HUMPHREY of Washington was called, and he voted "Yea."

Mr. TAGUE. Mr. Speaker, I voted "yea." I am paired with the gentleman from New Jersey [Mr. SCULLY]. If he were here, he would vote "nay," and I desire to vote "present."

The name of Mr. TAGUE was called, and he voted "Present."

The result of the vote was announced as above recorded.

The SPEAKER. The question is on the passage of the bill.

Mr. CULLOP. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman from Indiana rise?

Mr. CULLOP. To demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 212, nays 133, answered "present" 10, not voting 78, as follows:

YEAS—212.

So the bill was passed

The Clerk announced the following additional pairs:

On the vote:

Mr. COLEMAN (for) with Mr. KREIDER (against).

Mr. LOBECK (for) with Mr. SLOAN (against).

Mr. GOULD (for) with Mr. ASHBROOK (against).

Mr. MILLER of Delaware (for) with Mr. JOHNSON of South Dakota (against).

Mr. SCULLY (for) with Mr. TAGUE (against).

Mr. EAGAN (for) with Mr. HILLIARD (against).

Mr. FITZGERALD (for) with Mr. MCKENZIE (against).

Mr. GARLAND (for) with Mr. FOCHT (against).

Mr. LAZARO (for) with Mr. SMITH of New York (against).

Until further notice:

Mr. GALLAGHER with Mr. BENNET.

Mr. DALE of New York with Mr. ELSTON.

Mr. KREIDER. Mr. Speaker, I find I am paired with my colleague, Mr. COLEMAN, of Pennsylvania. I voted "no." I desire to change my vote to "present."

The SPEAKER. The Clerk will call the gentleman's name.

The Clerk called the name of Mr. KREIDER, and he answered "Present."

Mr. FOCHT. Mr. Speaker, I understand I am paired with Mr. GARLAND. I voted "no." I wish to withdraw that vote and vote "present."

The SPEAKER. The Clerk will call the gentleman's name.

The Clerk called the name of Mr. FOCHT, and he answered "Present."

Mr. HUMPHREY of Washington. Mr. Speaker, I am paired with the gentleman from Indiana, Mr. MORRISON. I voted "aye." I wish to withdraw that vote and vote "present."

The SPEAKER. The Clerk will call the gentleman's name.

The Clerk called the name of Mr. HUMPHREY of Washington, and he answered "Present."

Mr. TAGUE. Mr. Speaker, I voted "no." I am paired with the gentleman from New Jersey, Mr. SCULLY. I wish to withdraw that vote and vote "present."

The SPEAKER. The Clerk will call the gentleman's name.

The Clerk called the name of Mr. TAGUE, and he answered "Present."

The result of the vote was announced as above recorded.

On motion of Mr. SPARKMAN, a motion to reconsider the vote whereby the bill was passed was laid on the table.

EXTENSION OF REMARKS.

Mr. SPARKMAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the motion to recommit.

The SPEAKER. The gentleman from Florida asks unanimous consent to extend his remarks in the RECORD on the motion to recommit. Is there objection?

There was no objection.

Mr. SPARKMAN. Mr. Speaker, I ask unanimous consent that Members may have the right to extend their remarks in the RECORD for the space of five legislative days on the river and harbor bill.

The SPEAKER. The gentleman from Florida asks unanimous consent that all gentlemen may have the right to extend their remarks on the river and harbor bill for five legislative days. Is there objection?

There was no objection.

Mr. SCHALL. Mr. Speaker, I ask unanimous consent to extend in the RECORD my remarks on the parcel post.

The SPEAKER. The gentleman from Minnesota asks unanimous consent to extend his remarks on the parcel post. Is there objection?

There was no objection.

AGRICULTURAL APPROPRIATION BILL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 12717, a bill making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917.

The SPEAKER. The gentleman from South Carolina [Mr. LEVER] moves that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of House bill 12717.

Mr. LEVER. And pending that motion, Mr. Speaker, I would like to see if the gentleman from Iowa [Mr. HAUGEN] and myself could agree upon time for general debate. What suggestion has the gentleman?

Mr. HAUGEN. I have requests for 9 hours and 30 minutes on this side, and I would like to accommodate them as far as possible. What suggestion has the gentleman from South Carolina?

Mr. LEVER. Of course the gentleman from Iowa will agree that nine hours on a side would be entirely too long. I am going to suggest six hours for general debate, three hours to be controlled by the gentleman from Iowa and three by myself.

Mr. HAUGEN. Oh, Mr. Speaker, I am afraid that would not satisfy this side. I would like to accommodate these gentlemen as far as possible, and I take it that time is not so precious but that more liberal time can be allotted. I would suggest at least 12 hours, 6 hours on each side.

Mr. LEVER. That is entirely too much, I will say to the gentleman. What would the gentleman say to seven hours, to be equally divided?

Mr. MANN. Let me suggest this to the gentleman: Last year, the short session, there were seven hours allotted. Two years ago at the long session there were 12 hours' general debate on this bill, which is a bill that comes home to a great many Members of the House.

Mr. LEVER. I appreciate that fact, and I appreciate the fact that there is always a great demand for time on this bill; but this side has been extremely liberal in general debate during this session, and I thought we would probably make some time on this bill by limiting general debate.

Mr. MANN. I think that side of the House has been pretty fair, but I have not seen any extreme liberality. On the contrary, having started in with the idea of 20 hours on one bill, you cut it down to 10.

Mr. LEVER. I ask unanimous consent, Mr. Speaker, that general debate on this bill be limited to eight hours, four hours to be controlled by myself and four hours by the gentleman from Iowa [Mr. HAUGEN].

The SPEAKER. The gentleman from South Carolina asks unanimous consent that general debate on this bill be limited to eight hours, four hours to be controlled by himself and four by the gentleman from Iowa [Mr. HAUGEN]. Is there objection?

Mr. MANN. Reserving the right to object, I think if we met at 11 o'clock in the morning and ran to half past 5 or 6 we could afford to give a little more time than that.

Mr. LEVER. Let me make this suggestion to the gentleman from Illinois: If the House should continue in session until 7 o'clock this evening and meet to-morrow at 11 o'clock, I think we could agree upon 10 hours' debate.

Mr. MANN. There is no use in staying in session until 7 o'clock, and we ought not to meet at night without previous notice. We can run until 6 o'clock to-night and meet at 11 o'clock Thursday.

Mr. LEVER. Will the gentleman take kindly to the suggestion of suspending Calendar Wednesday?

Mr. MANN. No; we have a matter up to-morrow that a good many gentlemen really want to consider.

Mr. LEVER. I agree with the gentleman. I know what that proposition is.

Mr. BORLAND. Will the gentleman suggest a night session?

Mr. FOSTER. If there are to be 10 hours' general debate, would not the gentleman be willing to take a recess until 8 o'clock and then run until 11 o'clock this evening?

Mr. LEVER. I would be perfectly willing to do that.

Mr. SIMS. Debate to be limited to the bill.

Mr. MANN. I hardly think so. When we get to the point where we can accomplish things by having night sessions, I am willing to sit every night; but I do not think we ought to have a night session without previous notice.

Mr. FOSTER. Let me suggest to my colleague that under the five-minute rule it seems to me all the chairmen of committees have been very liberal in reference to debate, and many hours have been spent in discussing matters that did not particularly affect the items in the bill. That will probably be the case in the consideration of this bill. Many members get extensions of 5, 10, 15, or 20 minutes. Probably that will be the case here, although I hope not. If gentlemen were to confine their remarks entirely to the bill it might be different, but when they are going to discuss all manner of subjects, that is the way in which the time will be occupied. The gentleman realizes that under general debate there is usually not a very large attendance in the House.

Mr. SIMS. It is very unusual.

Mr. MANN. There is some truth in that, but here is the situation: My colleague Mr. FOSTER does not talk in the House as often as I do, but still he always gets the floor when he wants it. There are, however, some Members of the House who rarely speak, who desire at some time to make a connected speech upon some subject; and while that is not the only right they have, it is one right that comes home to a Member. I think they ought to be given some chance. However, we all know what the situation is. Suppose we agree now to have the House meet at 11 o'clock Thursday, with the understanding that we will run until 6 o'clock to-night.

Mr. FOSTER. Would the gentleman be willing to finish the debate Thursday when the House adjourns?

Mr. MANN. I would if I knew that nothing else was coming up, but I would not be willing without knowing what was coming up.

Mr. LEVER. Let me suggest to the gentleman from Illinois that we begin the general debate now and conclude it Thursday evening at 6 o'clock, running this afternoon until 6 o'clock.

Mr. MANN. There might be a dozen privileged things come in between now and then. Nobody would know about that.

Mr. FOSTER. Nobody knows of anything now, except that there is one on Friday.

Mr. MANN. Oh, yes; there is a special committee to report.

Mr. FOSTER. They do not report until Friday.

Mr. MANN. I do not know when they are going to report.

Mr. FOSTER. Not later than Friday.

Mr. MANN. And we have a bill or two to go to conference, and things of that sort. If the gentleman from Iowa will consent, I suggest that we agree on nine hours' general debate.

Mr. FOSTER. And then meet at 11 o'clock on Thursday and run until 6 o'clock or a little later.

Mr. MANN. Until half-past 5 or 6, depending on the temper of the House.

Mr. FOSTER. Make it 6 o'clock.

Mr. HAUGEN. I suggest that we agree on 10 hours for general debate, and begin the debate this afternoon with the understanding that we shall sit until 6 o'clock, and then we can try and finish up on Thursday probably, running until 6 o'clock or a little later.

Mr. LEVER. Let me make a counter suggestion to the gentleman and see if we can not agree on it by unanimous consent, that the general debate on this bill be limited to nine hours, the gentleman to control half the time, and I to control the other half.

Mr. HAUGEN. If the gentleman thinks that is all that can be given, of course I am not going to insist further, although I think we ought to have at least 10 hours.

The SPEAKER. The gentleman from South Carolina [Mr. LEVER] asks unanimous consent that the general debate on the Agricultural appropriation bill be limited to nine hours——

Mr. LEVER. And that the House meet on Thursday at 11 o'clock a. m.

Mr. MANN. That when the House adjourns to-morrow it adjourn to meet on Thursday at 11 o'clock.

Mr. LEVER. That when the House adjourns to-morrow it adjourn to meet on Thursday at 11 o'clock.

The SPEAKER. That when the House adjourns to-morrow it adjourn to meet on Thursday at 11 o'clock a. m., and that the gentleman from South Carolina [Mr. LEVER] control half the time and the gentleman from Iowa [Mr. HAUGEN] control the other half. Is there objection?

There was no objection.

AMERICAN NATIONAL RED CROSS.

The SPEAKER. The bill (H. R. 14426) to amend section 6 of the act entitled "An act to incorporate the American National Red Cross," approved January 5, 1905, was erroneously referred to the Committee on Military Affairs. It should be referred to the Committee on the Judiciary. Without objection, it will be so referred.

There was no objection.

SENATE BILL REFERRED.

Under clause 2 of Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 4856. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and to certain widows and dependent relatives of such soldiers and sailors; to the Committee on Invalid Pensions.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed without amendment bills of the following titles:

H. R. 10139. An act to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia; and

H. R. 9923. An act granting the consent of Congress to the county of Mitchell or to the county of Baker, both in the State of Georgia, acting jointly or separately, and their successors and assigns to construct a bridge across the Flint River.

The message also announced that the Senate had insisted upon its amendments to the bill (H. R. 10385) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1917, disagreed to by the House of Representatives, had agreed to the conference asked by the House on the disagreeing votes of the two Houses thereon, and had appointed Mr. ASHURST, Mr. MYERS, and Mr. CLAPP as the conferees on the part of the Senate.

The message also announced that the Senate had agreed to the report of the committees of conference on the disagreeing votes of the two Houses on the amendments of the House to bills of the following titles:

S. 3984. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors; and

S. 4399. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

AGRICULTURAL APPROPRIATION BILL.

On motion of Mr. LEVER, the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, with Mr. HAMLIN in the chair.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, on account of the fact that the Committee on Agriculture has held the most extensive hearings on the appropriation bill that have ever been held, and inasmuch as the report of the committee is probably the most comprehensive that has ever been filed with this bill, I shall not at this time discuss the particular features of it, preferring to do that under the five-minute rule.

I desire, however, at this time to discuss a bill which has been reported by the Committee on Agriculture and is now on the calendar of the House and is ready for consideration whenever it can be reached. I refer to what is known as the Federal warehouse bill, which passed the Senate and House in the last Congress but failed in conference.

Mr. Chairman, in the time at my disposal I shall discuss only the general purposes of this proposed legislation. The details of the bill will be explained as it is read by sections, although they are so simple as that a mere reading of them will suffice to bring out clearly their meaning and relationship to each other.

SOME LESSONS OF THE EUROPEAN WAR.

The European war has disclosed to this country weaknesses in its much-vaunted strength and superiority of such startling character as to be almost unbelievable. The most of us thought and acted upon the assumption that economically we were a self-sustaining people. The very fact of the bigness and variety of our natural resources led us to think that such resources were being developed and utilized to their fullest extent. If the assumption had been true we would to-day find ourselves in absolute economic independence of all other nations. But we have been lulled into false safety by assuming certain facts to exist which we find do not exist.

Events are forcing us to see ourselves as we are and not as we have imagined ourselves to be. We have been made to take stock, and the inventory has brought us little satisfaction with regard to certain fundamentals.

We find ourselves dependent wholly, or in large part, upon foreign nations for a number of essentials to a fully organized and efficient economic entity.

FOREIGN CONTROL OF OCEANIC TRANSPORTATION FACILITIES.

England controls the oceanic transportation facilities upon which we rely at this moment to get our export products into the markets of greatest demand and highest prices. For example, the rate on cotton from our ports to ports of England is almost prohibitive. Cotton is lying in great quantities at our exporting points ready for shipment at profitable prices while the manufacturing districts of Europe are facing a famine in cotton. They are willing to pay the price but the bulk of space on English ships has been commandeered for wheat, foodstuffs, and munitions of war. Cotton is given only limited space and that only at rates outrageously exorbitant, which the producer must bear in large part. The aggregate loss to the cotton farmer upon this one crop since the outbreak of the war on this account alone will reach into the hundreds of millions of dollars.

No great nation, especially an exporting nation, can afford to have its means of transportation upon the seas controlled by a foreign country. The neglect of Congress in this respect in years gone by is inexcusable, and further neglect, in the light of the teaching of the present experience, would be almost criminal.

An adequate merchant marine, under some method of Government control of rates, sufficient to meet the export needs of the country, must be provided if we are to attain a dominating influence in the commerce of the world. [Applause.]

THE FERTILIZER SITUATION.

Potash and nitrogen are essential ingredients of a commercial fertilizer, and fertilizers, in reasonable quantities, are necessary to the very existence of the agriculture of a large section of the country. Not only are these two substances important to the agriculture of the country, but they are absolutely necessary in the manufacture of explosives, munitions of war.

For potash we are dependent upon Germany, for nitrates, in part, upon Chile, although both of these are to be found in superabundance within our own domain. Potash is found in inexhaustible quantities in the alunites of Utah and in the kelps or giant seaweeds of the Pacific coast. Nitrogen fills the air about us and is easy of extraction by processes well known. The Atlantic Coast States will suffer severely this very year because in the past we have not had the foresight to guard against such a contingency as is upon us; but we have been content to allow other nations to supply us with things we should be supplying ourselves.

We can no longer justify a continuance of a policy of complacent self-satisfaction, amounting almost to lethargy, when experience is pointing so emphatically to the folly of such a course. Agriculture must suffer for the time being for a lack of these fertilizer ingredients, but agriculture will survive the suffering. But suppose the country were plunged suddenly into war, what would be the situation? Are we longer to depend upon others for these elements of preparedness for peace and war?

DYESTUFF SITUATION.

The gentleman from Connecticut [Mr. HILL] not long since very forcefully brought to your attention that this country is being compelled to buy from the German Government sufficient dyestuffs with which to print our money and make our postage and revenue stamps, and he pointed out that when we have received this consent of the German King, we must then go one step further and beg of an English King the privilege of transporting them into our own ports. Germany controls a monopoly of dyestuffs. England controls a monopoly of the seas, and as between the two it is estimated that the American users of dyestuffs and dyed wares are suffering a loss of not less than a million dollars a day, or a total loss up to date of $430,000,000 since the war began. Two million working men and women are employed in the industries which are directly dependent upon the use of artificial colors, and these are mostly engaged in the manufacture of cotton and wool. I know personally that a large number of the largest cotton-manufacturing establishments in the South are threatened with the necessity of closing down because of a lack of sufficient dyestuffs, and this situation is general in similar manufacturing industries of the country. Suppose these establishments shall be forced to close down, who can measure the loss and misery that must come as the result to the 2,000,000 people employed in them, and who can measure the effect of the closing down of the woolen and cotton mills of this country upon the price of wool and cotton to the producers thereof? It is a very serious problem.

Mr. BORLAND. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. BORLAND. The gentleman is discussing the provision in the agricultural bill for the investigation into dyestuffs. Does the gentleman know that an American firm has solved the making of aniline dyes, and is making them now?

Mr. LEVER. I know that some are making aniline dyes in this country. The purpose of the provision in the agricultural

bill is intended to permit an investigation of such agricultural plants as may give promise of furnishing dyes.

Mr. BORLAND. But the dyes used in textile goods and printing ink and paint are made from aniline which is derived from coal tar.

Mr. LEVER. That is true; but there are other sources from which dyes can be made, which the committee hope will be discovered by proper investigation.

Mr. BORLAND. Not long ago a gentleman connected with this firm came here and I took him to see the gentleman from Missouri [Mr. DICKINSON], of the Ways and Means Committee, and he explained to him that they were successfully making aniline dyes to-day for paint and could make them for printing and for textile goods, and that they were taking orders for that purpose; that they did not need any particular investigation; that they had procured scientists from Austria and Switzerland and were succeeding in making aniline dyes.

Mr. LEVER. Notwithstanding that, we are now dependent on Germany for dyestuffs and have been for years, and I trust that the small appropriation that we have in the Agricultural bill will be allowed to stay in, and that we may find a way of making ourselves independent of foreign nations in this regard.

Mr. BORLAND. I asked him whether the industry would be self-sustaining, and he said it would.

Mr. GORDON. Did not he want any protection?

Mr. BORLAND. No.

Mr. FESS. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. FESS. I understood that we were making a few varieties of aniline dyes in this country but not in comparison with the great number that were made in Germany, eighteen hundred, I think.

Mr. LEVER. That is true, but that is aside from the discussion.

THE LIST A LONG ONE.

Mr. Chairman, I could go on almost ad infinitum pointing out the weaknesses which the present world condition discloses in our economic system. The testimony would be cumulative only. Sufficient has been said to convince every patriotic man in this Congress of the productive inefficiency of the system. What I desire especially to do at this time and in this connection is to direct the attention of the House to what I conceive to be the most striking fact brought to light by the Old World cataclysm as touching our economic system, and it is this: The utter insufficiency and inadequacy of our method of marketing farm products.

Let me illustrate with what happened to cotton. This is the most nonperishable of all farm products. The machinery for its distribution is well constructed and finely adjusted. It is our most important export crop. But gentlemen will recall that, at the very first appearance of danger, almost contemporaneously with the first shot of the war, the machinery for marketing it collapsed entirely, carrying the price of cotton from around 13 cents per pound to 6 cents per pound. The market was for all practical purposes destroyed and the producer found himself at the mercy of the speculator and spinner.

This experience proved most decisively that cotton possesses neither credit value nor holding power under the existing system of distribution. The short-sightedness of State and National legislation to provide the machinery to guard against such a catastrophe cost the cotton farmer incalculably, and what was true of cotton then is more or less true of it now, and is more or less true of all agricultural products.

Mr. MADDEN. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. MADDEN. What is the gentleman's remedy; would he establish warehouses and give warehouse receipts?

Mr. LEVER. I am now leading up to that conclusion.

THE TEACHINGS ARE FINDING LODGMENT.

These are some of the more striking facts of supreme and far-reaching importance which the European war brings us. They show how completely in many essentials we are dependent upon our natural competitors and how far we are from being a self-sustaining people.

Mr. Chairman, the future of this country will depend upon the interpretation of and the use to which we put the teachings of these facts. I am confident that the lessons we shall draw from them are going to mean a new era in the economic life of the Nation; as it were, a declaration of agricultural and industrial independence.

The people are aroused to an appreciation of the situation as is evidenced by the suggestions and plans which come to us daily. The country has determined never again to allow itself to be found in such a condition of helpless defenselessness as is upon it.

THE WORD "PREPAREDNESS."

For the first time in our history the word "preparedness" has found a place in the vocabulary of all classes of people. It is upon the lips of all men of every shade of political opinion.

It is true the people are thinking largely of the more spectacular aspect of the preparedness program. The daily press, magazines, periodicals of every description, and platforms and pulpits are urging Congress to prepare our country for military and naval defense against foreign aggression and insult. The President is told to maintain the honor of the country and at the same time preserve the peace. To do this has come to mean in the minds of a large majority of people only an elaborate plan of military and naval preparedness. That thought of this character of preparedness should find lodgment first in the minds of men is but natural. The appeal to guard the flag, to maintain the rights and honor of the Nation on land and on sea, to protect its citizenship wherever found, reaches and arouses patriotic impulses and meets with a quick response. This phase of the preparedness program will continue to hold the spot light, and yet, Mr. Chairman, we must not, we can not, forget that the strength of our Army and Navy while it may be less, can never be greater than the strength of the economic forces sustaining them. Military and naval preparedness are bedrocked always in economic preparedness. [Applause.] The South fell because of her economic weakness; Germany stands to-day because of her economic strength. The blockade brought the South to defeat, shall it do likewise for the Nation?

AGRICULTURAL PREPAREDNESS.

Mr. Chairman, it is not my purpose to discuss the future military policy of the country. That duty is assigned especially to others. The committee of which I am chairman is charged with the more prosaic but none the less important duty of initiating fundamentally effective policies for the agricultural preparedness, both for defense and conquest.

The central dominating purpose of the warehouse bill is to aid in the mobilization of the agricultural resources of the people of the country to the end that the greatest degree of prosperity and happiness may be brought to those millions of our population who in the future must be relied upon to feed and clothe our armies, provide subsistence for our Navy, and, at the call, go forward themselves to defend the flag and protect the institutions which it represents.

PATRIOTISM AND OWNERSHIP.

Observation teaches us that individuals fight for that which they have a right to call their own. Intrinsic value does not determine the individual to risk the chances of combat.

Ownership determines that. History teaches that this principle is all the more true of nations, and that the spirit of proprietorship is the very essence and living spark of patriotism. Patriotism may exist apart from proprietorship but proprietorship can not exist inseparable from patriotism.

A man must have something to fight for if the best fighting of which he is capable is to be had. We fight and die for the flag because it symbolizes the conception of the proprietary right of each of us in our country. To some it may mean broad acres and stately mansions, to others only a small farm and a modest cottage, and to others still only an unmarked grave in a deserted family burial place, but to each and to all it embraces in its folds not only his ideal of his country but his claim of right to that ideal. [Applause.]

The spirit of ownership measures the degree of patriotism and men fight hardest in whom that spirit is most highly developed. And do not forget that it is axiomatic that the defensive strength of a nation can not be greater than the patriotism of its people.

Col. Ingersoll said that "It takes an unusual kind of patriotism that causes a man to shoulder a rifle in defense of a boarding house." Who will rise to deny the truth of this philosophy?

TENDENCIES.

And yet, Mr. Chairman, so long as the tendencies that have been going on for the last quarter of a century, and are now going on, shall remain unchecked, the time will come when the major part of our population will be crowded into the apartments and boarding houses of our cities and towns, and the strength, conservatism, peace-loving, and law-abiding rural life, of which we so proudly boast, will have passed from the face of the earth. I am not an alarmist nor am I given to vagaries, but I assert it as a fact, and no student of agricultural economics will deny it, that rural conditions in this country are such as to warrant the most serious thought of the highest order of statesmanship.

FARM TENANTRY INCREASING.

Farm tenantry is rapidly increasing. Each census period shows more farm tenants than was shown by the preceding census period.

Over one-third of our population is classed as tenants, and in some sections more than 60 per cent of the farmers fall within this classification. In my own State 43 per cent of our white farmers are tenants. The tendency throughout the country is from ownership to tenancy. Absentee landlordism is becoming the curse of the Nation and is gnawing at its very vitals. "Next to war, pestilence, and famine, the worst thing that could happen to a rural community is absentee landlordism," says Prof. Carver in his Principles of Rural Economics.

Mr. Chairman, no nation has or ever can reach its highest and best-balanced development whose rural population is largely made up of tenants and laborers. There is no more vital question than that of farm tenancy in this country, and to my mind the most pressing problem of the generation is the finding of ways and means of increasing home ownership in rural districts.

In the program of preparedness the conversion of one white farm tenant into a farm home owner is worth more, in my humble judgment, in the way of national defense than the addition of a company of well-trained Regulars to our standing Army or even the addition of a dreadnaught to our Navy.

FROM COUNTRY TO TOWN.

Again, Mr. Chairman, I direct attention to the drift of people from country to town. The deserted farm home stands out as a constant and tragic reminder that something is wrong, very wrong, in American rural life and conditions. People do not voluntarily relinquish the proud privilege of proprietorship nor turn their backs upon ancestral graves to become mere tenants at sufferance in a city boarding house. There must be a reason for this unrest, so evident among our rural people, as well as for the increase in tenantry.

THE CAUSE.

What is the cause? Broadly speaking, it lies in the fact that the farmer has not been afforded the facilities for capitalizing his brains and labor to the best advantage, as have other classes of people. The machinery for transforming his intelligence and energy into profit and comfort is crude and antiquated. The effect to be expected is precisely what the statistics show it to be. The farmers' profits are small. His educational advantages are by no means comparable with such advantages of towns and cities. His means of communication are inadequate and highly expensive. His social life, and especially that of his family, is meager, when not entirely barren.

Mr. GUERNSEY. Mr. Chairman, will the gentleman yield there?

Mr. LEVER. Yes.

Mr. GUERNSEY. Does the gentleman find the tendency to go from the farm increasing in the Northern States along the northern border?

Mr. LEVER. I am inclined to think so, although I do not have the figures before me. The tendency throughout the country is to go from the country to the town.

Mr. GUERNSEY. At any rate in the Southern States?

Mr. LEVER. Very largely in the Southern States.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. FESS. That is rather a striking tendency, I think, and is true.

Mr. LEVER. Undoubtedly.

Mr. FESS. Has the gentleman investigated to know any particular reason for that, with reference to what we might do in legislation?

Mr. LEVER. I am coming to that point immediately.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. MADDEN. And yet out of the 29,000,000 people living in the Southern States, including Oklahoma, there are 23,000,000 of them living in the rural districts, in territory with populations less than 2,000, whereas in the North, East, and West, with 71,000,000 people, there are 10,000,000 people more living in cities of over 2,000 inhabitants.

Mr. LEVER. That is very natural. The cities of the North have grown more rapidly than the cities in the South.

Mr. MADDEN. Mr. Chairman, will the gentleman yield further?

Mr. LEVER. Yes.

Mr. MADDEN. Does the gentleman know that over 95 per cent of men engaged in manufacturing, industrial, and mercantile pursuits in the United States fail, and that the opportunities afforded them are not anything like as stable or as lasting as the opportunities which are afforded to the farmers of the country?

Mr. LEVER. There may be more failures, I would say to the gentleman from Illinois, but the figures before the Committee on Agriculture show that the total earnings of the average farm in this country are only $402 a year, and as expressed by some of us in the committee, while the failures are not so constant or so spectacular, it is only a question of prolonging the agony.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. SMITH of Michigan. Did it develop before the committee in any way that the opportunities afforded the young man in the city greatly exceed those afforded the young man who stays on the farm?

Mr. LEVER. I will presently show the gentleman where I think the advantages in the city are largely greater than the facilities afforded the boy or the girl upon the farm, and this is a prime reason for parents moving into towns and cities.

Mr. SMITH of Michigan. And is it not true that the net income or profit of the farms, the good farms of Ohio, Indiana, Illinois, and Iowa, is only 3 per cent?

Mr. LEVER. I do not know that; I have not those figures in mind, but I have no doubt that the statement is correct.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. HAUGEN. If the gentleman will refer to the hearings before the Agriculture Committee, he will find that the average return is $402, and the average family 4.6 persons, making it a little less than $100 for each member of the family. That is the average throughout the United States. You will find that the average farm consists of about 75 acres, and the average investment of about $6,000. We are confronted with this proposition, that a farmer, with an average of 4.6 to his family, has an income, net, of only $402.

Mr. LEVER. The gentleman states the facts exactly as they appear in the hearings.

Mr. MOSS of Indiana. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. MOSS of Indiana. Does the gentleman believe that is true if you get to the farms in Indiana, Illinois, and Ohio and take the conditions in the year 1915 and the year 1916? Does the gentleman believe that those figures are true now?

Mr. HAUGEN. The figures were given only about three weeks ago.

Mr. MOSS of Indiana. I do not believe they are true of such States at the present time.

Mr. HAUGEN. That is the report that we have from the Department of Agriculture.

Mr. LEVER. They were the average of the entire country.

Mr. MOSS of Indiana. I am speaking of the conditions as they exist to-day in States like those I have named.

Mr. HAUGEN. In my statement I gave the average for the whole country; that is, the average return to the farmer and the average investment.

Mr. HARDY. Does that average of $402 net for the family of 4.6 people mean that that is the return to the family of renters or to the landlord on a $6,000 investment?

Mr. HAUGEN. That is the return to the landlord. The gross receipt is about $1,300.

Mr. HARDY. If that is what the man who owns the land gets, what does the fellow who does not own it, who is the tenant, get? What is his net income?

Mr. HAUGEN. It is often true that the renter gets more than the landlord. That, of course, depends upon the yield and also upon the price for which the crop is sold.

Mr. HARDY. Does the gentleman mean that the renter makes nothing?

Mr. HAUGEN. In many instances he makes more than the landlord.

Mr. LEVER. And in many instances he makes less than nothing.

Mr. HARDY. But if you have them separated, I would like to know what the renter's profits are?

Mr. HAUGEN. The department did not give an estimate as to the income of the renter or the landlord. It gave the average income of farmers of the United States, an average of $402, and out of that $260 for fuel, rent, butter, and cream consumed during the year should be deducted. Deducting $260 from the $402 gives the net income for 4.6 people.

Mr. HARDY. Just one more question along that line. My understanding is that in the Middle West the rent of such a farm would be over $400.

Mr. HAUGEN. That is true, but this is the average throughout the country. The average income of 75 acres, with an average net income of 4.6 people.

Mr. QUIN. In such a country as we have, where people work very hard, nobody makes $402 clear on a farm, especially a tenant.

Mr. HAUGEN. There is a variation. For instance, in my section of the country a year ago the returns were large, while this year they are small.

Mr. MOSS of Indiana. The question about making an average all over the United States is that it takes in so much of undeveloped territory. The United States is practically an undeveloped country.

Mr. FESS. I want to ask one more question.

Mr. LEVER. I will yield.

Mr. FESS. The chairman's statement is luminous and logical, I think. I wondered if you had made a comparison of those who would be without a home on the farm, the tenants, who I think are increasing in the country, with those in the city. Is the home owner in the city keeping pace with the home owner in the country?

Mr. LEVER. I have no figures on that, but my impression is this, I will say to the gentleman from Ohio, that home ownership in large cities is not increasing. Unfortunately, probably—and I am not so sure that I ought to say that—but in the city the tendency is for people to move out of their homes into apartments and places of that kind, where they do not have to have the expense and trouble to keep up the home. I feel sure that is true, especially of this city.

Mr. FESS. I am of the impression that tendency is growing in the country as well as in the city. I think it is unfortunate.

Mr. LEVER. The total population of the city is growing as compared with the total population of the country, but as to whether or not home ownership in the city is increasing, I am not able to say, though I fear it is not.

Mr. STEELE of Iowa. For the purpose of furnishing information to my friend from Indiana, I will state that Iowa's average is $552 for each and every farm in Iowa. That includes 4.9 people working upon each farm, and that does not include interest upon the farm. The average farm value in Iowa is $20,060, as reported by the agents of the Agricultural Department.

Mr. MADDEN. Is that gross or net?

Mr. STEELE of Iowa. That is so many farms minus. Your 5 per cent on that would make you minus on the farms of Iowa.

Mr. MADDEN. Does that include the accumulation of stock and accumulation of machinery, or does it include the net cash?

Mr. STEELE of Iowa. That makes the net, and when you allow 5 per cent for your investment on $20,000 you have a minus now.

Mr. LEVER. This is all very interesting, but it takes up too much of my time.

Mr. HAUGEN. Just one word. In keeping books in the department, everything consumed on the farm is charged to the farmer, including fuel and rent. Out of the $402 net you must deduct the $260 which is charged to and which is included in the gross receipts.

Mr. LEVER. While this is an interesting proposition, let me get back to what is the cause of this drift of population from country to town and this increase of farm tenantry we find in the country. Broadly speaking, it lies in the fact that the farmer has not been afforded facilities for capitalizing his brain and labor to the best advantage.

Mr. FESS. Are not the educational facilities in the country rapidly increasing?

Mr. LEVER. Fortunately; and I am optimistic enough to believe that the time is almost——

Mr. FESS. I know of some cases where the educational facilities are superior to those in the city, but those are exceptional.

Mr. HAUGEN. Is it not also true that the taxes increase correspondingly, and that the taxes at the present time nearly equal the profit from the farm? My recollections are that the gentleman from Indiana [Mr. Moss] indicated that in his section of the country the taxes amount to $1.50 an acre.

Mr. MOSS of Indiana. That is very true, but it is due to the inequality of the tax laws. While our real estate has increased 160 per cent in the last 10 years, it also shows that the personal property decreased. That shows a large amount of perjury is going on in Indiana; that is what that shows.

Mr. LEVER. Now, Mr. Chairman, to get back to my line of thought, the farmer's bank account does not permit him to surround and equip his home with the comforts of modern conveniences. His means of procuring credit are exceedingly limited, and when available at all it comes at exorbitant and ruinous prices. The conservative banker hesitates as to his security both with respect to land and to its products. The security is admittedly gilt-edged, but it is in such form as to be hard to realize upon and, of course, not easily negotiable. To the banker the best security is that which combines safety with quick convertibility into cash. Neither land nor the products of land under the present system of finance possess these highly desirable and necessary characteristics of a best security.

This situation results in the door of the bank being too often closed to the farmer. His only other source of credit too frequently lies with the usurer and the lien merchant, and he must at times have credit and hence must turn to these sources.

Some months ago the editor of the Progressive Farmer, the Hon. Clarence Poe, one of the profoundest students of farm economics in the country, printed in his paper a comparison of the average cash price with the average time price for eight staple necessities of the farm home in the South. I submit herewith that comparison, showing the increase per cent of time price over cash price for each article.

Article.	Average cash price.	Average time price.	Increase per cent.
Corn, bushel	$1.02	$1.235	21.08
Flour, sack	1.97	2.25	14.21
Hay, ton	20.50	25.50	24.39
Meal, bushel	1.0722	1.2944	20.72
Oats, bushel	.6436	.7936	23.31
Lard, pound	.1037	.1343	29.51
Sugar, pound	.0672	.0833	23.96
Molasses, gallon	.4364	.6020	38.16

He says:

Now, what does this mean? It means that the average difference between "time prices" and "cash prices" was 24 per cent, or if the average time-price account runs four months, interest was at the rate of 73 per cent per annum. Or if the average time-price account runs as long as six months, which I do not believe, the rate would still be over 48 per cent, or six times as high a rate charged the struggling poor as the State says bankers and money-lenders shall charge the rich.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. LEVER. I would be glad to yield, but I am pressed for time.

Mr. SMITH of Michigan. Then I will compress what I want to ask of the gentleman into one question.

Mr. LEVER. Very well.

Mr. SMITH of Michigan. I would like to inquire whether or not any other industry known to the gentleman owns as much bank deposits of the country as the farmer?

Mr. LEVER. That is not the case in my part of the country. It is probably true of the gentleman's country. Then Mr. Poe goes on to show that this condition is typical of a number of Southern States, and some personal investigation upon my own part demonstrates the accuracy of his information.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield there?

Mr. LEVER. Yes.

Mr. STAFFORD. Do I understand that in South Carolina you have a system of different prices based on cash and time payments?

Mr. LEVER. Certainly we have; and in most Southern States with which I am familiar.

Mr. STAFFORD. Then it is entirely different from the situation in the country where I live. There is one price, except in a few instances, where cut-price stores have been established.

Mr. LEVER. There is a time price and a cash price in practically every one of the Southern States.

Mr. STAFFORD. What is the time upon which these prices are based?

Mr. LEVER. Usually from four months to six months.

Where these conditions prevail you will see that the average farmer, in whose breast the spirit of home ownership beats as strongly as it does in yours, walks with the shackles of the private usurer and the rapacious lien merchant upon his ankles.

Gentlemen of the House, I ask in all solemnity if any profession anywhere can survive under such a deadening handicap? Is it strange that farm tenantry is increasing? Is it strange that the deserted farm home breaks so constantly upon the vision? Is it strange that the farmer cries out in revolt against these conditions? Now, what is the remedy?

Mr. HARDY. Mr. Chairman, will the gentleman yield there for a question?

Mr. LEVER. Yes.

Mr. HARDY. I agree with the gentleman's statement as to the conditions he speaks of and the tenant farmer. The fact that the merchant makes these charges is due, is it not, to the fact that the man who pays must make up for the man who does not pay?

Mr. LEVER. It is due to several causes. I think the gentleman will find, when I have finished my statement, that my remedy is broad enough to cover the situation.

Mr. SHALLENBERGER. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. SHALLENBERGER. Along the line of the gentleman's statement, let me ask the gentleman a question.

Mr. LEVER. Yes.

Mr. SHALLENBERGER. Is it not a matter of record that the farmer pays the highest rate of interest of any man engaged in any line of industry in this country?

Mr. LEVER. Yes. That is the case.

Mr. STAFFORD. That is not the case, if the gentleman will permit me, in the district that I formerly represented, where the farmers of Waukesha paid 4 per cent less than what the people were paying in the city of Milwaukee,

Mr. LEVER. The gentleman comes from a section of country that has more wealth than some other sections of the country.

Mr. STAFFORD. Yes; no doubt the per capita of wealth is greater there.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman permit another question?

Mr. LEVER. Yes.

Mr. SMITH of Michigan. Is it not true that the average rate of interest paid by farmers is something less than 7 per cent?

Mr. LEVER. No. I think it is more than 8 per cent on farm land, and on short loans much higher. Some of the testimony before our joint committee showed that some short loans bore an interest rate of 2,000 per cent. Of course, that is exceptional.

THE FARMER MUST HAVE CHEAPER CREDIT.

Since the establishment of land-grant colleges more than half a century ago the Government has been aiding in teaching the farmer more profitable production. In this effort nearly $200,000,000 has been expended. The work has justified itself in the rich results which it has brought. But it is only recently that any effort has been made to aid the farmer in the economic distribution of that which he produces. I think I may be pardoned in the pride which I feel in the authorship of the original item in the annual appropriation bill which carries the funds and authority for this kind of work. If permitted to develop gradually and soundly, the time will come when our system of distributing farm products will be as efficient as is our system of producing them. [Applause.]

But, Mr. Chairman, agriculture may be described as a tripod. The first leg we call production, the second distribution, the third finance. Each of these are absolutely essential to a proper support of the system. We have done much, as I have pointed out, for production; something for distribution; but we have done nothing in the way of adequately providing for the support of the other leg of the tripod. We have left the farmer to do this, and the task is too big for him. He is entitled to the help of the Government in the undertaking. Money, it must be remembered, or credit, is as necessary in cheap production as is science. Likewise no system of economic distribution of farm products can be worked out which is not based upon the gradual distribution of such products as the demand requires them, and gradual distribution is an utter impossibility except as money or credit makes it possible.

To illustrate: The farmer who places a lien upon his crop before it is planted and obligates himself for the repayment of it at a fixed time in the fall by that very act denies himself any voice whatsoever in fixing the price of the crop, which represents the efforts of his brain and labor for the year. He is forced to sell by the nature of his obligation without regard to the market price prevailing. The products of his labor are undergoing consumption during 12 months of the year, but the process of distribution from the hands of the farmer into the channels of commerce covers a period only of from 3 to 5 months. Such a system, the outgrowth of the farmers' financial necessities, must inevitably result in weighing down the market during this period of forced sale, causing lower prices and tremendous aggregate losses. This bill undertakes to provide a means by which the period of distribution of farm products may be lengthened and the inevitable glut upon the market under the present system reduced to a minimum. We are trying to give to certain agricultural products a holding power, a borrowing character, which they do not and can never possess under the existing system of distribution. It is axiomatic that no great betterment in rural conditions can take place until some system is devised which gives to the farmer complete ownership of the products of his soil and assures him a voice in fixing the price at which he is willing to part with that which he labors to produce. Such a system must rest fundamentally upon the ability of the farmer to procure easier and cheaper credit at the critical marketing periods of a given crop.

LONG-TERM CREDITS.

Mr. Chairman, substantial progress is being made in this direction. The last Congress created a joint committee of the Senate and House—six Members from each body—to study the whole subject of rural credits and to report back to the two Houses of Congress a plan for the inauguration of a system of rural credits adapted to American needs and conditions. I had the honor to be one of the six to serve upon that committee from the House of Representatives. This committee early in January reported to the two Houses of Congress the results of its efforts, recommending a comprehensive system of land-mortgage credits, which will provide for amortization payments of principal on long-time loans at low rates of interest. We have furnished the framework upon which the two Banking and Currency Committees of the House and Senate will build their system. The Senate committee has already reported. The House committee will do so shortly, so that it is safe to say that a system of long-term credits is assured.

SHORT-TERM CREDITS.

The bill reported by the joint committee does not undertake to establish a system of personal, short-term credits. It deals only with long-term loans based upon farm mortgages. This is not sufficient to completely solve the problem. It will greatly help and means immeasurable good to the country.

But to reach the most comprehensive solution of the difficulty under which agriculture exists it is necessary that provision be made, probably in a series of substantive laws and amendments to existing laws, which will provide these short-time loans which must be available to the farmer to enable him to procure that easier and cheaper credit at those critical marketing periods, to which reference has been made already.

THE AVAILABILITY OF THE FEDERAL RESERVE SYSTEM.

Gentlemen, my studies of rural-credits systems in other countries and my understanding of conditions in this country have brought me to the conclusion that, for the present at least, we shall have to look largely to the provisions of the Federal Reserve System for the machinery for furnishing short-term credits to the farmer.

It will be recalled that in the consideration of the Federal reserve act the question of extending the privilege of rediscount to agricultural paper was for many weeks the chief point of discussion among Members of this body. It was at last agreed that the farmer was entitled to this privilege along with the commercial interests of the country, and section 13 of that act embodies the principle of this agreement. As the bill left the House, the rediscount privilege for farm paper was limited to 90-day paper. The Senate increased this to six months. I do not believe the country has yet realized the tremendous possibilities for good that lie in this section as the system affects agriculture. A liberal interpretation by the Federal Reserve Board of this section, if supplemented by wise action upon the part of the people themselves, will result, in my judgment, in revolutionizing the present system of the distribution of agricultural products, and for the first time put the farmer in position to be the master of the products of his brain and brawn.

Mr. SMITH of Michigan. The law also provides for loaning money on a farm mortgage, does it not?

Mr. LEVER. Yes; but that has not been availed of to any great extent, I understand.

Mr. SMITH of Michigan. And the term of credit to the farmer is six months, whereas to the ordinary business man it is only three months.

Mr. LEVER. Yes.

Mr. HUTCHINSON. Congress passed a law providing for Federal reserve banks, but is it not a fact that the Federal reserve banks will not discount papers for a farmer?

Mr. LEVER. If a farmer's note is secured by proper collateral, such as a terminal-warehouse receipt, the reserve banks will rediscount such notes.

Mr. SMITH of Michigan. The Federal reserve act itself does not provide that a farmer's note shall be secured by any collateral, does it?

Mr. LEVER. It does not. That is a ruling of the Federal Reserve Board. I will say to gentlemen of the committee that the time which I have allotted to myself is nearly exhausted, and I must hurry along.

Mr. HAUGEN. Is it not true that the restrictions placed on farmers' loans are largely due to the regulations of the Federal reserve banks?

Mr. LEVER. I am not sure about that.

Mr. HAUGEN. And that by more liberal construction of the provisions of the law the Federal Reserve Board could make it easier for the farmers and the banks in this respect?

Mr. MOSS of Indiana. The gentleman had reference to the Federal-reserve rate of 3 per cent.

Mr. LEVER. The commodity rate; yes.

Mr. HELGESEN. In regard to the clause in the Federal reserve act providing that they can take care of farmers' paper, our experience in the West is that these loans have to be obtained through the local banks.

Mr. LEVER. Yes.

Mr. HELGESEN. And the governor of the Federal reserve banks for Minneapolis explained in a long letter that while he was trying to give preference to farmers' paper, he said he had to make these loans to the local banks, and the local banks charge just as much as the local market will permit, regardless of the fact that the Federal reserve bank charges them a low rate.

Mr. LEVER. I was coming to that. Already the Federal Reserve Board has done much to vitalize this section. On the 3d of last September the board established a preferential rate on commodity paper and defined such paper as a note, draft, or bill of exchange secured by warehouse terminal receipts, or shipping documents covering approved and readily marketable nonperishable staples, properly insured. This especial privilege for agricultural paper was extended to the member banks only on condition that the rate of interest, including commissions charged the maker of the note, did not exceed 6 per cent per annum. Many of the banks accepted this privilege, and the farmer for the first time got a glimpse of 6 per cent money. It is the first time, Mr. Speaker, in the history of this country that the farmer's note, secured by definite collateral, is given a preference over commercial paper in the matter of interest rate, and to my mind herein lies the beginning of a new era in farm short-term credits in this country, with all that this must mean to the prosperity and happiness of rural communities.

Mr. HELGESEN rose.

Mr. LEVER. Now, in a moment I am sure I will come to the point which the gentleman from North Dakota has in mind.

Frederick A. Davenport, professor of law and politics in Hamilton College, after a journey through the South Atlantic States, has this to say in the Outlook about conditions as he found them:

> But no proof of the powerful helpfulness of the Government at Washington ever crossed the vision of the South like that which the Federal Reserve Bank System has afforded in the use of the national credit to stabilize the great cotton industry. No single event has done so much to quicken the sympathy of the South with the National Government. Cotton is no longer simply a commodity, but a basis of security. The cotton warehouse receipts represent an indestructible quality, and so highly important an article in the balance of international trade that as a basis of agricultural loans there is nothing superior. The lower rate of interest and the sense of relief and freedom which have come to countless plain homes in the South augurs well for their future devotion to the Nation. Everywhere I heard the Federal Reserve System praised. And this the South owes to the Federal Government.

Here we have the unbiased opinion of a student of economics, who says in powerful descriptive language what every southern Member of Congress knows to be the facts. It will be noted that "the powerful helpfulness" to which Prof. Davenport refers is afforded through the Federal Reserve System, which permits cotton to become for the first time not simply a commodity but a basis of security. The warehouse bill is intended to provide the machinery through which farm products may get the full benefit of the Federal reserve act. Without this great piece of constructive legislation we should have nothing to build upon. Elevator receipts, warehouse receipts for grain, cotton, and other nonperishable products would have no special value, because without the Federal reserve act they would have no properly regulated credit reservoirs with which to relate themselves.

Mr. SMITH of Michigan rose.

Mr. LEVER. My friend will pardon me. I must hurry through. But, Mr. Chairman, with the facilities for credit which this act affords the farmer it would be almost criminal if we did not provide the additional legislation necessary to enable him to reach them, and that is just what we are proposing to do in this bill. We are seeking in this legislation to agriculturalize somewhat the reserve system; and this bill, in fact, from the standpoint of agriculture, is but a necessary legitimate adjunct to and result of the reserve system.

AN AMENDMENT TO THE RESERVE ACT.

In issuing its commodity rate the reserve board has given as liberal interpretation as is probably possible to section 13, and while great good has come from this section already the fact remains that a great many banks in certain sections of the country, unwilling to educate the people to 6 per cent interest, refused to accept the privileges thus afforded them by the commodity rate. This situation, it seems to me, has made it necessary that the reserve act be amended in such a way as to allow reserve banks to discount directly such paper as is made eligible for the commodity rate. Such an amendment would allow a farm note secured by a proper warehouse receipt discount at a reserve bank, and the result would be that member banks which now refuse to discount such notes would be forced to do so or else run the risk of losing a large part of their patronage.

The gentleman from Texas [Mr. SMITH] has such a bill pending before the Banking and Currency Committee, and I trust we may have the opportunity to vote upon it at this session of Congress. If member banks are not farsighted enough to realize that the prosperity of agriculture is the basis of all other prosperity, I think the big-stick policy of knocking their eyes open to a fact which is as much to their interest as it is to the farmer himself is justified.

ADDITIONAL MACHINERY NECESSARY.

But for the farmer to be able to avail himself of the existing privileges of the reserve system and the larger and wider privileges accruing to him under such an amendment it is necessary that machinery shall be afforded him which automatically converts his perfectly safe but nonliquid security into an equally safe but at the same time negotiable credit asset. The chief difficulty with the security which the farmer has to offer as collateral for loans is to be found not in its inherent weakness but in its nonliquid and otherwise unattractive form. If Congress intends or desires to furnish to agriculture the same facility for credit which the reserve act now affords to commerce, ways and means must be devised which will give to agricultural security those same characteristics as have enabled the security of the merchant and other classes of people always to command credit. To meet this situation, to give negotiability to the paper of the farmer, we propose under the terms of the warehouse bill to set up a system of warehouses licensed and bonded under Federal authority for the storage of specified, nonperishable agricultural products. And upon such products, so stored, uniform receipts will issue, the grades and weights of the products specified therein having been determined previously by licensed weighers and graders in accordance with Government standards. The machinery is simple, and experience shows it to be effective.

What is it? It contemplates a warehouse, bonded and under the control of a bonded and licensed warehouseman, to safeguard the product or security. It provides for the licensed weigher and grader which guarantees impartial and competent judgment as to the quantity and quality of the product. The quality of the product is measured by the Government standard of grade, which assures both correctness and uniformity of measurement.

Each and all of these important and essential facts find expression in the face of the storage or warehouse receipt. The workability of the entire plan depends ultimately and necessarily upon the absolute integrity of this receipt and especial care has been taken to see to it that the receipt in all cases speaks the facts with unquestioned verity. To be certain that such a receipt is provided we have followed as closely as possible the form of receipt issued under the uniform warehouse receipts act, in force in 31 States of the Union, which has become more or less a standard form in the channels of commerce.

HARDING'S INDORSEMENT.

Mr. Chairman, if there is any one member of the Federal Reserve Board who more than any other understands agricultural conditions and needs, it is the Hon. W. P. G. Harding, who himself began life in a country village. He knows country people and sympathizes with them. His services to agriculture as a member of the board can never be appreciated fully, and his indorsement of any proposal touching agriculture must carry great weight. I have discussed with him the provisions of this bill and submitted it to him for his mature thought which he expresses in a letter to me which I wish to bring to your attention at this time.

The letter is as follows:

FEDERAL RESERVE BOARD,
Washington, February 1, 1916.

MY DEAR MR. LEVER: I have received your letter of January 25 inclosing copy of bill (H. R. 9419) known as the United States Warehouse Act, together with your analysis of it.

It is generally recognized by banks and other financial institutions that cotton, which when properly warehoused can be held without deterioration for many years, and which is always readily marketable at a price, affords more satisfactory security for loans than perhaps any other commodity, but the difficulty hitherto has been the lack of a satisfactory warehouse receipt. The physical conditions attached to the warehouse must be considered. It must be so constructed as to afford adequate protection from the elements for cotton stored in it and it should be built in such a manner and of such materials as to provide for its contents a low insurance rate. The ownership and management of the warehouse must be responsible so that holders of receipts for goods stored in it may feel assured that the commodities represented by the receipts will, under all circumstances, be in the warehouse awaiting the return of the receipts. Furthermore, the banks and others making loans against warehouse receipts for cotton must be protected against adverse liens, and must be satisfied that the pledgor of the commodities covered by the receipt has a good and legal title to such commodities. The bill seems to recognize all of these points and it provides for proper inspection of warehouses, for the exercise of reasonable care on the part of the owners of warehouses receiving goods for storage, and further protects holders of receipts by requiring that the warehouses be bonded. For some years past there has been no difficulty in arranging loans at reasonable interest rates, on cotton stored in large warehouses at the ports and other concentrating points, but there have been practically no facilities for getting loans, except through local agencies, on cotton stored in warehouses at the numerous interior towns throughout the cotton belt, although after making due allowance for the cost of transporting cotton to market, there is no reason why the cotton at small interior towns should not be just as good collateral as that stored in a warehouse at Houston, New Orleans, or Memphis.

The proposed Federal warehouse act will, in my opinion, tend to make cotton stored at interior points available as collateral for loans without the intermediation of local banks, and will broaden very materially the market for loans secured by warehouse receipts for cotton. The consumption of a cotton crop is a process which is going on through all of the 12 months of the year, but the marketing of the crop, as far as the producer is concerned, is, generally speaking, a matter that involves only 3 or 4 months. The result has been that a mass of cotton comes on the market within a short period when prices are depressed under the weight of the offerings, so that the producer does not get the benefit of the averabe price covering the full 12 months' period. Proper warehouse laws and adequate warehouse facilities will invite abundant offerings of money to be loaned on cotton, and will enable producers to become a factor in determining the price of cotton and to exercise some discretion in selling. Should the bill become a law, warehousemen will not be compelled to take a Federal license, but can use their own judgment, and there will be ample opportunity to test its practical workings without hardship to anyone. In my opinion warehouses having a Federal license will do more business throughout the year than will the nonlicensed warehouses, and I think the result will be that in the long run practically all warehousemen will comply with the requirements of the act in order to share in its benefits.

As requested, I inclose herewith a copy of the Federal Reserve Board's commodity loan regulation.

Very truly, yours, W. P. G. HARDING.

Hon. A. F. LEVER,
Chairman Committee on Agriculture,
House of Representatives, Washington, D. C.

The bill meets every condition laid down by Mr. Harding for insuring the integrity of the receipt. It sets up a credit instrument, which this great economist describes as sufficient to meet all the requirements.

Mr. SMITH of Michigan. The gentleman refers to the warehouse bill?

Mr. LEVER. The warehouse bill.

Mr. HAUGEN. I would like to ask if Mr. Harding indorsed the bill as it was recently amended by the committee, which eliminates the grading of grain except grain that enters into interstate commerce, which will do away with the grading, as practically none of the stored grain will be held to be in interstate commerce?

Mr. LEVER. I will say that the matter was submitted to him before the committee had passed upon that, so that he does not touch upon that subject.

UNIFORMITY OF RECEIPT.

It is a well-known principle in economics that standardized, uniform security always is most negotiable and always commands the lowest rate of interest. A Federal warehouse law insures beyond doubt uniformity in character of warehouses, uniformity in methods of inspection, uniformity in methods of weighing and grading, uniformity in the standard of measurement—grade—and above all, and more important than all, such a system provides for a uniform warehouse receipt, or credit instrument, for the same product in every State in the Union. Each receipt, whether issued from a warehouse in Texas or in South Carolina for a like product will carry on its face the same story and will be issued under the same rules and regulations and protected by the same law. Such a receipt must be of the highest collateral value and it is my belief that it would flow at once into the general system of securities and become realizable upon at any time in the general market of securities.

THE OPINION OF A LEVEL-HEADED AGRICULTURAL STUDENT.

Mr. Chairman, I am not alone in my judgment upon this point. I wish to quote from a statement of the Hon. Clarence Poe, editor of the Progressive Farmer, in commenting upon an article of mine appearing in his paper last October:

One of the most important articles that the Progressive Farmer has ever printed—that is our opinion of the letter from Congressman A. F. LEVER, on another page, explaining the provisions of the proposed Federal warehouse law, a measure to whose support all American farmers should quickly rally.

The advantages of the plan should be self-evident. It will standardize the cotton-warehouse receipt and make it literally "as good as gold" as collateral paper. It will insure scientific grading of all cotton stored in such warehouses and thereby save the farmers millions of dollars—millions now being lost, as Mr. LEVER points out, as a result of shrewd, unfair graders taking advantage of the grower's ignorance, and millions more lost as a result of incompetent buyers grading too low in order to protect themselves from their own ignorance.

We have already been urging farmers to establish State warehouse systems, and expect to continue to do so, for as Mr. LEVER points out, there will be plenty left for the States to do in warehousing and marketing after this national measure is passed. But the first great need, as we see it, is the passage of this national warehouse law. If each State has a separate system without responsibility to the National Government, one State might be lax in enforcing its rules, might be too careless in licensing graders, might be too negligent in safeguarding receipts, etc. And then, as Mr. LEVER says, the bad receipt might injure the credit of the good one. But with national supervision and control, and the reputation for thorough and scientific work, utterly free from politics, for which the national Department of Agricultural has a reputation, the warehouse receipt would be absolutely unquestioned as collateral, and money would be available in unlimited quantities not only through the Federal Reserve System, but from all the great financial centers where dollars are always seeking investment on safe security.

In a later editorial, Mr. Poe again calls attention very strikingly to the desirability of a Federal warehouse system for farm products and points out the greater advantages of such a system.

A NATIONAL WAREHOUSE LAW NEEDED.

Great as are the advantages resulting from the action of a single State, however, we are convinced that they will be doubled when we get a national warehouse law such as that advocated by Senator HOKE SMITH and Representative LEVER in the last session of Congress, and doubled again when all the States in the South join in passing warehouse laws.

The advantages of having a general national law need only be considered to be admitted. No State government in the South, so far as we know, has worked out any plan for civil service or for divorcing public office from the party "spoils system," and for this reason it is highly important that graders and warehouse inspectors be licensed and controlled by the Bureau of Markets of the National Department of Agriculture. It is still more necessary in order to insure uniformity of methods—uniformity in grading methods and uniformity of rules as to what constitutes a satisfactory warehouse.

What we are after is getting a system whereby a warehouse receipt will be as good collateral as a Government bond in New York and other money markets, and in order to effect this result it is necessary to have this national supervision. Otherwise there will be variations in standards and consequent confusion and uncertainty as to just what a warehouse receipt means, and there will be the danger that the warehouse system in some States will fall a prey to politics and inefficiency.

THE SYSTEM IS COOPERATIVE AND PERMISSIVE.

I wish to emphasize that the provisions of this bill are permissive and in no sense compulsory. No warehouse is forced to come into the system. That is left entirely to the individual wishes of each warehouseman. He will determine the advantages and disadvantages of the situation. We have deliberately made the bill permissive rather than compulsory.

I wish also to point out very distinctly that the system proposed here can not interfere with any system organized under State or local authority. I recognize the value of State and local systems of warehousing farm products and I would not in the least hamper them. I believe emphatically that there is ample work for both systems to do and that the two will quickly harmonize their efforts and aims.

AMBITIOUS PROGRAM.

This, Mr. Chairman, is the first step at this session of Congress in the direction of agricultural preparedness. It is a most important step in rural-credits legislation.

Immediately following it will come the grain-grading bill. A little later will follow the cotton-standards and cotton-futures bills. And soon, we understand, the Committee on Banking and Currency is to report the land-mortgage credit bill. All of these proposed measures aim at the very vitals of the country's agricultural problems and provide a fundamental basis of solution of them.

This is the most ambitious program of agricultural legislation ever proposed in this or any other law-making body, and if these suggestions shall be written into law we shall have given evidence of a spirit of willingness to do for our farmers what European countries have done for theirs. This is the most the farmer asks to be done. It is the least we can afford to do. [Applause.]

Mr. FESS. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. FESS. I recognize the argument for Federal legislation for a rural-credit system, but I am not fully persuaded that

the argument is just as strong for a Federal warehouse system. Would not the State take care of that?

Mr. LEVER. The same argument that is of force for the establishment of a national-bank system, in my judgment, would apply to a system for Federal warehouses. I think there is necessity for both. I feel certain in my own mind that a receipt issued from a federally supervised warehouse would possess a much higher credit value than if issued from a State-controlled warehouse.

Mr. MOSS of Indiana. The gentleman would not put the warehouse outside of the uniform standard of quality and condition.

Mr. LEVER. Not at all.

Mr. MOSS of Indiana. And inasmuch as your bill calls for a Federal grading and a Federal standard, that goes along with the Federal receipts, and gives it a much higher credit value than would a State-warehouse system.

Mr. LEVER. Undoubtedly.

Mr. SMITH of Michigan. Can the gentleman tell how many States have a warehouse system?

Mr. LEVER. There are 31 States that have adopted the uniform warehouse receipts act.

Mr. SMITH of Michigan. I should think that they might work together.

Mr. LEVER. They will.

Mr. PLATT. Does not the gentleman think that the State banks could give the necessary accommodation for this form of paper without asking the Federal reserve banks to do it?

Mr. LEVER. We face a fact and not a theory; they are not doing it. We might make them, but they are not doing it. Mr. Chairman, how much time have I used?

The CHAIRMAN. The gentleman has consumed 1 hour and 14 minutes.

MESSAGE FROM THE SENATE.

The committee informally rose; and Mr. RUBEY having taken the chair as Speaker pro tempore, a message from the Senate by Mr. Tulley, one of its clerks, announced that the Senate had passed bills of the following titles, in which the concurrence of the House of Representatives was requested:

S. 4432. An act to amend section 8 of an act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914; and

S. 5407. An act authorizing and directing the Secretary of the Treasury to extend the time of payment of the amount due the Government by the city of Augusta, Ga.

AGRICULTURAL APPROPRIATION BILL.

The committee resumed its session.

Mr. HAUGEN. Mr. Chairman, I yield 15 minutes to the gentleman from South Dakota [Mr. DILLON].

COOPERATION IN DISTRIBUTION OF FARM PRODUCTS.

Mr. DILLON. Mr. Chairman, in order to obtain success in the farming industry the farmers must adopt cooperative methods. The big question is how to avoid waste in production and distribution. Every producer and every consumer is deeply interested in this vital question. The annual production of the American farm amounts to $13,000,000,000. In the distribution of these products the railroads receive 3.8 per cent, the selling expense is 9.2 per cent, waste in selling is 12 per cent, and the dealer's profit is 28.9 per cent, while the producers share is 46.1 per cent.

It will be seen that it costs more to distribute the products than it does to produce them. The burden of looking after distribution must largely be assumed by the producer. The consumer should aid the producer in an effort to protect the distribution from unfair charges from the time the products leave the farm until they reach the consumer. If the producer fails to look after his market the speculator will assume the functions of distribution and pocket the profits.

The farmer of to-day is violating the rules of modern business in the distribution of his crops. As soon as the crop is harvested he, too often, puts it on the market when it is not needed for consumption. The consumer does not want these overplus products when the market is oversupplied. It is then wanted by the speculator. The crop should go to the consumer only as fast as it is needed for consumption.

The farmers through cooperative organization ought to hold their products and sell them only as fast as the consuming public needs them. By so doing they would supply the market according to demand. The successful manufacturer does not rush his products to the consumer regardless of the demand, but holds them and thus feeds the demand. This is what every other business is doing except the farmer.

The farmer in protecting his own interest should not stop with production, but should follow his product to the end of distribution, because distribution for him is as important as production. For the want of cooperation the farmer is being forced to turn his product over to the speculator.

Local production for local consumption is no longer feasible. The local dealers will not buy the farmers' stock for local consumption for fear the packers will refuse to sell him supplies. The local dealers, therefore, recognize the fact that the farmers' sales do not make a continuous supply for the market. They turn to the packers because they furnish a regular supply for the consuming public.

The trusts that deal in coal, oil, coffee, sugar, beef, and lumber, and the manufacturing plants are all careful to follow their products to the consumer, and by so doing they are preventing waste and are crowding out the speculator. New oil fields do not lower the price of oil; new coal mines do not lower the price of coal; overproduction of manufactured articles seldom lowers the price to the consumer, because the supply is carefully regulated to meet the market at prices arbitrarily fixed.

Thus it has become a part of business methods to see that the supply does not exceed the demand. The railroads, the telephone, the telegraph, the bankers, the trust operators, the governmental patentees each reach the consumer without any real competition and without going through the speculative operators.

The farmer, however, unmindful of these methods continues doing business in the same old way. He gluts the market and forces a sale where there is no demand. He fails to enter into distribution, while the speculator takes charge of these activities for his own profit. Who has not seen the farmer with his load of hay or wood standing on the street corner waiting for a buyer? Such methods violate every rule of modern business.

The individual method of reaching the consumer is rapidly passing. The corporation method is giving way to the cooperative system which is now rapidly coming into common use.

Denmark has made great progress in the development of cooperative buying and selling agencies. These societies have experts who make tests of seeds for the farmers and give them advice in the improved and scientific methods of farming. The Danish farmer does not individually buy his supplies nor does he individually sell his products.

The cooperative societies engage in the distribution of the products of the farm and likewise in buying the supplies for the farmers. His grain, hogs, poultry, eggs, butter, and vegetables are all handled by the cooperative societies. It is said that 95 per cent of the Danish farmers are members of the cooperative dairies which are now selling about $1,000,000 worth of butter per week to the English customers. They have cooperative slaughterhouses, cooperative bakeries, and cooperative export associations as well as cooperative buying and selling agencies. In fact, in every line of trade cooperation exists.

This system has made Denmark rich in its agricultural development, and it is said that 89 per cent of the Danish farmers own their own homes. Germany has also made a great success in the development of her selling and buying agencies.

In this country we are rapidly developing this system of distribution, yet it must be conceded that the cooperative system in this country is in its infancy. The fruit growers of the country acting individually made a failure of marketing the crops. The California Orange Growers' Protective Union was established in 1885. For the want of loyalty among its members it was overtaken by failure.

In 1893 the task was again assumed, but the spirit of disloyalty carried it down in defeat. In 1895 it was reorganized and achieved partial success. In 1905 the California State Fruit Growers' Exchange was organized and has successfully established a stable and permanent market for the fruit growers of that State. It has its legal department, its insurance department, its box-manufacturing department, and is annually shipping 20,000 carloads of fruit.

Likewise the Florida citrus exchanges have reached a high stage of development. The walnut groves of California, the Georgia fruit exchanges, the apple growers of Oregon, all are examples of a successful business conducted under a cooperative system.

Wherever the cooperative associations have reached the highest stage of development they have forced loyalty among their members by contracts providing for annual delivery of the products and providing for damages for failure to comply with the contract. Such contractural provisions have played an important part in compelling loyalty, and have successfully withstood the attacks of the middlemen and speculators.

The by-laws of these institutions provide for a division of the profits resting on a basis of patronage, thus eliminating the

capitalists. These institutions have passed the experimental stages. Whenever the products of the farm can be handled through the cooperative channel we will no longer have the fluctuations that now exists in the prices. Distribution reduced to a scientific basis in the city of New York would save the consumers of that city $75,000,000 per year.

This bill carries an appropriation of $24,501,093 for the purpose of aiding the American farmer. A great part of these funds are to be used for investigating purposes. These investigations are going on every year, and are never finished. The bill is long on investigation and short on the diffusion of knowledge. We need everyday, practical, common-sense methods of imparting the results of these investigations to the farmers.

It is evident that the farmers have sustained great losses in their failure to engage in the distribution of their products, and the Agricultural Department is likewise failing to distribute the result of its investigations.

The farmer is not so much interested in the scientific phases of the investigations, but he is deeply interested in the practical things and wants to know how to get results. He knows how to raise good crops and is well educated in matters of production. He knows that he is raising great crops, but this does not assist him in getting a fair return for his labors. How does he know where and when to ship his products, how to avoid a glutted market, and how to obtain a good market?

At present the terminal market constitutes his greatest trouble. Here the speculator and trafficker gather, so that they may cast lots and barter on the products of his toil. Give him less investigation and more common-sense knowledge about markets and help him to get an honest, stable price for his product.

He needs help on transportation, help at the terminals, rather than investigations to be carried on under the terms of this bill. He knows the Shipping Trust, the Elevator Trust, and operators on boards of trade, dealing in futures, without intent to deliver, are all exacting from him undue profits.

As a part of my remarks I am inserting a scholarly discussion by former Congressman John E. Kelley, of Pierre, S. Dak., showing how the farmer is robbed by the Shipping Trust and market raiders:

Grain prices throughout the world have been the highest known for 40 years. Yet, owing to the Shipping Trust and the American Terminal Elevator Trust, the American farmers have been selling, in many instances, below the cost of production. Oats throughout the Northwest, for more than 100 days after the opening of the markets this year, sold for 25 to 26 cents per bushel, and in many instances even less. All of this time, with the exception of just a few days, American oats sold in Liverpool at 74½ to 75 cents for 32 pounds. "New clipped, American, Liverpool, 45 pounds, 4s. 4½d. to 4s. 5d." Thus, while American oats sold in Liverpool for 75 cents per bushel, and the American farmers were getting at the same time but an average of 25 cents, who got the remaining 50 cents per bushel? Here are the figures: The market raiders got 23 cents per bushel of it and the Shipping Trust took 16 cents per bushel, in addition often to the regular rates before the war. The other 11 cents per bushel were absorbed in local elevator rates, lake rates, insurance, over-seas and locally. The Government furnishes the insurance, which has averaged 1 cent to British ports down to one-half cent and one-fourth cent to nonbelligerent countries. So that insurance is low and within reach of all.

Accordingly, while the consumer in England paid an average of 75 cents per bushel for American oats, the American farmers got an average, for the first 100 days following the opening of the market this fall, of 25 cents per bushel, or but one-third of the real value on his crop.

Of the 50 cents per bushel taken from the farmers, from 11 to 13 cents only could by any possibility be fairly charged, even during war times, to legitimate expenses and legitimate profits. The remaining 37 cents per bushel represents clear plunder divided up between the American grain speculators and the foreign Shipping Trust, above indicated

A short time before the war the Minneapolis Journal made a comment upon the fact that the spread between the price of wheat in Liverpool and Minneapolis was the exact cost of transportation and commission, and was given as 12 cents per bushel lake freight from Duluth.

On the 27th day of November the spread between Duluth and Liverpool was 71 cents per bushel, being worth in Liverpool $1.73, or 12s. In Duluth (same grade), $1.02; spread, 71 cents; fair cost of handling, 17 cents; difference, 54 cents.

A fair price for handling wheat between Duluth and Liverpool on that date, allowing big advances on account of the war, would be:

	Cents.
Lake rates	4
Elevator	1
Commission	1
Insurance, local and overseas	2
Emergencies	1
Ocean rates (double peace rate)	8
Total	17

Yet we find that 54 cents in addition to this sum was taken and was divided between the terminal market raiders and the foreign shipping trust as follows: The rate charged by the shipping trust that day from New York to British ports was 14d. per bushel—28 cents. Here was 20 cents clear plunder taken from farmers. But the American terminal market raiders distanced the foreign shipowners when it came to plunder to the extent of 69 per cent; for the raiders took on that day, over and above every known cost of handling, fixing the calculation on the price of wheat that day between Duluth and Liverpool, 34 cents per bushel. The price the farmers got on the 27th of November in Aberdeen, S. Dak., for No. 1 wheat was 85 cents; accordingly, the terminal market raiders took as a clear toll over all costs of handling 40 per cent of the price the South Dakota farmer got; and the raiders and the shipping trust together took as a clear toll, over all legitimate costs of handling, 63 per cent of the selling price the South Dakota farmers received, an unjustifiable loss of 54 cents per bushel.

But wheat and oats are getting well out of the hands of farmers now and into the hands of the market raiders. Accordingly, watch them between November 27 and December 18. In Liverpool the advance was but 6 cents per bushel, while the advance in price in Duluth, Chicago, or Minneapolis has been 26 cents per bushel.

AFTER THE CORN GROWER AND THE CONSUMER NOW.

Now, since wheat, oats, and barley have largely passed into the hands of speculators, they have advanced in price rapidly; but the corn grower—he is now marketing heavily—they are after him.

Corn, American, mixed, new, Liverpool, December 28, 9s. 8d.

Reduced to American money this means 56 pounds is worth $1.30.

Chicago, No. 6, mixed, December 8, 65 cents.

Spread between Chicago and Liverpool, 65 cents.

Ocean rate, 22 cents; railroad rate to Philadelphia or Baltimore, 7 cents; insurance, 1 cent; elevator at coast, 1 cent; total cost of handling, 31 cents.

Toll taken by speculator over all costs of handling, 34 cents.

Add to this the excessive ocean rates charged by the shipping trust, which is 16 cents, and we have a total of 50 cents.

If this isn't robbery, what is it? When farmers become sufficiently intelligent to organize, and place tried and true men at the head of their organizations—not mere puppets of market raiders and gamblers—they will put a stop to such robberies, but not till then.

From the above article it appears that the American farmer received 25 cents per bushel for his oats, which sold in Liverpool for 75 cents per bushel. He received for his wheat at Aberdeen, S. Dak., 85 cents per bushel, which sold in Liverpool for $1.73 per bushel. He received in Chicago 65 cents per bushel for his corn, which sold in Liverpool for $1.30.

Mr. SMITH of Michigan. Will the gentleman yield?

Mr. DILLON. Certainly.

Mr. SMITH of Michigan. I would like to inquire whether or not under your investigation you have observed that the farmer only receives 33⅓ per cent of the price paid by the ultimate consumer?

Mr. DILLON. I think it is more than that. I think it 46.1 per cent.

This article demonstrates that the Shipping Trust and terminal operators are levying upon the farmers a toll of 37 cents per bushel on oats, 54 cents per bushel on wheat, and 34 cents per bushel on corn above fair and reasonable charges.

Mr. Chairman, the American farmer will take care of the production of his crop with but little help from the Government, but he has sorely needed aid in the distribution of his crop and in obtaining a fair and honest market for his crop.

We would remind you that in the year 1905 the difference between the Minneapolis high and low May wheat was 65 cents per bushel, while the difference between high and low May wheat in Chicago the same year was 38½ cents per bushel. Also that frequently the sales of wheat on the Chicago Board of Trade amounted to 100,000,000 bushels per day, while the entire amount of wheat going to Chicago is only about 36,000,000 bushels per year.

These boards of trade are expensive mediums for the American farmer in the distribution of the products of the farm. These matters should have our attention if we would restore to the farmers an honest, open market for his products.

The remedies needed are: Prohibiting dealing in futures where no intent to deliver exists; conservation of the farm products through cooperation reaching from the producer to the consumer; Government-owned merchant marine; and Government control of warehouses at terminals. [Applause.]

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12717, the Agricultural bill, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. BENNET, indefinitely, on account of illness.

To Mr. WALKER, for 10 days, on account of illness in his family.

ARMOR PLATE.

Mr. BUTLER. Mr. Speaker, on last Saturday the gentleman from Michigan [Mr. KELLEY] asked for three days to file views of the minority of the House Naval Affairs Committee on the bill S. 1417, the armor-plate bill. One of my colleagues, Mr. FARR, is absent on account of a death in the family, and I ask that the time be extended for three legislative days.

The SPEAKER. The gentleman from Pennsylvania asks unanimous consent that the time for filing minority views on the

armor-plate bill be extended for three legislative days. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 20 minutes p. m.) the House adjourned until to-morrow, Wednesday, April 12, 1916, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Portsmouth Harbor, N. H. (H. Doc. No. 1010); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

2. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Shrewsbury River, N. J., with a view to constructing works to prevent the sea from breaking through and destroying the navigable channel, including consideration of any proposition for cooperation on the part of local or State interests (H. Doc. No. 1011); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

3. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Buffalo Harbor, N. Y., with a view to securing a width of 400 feet in the inner harbor entrance channel, including consideration of any proposition for cooperation on the part of local interests (H. Doc. No. 1012); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

4. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Pensauken Creek, N. J. (H. Doc. No. 1013); to the Committee on Rivers and Harbors and ordered to be printed.

5. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Clinton River, Mich. (H. Doc. No. 1014); to the Committee on Rivers and Harbors and ordered to be printed.

6. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Port Arthur ship canal, Texas, with a view to making an entrance into Sabine Lake at or near the city of Port Arthur (H. Doc. No. 1015); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

7. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Sebethe River, Conn., from its mouth to a point at or near the city of Bristol, Conn., and canal from a suitable point on the Sebethe River to New Britain, Conn. (H. Doc. No. 1016); to the Committee on Rivers and Harbors and ordered to be printed.

8. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on reexamination of Depere Harbor, Wis. (H. Doc. No. 1017); to the Committee on Rivers and Harbors and ordered to be printed.

9. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on reexamination of Duluth-Superior Harbor, Minn. and Wis. (H. Doc. No. 1018); to the Committee on Rivers and Harbors and ordered to be printed.

10. A letter from the Acting Secretary of the Treasury, transmitting copy of a communication from the Secretary of War submitting list of claims that have been adjusted and settled by the Chief of Engineers and approved by the Secretary of War (H. Doc. No. 1019); to the Committee on Expenditures in the War Department and ordered to be printed.

11. A letter from the chairman of the Federal Trade Commission, transmitting a preliminary report concerning the investigation of gasoline prices by the Federal Trade Commission (S. Doc. No. 403); to the Committee on Interstate and Foreign Commerce and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. ADAMSON, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 9134) to repeal certain sections and part of section of an act entitled "An act to provide for recognizing the services of certain officers of the Army, Navy, and Public Health Service for their services in connection with the construction of the Panama Canal, to extend to certain of such officers the thanks of Congress, and for other purposes," approved March 4, 1915, reported the same with amendment, accompanied by a report (No. 515), which said bill and report were referred to the House Calendar.

Mr. GREENE of Massachusetts, from the Committee on the Merchant Marine and Fisheries, to which was referred the bill (H. R. 13831) to amend section 4464 of the Revised Statutes of the United States, relating to number of passengers to be stated in certificates of inspection of passenger vessels, and section 4465 of the Revised Statutes of the United States, prescribing penalty for carrying excessive number of passengers on passenger vessels, and section 4466 of the Revised Statutes of the United States, relating to special permits for excursions on passenger steamers, reported the same with amendment, accompanied by a report (No. 516), which said bill and report were referred to the House Calendar.

Mr. RAYBURN, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 12197) authorizing Ashley County, Ark., to construct a bridge across Bayou Bartholomew, reported the same with amendment, accompanied by a report (No. 517), which said bill and report were referred to the House Calendar.

Mr. SIMS, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 12099) extending the time for the completion of the bridge across the Mississippi River at Memphis, Tenn., authorized by an act entitled "An act to authorize the Arkansas & Memphis Railway Bridge & Terminal Co. to construct, maintain, and operate a bridge across the Mississippi River at Memphis, Tenn.," approved August 23, 1912, reported the same with amendment, accompanied by a report (No. 518), which said bill and report were referred to the House Calendar.

Mr. DEWALT, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 13475) granting the consent of Congress to the county commissioners of Warren County, Pa., to construct a bridge across the Allegheny River in the borough of Warren, county of Warren, in the State of Pennsylvania, reported the same without amendment, accompanied by a report (No. 519), which said bill and report were referred to the House Calendar.

Mr. RAYBURN, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 13715) granting the consent of Congress to C. M. Simpson, Z. T. Hedges, J. C. Hackney, and Mark Brown to construct a bridge across Bayou Bartholomew, Ashley County, Ark., reported the same without amendment, accompanied by a report (No. 520), which said bill and report were referred to the House Calendar.

Mr. SUTHERLAND, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (S. 4026) authorizing and directing the Secretary of War to abrogate a contract lease of land and water power on the Muskingum River, Ohio, reported the same with amendment, accompanied by a report (No. 521), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. RAYBURN, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 10849) granting the consent of Congress to Ashley County, Ark., to construct a bridge across Bayou Bartholomew, reported the same without amendment, accompanied by a report (No. 522), which said bill and report were referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. ADAIR, from the Committee on Invalid Pensions, to which was referred the bill (H. R. 14484) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war, reported the same without amendment, accompanied by a report (No. 523), which said bill and report were referred to the Private Calendar.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and a memorial were introduced and severally referred as follows:

By Mr. JAMES: A bill (H. R. 14469) providing that no officer or enlisted man who once deserted from an enlistment in the United States Army, Navy, or Marine Corps, and who was apprehended and by court-martial decision was dishonor-

ably discharged from said service, shall be entitled to receive a pension under any law; neither his widow, minor children, nor any other dependent relative; to the Committee on Pensions.

By Mr. HERNANDEZ: A bill (H. R. 14470) to construct a bridge in San Juan County, State of New Mexico; to the Committee on Interstate and Foreign Commerce.

By Mr. FERRIS: A bill (H. R. 14471) to amend an act entitled "An act to codify, revise, and amend the laws relating to the judiciary"; to the Committee on the Judiciary.

By Mr. MOORE of Pennsylvania: A bill (H. R. 14472) to prevent and punish the desecration of the flag of the United States; to the Committee on the Judiciary.

By Mr. CARLIN: A bill (H. R. 14473) for the construction of a public building at Orange, Va.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14474) for the construction of a public building at Culpeper, Va.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14475) for the construction of a public building at Louisa, Va.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14476) for the construction of an addition to the present post-office building and for the acquisition of additional real estate to enlarge the post-office grounds in the city of Alexandria, Va.; to the Committee on Public Buildings and Grounds.

By Mr. PARKER of New Jersey: A bill (H. R. 14477) further to increase the efficiency of the Military Establishment of the United States; to the Committee on Military Affairs.

By Mr. McCULLOCH: A bill (H. R. 14478) extending the franking privilege of the United States Postal Service to communications in relation to pending and proposed Federal legislation; to the Committee on the Post Office and Post Roads.

By Mr. JOHNSON of Kentucky (by request): A bill (H. R. 14479) to license operators of cinematographs, moving-picture machines, and similar apparatus, and for other purposes; to the Committee on the District of Columbia.

By Mr. NICHOLLS of South Carolina: A bill (H. R. 14480) for the erection of a public building at Woodruff, S. C.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14481) for the erection of a public building at Greer, S. C.; to the Committee on Public Buildings and Grounds.

By Mr. GUERNSEY: A bill (H. R. 14482) to provide for enlarging the United States building at Houlton, Me.; to the Committee on Public Buildings and Grounds.

By Mr. NORTON: A bill (H. R. 14483) to authorize the construction of a bridge across the Missouri River at or near the city of Williston, N. Dak.; to the Committee on Interstate and Foreign Commerce.

By Mr. CARY: Joint resolution (H. J. Res. 198) providing for the appointment of a committee by Congress to assess the value of the Carlyle house, located in the city of Alexandria, Va.; to the Committee on Rules.

Also, resolution (H. Res. 199) directing the Commissioners of the District of Columbia to report by what authority the gaslight companies are furnishing gas to consumers outside of the District of Columbia; to the Committee on the District of Columbia.

By Mr. WARD: Memorial of the legislature of the State of New York urging Representatives in Congress to oppose any legislation tending to delay or interfere with the immediate preparation of our military and naval forces for a condition of proper and adequate defense; to the Committee on Military Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ADAIR: A bill (H. R. 14484) granting pensions and increase of pensions for certain soldiers and sailors of the Civil War, etc.; to the Committee of the Whole House.

By Mr. AUSTIN: A bill (H. R. 14485) granting an increase of pension to James M. Minton; to the Committee on Invalid Pensions.

By Mr. AYRES: A bill (H. R. 14486) granting a pension to Sarah A. Eddy; to the Committee on Invalid Pensions.

By Mr. CALLAWAY: A bill (H. R. 14487) for the relief of the estate of G. W. Hollingsworth; to the Committee on Claims.

By Mr. CARY: A bill (H. R. 14488) to carry out the findings of the Court of Claims in case of Albert G. Peabody; to the Committee on War Claims.

By Mr. COX: A bill (H. R. 14489) to correct the military record of George Payton; to the Committee on Military Affairs.

By Mr. DILLON: A bill (H. R. 14490) to correct the military record of Patrick Dwyer; to the Committee on Military Affairs.

By Mr. DRISCOLL: A bill (H. R. 14491) granting a pension to Max Marciniak; to the Committee on Pensions.

By Mr. EAGAN: A bill (H. R. 14492) granting an increase of pension to Mary F. Smart; to the Committee on Invalid Pensions.

By Mr. GOOD: A bill (H. R. 14493) granting an increase of pension to William T. Brown; to the Committee on Invalid Pensions.

By Mr. GRAY of Indiana: A bill (H. R. 14494) granting an increase of pension to John Showalter; to the Committee on Invalid Pensions.

By Mr. GRAY of New Jersey: A bill (H. R. 14495) for the relief of Henry Von Der Heide; to the Committee on Claims.

By Mr. HASTINGS: A bill (H. R. 14496) granting an increase of pension to Robert M. Gilmore; to the Committee on Invalid Pensions.

By Mr. JOHNSON of Kentucky: A bill (H. R. 14497) granting an increase of pension to Margaret A. Osborne; to the Committee on Pensions.

By Mr. KAHN: A bill (H. R. 14498) granting a pension to Mary A. Craig; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14499) for the relief of Jacob Meyers; to the Committee on Claims.

By Mr. KENNEDY of Iowa: A bill (H. R. 14500) granting an increase of pension to William Sprouse; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14501) granting a pension to Peter McDoll; to the Committee on Invalid Pensions.

By Mr. KETTNER: (H. R. 14502) for the relief of Silver Gate Building and Loan Association; to the Committee on Claims.

By Mr. LAFEAN: A bill (H. R. 14503) granting an increase of pension to Mary S. Sweitzer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14504) granting an increase of pension to Susan Adams; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14505) granting an increase of pension to Sarah C. Hikes; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14506) granting an increase of pension to Maggie A. Meals; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14507) granting an increase of pension to Albert H. Holtzinger; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14508) granting an increase of pension to Jacob Haar; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14509) granting an increase of pension to George N. Householder; to the Committee on Invalid Pensions.

By Mr. LANGLEY: A bill (H. R. 14510) granting three months' pay proper to Henry C. Pearson; to the Committee on War Claims.

Also, a bill (H. R. 14511) granting an increase of pension to William Turner; to the Committee on Invalid Pensions.

By Mr. LLOYD: A bill (H. R. 14512) granting an increase of pension to Otis Miller; to the Committee on Invalid Pensions.

By Mr. McCULLOCH: A bill (H. R. 14513) granting a pension to Howard M. Greenwald; to the Committee on Pensions.

By Mr. McKINLEY: A bill (H. R. 14514) to correct the military record of Richard Gulliford; to the Committee on Military Affairs.

By Mr. MOON: A bill (H. R. 14515) for the relief of Fannie Hoyl Blevins; to the Committee on War Claims.

Also, a bill (H. R. 14516) granting an increase of pension to James P. Griffin; to the Committee on Invalid Pensions.

By Mr. PRATT: A bill (H. R. 14517) granting an increase of pension to Thomas Smeaton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14518) granting a pension to Frances W. Graves; to the Committee on Invalid Pensions.

By Mr. ROBERTS of Massachusetts: A bill (H. R. 14519) granting an increase of pension to Charles E. Gerrold; to the Committee on Invalid Pensions.

By Mr. SIMS: A bill (H. R. 14520) granting a pension to Mrs. L. B. Spence; to the Committee on Invalid Pensions.

By Mr. SPARKMAN: A bill (H. R. 14521) granting a pension to Mary E. Phillips; to the Committee on Invalid Pensions.

By Mr. SUTHERLAND: A bill (H. R. 14522) for the relief of John W. Berry; to the Committee on Military Affairs.

By Mr. SWEET: A bill (H. R. 14523) to reimburse Mrs. Abbie J. Foster for safe destroyed by burglars; to the Committee on Claims.

By Mr. TAGGART: A bill (H. R. 14524) granting an increase of pension to Mary Hurry; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14525) granting an increase of pension to John D. Patterson; to the Committee on Invalid Pensions.

By Mr. THOMAS: A bill (H. R. 14526) granting a pension to Carrie A. Stillions; to the Committee on Pensions.

By Mr. WILLIAMS of Ohio: A bill (H. R. 14527) granting a pension to William B. Spencer; to the Committee on Pensions.

By Mr. WOODS of Iowa: A bill (H. R. 14528) for the relief of W. W. Finn; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BAILEY: Petitions of Isaac Blackburn, of Springhope, and John A. Cuppett, of New Paris, both in the State of Pennsylvania, favoring preparedness; to the Committee on Military Affairs.

Also, petitions of Isaac Blackburn, Springhope, and John A. Cuppett, New Paris, both in the State of Pennsylvania, favoring Government monopoly of telegraph and telephone; to the Committee on the Post Office and Post Roads.

Also, petition of A. M. Warner, Johnstown, Pa., member of the Society of the Chagres, Balboa Heights, Canal Zone, favoring House bill 8828, relative to civilian employees of the Isthmian Canal Commission; to the Committee on Appropriations.

Also, protest of M. L. Varner, P. R. Ream, F. D. Rively, H. E. Murphy, John Griffith, J. S. Stutzman, David Berkey, L. E. Berkey, J. R. Frye, W. J. Thiele, E. J. Allenbaugh, Ephraim Ream, H. L. Richardson, E. O. Evans, Daniel Custer, J. H. Hinemeyer, Harry Smith, J. E. Manges, David Miller, H. M. Lamison, H. J. Baumgardner, Jacob Statler, M. E. Shaffer, B. F. Small, U. G. Custer, James Heiple, E. A. Swart, W. D. Miller, M. W. Cope, and A. L. Wagner, all of Johnstown, Pa., against House bills 491 and 6468, denying the use of the mails to certain publications; to the Committee on the Post Office and Post Roads.

By Mr. BEAKES: Petition of Bouldry & Tucker, Reynolds & Warner, J. H. Magel, F. G. Lincoln, Dr. M. L. Bacon, and Pratt & Snow, all of Concord, Mich., in support of House bills 712 and 270; to the Committee on Ways and Means.

Also, petitions of Jesse Wall and 74 citizens of Sand Creek, Mark Olmstead and 11 citizens of Bancroft, and James B. Ivey and 15 citizens of Saginaw County, all in the State of Michigan, protesting against the passage of House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petitions of Sunday School and congregation of the Methodist Episcopal Church, Willis; H. C. Fry and 43 citizens of Willis; Lathrop Memorial Woman's Christian Temperance Union, Jackson; and Sunday School of the Friends Church, Rollin, all in the State of Michigan, in favor of national prohibition; to the Committee on the Judiciary.

By Mr. BRUCKNER: Petition of Bronx County Civic League, New York, favoring House bill 6915, relative to superannuated employees of the Postal Service; to the Committee on the Post Office and Post Roads.

Also, petition of Local Union No. 478, United Brotherhood of Carpenters and Joiners of America, relative to printing of report of Commission on Industrial Relations; to the Committee on Appropriations.

Also, petition of William A. Hartman, New York City, favoring motion-picture censorship; to the Committee on Education.

Also, petition of Richard E. Hyetberg, of New York, relative to ferryboat regulation; to the Committee on Interstate and Foreign Commerce.

Also, petition of McWilliams Bros., of New York, against House bill 8036, relative to eight hours, etc., for officers of towboats; to the Committee on the Merchant Marine and Fisheries.

Also, petition of Andrew Itzla, New York, favoring passage of the Stevens-Ayres bill; to the Committee on Interstate and Foreign Commerce.

By Mr. CLARK of Florida: Petition of J. G. Baskin and many other citizens of Dunnellon, Fla., protesting against passage of House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

By Mr. COOPER of Wisconsin: Petition of 175 voters of Kenosha, Wis., favoring national prohibition; to the Committee on the Judiciary.

By Mr. CURRY: Memorial of American River Grange, No. 172, of Sacramento County, Cal., against preparedness; to the Committee on Military Affairs.

Also, memorial of Silverado Grange, No. 370, of Calistoga, and American River Grange, No. 172, of Sacramento County, Cal., relative to postalizing the wires; to the Committee on the Post Office and Post Roads.

Also, petition of 125 citizens of Lodi, Cal., against passage of the Sunday-observance bill in the District of Columbia; to the Committee on the District of Columbia.

By Mr. DALE of New York: Memorial of Free Press Defense League, asking for an investigation of the activities of various persons and organizations in reference to our relations with Mexico; to the Committee on the Judiciary.

Also, memorial of Lawyers' Mortgage Co., of New York; sundry citizens of New York; and Olin J. Stephens, of New York, favoring adequate preparedness; to the Committee on Military Affairs.

Also, petition of Lumberman's Engineering Co., of Portland, Oreg., in re Oregon and Washington land grant; to the Committee on the Public Lands.

By Mr. DAVIS of Texas: Memorial of Southwestern Millers' League, favoring establishment of a merchant marine; to the Committee on the Merchant Marine and Fisheries.

Also, petition of citizens of Mercedes, Tex., opposing House bill 652; to the Committee on the District of Columbia.

Also, petition of citizens of Gardiner, Me., favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of El Paso Chamber of Commerce, favoring adequate military preparedness; to the Committee on Military Affairs.

By Mr. DILLON: Petition of sundry citizens and organizations of the State of South Dakota, favoring national prohibition; to the Committee on the Judiciary.

By Mr. EAGAN: Petition of Lumbermen's Engineering Co., Portland, Oreg., relative to timbered lands in the Oregon and California railroad land grant; to the Committee on the Public Lands.

By Mr. ELSTON: Petition of Elizabeth M. Hendry and other citizens of Alameda County, Cal., opposing House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

By Mr. FLYNN: Memorial of Lawyers' Mortgage Co., of New York, and sundry citizens of New York, favoring adequate preparedness; to the Committee on Military Affairs.

By Mr. FULLER: Petition of United Brotherhood of Carpenters and Joiners, favoring the Smith-Hughes vocational bill, House bill 11250; to the Committee on Education.

Also, petition of the Washington State Grange, for the Morgan land credit bill, House bill 10310; to the Committee on Banking and Currency.

By Mr. GALLIVAN: Memorial of Major How Corps, No. 96, Woman's Relief Corps, indorsing the Ashbrook pension bill; to the Committee on Invalid Pensions.

By Mr. GOODWIN of Arkansas: Papers in support of House bill 10944, for the relief of Carrie Roland Burke; to the Committee on Indian Affairs.

By Mr. HASTINGS: Petition of Baptist Church of Porum, Okla., favoring national prohibition; to the Committee on the Judiciary.

By Mr. KAHN: Petition of residents of San Francisco and Oakland, Cal., protesting against the enactment of Senate bill 645, to provide for the closing of barber shops on Sunday; to the Committee on the District of Columbia.

Also, memorial of El Paso (Tex.) Chamber of Commerce, favoring immediate military preparedness; to the Committee on Military Affairs.

Also, memorial of Board of Supervisors of Alameda County, Cal., favoring the enactment of House bill 8352, to standardize the treatment of tuberculosis in the United States and to provide Federal aid in caring for indigent tuberculous persons; to the Committee on Interstate and Foreign Commerce.

Also, memorial of Commonwealth Club, of San Francisco, Cal., favoring the peaceful settlement of all international disputes; to the Committee on Foreign Affairs.

By Mr. KENNEDY of Iowa: Petition of City Council of Keokuk, Iowa, favoring the Penrose-Griffith bill; to the Committee on the Post Office and Post Roads.

Also, petitions of citizens of Danville, Burlington, and Van Buren County, Iowa, against bills to amend the postal law; to the Committee on the Post Office and Post Roads.

By Mr. KENNEDY of Rhode Island: Petition of citizens of Providence, R. I., favoring national prohibition; to the Committee on the Judiciary.

By Mr. KONOP: Petition of H. C. Harrison, of Fence; L. K. Harrison, of Fence; and Anton Rople, of Fence, Wis., favoring embargo resolution; to the Committee on Foreign Affairs.

By Mr. LAFEAN: Memorial of the Western Oil Jobbers' Association, petitioning Congress to supplement the Sherman Act so as to provide the effectual dissolution of the Standard Oil Co.; to the Committee on the Judiciary.

Also, petition of Mrs. Charles Heiland, of Philadelphia, Pa., against Senate bill 645, which provides for Sunday closing of

barber shops in the District of Columbia; to the Committee on the District of Columbia.

Also, petition protesting against the passage of House bills 6468 and 491, to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, memorial of the Assembly of Porto Rico, requesting no prohibition on the manufacture or sale of alcoholic beverages; to the Committee on the Territories.

Also, memorial of New York Young Republican Club, against the Hay bill and favoring enlargement of the Army; to the Committee on Military Affairs.

Also, memorial of New York Young Republican Club, against the Clarke amendment fixing the date of withdrawal of the United States from the Philippine Islands; to the Committee on Insular Affairs.

By Mr. LEWIS: Memorial of labor unions of Utuado, P. R., signed by thousands of laborers and citizens, requesting a congressional investigation of conditions on the islands; to the Committee on Insular Affairs.

By Mr. LIEB: Petition of the following voters in Spencer County, Ind., opposing passage of House bills 491 and 6468: M. F. Oskins, Ed. Rose, John Patmore, J. J. Painter, B. H. Kerr, E. L. Kerr, F. T. Barker, F. L. Tabelman, G. H. Sutton, Richard Brown, A. S. Patmore, A. J. Burkhart, S. O. Burkhart, L. F. Tabelman, Dan Anderson, Lawrence Meese, John Howrey, R. S. Ferguson, Harry E. Crawford, Curtis Patmore, Charles Franzman, C. L. Davis, W. H. H. Taylor, L. E. Crandall, Lou Allen, Philip Heuser, J. A. Sandefur, Patrick Doyle, G. G. Lockyear, S. A. Bridges, C. Morton Pattee, W. J. Doyle, Pharaoh Chrisney, S. F. Tower, Fred Bergman, E. R. Lannam, J. W. Cockrell, Henry Pierson, G. O. Tilley, D. L. Johnson, J. P. Brown, R. H. Ayer, Henry A. Wenner, W. W. Bridges, J. Edwin Howe, Henry C. Grigsby, Charles Gerlach, Benjamin Hankins, James Adams; to the Committee on the Post Office and Post Roads.

By Mr. LITTLEPAGE: Memorial of Hon. John Chase, adjutant general of State of Colorado, favoring Volunteer officers' retired list legislation; to the Committee on Military Affairs.

By Mr. LOUD: Petition of E. C. Nolan and 29 other residents of Edenville, Midland County, Mich., opposing House bill 6468, to amend the postal laws, and also House bill 491, with the same title, or any other like measure; to the Committee on the Post Office and Post Roads.

By Mr. McARTHUR: Memorial of the Western Star Grange, No. 309, on prohibition; to the Committee on the Judiciary.

Also, memorial of the Western Star Grange, No. 309, on postalizing the wires; to the Committee on the Post Office and Post Roads.

Also, memorial of the Western Star Grange, No. 309, on preparedness; to the Committee on Military Affairs.

By Mr. MANN: Petition of citizens of Chicago, Ill., favoring permanent and adequate preparedness; to the Committee on Military Affairs.

Also, petition of the Western Efficiency Society, of Chicago, Ill., against the Tavenner bill, House bill 8665, to prohibit stop watch in Government departments; to the Committee on Labor.

Also, petitions of citizens of Chicago, Ill., against House bills 491 and 6468, to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. MAPES: Petition of the Sunday School Association of Walker, Mich., favoring national prohibition; to the Committee on the Judiciary.

By Mr. MOON: Papers to accompany a bill for the relief of Fannie Hoye Blevins; to the Committee on War Claims.

Also, papers to accompany a bill for the relief of James P. Griffins; to the Committee on Invalid Pensions.

By Mr. MORIN: Petition of J. A. Atwood, George W. Nichols, J. C. Hobbs, Paul L. Hay, D. F. Monica, B. E. W. Luty, Dexter Edgar, C. W. Ridinger, George H. Laber, jr., Richard P. Irns, Frank Wilcox, B. S. Rederer, George L. Norris, C. S. Leet, Andrew Pinkerton, F. G. Cunningham, F. W. H. Clay, Hugh P. Tiernan, George P. Thomas, W. M. Juod, D. E. Jackman, Emil Swensson, E. D. Leland, W. F. Schell, M. P. Walton, H. R. Bluckle, and W. Edgar Reed, all of Pittsburgh, Pa., in favor of House bill 10845 and Senate bill 3946; to the Committee on Military Affairs.

Also, petition of E. J. Kent, of Pittsburgh, Pa., in favor of an export tax on gasoline; to the Committee on Ways and Means.

Also, petition of Biddle Arthurs, of Pittsburgh, Pa., in favor of an export tax on gasoline; to the Committee on Ways and Means.

Also, petition of Automobile Dealers' Associations of Pittsburgh, Pa., in favor of investigation of 37 Standard Oil companies; to the Committee on Ways and Means.

By Mr. NEELY: Petition of sundry citizens of Ohio and sundry citizens of West Virginia, protesting against House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petition of sundry citizens protesting against House bill 13048; to the Committee on the Judiciary.

By Mr. NOLAN: Resolution of Richter-McKinnon Camp, No. 2, United Spanish War Veterans, Department of California, indorsing the Nolan minimum wage bill, House bill 11876; to the Committee on Reform in the Civil Service.

Also, resolutions of the Commonwealth Club of California, San Francisco, Cal., favoring the settlement of international disputes by peaceful means; to the Committee on Foreign Affairs.

Also, petitions of California Federation of Woman's Clubs, Burlingame; California Associated Societies for the Conservation of Wild Life, Berkeley; Los Angeles City Teachers' Club, Los Angeles, all in the State of California, indorsing the bill providing for a national park service and an appropriation of at least $300,000 for Yosemite National Park; to the Committee on Appropriations.

Also, resolutions from the Board of Supervisors of Alameda and Health Officers' Association of Los Angeles County, Cal., indorsing House bill 8352, providing Federal aid in caring for indigent tubercular persons; to the Committee on Interstate and Foreign Commerce.

Also, petitions of T. I. McGrath and sundry other clerks of the Quartermaster Corps of the Army, serving in the office of the department quartermaster at San Francisco, Cal., indorsing House bill 13671, providing for the appropriate designation of, fixing the status of, and granting an increase in pay to, certain clerks employed with the Army at large; to the Committee on Military Affairs.

By Mr. OAKEY (by request): Petition of citizens of Hartford, Conn., favoring motion-picture censorship; to the Committee on Education.

By Mr. OLNEY: Petition of Rev. E. Stacy Harrison and citizens of Avon, Mass., favoring national prohibition; to the Committee on the Judiciary.

By Mr. PETERS: Petition of citizens of Augusta, Me., favoring national prohibition; to the Committee on the Judiciary.

By Mr. RAKER: Protest of H. G. Moody, of Redding, Cal., against the passage of House bill 652 and Senate bill 645; to the Committee on the District of Columbia.

Also, memorial of John Marlow, A. H. McCarly, W. McHeath, and other members of various posts of the Grand Army of the Republic at Philadelphia, Pa., asking for the enactment of House bill 386, for relief of certain Volunteer officers of the Civil War; to the Committee on Military Affairs.

Also, protest of H. L. Moody, of Redding, Cal., against House bills 6468 and 491, to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of citizens of Lodi, Cal., and vicinity, opposing the passage of House bill 652; to the Committee on the District of Columbia.

Also, protest by citizens of Lodi, Cal., and vicinity, against House bills 6468 and 491, amending the postal laws; to the Committee on the Post Office and Post Roads.

Also, memorial of P. H. Crow, brigadier general, adjutant, and general, of Idaho, for passage of House bill 386; to the Committee on Military Affairs.

By Mr. RANDALL: Petition of L. P. Eldwin and 12 citizens of Pasadena; Carl E. Engstrum and 24 citizens of Pasadena; Soloman Lindan and 14 citizens of Pasadena, Cal., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of Sven No. 2 Lodge, International Order of Good Templars, of Pasadena, Cal., favoring national prohibition; to the Committee on the Judiciary.

By Mr. ROGERS: Petition of the Massachusetts Sunday School Association of Ayer, Mass., favoring national prohibition; to the Committee on the Judiciary.

By Mr. ROWE: Petition of C. E. Graff, of Brooklyn, N. Y., favoring House bill 13671, relative to headquarters and quartermasters clerks of the Army at large; to the Committee on Military Affairs.

Also, petition of Niagara Motor Boat Co., of New York State, against House bill 9411, to tag motor boats; to the Committee on the Merchant Marine and Fisheries.

Also, petition of Railway Educational Association, relative to pensioning letter carriers; to the Committee on the Post Office and Post Roads.

Also, petition of members of Holy Name Society of Church of St. Benedict, Brooklyn, N. Y., favoring bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of sundry citizens of New York City, favoring the Stevens standard price bill; to the Committee on Interstate and Foreign Commerce.

Also, petition of Tracy Towing Line of New York, against passage of House bill 8036, relative to tugboats; to the Committee on the Merchant Marine and Fisheries.

By Mr. SNELL: Petition of Maxfield & Needham, Horace N. Clark, Henry Wells Co., Smith & Smith, W. T. Hinman, R. J. Sanford, Duffy Rives & Co., and C. E. Haywood, of Potsdam; F. M. Strickland, Wiley & Burtrand, Mrs. William Paquette, Oliver La Fountaine, jr., and Milo Lewis, of Champlain; H. D. Creble, Josephson & Solomon, and Andrew Robinson Co., of Malone; G. W. Foster, H. C. Rodgers, G. S. Franklin, W. D. Ryan & Co., and Duffy Bros., of Chateaugay; J. W. & T. W. Fray, the F. W. Lawrence Co., the Hyde Drug Co., Mrs. H. A. Kane, Grimes Specialty Co., Malone Hardware Co., F. P. O'Connor, Guy C. Dewey, Dewey & Smith, H. D. Thompson & Co., Mullarney & Holland, Stockwell & Flanagam, Lansing Donaldson, and Ernest E. Muller, of Malone; E. E. Bullis and William J. Lawars, of Rouses Point; F. F. Woodruff and L. M. Deyo, of Moriah Center; John G. Hutchinson, F. H. Peck, F. L. Brust, S. A. Weaver, D. Rothschild, L. A. Clements, Holmes & Wilcox, and M. J. Wilcox, of Ticonderoga; Colligan Bros., Foote Bros., W. H. Martin, J. T. Bradshaw, G. I. Merrihew, C. V. Dery, and Gilbo & Swartz, of Port Henry; O. F. Burno, H. W. Berry & Co., W. H. McIntyre, P. A. Deyo, Plattsburgh Furniture Co., Gilbert's Drug Store, Walker-Sherman Co., O. Larkin, Schiff, Quinette & Haley, F. E. Byrnes, A. Sharron, and R. O. Barber & Sons, of Plattsburgh; W. A. Bond, E. F. Stone, and J. B. Mace, of Keeseville; F. F. Woodruff, of Mineville; G. E. Evans, the Scofield, W. H. Gardner, and B. F. Kent, of Philadelphia; Fred A. Roper, G. S. Blackmon Co., Edward M. Wheeler, and C. A. Giltz, of Theresa; A. G. Franklin, G. H. Wyllis, W. T. Stiles, W. R. Wilson, and W. A. Laidlaw, of Hammond; J. L. Smith and J. V. Crawford, of Morristown; F G. Mann, S. J. Hosley & Co., Edwin Aitchison, E. E. McKnight, and E. B. Watson, of Madrid; J. L. Cumming, W. P. Warner, and Crabbe & Curry, of Norfolk; W. A. Daniels, J. E. McKee, George A. Martin, L. A. Cole, and H. D. Wilson, of Waddington; A. E. Pearson, J. C. Tolsom, and Haley & Capell, of Winthrop; W. N. Montross and A. L. Sayles, of Moira; L. G. Rice, B. F. Harris & Sons, and Conger Bros., of Brushton; Burt F. Kinney, M. E. Loveland, F. Erwin Cox, F. C. Mead, Harvey Smith, C. R. Rodger, George M. Frazier, Henry H. Ryan, W. R. Perrin, Hutton & Rutherford, F. W. Sprague, N. E. Marsh, G. C. Donald, and Freeman Bros., of Gouverneur; W. E. Dunn & Son, E. M. Kirkland, Canton Clothing Co., C. H. Goodmough, F. C. Heaton, and C. S. Cook, of Canton; L. C. Rice, John H. Gilmour, and E. M. Cole, of DeKalb Junction; H. H. Preston, of Heuvelton; L. McGillis Funiture Co., Herwell & Fraser, and Fleming & Sovie Co., of Ogdensburg; Gibbs & Phillips, Paul Lemieux, A. E. Cooley, Douglass & Southworth, and C. E. Forkey, of St. Regis Falls, all in the State of New York, in support of the Hinebaugh bill (House bill 5308); to the Committee on Ways and Means.

By Mr. TILSON: Petition of Floyd A. Beecher and 57 others, of New Haven, Conn., opposing House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

By Mr. WINSLOW: Petition of citizens of Worcester, Mass., protesting against any bills to restrict activities on Sunday in the District of Columbia; to the Committee on the District of Columbia.

SENATE.

WEDNESDAY, *April 12, 1916.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, we come before Thee calling upon Thy name that the spirit of our counsel and the expression of our deliberation may be the result of the inflowing of Divine truth through the hearts and minds of men. In the higher range of life Thou dost rule us with Thy love. Thou dost appeal to the hearts of men. Thou that didst command the light to shine out of darkness, Thou hast shined in our hearts Thy truth to give the knowledge of Thy glory. May the vision of God's face never fade from our hearts. Grant us this day grace to do and to say as Thou wouldst have us, that we may glorify Thy name and help perpetuate the blessings of our free institutions. For Christ's sake. Amen.

The Journal of yesterday's proceedings was read and approved.

NATIONAL DEFENSE.

Mr. JONES. Mr. President, I gave notice that I would submit some remarks to-day on the preparedness issue. I am not quite ready to do that, and so I desire to give notice that to-morrow, upon the assembling of the Senate, if a recess is taken, or after the routine morning business, if there is an adjournment, I shall submit some remarks on the matter of preparedness.

NITROGEN FERTILIZERS.

Mr. SMITH of Georgia. I desire to present to the Senate and have printed in the RECORD a letter from Mr. Bower in which he discusses briefly the question of potash and nitrogen as it applies to agriculture.

In connection with the letter I have two or three memoranda prepared by the author of that letter with reference to the use of cyanamide or air nitrogen which I wish to have printed just below the letter in the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD as follows:

THE FARMERS' EDUCATIONAL AND
COOPERATIVE UNION OF AMERICA,
NATIONAL UNION,
Washington, D. C., April 11, 1916.

Hon. HOKE SMITH,
United States Senate, Washington, D. C.

SENATOR: I write to you as a Senator from the cotton-growing Southern States.

The annual requirement and bill of the South for fertilizers amount in value to about $100,000,000. At the present time neither potash from Germany nor nitrates from Chile can be had by southern farmers at all, and we are paying for phosphoric acid about twice the price paid before the European war. Ocean freight rates on Chilean nitrates have increased since 1914 from $3.75 and $5 to $18.75 and $20 a ton.

German farmers have the advantage of having a supply of potash at home, and now Germany is producing within her own borders 600,000 tons of air nitrogen annually, whereas before the European war less than 60,000 tons were produced, and now German authorities boast that Germany is now independent of the Chilean nitrate monopoly, both for military and agricultural purposes, whereas the farmers of the United States are still dependent upon Germany for potash and still dependent upon Chile for nitrates.

We are told that we should depend upon private enterprise and capital for our air nitrate developments, but we press upon you as strongly as possible the fact that the farmers of the South can no more rely upon private capital to develop the necessary water power to provide our needed nitrogen fertilizers than the farmers in the arid States of the West could have relied upon private capital and enterprise to have developed the great irrigation projects of the West, to provide for which the United States Government has appropriated and spent more than $116,000,000. The Roosevelt Irrigation Dam in Arizona, costing nearly $13,000,000, and the Arrowrock Dam in Idaho, costing more than $5,000,000, never would have been built by private capital; and if they had been built by private capital, the cost of water for irrigation, owing to higher rates of interest that private enterprise would have had to pay, would have made the cost of irrigation so high the farmers could not have used the water.

Likewise, if the southern farmers are to depend upon private capital, the cost of air fertilizers will be so high they can no more use air-nitrogen fertilizers than they can to-day use Chilean nitrate fertilizers at the present exorbitant and prohibitive costs.

Suppose a dam costs $10,000,000, and that the power at this dam would produce 300,000 tons of nitrogen-phosporus fertilizers, and that 5 per cent is paid upon the $10,000,000. This would be $1 per ton fixed charge. If the interest was 6 per cent, it would be $2 per ton, and if 9 per cent it would be $3, and we are informed that few power companies can secure capital for less than 9 per cent, when all costs of capital are paid.

Therefore, the southern farmer is asking Congress to do for him what Congress has done for the farmers in the arid States of the West in providing water for irrigating western arid lands—the cost of water for irrigation measures, the cost of crop production in the arid States of the West, and the cost of fertilizer measures, the cost of food products and cotton products in the Southern States.

As an example of this will you please read the little pamphlet I am inclosing, showing the comparative use of cottonseed-meal nitrogen as a fertilizer against air nitrogen as a fertilizer.

If the Government builds dams for providing nitric acid for national defense, the power at these dams can be used for manufacturing cheap fertilizers in times of peace, and the little comparison I am inclosing you between cottonseed meal aid air-nitrogen fertilizers illustrates what cheap water power will do and how cheap electricity will contribute to decreasing the cost of southern cotton and food crops.

We appeal to you to do for the farmers of the South what you have done for the farmers of the West.

Yours, very truly, R. F. BOWER.

HOW CYANAMIDE OR AIR NITROGEN IS MADE.

The greatest heat and the greatest cold obtainable are utilized in making cyanamide. By the intense heat of the electric furnace—6,000° F.—lime and coke are fused together to make calcium carbide. This is powdered and placed in large drum-like ovens and again brought by electricity to a white heat.

In the meantime, wonderful machines are making liquid air by compressing and cooling over and over again clear, pure air until, at 380° below zero, the air liquefies. Air is four-fifths nitrogen and one-fifth oxygen. When the liquid air is warmed a little, only pure nitrogen gas is given off. This is pumped into the drum-shaped ovens containing the white hot carbide, by which it is absorbed, and in which it is permanently fixed, to be released only when in the soil, and for the feeding of the plants. This product, when cooled, ground, and processed with special machinery, is cyanamide.

Cyanamide is a bluish-black, odorless, powdered material. It contains from 20 per cent to 22 per cent ammonia, about 12 per cent carbon or lampblack, and the equivalent of about 70 pounds of slaked lime.

HOW AMMONIUM PHOSPHATE IS MADE.

Ammo-phos—pronounced am-mo-phos—is the registered trade name for a patented chemical compound consisting principally of phosphate of ammonia. This product is the result of several years of research to develop an ideal fertilizer material utilizing atmospheric nitrogen.

The cheapest method of fixing nitrogen from the air in unlimited amounts is the lime-nitrogen process. Lime nitrogen is a compound

made electrically from lime, coke, and liquid-air nitrogen. A plentiful supply of water power, at low cost, is an important factor in the operation of the process. It is quite easy to obtain ammonia gas from lime nitrogen by treatment with superheated steam in specially designed equipment. The ammonia gas so obtained is then fixed in highly concentrated phosphoric acid. The latter is obtained from phosphate rock by extraction with sulphuric acid, or by electric-furnace treatment. After the ammonia gas has been fixed in the phosphoric acid the moisture in the solution is evaporated and the residue is dried and ground. The resulting material, known as Ammo-phos, is a dry, granular substance, gray in color, and to all appearances very much like ordinary acid phosphate. Ammo-phos contains about 12 per cent ammonia and 48 per cent available phosphoric acid. Both constituents are almost entirely water soluble. The ammonia (nitrogen) content can be increased to 20 per cent and the phosphoric acid reduced to give any desired proportion of ammonia (nitrogen) to phosphoric acid. The product is perfectly neutral, pleasant to handle, and will keep indefinitely.

IMPORTANCE OF NITROGEN AND PHOSPHORIC ACID.

One hundred and seventy-seven million dollars was expended for commercial fertilizers in the United States during the year 1914. Of this amount $78,000,000 was paid for nitrogen and $65,000,000 for phosphoric acid, a total of $134,000,000 for both, or over 80 per cent of the entire bill. Only $43,000,000 was paid for potash. Germany is smaller than the State of Texas, yet she uses more fertilizer than the entire United States—about $200,000,000. Her crop yields are approximately 80 per cent greater per acre than the yields in this country. If the United States had available an adequate, cheap supply of fertilizer, and used it at the German rate per cultivated acre, and secured thereby the same increase in production credited to the use of fertilizer in Germany, there would be a net gain in crop yields to the United States, over and above the cost of the fertilizer, of $1,000,000,000 per year.

MERITS OF AMMO-PHOS.

Ammo-phos has been tested on 23 different farm crops in all parts of the United States. These tests have demonstrated that it is the equal or superior to ordinary fertilizers furnishing the same amount of plant food constituents. The material contains more than 60 per cent of plant foods, and is therefore three to five times as rich in fertilizing value as ordinary fertilizer mixtures, which usually contain only 12 per cent to 20 per cent plant foods. Hence, only one-third to one-fifth as much Ammo-phos need be applied to the crops as is generally applied in the form of mixed fertilizers.

A plant and equipment for making Ammo-phos would be available, in times of war, to furnish great quantities of nitric acid and sulphuric acid. The various kinds of gunpowder, explosives, and primers used in cartridges, grenades, shrapnels, bombs, torpedoes, and the like require for their production large amounts of both the acids named. In this respect the immediate establishment of one or more Ammo-phos factories in the United States would be an excellent preparedness measure.

Ammo-phos factories could be advantageously located near the large beds of phosphate rock in the United States, and thus assist in the development of this very important resource.

If Ammo-phos were made in sufficient quantities to furnish the farmers of the United States all the nitrogen and phosphoric acid necessary to fertilize their cultivated acreage at the same rate that the Germans fertilize, the total expenditure for fertilizers would be only $580,000,000 instead of $740,000,000, which would be the cost for the grades now obtainable. Whatever the amount used, Ammo-phos would effect a saving of more than 50 per cent on the present average cost of nitrogen, and fully 20 per cent on the phosphoric acid.

—

SOME IMPORTANT NITROGEN FACTS.

The problem of the cost of living must be solved by increasing the food-crop production per acre on our farm lands without increasing labor costs, and this can only be accomplished with cheap fertilizers.

NITROGEN.

EXPLOSIVES.

Air over each acre of ground contains 33,880 tons of nitrogen.

Two great dangers threaten the American people: (1) The introduction of new engines of destruction in war; (2) the high cost of living.

War has abandoned the isolated projectiles; has adopted streams of projectiles making a curtain of fire.

The necessary quantity of explosives has increased one hundredfold.

They require nitrogen universally in their manufacture as their chief constituent.

The chief sources of nitrogen supply are from the high plateaus of northern Chile and from the atmosphere.

SUPPLY OF NITROGEN FROM CHILE.

The first shipment of sodium nitrate from Chile was made in 1838.

Records of the Department of Commerce show the imports of sodium nitrate from Chile into the United States from the year 1867 to May, 1915, was 8,040,271 tons, costing $261,990,054.

The importations have been constantly increasing and amounted in the year 1913 to 589,136 tons, costing $20,718,968.

The Government of Chile levies an export tax on sodium nitrate that equals in our money $11.60 a ton, which would amount to $6,833,977 on the imports coming into the United States in 1913.

The Government of Chile has collected on sodium nitrate coming into the United States all told approximately $90,000,000.

Germany's present use of explosives is estimated to be $1,000,000 a day.

Germany had on hand at the beginning of the present European war approximately 630,000 tons of Chilean nitrate, valued at $30,000,000.

The United States has been endeavoring to accumulate a reserve supply of 65,000,000 pounds (32,500 tons) of sodium nitrate from Chile, which represents about 5 per cent of what Germany had on hand when the war began. The United States has a sufficient supply to conduct a war on the scale of this conflict in Europe from 8 o'clock in the morning to half past 10 the same day.

FOOD.

Cost of food in the United States increased from 1896 to 1912, 80 per cent. The advance in the general cost of living during this period was 59 per cent in the United States and approximately 40 per cent in Europe.

The Bureau of Labor has just reported that the cost of living is now 15 per cent higher than it was two years ago.

From 1900 to 1910 the population of the United States increased 21 per cent and the crop production only 10 per cent. The importation of foodstuffs and live animals doubled and the exportation of wheat and flour dropped from 31 per cent of their production to 13 per cent.

Cost of living and food crop yields per acre are the same problem.

Take Germany as an example of European agricultural practice.

She has increased in 20 years her grain crop 15 bushels to the acre; the United States, 3 bushels.

Potato crop increased 80 bushels; United States, 24 bushels.

Germany's acre yields 80 per cent more than for the corresponding crops in the United States. Germany uses four or five times as much fertilizer per acre cultivated as we use. If the farmers of the United States had a cheap fertilizer and used it over the cultivated area of the United States at the rate Germany uses fertilizer, there would be a net gain above the cost of the fertilizer of $1,000,000,000 a year.

The sure and safe way to obtain cheap fertilizer is to use the water power of America that is going to waste to make nitrogen out of the air.

QUOTATIONS FROM GERMAN AUTHORITIES.

If we needed any testimony to reconcile every misgiving or to repel distrust of all uncertainty as to the soundness of these conclusions, it would be found in the late utterances of some of the economists of Germany. Prof. Lemmermann, in his recommendations to the German Government at the outbreak of the war to take immediate steps for the erection of Government nitrogen factories, says:

"We are short 850,000 tons of nitrogen salts, compared with the usual consumption. * * * If one calculates this quantity to its grain equivalent, the resulting crop shortage will amount to 3,300,000 tons of grain."

This has a value of approximately $110,000,000.

And, further, he says:

"The nitrogen question and nitrogen demand is not only of significance from the standpoint of food production * * * but it also has great importance from the military standpoint."

The following is extracted from a letter written by senior professor of economics in the University of Berlin, Dr. Max Seering, dated July, 1915:

"The complete cutting off of the supply of Chile saltpeter during the war has been made good by our new nitrogen taken directly out of the air in large factories built during and before the war. With extraordinary rapidity the question has been solved how the enormous quantities of the needed ammunition were to be produced, a question which in England still meets with difficulties in spite of the help from America. It is, however, not only for the needed explosives that we take nitrogen from the air, but also for the nitrogen-containing fertilizers which we formerly imported in the form of Chile saltpeter."

The following is an article by Dr. Hugo Schweitzer appearing in the Review of Reviews, August, 1915:

"Nitric acid is generally prepared from Chile saltpeter and sulphuric acid, but in Norway, as described above, it is made from nitrogen of the air, and in Germany from ammonia and calcium cyanamide, which themselves are obtained from the nitrogen of the air. With this cheap power Germany has been able to produce new nitrogen compounds which threaten to revolutionize our present system of fertilization. This industry, to which the war has given the impetus, has assumed such dimensions and has given such unexpected results that the Government requested the German Parliament to grant an imperial nitrogen monopoly. From the official documents it appears that chemical compounds have been discovered which allow the production of a universal fertilizer."

The following is from an address of Prof. Gerlach before the German Agricultural Society on September 18, 1915:

"There was a great scarcity of nitrogent product at the beginning of the war, but cyanamide factories have been put into operation since then, and although a large part of the product has been needed for military purposes, still the worst of the famine has now been overcome."

—

It is estimated by the United States Department of Agriculture that fully 1,000,000 tons per annum of cottonseed meal is used for fertilizer purposes in the United States.

AIR NITROGEN AGAINST COTTONSEED NITROGEN—YIELDS PROVE AGRICULTURAL VALUE.

POUNDS SEED COTTON PER ACRE.

Air-nitrogen mixture.	Cottonseed mixture.
2,398	2,030
2,032	2,048
1,995	2,100
1,850	1,745
1,800	1,800
1,300	1,300
1,282	1,337
1,250	920
1,200	1,200
Average 1,679	Average 1,609

The mixtures used were identical in analysis, both containing 4 per cent ammonia, 8 per cent phosphoric acid, and 4 per cent potash. In the one case all the nitrogen was derived from air nitrogen; in the other all the nitrogen was derived from cottonseed meal. The air nitrogen mixture cost $33 per ton, while the cottonseed meal mixture cost $38.50 per ton. A thousand pounds per acre of each was applied. Hence the saving with the air nitrogen mixture was $2.75 per acre. The air nitrogen mixture produced 70 pounds more of seed cotton per acre, worth, at 10 cents for lint cotton and $28 per ton for seed, $2.95, or a total saving with the air nitrogen mixture of $5.70 per acre. Moreover, by the use of air nitrogen as a source of nitrogen the equivalent amount of cottonseed meal was released for use as a stock food, for which purpose it returns much better profits than when used as a fertilizer.

The cotton acreage in the United States for the year 1914 was estimated at 36,000,000 acres. Assume that one-half of this acreage, 18,000,000 acres, could save the farmers and the country $5.70 per acre by the use of air nitrogen mixture instead of cottonseed meal fertilizer mixture and the saving would have been to the southern farmers and to the country for the year 1914, $102,000,000. Even suppose that one-fourth the acreage, 9,000,000 acres, could have received air nitrogen as a fertilizer instead of cottonseed meal as a fertilizer, and the saving would have been $51,000,000.

"If these are not facts, if a ton of cottonseed meal fed on the farm to good cattle and the manure saved is not worth from $50 to $60 a ton, then we are paying too much for plant foods, or corn is not worth 50 cents to 65 cents a bushel to feed." (Mr. Tate Butler, editor Progressive Farmer.)

WORLD PRODUCTION OF AIR NITROGEN BY THE CYANAMIDE PROCESS.

Switzerland	16,500
Austria	23,100
Total (equals 200,000 tons of nitrogen)	997,550

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED.

The message also announced that the Speaker of the House had signed the following enrolled bills and joint resolution, and they were thereupon signed by the Vice President:

H. R. 9923. An act granting the consent of Congress to the county of Mitchell, or to the county of Baker, both of the State of Georgia, acting jointly or separately, and their successors and assigns, to construct a bridge across the Flint River;

H. R. 10139. An act to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia; and

H. J. Res. 171. Joint resolution to continue in effect the provisions of the act of March 9, 1906.

PETITIONS AND MEMORIALS.

Mr. SHAFROTH presented petitions of sundry citizens of Porto Rico, praying for prohibition in the island of Porto Rico, which were referred to the Committee on Pacific Islands and Porto Rico.

Mr. SMITH of South Carolina presented petitions of sundry citizens of South Carolina, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. GALLINGER presented petitions of 47 citizens of New Hampshire, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. SHERMAN presented petitions of sundry citizens of Illinois, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. MYERS. I present a resolution adopted by the women voters of Silver Bow County, Mont., in favor of the Susan B. Anthony constitutional amendment. I ask that the resolution be printed in the RECORD, together with the signatures.

There being no objection, the resolution was ordered to lie on the table and to be printed in the RECORD, as follows:

Resolution passed by women voters of Silver Bow County, Mont.:

"*Resolved*, That we, the women voters of Silver Bow County, assembled in a county conference at Butte, April 7, 1916, demand that the national administration give facilities for the passage of the Susan B. Anthony amendment during the present session of Congress; and be it further

"*Resolved*, That a copy of this resolution be sent to the administration leader in our National Capitol and the members of the Montana congressional delegation."

Unanimously adopted.

Mrs. JENNINGS,
1134 West Platinum, Butte, Mont.,
Mrs. HUGH MCLODE,
846 West Mercury, Butte, Mont.,
Mrs. J. C. PYLE,
1135 West Platinum, Butte, Mont.,
Mrs. J. S. CASEY,
1062 West Platinum, Butte, Mont.,
Officers of Silver Bow County Branch of the Congressional Union.

Mr. BURLEIGH presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. SAULSBURY presented petitions of sundry citizens of Delaware, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. SHEPPARD presented memorials of sundry citizens of Dallas and Keene, in the State of Texas, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

Mr. LIPPITT presented petitions of sundry citizens of Rhode Island, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a memorial of the Washington Park Yacht Club, of Providence, R. I., remonstrating against certain proposed regulations for the operation of motor boats, which was referred to the Committee on Commerce.

Mr. OLIVER presented petitions of sundry citizens of Pennsylvania, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry patriotic societies in the State of Pennsylvania, praying for the enactment of legislation to further restrict immigration, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Pittsburgh, Erie, and Greenville, all in the State of Pennsylvania, praying for the enactment of legislation to grant pensions to employees of the Postal Service, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of Local Grange No. 1569, Patrons of Husbandry, of Macungie; and of Pocono Grange, No. 1415, Patrons of Husbandry, of Farmersville, in the State of Pennsylvania, remonstrating against any change being made in the parcel-post law, which were referred to the Committee on Post Offices and Post Roads.

He also presented a petition of the New Century Club, of Philadelphia, Pa., praying for the enactment of legislation to prohibit interstate commerce in the products of child labor, which was referred to the Committee on Interstate Commerce.

He also presented a petition of sundry citizens of Pittsburgh, Pa., praying for Federal censorship of motion pictures, which was referred to the Committee on Education and Labor.

He also presented a petition of the York County Lutheran Ministerial Association, of York, Pa., praying for prohibition in the District of Columbia, which was ordered to lie on the table.

He also presented memorials of sundry citizens of Pennsylvania, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry granges of Pennsylvania, praying for Government ownership of telephone and telegraph systems, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of sundry granges of Pennsylvania, remonstrating against an increase in armaments, which were ordered to lie on the table.

Mr. PHELAN presented a petition of Local Branch, Bakers and Confectionery Workers' Union, of San Diego, Cal., praying for the enactment of legislation to further restrict immigration, which was ordered to lie on the table.

He also presented a petition of the Friday Morning Club, of Los Angeles, Cal., praying for an appropriation for the improvement of the Yosemite National Park and for the creation of a national park service, which was referred to the Committee on Appropriations.

He also presented a petition of the executive council of the San Francisco Association for the Study and Prevention of Tuberculosis of California, praying for an investigation of conditions surrounding the marketing of dairy products, which was referred to the Committee on Agriculture and Forestry.

He also presented a petition of the Alaska Fishermen's Union, affiliated with the Labor Council of San Francisco, Cal., praying for the enactment of legislation to regulate the mesh in gill nets in the catching of red salmon in the Bering Sea, which was referred to the Committee on Fisheries.

Mr. LANE presented petitions of sundry citizens of Oregon, praying for Federal censorship of motion pictures, which were referred to the Committee on Education and Labor.

REPORTS OF COMMITTEES.

Mr. SMITH of South Carolina. From the Committee on Immigration I report back favorably with amendments the bill (H. R. 10384) to regulate the immigration of aliens to, and the residence of aliens in, the United States. With the consent of the Senate, I shall in a few days submit a report to accompany the bill.

The VICE PRESIDENT. The bill will be placed on the calendar.

Mr. HARDING, from the Committee on Commerce, to which was referred the bill (H. R. 449) to provide for the appointment of 11 supervising inspectors, Steamboat-Inspection Service, in lieu of 10, reported it without amendment and submitted a report (No. 344) thereon.

Mr. CLARK of Wyoming, from the Committee on Public Lands, to which was referred the bill (H. R. 177) authorizing the Secretary of the Interior to accept the relinquishment of the State of Wyoming to certain lands heretofore certified to said State, and the State of Wyoming to select other lands in lieu of the lands thus relinquished, reported it without amendment and submitted a report (No. 346) thereon.

DESERT-LAND ENTRIES IN NEVADA.

Mr. PITTMAN. I should like to present a report from the Committee on Public Lands and ask for its consideration. From the Committee on Public Lands I report back favorably, without amendment, the bill (S. 5466) to open abandoned military reservations in the State of Nevada to homestead entry and desert-land entry, and to amend an act entitled "An act to open abandoned military reservations in the State of Nevada to homestead entry," approved October 1, 1890, and I submit a report (No. 345) thereon. This is simply an amendment to existing law providing for desert-land entries in addition to homestead entries on abandoned military reservations in Nevada. It is very short, Mr. President, and I ask unanimous consent for the present consideration of the report and the bill.

Mr. SMOOT. Mr. President, yesterday I gave notice to the Senate that I would object to the consideration of any bills until the calendar under Rule VIII can be taken up. I think it is very unfair to the bills that are upon the calendar—18 pages of them now—to allow bills to be taken up in the morning hour and passed. There are only 18 pages of those bills, and it would not take more than two or three hours to pass them if the Senate would give that time to the calendar. I expressed the hope that there would be enough bills placed on the calendar to get enough Senators interested in them that we might have the calendar taken up for consideration. I still hope that. I wish the Senator from Nevada would not ask for the consideration of the bill, but help us to get up the calendar and have it considered at some time to-day.

Mr. PITTMAN. Mr. President, I agree entirely with the Senator from Utah, but I will state that this particular case is an emergency. It has been called to my attention by wire.

It is this: There was an attempt made to homestead some land on a military reservation in Nevada. It proved to be an utter failure by reason of the lack of water. These settlers have acquired water near the military reservation which will enable them to perfect desert-land entries, and it is an attempt to obtain the benefit of the spring flow which is starting that constitutes the emergency requiring immediate action.

That is the only reason for it; and if they are going to have the benefit of these water developments, the bill will have to pass now.

Mr. SMOOT. Is it a Senate bill or a House bill?

Mr. PITTMAN. It is a Senate bill.

Mr. SMOOT. I shall not object to this, it being an emergency matter; but I still believe the only way we can get the calendar considered is by objecting to the consideration of bills when reported.

The VICE PRESIDENT. Is there objection to the consideration of the bill reported by the Senator from Nevada?

There being no objection, the bill was considered as in Committee of the Whole. It provides that all the agricultural lands embraced within the military reservations in the State of Nevada which have been placed under the control of the Secretary of the Interior for disposition be disposed of under the homestead and desert-land laws, and not otherwise.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

COURTS IN WASHINGTON.

Mr. OVERMAN. From the Committee on the Judiciary I report back favorably without amendment the bill (S. 3723) providing for the holding of terms of the district court for the southern division of the western district of the State of Washington at Aberdeen.

Mr. JONES. That is a very short bill, and I ask for its present consideration.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill. It provides that hereafter terms of the district court for the southern division of the western district of the State of Washington shall be held at Aberdeen on the first Tuesdays in June and December, and the clerk for the western district shall maintain an office in charge of himself or deputy at that place.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. PAGE (by request):

A bill (S. 5502) to establish courts of arbitration; to the Committee on the Judiciary.

By Mr. SAULSBURY:

A bill (S. 5503) to provide for the purchase of a site for the erection of a Federal building at Georgetown, Del.; to the Committee on Public Buildings and Grounds.

By Mr. WADSWORTH (for Mr. GRONNA):

A bill (S. 5504) for the relief of Louis Blanchette, alias Lewis Blanchard, alias Louis White (with accompanying papers); to the Committee on Military Affairs.

By Mr. OLIVER:

A bill (S. 5505) granting an increase of pension to Thomas J. McBride (with accompanying papers);

A bill (S. 5506) granting an increase of pension to Mary A. Goodsell (with accompanying papers); and

A bill (S. 5507) granting an increase of pension to Elizabeth S. Reess (with accompanying paper); to the Committee on Pensions.

By Mr. OLIVER (for Mr. PENROSE):

A bill (S. 5508) granting an increase of pension to Marion L. Wilson; to the Committee on Pensions.

By Mr. DILLINGHAM:

A bill (S. 5509) granting a pension to John W. Erwin (with accompanying papers); to the Committee on Pensions.

By Mr. CHAMBERLAIN:

A bill (S. 5510) granting a pension to James Cunningham (with accompanying papers); to the Committee on Pensions.

By Mr. JAMES:

A bill (S. 5511) granting an increase of pension to George Hinds (with accompanying papers); to the Committee on Pensions.

By Mr. SMOOT:

A bill (S. 5512) for the relief of Hannah Nelson Lundegren; and

A bill (S. 5513) for the relief of Marion B. Patterson; to the Committee on Claims.

A bill (S. 5514) granting an increase of pension to Lucy Cole (with accompanying papers); to the Committee on Pensions.

By Mr. LANE:

A bill (S. 5515) to consolidate certain forest lands in the Oregon National Forest, in the State of Oregon; to the Committee on Agriculture and Forestry.

By Mr. SMITH of Maryland:

A bill (S. 5516) for the relief of the heirs of Richard Butt and Sarah A. Butt; to the Committee on Claims.

By Mr. GORE (by request):

A bill (S. 5517) to increase the efficiency of the United States Cavalry and Artillery; to the Committee on Agriculture and Forestry.

BLACK CANYON IRRIGATION PROJECT, IDAHO.

Mr. BORAH submitted an amendment proposing to appropriate $10,000 for the investigation and survey of what is known as the Black Canyon irrigation project, in the counties of Canyon, Gem, and Ada, Idaho, intended to be proposed by him to the sundry civil appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

NATIONAL DEFENSE.

Mr. TILLMAN submitted an amendment, intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

Mr. LEWIS submitted an amendment, intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

THE NAVY.

Mr. LODGE submitted the following resolution (S. Res. 169), which was read, considered by unanimous consent, and agreed to:

Resolved, That the Secretary of the Navy is hereby directed to send to the Senate of the United States the following documents:

1. A communication dated August 3, 1914, from the General Board of the Navy warning the Navy Department of the necessity of bringing the Navy to a state of preparedness.

2. A communication dated November 9, 1914, from Rear Admiral Bradley A. Fiske, senior adviser to the Secretary, warning the Navy Department of the unprepared state of the Navy.

HOUSE BILL REFERRED.

H. R. 12193. An act making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, was read twice by its title and referred to the Committee on Commerce.

SALE OF ARMY RIFLES.

Mr. WORKS obtained the floor.

Mr. ASHURST. Will the Senator from California yield to me for three or four minutes?

Mr. WORKS. I yield to the Senator from Arizona.

Mr. ASHURST. Mr. President, I wish to take three or four minutes on a question of the state of the Union. I think Congress ought to know something about how its laws are being enforced. Congress is busily engaged and probably will be engaged for some time in making laws. Congress has a right to assume that its laws are executed by another branch of the Government. It is my duty, however painful it may be, to call attention this morning to one of the laws passed in 1905 and another one in 1914 which one of the departments arbitrarily refuses to execute, and I shall, although laboring under a severe stress of feeling preserve a calm exterior and shall briefly and accurately lay before the Senate and the country the arbitrary action of the present Secretary of War.

In chapter 1416, of an act approved March 3, 1905, it is provided:

Chapter 1416: An act to promote the efficiency of the reserve militia and to encourage rifle practice among the members thereof.

Be it enacted, etc., That the Secretary of War is hereby authorized to sell, at the prices at which they are listed for the Army, upon the request of the governors of the several States and Territories, such magazine rifles belonging to the United States as are not necessary for the equipment of the Army and the Organized Militia, for the use of rifle clubs formed under regulations prepared by the National Board for the Promotion of Rifle Practice and approved by the Secretary of War.

SEC. 2. That the Secretary of War is hereby authorized in his discretion to sell to the several States and Territories, as prescribed in section 17 of the act approved January 21, 1903, for the use of said clubs, ammunition, ordnance stores, and equipments of the Government standard at the prices at which they are listed for the Army. The practice of the rifle clubs herein provided shall be carried on in conformity to regulations prescribed by the National Board for the Promotion of Rifle Practice, approved by the Secretary of War, and the results thereof shall be filed in the office of the Military Secretary of the Army.

Approved, March 3, 1905.

I will now read from chapters 72–74 of an act approved April 27, 1914:

* * * * * * *

Provided further, That the Secretary of War is hereby authorized to issue, without expense to the United States, for use in target practice, United States magazine rifles and appendages therefor not of the existing service model and not necessary for the maintenance of a proper reserve supply, together with 40 rounds of ball cartridges suitable to said arm, for each range at which target practice is had, not to exceed a total of 120 rounds per year per man participating in target practice, to rifle clubs organized under the rules of the National Board for the Promotion of Rifle Practice and to schools having a uniformed corps of cadets and carrying on military training, in sufficient number for the conduct of proper target practice. * * *

The National Board for the Promotion of Rifle Practice on the 8th of this month, under the direction, or, at least with the implied consent, of the Secretary of War, issued its pamphlets to the newspapers, to be released, it states, on or after April 10, 1915. It proceeds among other things to say:

From a national-defense standpoint the training in rifle practice of the unorganized militia is of as vital importance to our country as the training of the Regular Establishment and the Organized Militia. The volunteer who can hit what he shoots at is 80 per cent efficient as a soldier.

The United States Government has stored away in its arsenals approximately 300,000 Krag United States magazine rifles, model 1908, and 30,000,000 ball cartridges for same. Uncle Sam will issue these rifles and the ammunition free to organized rifle clubs affiliated with the National Rifle Association of America for use of members at small-arms practice.

During the first quarter of 1916 just ended the Ordnance Department issued to clubs 316 rifles and 1,438,974 ball cartridges.

President Woodrow Wilson must have had in mind the rifle-club movement when he wrote his message to Congress, in which he said: "We must depend in every time of national peril in the future as in the past, not upon a standing army, nor yet upon a reserve army, but upon a citizenry trained and accustomed to arms. It will be right enough, right American policy, based upon our accustomed principles and practices, to provide a system by which every citizen who will volunteer for the training, may be made familiar with the use of modern arms."

To teach the citizenry the use of the modern arm requires organization of rifle clubs and small-arms practice under capable instructors. Ten or more citizens of the United States in any town or county near which or in which a rifle range could be constructed, are eligible to organize a civilian rifle club and affiliate with the National Rifle Association of America. Blank forms and copy of by-laws prescribed by the National Board for Promotion of Rifle Practice in the United States and instructions how to form a rifle club may be secured from Maj. Fred H. Phillips, jr., assistant recorder National Board for Promotion of Rifle Practice and secretary National Rifle Association of America, Washington, D. C.

The object of the National Rifle Association is to encourage marksmanship throughout the United States, particularly in the direction of qualifying as finished marksmen those individuals who may be called upon to serve in time of war; to encourage competition in marksmanship between teams and individuals; to encourage legislation for the establishment and maintenance of ranges; to secure the issue of military rifles and ammunition to those practicing on these ranges; and to create a public sentiment in respect to the necessity of rifle practice as a means of national defense.

The association membership on December 31, 1915, as reported by the secretary, was: Twenty-three State rifle associations, 63 regiments, 47 separate military organizations, 639 civilian rifle clubs, 64 college and university rifle clubs, 129 school rifle clubs, 9 boys' rifle clubs, 549 life members, and 943 annual members.

During the past three months—January 1 to March 31, 1916, inclusive—the National Rifle Association has gained in membership as follows: One State association, 1 regiment, 170 civilian rifle clubs, 4 college and university rifle clubs, 19 school rifle clubs, 4 boys' rifle clubs, 24 life members, and 137 annual members.

The National Rifle Association was incorporated in 1871, and since that time has been the one active agent in promoting rifle practice in the United States.

Official from the National Board for Promotion of Rifle Practice in the United States.

F. H. PHILLIPS, Jr.,
Assistant Recorder.

The secretary of this National Rifle Association, under the implied supervision of the Secretary of War, issued the above statement to the newspaper editors in the United States in the following manner:

To the EDITOR:

Will you assist me in the organization of rifle clubs by telling your people the United States Government will issue free rifles and ammunition? We should have at least one rifle club in every town and county in the United States.

Since January 15, 1916, I have organized 38 rifle clubs, with a membership of 4,800, in Washington, D. C., alone. These clubs will start active outdoor rifle practice April 10 on the Marine Corps rifle range at Winthrop, Md.

F. H. PHILLIPS, Jr.,
Secretary National Rifle Association.

—

WAR DEPARTMENT,
NATIONAL BOARD FOR PROMOTION OF RIFLE PRACTICE,
1108 Woodward Building, Washington, April 8, 1916.

Hon. HENRY F. ASHURST,
United States Senate, Washington, D. C.

DEAR SIR: The inclosed news item, released April 10, 1916, no doubt will cause many of your constituents to make inquiry of you regarding the formation of civilian rifle clubs.

I will be pleased to forward the necessary literature to parties interested in the formation of rifle clubs upon receipt from you of names and addresses.

I herewith inclose a tabulation showing the development of interest in rifle practice among civilians.

Very truly, yours,

FRED H. PHILLIPS, Jr.,
Assistant Recorder National Board,
Secretary National Rifle Association.

FRED H. PHILLIPS, Jr.,
Assistant Recorder National Board,
Secretary National Rifle Association.

Mr. President, various rifle clubs in the State of Arizona have been formed, and the gentlemen composing the rifle clubs of Arizona will compare most favorably with the honorable Secretary of War in ability, patriotism, and resolution of character. Some citizens of the town of Bisbee, Ariz., composed of as reliable, as clear-headed citizens as any man who ever

held the office of Secretary of War, organized themselves into a rifle club. I will mention the names of but a very few of the members, to wit, Mr. I. C. E. Adams, the mayor of Bisbee, a prominent merchant; Mr. J. J. Bowen, a prominent merchant; Mr. Arthur Notman, a prominent officer of the Calumet & Arizona Mining Co.; Mr. M. J. Cunningham, cashier of the Bank of Bisbee; Mr. L. R. Bailey, the postmaster at Bisbee; Mr. M. J. Brophy, manager of the Copper Queen Store at Bisbee; Mr. M. Newman, formerly mayor of Bisbee and a prominent merchant; Mr. J. F. McDonald, a prominent citizen and deputy United States marshal; and Mr. V. W. Marshall, a reliable citizen, who is secretary of the club. These gentlemen complied with the law respecting the acquisition of arms and ammunition; this I know, first, because they have advised me that they have done so, and, secondly, because I telephoned to the War Department about 30 minutes ago to make sure of that fact, and was advised by an official in that department that this club had complied with the law, but that for reasons which the War Department thought were good unto itself, it would suspend the law and refuse to issue arms to this club. I wish in this connection to state that on last Saturday, the 8th of this month, I had a personal interview with the Secretary of War and Chief of Staff and urged them to comply with the law, but the Secretary stated he felt he would be obliged to suspend the law.

Mr. President, one of the Stuart Kings of England lost his head, and, I believe, another lost his crown because he was too much attached to the dispensing power. These monarchs dispensed or attempted to dispense with statutes which Parliament had made, and when any department of our Government declines to carry out any existing law, sets up its ipse dixit and says, in effect, "I am greater than the law," it is then the duty of a Senator to call attention to such arbitrary conduct, and impeachment proceedings sometimes teach arbitrary gentlemen in departments that they are executing and not making the laws.

The reason given by the honorable Secretary of War for declining to issue these arms is that he said he feared some damage might be done or some action might be taken by some hotheaded member of the club which would precipitate a great deal of trouble. Mr. President, I resent that statement. All the citizens whose names I have read, and the members of the club generally, are cool-headed, thoughtful, representative American citizens. They are not men who are likely to involve our country and her laws and institutions in any difficulty. They are citizens who wish to obey the letter and the spirit of the law.

Mr. SMITH of Georgia. Mr. President——

Mr. ASHURST. Just a moment, if the Senator please; I will yield to him in a moment. I desire at this point to read a letter from Brig. Gen. Crozier, Chief of Ordnance. It is as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ORDNANCE,
Washington, April 8, 1916.

Hon. HENRY F. ASHURST,
United States Senate.

MY DEAR SENATOR: Referring to your personal call at this office and to your inquiry as to the possibility of issuing or selling to the Bisbee Rifle Club, in accordance with law, a number of rifles which, from previous correspondence, is assumed to be 200, I can answer you that a direct request came from this rifle club several weeks ago, and was answered by The Adjutant General of the Army to the effect that no more rifles could be sold than one for each member of the club, and that application should be made through the usual channel for the purchase. Since this letter was written, however, the subject of the issue or sale of rifles to parties near the Texas border has been more markedly brought to the attention of the War Department by additional applications for considerable numbers of rifles, and the Secretary of War has concluded that it would not be wise to place arms in the hands of citizens near the border who are not subject to strict military discipline, and that, in order to present some unfortunate incident which might precipitate trouble, which we all wish to avoid, it would be more prudent to suspend action for a time under the law which permits the sale or issue of rifles to clubs. It is for this reason that the request of the Bisbee Rifle Club has not been complied with.

Sincerely, yours,

WILLIAM CROZIER,
Brigadier General, Chief of Ordnance, U. S. A.

I wish to read at this point the following telegram signed by the gentlemen to whom I have already referred:

BISBEE, ARIZ., *April 7, 1916.*

Hon. HENRY F. ASHURST,
United States Congress, Washington, D. C.:

Bisbee Rifle Club made requisition through the regular channels for ordnance stores for bona fide members to the Benecia Arsenal. Order held up by order of Chief of Ordnance at Washington. Use your influence to have same approved; seeing President, if necessary, and have approval. Wire to the Benecia Arsenal. Following residents of district join in request:

V. W. Marshall, secretary Bisbee Rifle Club; I. C. E. Adams, mayor; J. J. Bowen; Arthur Notman; M. J. Cunningham; L. R. Bailey; M. J. Brophy; M. Newman; J. F. McDonald.

I will also read the following telegram from the secretary of the Bisbee Rifle Club, which, I think, ought to be read in this connection:

BISBEE, ARIZ., *April 11.*

Hon. HENRY ASHURST,
Washington, D. C.:

This club was organized under act of Congress governing rifle clubs and we have strictly complied with all regulations. This order, now being held up, is for both new and old members, and if unable to secure further arms and ammunition will have to close range and discontinue rifle practice. Other clubs are having requisitions honored, and any discrimination against our 475 members will have effect in November upon voters of this district in both State and National elections. Officials of club not interested in any movement to secure arms for home protection, our prime interest being in the furthering of rifle practice. Ascertain just what club may expect on further requisitions and write how and by whom this order was originally held.

V. W. MARSHALL.

It is very unfortunate that the secretary of the club should have seen fit to state in his dispatch that any member of the club would allow his vote to be influenced by the fact as to whether or not these rifles were secured. The members of the club would not allow the issuance to them or the nonissuance to them of a rifle to influence their votes. They are men of too high a class for that kind of conduct.

Mr. POMERENE. Mr. President——

Mr. ASHURST. I will yield in a moment, if the Senator please.

Mr. WORKS. Mr. President, I have the floor, but I am not willing to yield for general discussion.

Mr. ASHURST. I decline to yield to anybody. I want to finish. The Senator from California has yielded to me.

Mr. WORKS. I yielded to the Senator for three or four minutes. I am not objecting to the Senator concluding, but I see other Senators on their feet, indicating that a discussion is imminent. I want to avoid that.

Mr. ASHURST. I will finish in half a dozen sentences. Like a certain class of people in this country, I admire short sentences. [Laughter.]

I wish to make it clear here and now that these gentlemen wish these rifles simply, solely, and only for the purpose of rifle practice.

Mr. SMITH of Georgia. Mr. President, I only wanted to ask the Senator from Arizona one little, short question, which was this——

The VICE PRESIDENT. The Senator from California [Mr. WORKS] has the floor, and the Chair understands he declines to yield further.

Mr. SMITH of Georgia. If the Senator from California will allow me, I merely desire to ask the Senator from Arizona whether he thought the citizens of Arizona, if they had the guns and knew how to shoot, would not stand up as well as the citizens of any of the other States?

Mr. ASHURST. Mr. President, in the first place I want to make it clear to the Senate, if the Senator from California will pardon me for a moment——

Mr. WORKS. Oh, yes.

Mr. ASHURST. I want to repeat, because I want to make it clear, that these citizens are not arming themselves to invade Mexico, as the Secretary of War thinks they might do. The law permits them to organize rifle clubs for practice purposes, and that is the sole and only purpose for which they wish to organize themselves.

Mr. POMERENE. Will the Senator from Arizona yield to me merely for a question?

Mr. ASHURST. The Senator from California has the floor.

Mr. POMERENE. I desire to ask a question of the Senator from Arizona, if I may.

Mr. WORKS. If it is confined to a mere question, Mr. President, I shall yield for that purpose.

Mr. POMERENE. I understood the Senator from Arizona to say that he talked with the Secretary of War this morning.

Mr. ASHURST. I talked with the Secretary of War last Saturday. I said that I telephoned to the department this morning. I am not going to say to whom I telephoned; but I said I telephoned—and the reporters' notes will bear me out that the statement I made was that I telephoned to the department. I call upon Senators to remember that I did not say that I telephoned to the Secretary of War.

Mr. POMERENE. I understood the Senator to say that he had talked with the Secretary of War this morning. I evidently misunderstood him.

Mr. ASHURST. I said I telephoned to the department.

Mr. POMERENE. I knew the Secretary of War was not in the city to-day.

Mr. SMITH of Arizona. Mr. President, I can not refrain this morning from expressing my protest against the action as set

forth in a letter to me signed William Crozier, Brigadier General, Chief of Ordnance, United States Army, in which he says, in regard to rifle clubs on the coast:

The Secretary of War has concluded that it would be unwise to place arms in the hands of citizens near the border who are not subject to strict military discipline, and that, in order to prevent some unfortunate incident which might precipitate trouble, which we all wish to avoid, it would be more prudent to suspend action for a time under the law which permits the sale or issue of rifles to clubs. It is for this reason that the request of the Bisbee club has not been complied with.

Mr. President, I resent the imputation that there is any lawlessness among the citizens along the border between old Mexico and the State of Arizona, or that they can not be trusted with arms, as other citizens are. I speak only as to territory concerning which I have knowledge; but I imagine that my statement will apply equally to every other point on the border. There is a legally organized rifle club at Bisbee, Ariz. The citizens forming this club need arms and have a right to them as much as any like club in the country. No longer than yesterday a citizen of Nogales was here asking protection for that town, and as an evidence of the need of it pointed to the fact of a large number of Mexican soldiers were mobilized on the Mexican side; yet the Secretary of War refuses to furnish arms to a rifle club composed of the very best citizens of the State of Arizona, who at an instant should be in a position to protect themselves against invasion if it should come. All we have asked is to be treated as the people of New York, Missouri, the Carolinas, and Massachusetts, and all other States not on the Mexican border are treated. However patriotic others may be and however law-abiding the citizens of other States, I deny that they have any advantage in either particular over the people of the Western States, who are not afraid, but who want—and that is all they want—to be protected or to be allowed to protect themselves. Yet we find that we are singled out as the only people that can not have arms for defense and can not be allowed to indulge in the splendid practice of learning to defend themselves by familiarity with the use of arms.

I indulge the hope that the Secretary of War will reconsider his decision—ill advised as I am sure it is—and relieve the people of Arizona and all that brave citizenship along the international border of the undeserved and unjust suspicion—if not actual aspersion—cast on them by the letter an extract from which I have just read to the Senate. There is no reason to discriminate against the only people within our borders who live within the zone of any possible danger by reason of a groundless fear that they may break the Nation's peace. I feel assured that the rifle club at Bisbee will at an early day be treated with the same courtesy—and, I may add, decency—accorded to similar clubs in every other part of our common country.

I thank the Senator from California for his courtesy.

REPORT OF INDUSTRIAL RELATIONS COMMISSION.

Mr. POINDEXTER. Mr. President——

The VICE PRESIDENT. The Senator from Washington.

Mr. POINDEXTER. I ask unanimous consent for the present consideration of Calendar No. 134, being the resolution to print as a document the report of the Industrial Relations Commission.

Mr. SMOOT. Mr. President, I wish to say to the Senator that that matter will lead to some discussion—not on my part, because I am in favor of it—but there are a number of Senators who have said that they desired to speak upon it whenever it came up, and they asked me not to allow it to come up in their absence. I think the Senate ought to know that if it is to be discussed, it will take some time to do it.

The VICE PRESIDENT. That does not seem to come within the fair purview of morning business, and the Chair now declares the morning business closed and recognizes the Senator from California.

Mr. POINDEXTER. Of course, Mr. President, in view of the fact that the Senator from California desires to address the Senate, I will not insist on this matter if there is going to be any debate upon it; but I will make the remark that I think if the Senate by unanimous consent desires to take up a matter, it can do so.

The VICE PRESIDENT. The Chair understood that there would be discussion about it.

NATIONAL DEFENSE.

Mr. WORKS. Mr. President, up to this time I have taken but little part in this debate. But while others have been talking I have been doing a good deal of thinking. The course the debate has taken, the arraying of one self-seeking interest against another, the mere mention of politics in connection with the consideration of a question of such grave import, the injection into the controversy of outside opposing interests have excited in me, as I think it should in the mind of every patriotic American citizen, a mingled feeling of resentment and apprehension.

Mr. President, I love my country. I believe in its free institutions. I proclaim it to be the greatest and most beneficent government the ingenuity and patriotism of man has yet devised. It is a government that should command the respect not only of its own citizens, but of the peoples of all nations. It should be the pleasure, as well as the patriotic duty, of those who share in its protection and its benefits to protect and uphold it against its enemies within and without—from the dangers and encroachments of greed and avarice and self-seeking in all its forms within, as well as foreign aggression or invasion from without.

A few days ago, in an address to the Senate on preparedness for peace, I had occasion to say:

The dangers that threaten us are within, and not without.

I want now to reiterate and to emphasize what I then said and to point out some of the dangers that are confronting the country and threatening the perpetuity of its institutions. As I shall attempt to show, these dangers have been disclosed in great part by the debate on this bill. To me the greatest virtues of our Government, as manifested in the Declaration of Independence and the Constitution, are popular self-government, the preservation in the States of sovereign power over matters of local concern, and the establishment of independent departments of the Government, free from domination or dictation by any other department. The wisdom of our forefathers gave us, as parts of the Government, the executive, the legislative, and the judicial departments and made them independent of each other. They made the National Government one of enumerated and limited powers, leaving the powers not enumerated to the States. So jealous were the southern people of the rights of the States that they were willing to go to war to preserve them to an extent denied to them by the States of the North. And yet, sir, the tendency of legislation to-day is to surrender and barter away what were once regarded as the most sacred rights of the States and centralize all power in the Federal Government. And, strange as it may seem, the southern Members of the Congress of the United States are taking the lead and forcing through this kind of legislation so destructive of the sovereignty of their States and extending and enlarging by law and by construction the powers and influence of the departments and of the bureaus and commissions of the Federal Government.

And, sir, the saddest and most dangerous feature of this abandonment of State sovereignty and local self-government is that, in the main, it is done for purely commercial reasons. The States of this Union are selling their sovereignty for money appropriations for internal improvements and material benefits. So-called pork-barrel legislation is degrading our citizenship and destroying the freedom and independence of the States. The temptations that lead lawmakers to surrender the rights of the States are many and persuasive. Their course in making the surrender of these sovereign rights is generally approved by their unthinking constituents because it means prosperity to their States and money in their pockets. They want better roads, the improvement of their waterways, the establishment of vocational schools, better preservation of health, advancement of agricultural interests, conservation of natural resources, the manufacture of nitrogen at Government expense, and a hundred other things, most of which should be provided for them by their States and at their own expense. But they are more than willing to surrender their right to deal with these questions, falling clearly within the sovereign powers of the States, and to shift their duty and their responsibility to the National Government if only it will bear the burden of their cost. In defense of this unfortunate and unpatriotic course the claim is made that the Government is rich and powerful, and can do these things; and if it does not they will not be done at all, because the States are financially unable to do them. But, Mr. President, to me this seems the most dangerous feature of the whole matter. It is an abject surrender of the sovereign duties of the States because they are not able to perform them. It is an admission that our form of government is a failure, and means the downfall of the States as separate and independent parts of the Federal Government.

As a natural and inevitable result we are fast becoming a centralized and paternal Government. The States, instead of maintaining their independent sovereignties, are becoming—yes, they have to an alarming extent already become—the dependent wards of the Federal Government.

Not only this, which would seem to be bad enough, but this course has made us a bureaucratic Government. We have bureaus and commissions and divisions innumerable, costing the Government millions of dollars a year in doing the things that should be done by the States. The departments of government have by this means become great and powerful machines that dictate and control legislation.

The Congress of the United States has ceased in great measure to be an independent department of the Government. Hardly a bill is passed or even considered by a committee of either House of Congress until it is referred to and passed upon by one of the departments. And if reported against by the department it is generally looked upon as killed. This is not all, Mr. President. It has become a common thing for bills to be formulated by a department head, approved by the President and presented to Congress, not as a bill originated by either House of Congress, or a Member of it, but as an "administration measure." Thus does the executive branch of the Government inject its power and influence into the law-making branch, which should be wholly free and independent within its own jurisdiction and the performance of its functions. Even this is not all. The Executive head of the Government not only has formulated bills for passage, and let it be known that they are administration bills and must be passed, but he assumes to and does prepare and enforce a legislative program for Congress and dictates what bills shall be considered first and in preference to others and when, and after the passage of what bills Congress shall be permitted to adjourn. I have been told, and I have no doubt it is true, that Members of Congress, members of this body, go to the President to be told how they shall conduct the business of Congress and what bills shall be preferred over others. There is still more to come. It is an alarming fact, and one which is well known to everybody who keeps account of what is going on here, that Members of Congress accept the dictation of the President and do what he asks as a duty higher than their obligation to follow their own conscientious convictions. Mr. President, if half of the things I have mentioned be true, what can we expect for the future of our country?

The division of power between the several departments of the Government was intended to protect the people from the liberty-destroying effects of one-man power. The granting of separate sovereignty to the States was for the protection of their independence. The effort of the Executive branch of the Government to extend his power over the legislative branch is plain usurpation and a violation of the very spirit of the Constitution. Not only so, it is the unwarranted assumption of power that if persisted in will lead to despotism and finally result in a dictatorship. What I am saying is not directed at any one personality. This tendency to usurp power not belonging to it by the executive departments has been in evidence for some years past. But, as was inevitable, it has increased and become more arrogant and offensive to our institutions and form of government year by year. And unless Congress asserts and maintains its independence, it will continue to grow worse until the Congress will cease to have any independency. Such a result is a long step toward the destruction of free government.

Mr. President, one of the melancholy features of the situation is that the people generally do not understand or appreciate the dangers that confront them. They look upon the office of Chief Magistrate as the seat of all power and all departments as subservient to his will. The people of this country should be awakened to the danger of such sentiments. They are subversive of the principles upon which our Government is founded, and if this awakening comes it must be brought about by the assertion by Congress of its rights as an independent branch of the Government. If Congress bows submissively to the will power and dictation of the President within the sphere of its power and jurisdiction, it will deserve the contempt of all good citizens.

I can not take time now to enumerate the many acts and tendencies that are threatening the perpetuity of the free institutions of this Republic. Many of them are as plain as the light of day and are known to all observing men. But there is one that stands out fully revealed as the worst and most dangerous of them all. It is self-seeking partisan politics. Its dominating and sinister influences are found everywhere. I have been amazed to find, as a result of my service in this body, how extensive, far-reaching, and powerful its influence is. Even in the consideration of the bill now before the Senate, involving the future peace and safety of the country, the apprehension of outside political influences is felt and expressed on the floor of the Senate and the influence of outside selfish interests, as unpatriotic as they are offensive, have been used in support of and in opposition to certain provisions in the bill beyond any doubt. We breathe the polluted atmosphere of self-seeking influences at every turn in the performance of our duties as representatives of the people.

Partisan politics is ruthless in its demands and invades the most sacred precincts of the National Government. It is seeking place and pelf and power wherever and whenever it can find entrance. Just now it is attempting to invade the Supreme Court of the United States. It is presenting to a member of that body the greatest temptation that could be offered to an American citizen—to surrender his place on the bench and become a candidate for a political office. This attempt to bring the highest judicial tribunal of the country, or any member of it, into politics should be resented not only by the member to whom the tempting offer is made but by the whole country. To my mind it is of the gravest importance that that great tribunal should be separated absolutely and forever from politics, candidacy for office, or any interest in elections beyond that of the disinterested and patriotic private citizen. If any member of the Supreme Court is tempted by an offer of a nomination as a candidate for the Presidency of the United States and refuses the offer because he is a justice of the Supreme Court and for that reason can not conscientiously accept a nomination to a political office or engage in politics, he will have rendered his country a great and lasting service. If he does that one act of unselfish patriotism and devotion to the best interests of his country, that has so signally honored him, it will keep his memory green in the minds of his countrymen long after the politicians who thus tempted him are forgotten. The use of his name as a candidate is an offense to him and to the country.

Whether Justice Hughes is going to allow his name to be used as a candidate in a political convention is a matter of profound interest and grave importance to the American people. Whether one man or another shall be nominated by that convention for the office of President of the United States is of but little importance compared with the question whether a member of the Supreme Court can be used to advance the interests or secure the success of any political party. I commend to the Senate and the country the wise and patriotic sentiments expressed in the following editorial of the Providence Journal:

> Which path shall Justice Hughes choose? Shall he yield to the demand of the moment or be true to the larger demand? Shall he plunge into the maelstrom of politics again or once and for all buttress the tradition of isolation and sanctity with which the Supreme Court of the United States is raised above its coordinate branches of the Government?
>
> There can be no possible doubt that Mr. Hughes has it in his power to perform a greater public service by remaining where he is than he could possibly perform by heeding the call to party leadership. It is a service that would become historic; that would strengthen every wholesome principle on which our democracy rests. It would do more by one stroke of the pen to preserve our best traditions of free government and human liberties than Mr. Hughes could hope to do in four years or eight years by conscientious endeavor in the White House.
>
> That he himself is inclined to this view is altogether probable. We can easily believe that his feeling from the first has been that in the next few years of critical problems in the United States there will be work arduous and engrossing enough on the bench of our highest court for the most willing and intelligent patriot.
>
> In a spirit of entire friendship for Mr. Hughes, and in accordance with what we are convinced is his own honest judgment and desire, we would urge him to a frank and unequivocal renunciation of the call of politics in these unique circumstances. The country needs him where he is, not for his talents alone, great as they are, but for the example he would set for all time of our supreme Federal judiciary wholly beyond the ambitions of the political forum and the real or fancied requirements of the hour.

Mr. President, let me advert briefly to another of the conditions that is threatening the future peace and well-being of the country far beyond any danger of war. It is the division of capital and labor into hostile classes, and the tendency to divide the people of this country into classes of rich and poor, with all that it implies. Theoretically, and as a matter of law, all men are equal in this Republic. This doctrine of equality and like opportunities for all without regard to race, color, or station in life, is woven into the very fabric of our free institutions and is one of its greatest elements of strength. It is no crime in this country to be either rich or poor. It should be no mark of distinction to be rich, or a badge of inferiority or subserviency to be poor. So long as any American citizen keeps himself within the bounds of honesty, integrity, and fair dealing he can not be criticized for becoming rich beyond his fellows or even for amassing inordinate wealth that he does not need and can not use for his own good. On the other hand, the man who endeavors and fails is entitled to as much respect and consideration as the man who succeeds. The man who succeeds and amasses wealth has the greater responsibility. He becomes the trustee of his wealth for the common good. There is no reason why there should be hatred or envy or controversy between employer and employee, rich and poor, or the successful and unsuccessful.

And, sir, it is not because some are rich and others poor that discontent and controversies arise among men. It is because public sentiment divides men into classes, not because some are better than others as men and citizens, but because some are rich and some poor and one is considered, respected, and deferred to and the other looked down upon and his rights as a man and a citizen disregarded. As a necessary consequence, this has led to intolerance, arrogance, and oppression on the one side and unwilling and sullen submission and subservience on the other, which has led to hatred, discontent, and controversy, sometimes

even to violent destruction of property and the shedding of blood. It has brought about powerful organizations for the protection of one class against another. These organizations on both sides have attempted to accomplish their ends by force and oppression, and not by reason, justice, and peaceful means.

Mr. President, the harmonizing and bringing into friendly relation of these conflicting elements in the social and business affairs of this country is, I am firmly convinced, one of the greatest problems this Republic is called upon to solve, and solve righteously and justly, in order to live. It is a danger more imminent and more threatening, more inimical by far to our form of government and its continued existence, than foreign enemies.

Now, Mr. President, I might point to other sinister forces and influences that are in greater or lesser degree inimical to our institutions, but it is unnecessary. I have tried to point out what seems to me to be the worst and most dangerous of them.

Mr. President, let me now comment briefly and more directly on the pending bill. The distinguished Senator from Oregon, chairman of the Committee on Military Affairs, has said with the emphasis of sincerity that we should speak frankly in dealing with this important question, and he is right. No man in this body stands higher in the estimation of his colleagues on this floor than the Senator from Oregon. He has imposed upon him a most unpleasant task in his courageous efforts to uphold and sustain the bill reported by his committee. The bill is itself a sham and a delusion. In saying this I am not intending to criticise or reflect upon the chairman or any member of the committee. I know, and no one doubts the fact, that they have done the best they could under the most trying circumstances. The people in large numbers have been clamoring for preparedness for national defense. Defense against what? Defense against an invasion of our country by the forces of some foreign nation, of course. This has been understood by everybody from the beginning. There has not been, and will not be, any need of preparation for defense by military force against anything else. Does this bill prepare us for national defense in this sense? No one that I have yet heard pretends that it does. Of course it does not. In addressing the Senate a few days ago the Senator from Oregon expatiated at length and with great eloquence upon the dangers that were confronting us of war with one or more of the belligerents or some other nation.

When he had done I asked him if he thought the force provided by this bill would furnish a military force adequate to meet the dangers that he had been talking about, and he answered emphatically, "No, I do not. The bill is a compromise." A compromise, Mr. President! A compromise of what? Are we proposing to compromise with the peace and safety of the country in the face of the dangers that the Senator has so eloquently depicted as an excuse for passing any bill at all increasing our military strength? That is just what we are proposing to do. No Senator here believes that the force provided for by this bill will prepare us for defense against any of the nations that some people think might engage us in war. We are adding millions of dollars to the burdens of the people without providing what some of them are demanding, the means of national defense. I say again the bill is a sham and a delusion.

If this bill should pass and the force it provides for be raised what kind of defense would it provide for my own State or the Pacific coast? The portion that upon an equal division of the forces on the basis of area or population would be allotted to California would not furnish soldiers enough to defend one medium-sized city in the State. There are enough seasoned Japanese veterans in the State to kidnap and carry them off if we should have trouble with that country of which I have no more fear than I have of war with Germany or Great Britain or any other country.

Then we are not dealing fairly with the people of this country who must bear the heavy and practically useless burden of maintaining this increased military force. They think we are really preparing for national defense; we know we are not.

Why, Mr. President, preparation for national defense would call for an army of 2,000,000 instead of 200,000 men. But such an army is not provided for because the people of this country, even those of them who have been wildly demanding preparedness for national defense, would not submit to any such burden and face the danger of militarism that such an army implies. For myself I am not willing to join in this pretense of preparedness for national defense.

Mr. President, before I conclude I want to say a word about what I consider an unwarranted attempt to deprive the States of control over the State militia, now commonly called the National Guard. As I have said, one of the objects of the framers of the Constitution was to preserve and protect the independence and the sovereignty of the States in their proper spheres and limit the sovereignty of the Federal Government to national and interstate affairs. The provision of the Constitution relating to the militia, so often quoted in this debate, furnishes clear and convincing evidence of this intention. It provides that the militia shall be officered and trained by the States, which gives the States power and control over them.

Congress is given the power to "provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions."

For all other purposes the militia is a State organization under State control and may be used by the States for the protection of their own independence and the enforcement of their laws. The attempt in this bill to take over the militia to the National Government is only another effort to deprive the States of their sovereignty and powers and transfer them to the Federal Government that I have already commented upon. It is a part of the centralizing process to which I have referred. In their efforts to become a part of the Federal forces the National Guard are disloyal to their States, to whom their allegiance is due until called out by the Government in the cases specified in the Constitution.

To thus alienate the Nationad Guard from their States is to serve their selfish ambitions and to take over to the Federal Government the military force intended by the framers of the Constitution as primarily for the protection of the States and the enforcement of their laws. And for their services to the Government the compensation to be paid by the Government is fixed by the Constitution. Congress must "provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States." The only interest the Federal Government has in the militia, miscalled the National Guard, is to see that when the emergency arises that warrants their call to the aid of the National Government they shall be armed and disciplined in such way as Congress may provide. There can be no escape from the fact that the militia is a State organization intended primarily and at all times for the protection of the States and the enforcement of their laws. And it follows necessarily that any attempt, such, for example, as we find in this bill, to make them a part of the Federal forces is a plain violation of the Constitution and a serious infringement on the rights of the States.

Mr. President, I am opposed to this bill as a whole, because I do not believe preparedness for national defense against a foreign foe is necessary, and, if it were, this bill does not begin to provide for any such defense; and for the further reason that no such increase as the bill provides for is necessary for the protection of the country and the enforcement of its laws in time of peace. I believe the regiments we have should be filled to their full complement and kept so, and that they should be adequately equipped, officered, and the men better paid and more humanely and liberally treated. I am not willing to go further than this at the present time. To go further and place upon our people the enormous burden of maintaining this unnecessary and inadequate military force is unjustifiable and unwise.

Mr. SMOOT. I move that the Senate proceed to the consideration of unobjected bills on the calendar under Rule VIII.

Mr. REED. Mr. President, I hope we can give the time between now and the time fixed for voting on the military bill to that bill. There are a great number of amendments.

Mr. SMOOT. I will say to the Senator that all I desire is to consider the bills on the calendar until 2 o'clock. The military bill will come up automatically at 2, and I thought between this time and 2 we could get rid of a great many bills upon the calendar to which there is no objection.

Mr. REED. Could not the Senator let that go until after the unanimous-consent agreement expires? I will then be very glad, so far as I am concerned—I only speak for myself—to cooperate with the Senator's desire and to take half a day, if necessary, to go through the bills on the calendar. I think they ought to be disposed of; but this military bill is here; we have fixed a time to vote upon it, and there are a great number of important amendments, some of which some of us are anxious to discuss. I wish the Senator would concede that, though, of course——

Mr. SMOOT. I would not interfere with the consideration and the passage of the military bill in any way; I recognize that it is of great importance; but I do not believe that if we give 40 or 50 minutes now to the calendar it would make very much difference to the bill, and it would get a lot of bills off the calendar to which there is no objection. I hope the Senator from Missouri will agree to that course.

Mr. REED. We are to vote on Friday.

Mr. SMOOT. No; not until Tuesday.

Mr. REED. But on Friday the 10-minute rule applies.

Mr. SMOOT. Not until Tuesday. The time was extended, I will say to the Senator.

The VICE PRESIDENT. The 10-minute rule begins on Friday at meridian.

Mr. SMOOT. Yes; the 10-minute rule begins then. I did not understand the Senator.

The VICE PRESIDENT. Under the unanimous-consent agreement the Senate is to vote upon the bill at 4 o'clock on Tuesday.

Mr. REED. That leaves only two afternoons practically for general discussion. There are many amendments that I know are pending; there are, I should say, 30 or 40 amendments here, and some of them are very important. I have said all I care to submit.

Mr. THOMAS. Mr. President——

Mr. SMOOT. I yield to the Senator from Colorado.

Mr. THOMAS. Mr. President, I was very much impressed with the remarks of the Senator from California [Mr. WORKS] just delivered, and particularly so with that portion of his address regarding the association of the name of one of our most distinguished members of the Supreme Bench with a Presidential nomination. I think, Mr. President, every comment of the Senator on that subject is unanswerable. And the lesson he would teach is one that should apply not only to the national but to the State courts.

I was reminded of the importance and the need of this, and by the Senator's discussion, that in one of the States of the Union, whose constitution declares that no occupant of the bench shall, during his term of office, be a candidate for any other than a judicial office, two members of its supreme bench, both of whom have sworn to support their constitution, one a Democrat and the other a Republican, are to-day active candidates for the nomination by their respective parties to a seat in this body.

The situation there presented is not an encouraging one, and when we reflect that the same court has exclusive jurisdiction of all political controversies. Hence the other candidates of the two parties for this position are incapacitated for even contesting the question whether that constitutional inhibition disqualifies these gentlemen from aspiring to the Senate while they occupy seats upon the supreme bench. They constitute two-thirds of the court, and are certainly disqualified by the most obvious principles from passing formal judgment upon themselves.

That spectacle, so unfortunate and so humiliating, and at the same time so illustrative of the extent to which the ambition, honorable ambition, if you please, of members of the bench will carry them if the rule for which the Senator contends is disregarded, that I could not avoid the temptation of calling attention to it at this opportune time.

Mr. SMOOT. Mr. President, at the request of the Senator from Oregon [Mr. CHAMBERLAIN], who has the military bill in charge, and at the solicitation of the Senator from Missouri [Mr. REED], I shall withdraw my motion to proceed to the consideration of the calendar under Rule VIII.

The VICE PRESIDENT. The calendar under Rule VIII is in order.

Mr. CHAMBERLAIN. I request that the unfinished business be laid before the Senate.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. BRANDEGEE. Mr. President, yesterday the Chair laid before the Senate a communication from the Secretary of War, transmitting there opinions of the Judge Advocate General of the Army bearing upon various legal questions involved in measures pending before the two branches of Congress for the reorganization of the Army. At that time I asked that the communication be printed in the RECORD when the Army reorganization bill was again taken up for consideration. The Senate so ordered. Pursuant to that order, I ask that the communication be printed in the RECORD at this point.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

WAR DEPARTMENT,
Washington, April 10, 1916.

SIR: I have the honor to transmit herewith, in response to the resolution of the Senate of March 30 (calendar day April 7), 1916, three opinions of the Judge Advocate General of the Army. These opinions bear upon various phases of the legal knowledge involved in measures pending before the two branches of Congress for the reorganization of the Army:

1. Is a general opinion on the question of the constitutionality of certain proposals for the federalized militia, since somewhat modified by amendment in the House in which that bill originated.

2. An opinion bearing on the constitutionality of a provision for drafting members of the State militia into the National Army applicable to the draft provision added by amendment to the bill originating in the House and on the legality of a dual enlistment.

3. An opinion on the provisions of the pending militia pay bill respecting the exercise of the power to exempt from militia service and upon the question of the legality of the dual enlistment therein proposed.

It is understood that in transmitting these opinions they are sent strictly in response to the resolution of the Senate, and that, since I have not had the time adequately to examine the grounds upon which these opinions are expressed, they are the opinions of the Judge Advocate General and not otherwise of the department.

Respectfully submitted,

NEWTON D. BAKER,
Secretary of War.

The PRESIDENT OF THE SENATE.

(Inclosures.)

—

MEMORANDUM TO ACCOMPANY NO. 1.

Numbers indicate sections of the bill as introduced in the Senate. Numbers in parenthesis indicate sections of the bill as reported to the Senate.

No. 1.

WAR DEPARTMENT,
OFFICE OF THE JUDGE ADVOCATE GENERAL,
Washington, March 9, 1916.

From: The Judge Advocate General.
To: The Secretary of War.
Subject: S. 4840, "A bill for making further and more effectual provision for the national defense, and for other purposes."

1. Instructions issued under date of March 6 with reference to S. 4840, "A bill for making further and more effectual provision for the national defense, and for other purposes," require me to submit not later than 9 a. m March 11 (a) a statement as to the effect of the bill upon the Judge Advocate General's Department and (b) a statement as to the legal aspects of the bill. This paper is designed to be responsive to requirement (b), the statement responsive to requirement (a) having been submitted in another paper.

2. For the purpose of discussion the 123 (120, H. R. 12766, Cal. 285) sections of the bill may conveniently be grouped in four subdivisions, viz:

(a) Those which relate mainly to the Regular Army, including the Regular Army Reserve and the Officers' Reserve Corps, sections 1 to 43 (1 to 41) and section 118 (115).

(b) Those which relate mainly to the reserve officers' training corps, sections 44 to 57 (42 to 55).

(c) One which relates to Volunteer forces, section 58 (56).

(d) Those which relate mainly to the militia, sections 59 to 117 (57 to 114) and 119 to 123 (116 to 120).

I have already submitted, in the form of detached memoranda, such observations and comments as I have to make respecting subdivisions (a) and (b). There remains to be discussed subdivision (c), volunteer forces, and subdivision (d), the militia, and these will be taken up and discussed in the order indicated.

(c) VOLUNTEER FORCES.

3. The subject of volunteer forces is dealt with in but a single section of the pending bill, reading as follows:

"SEC. 58 (56). The President is hereby authorized, at any time, to organize, maintain, and train, under the provisions of sections 3 to 12, both inclusive, of an act entitled 'An act to provide for raising the volunteer forces of the United States in time of actual or threatened war,' approved April 25, 1914, volunteer forces not exceeding an average of 600 officers and enlisted men for each congressional district. The term of enlistment, which shall in no event be greater than that of the Regular Army, the period of service with the colors and with the reserve, and the period of training shall be as the President may prescribe, those passing to the reserve to have the status and obligations prescribed for reserves of the Regular Army. Officers and enlisted men of the volunteer forces raised under the provisions of this section shall be entitled to the pay and allowances of officers and enlisted men of corresponding grades in the Regular Army during periods of training only.

"Temporary appointments and promotions of officers of the Regular Army arising from the operation of this section may be terminated at the discretion of the President.

"Officers of the Regular Army who receive commissions in the volunteer army herein authorized shall in time of peace receive the pay and allowances of their respective grades in the Regular Army, and no more."

The purpose here is to utilize the machinery of existing law for the raising of a citizen army for training. The existing law is the recently enacted volunteer act, approved April 25, 1914 (38 Stat., 347), a law prepared by the General Staff, approved by the War Department, and enacted by Congress in substantially the form in which submitted by the General Staff. By its express provisions it is operative "only during the existence of war, or while war is imminent, and only after Congress shall have authorized the President to raise such a force" (sec. 2). Proposed section 58 (56) adopts 10 of the sections of this law and makes them operative in time of peace for its purposes.

4. I have given careful consideration to these 10 adopted sections, as modified by proposed section 58 (56), and am of the opinion that they supply, in necessary detail, all the statutory direction which the department needs in raising and maintaining a volunteer army for training. Section 3 authorizes the embodiment of the National Guard with this force for adequate annual periods of training, and by virtue of muster in and muster out of the service of the United States, which will initiate and terminate the period of training, all constitutional questions respecting such a use of the militia are avoided, and the interruption of the State relations of the National Guard so embodied is reduced to a minimum. From a legal point of view these 10 sections appear to be well adapted to the purpose of proposed section 58 (56), save in the minor regards next to be noted.

5. Proposed section 58 (56) gives to the reserves of the citizen army for training raised under its provisions the status and obligations of reserves of the Regular Army. This provision is a proper one as the law relating to Regular Army reserves now stands, but as proposed to be adopted in sections 33 and 34 of the bill here under review, I doubt if we should completely assimilate the citizen army reserve to the Regular Army reserve. While it is important that they should have the same status and obligations in respect of mobilizing for training and for actual or imminent war, I doubt if it will be the final judgment of the War Department that they should have the pay status in time of peace which sections 33 and 34 give to the Regular Army reserve. When this question has received the attention of the General Staff and of the War Department and a decision reached, the language of section 58 (56) should be modified to express the departmental view.

The average strength of 600 per congressional district should, of course, be exclusive of National Guard organizations mustered only for periods of training.

6. It is, of course, not desirable that the forces raised under the authority of section 58 (56) should be available to the President for all purposes. A simple provision should be inserted to the effect that, except for periods of training as thereinafter provided for, the forces raised under the authority of this section shall not be called out for service except when authorized by Congress in the emergency of actual or imminent war It is likewise desirable, I think, to vest in the President quite an extensive authority in the appointment of officers of such provisional forces as are here under consideration, and a provision to that effect should be inserted. Amended in these regards, reserving the amendments respecting the status and obligations of reserves, it would be necessary to insert after the word "exceeding," in the seventh line of the section, the words "exclusive of National Guard organizations mustered into the service of the United States for training under the provisions of this section," and to add the following paragraph:

"The President alone is authorized to appoint all officers of volunteer forces raised under the provisions of this section below the grade of brigadier general. Except for periods of training, said volunteer forces shall not be called out for service except when authorized by Congress in the emergency of actual or imminent war."

(D) THE ORGANIZED MILITIA.

7. The proposed militia legislation, particularly when viewed in the light of recent discussion of the problem of national defense, is understood as intended, first, to increase the existing participation of the Federal Government in the control and direction of the training of the militia with a view to rendering it more efficient as a possible arm of national defense; and, second, to assure to the Federal Government on demand the military service, unhampered by constitutional restrictions affecting the militia, of all individuals who shall become beneficiaries under the legislation.

(1) CONTROL OF TRAINING BY PURCHASE.

8. One group of provisions may be described as designed to secure to the United States control over the training of the Organized Militia by making compliance with Federal training statutes and regulations a condition precedent to the participation of the militia in Federal appropriations, examples of which are found in section 96 (93), providing for pay for camp and maneuver training service, and sections 111 and 112 (108, 109), providing for pay for home-station training service. These provisions may be dismissed with the remark that they do not serve to raise any question fundamentally different from those raised in provisions similar in nature, though, perhaps, different in degree, under the militia act of 1903 (Dick bill) and subsequent amendments thereto. I am of the opinion, however, that the general effect of the provisions here considered is not to vest in the Federal authorities a legal jurisdiction capable of being made effective by such authorities by means of legal measures, coercive in nature, but only to afford opportunity for voluntary compliance with Federal regulations designed to make training service more effective; and that essentially this compliance is not constrained in anywise and may cease at any moment, generally without penalty other than the interruption of the right to receive Federal compensation for training service.

(2) COMMAND.

9. Another group of provisions, designed to federalize the Organized Militia through the exercise of command, raises a new question, which must be examined with special reference to the constitutional distribution of powers over the militia. Of this group only the most representative will be discussed, section 66 (64), which reads as follows:

"For the purpose of maintaining appropriate organization and to assist in instruction and training, the President may assign the National Guard of the several States and Territories and the District of Columbia to divisions, brigades, and other tactical units, and may detail officers of appropriate grade either from the National Guard or the Regular Army to command such units: *Provided*, That where complete units are organized within a State, Territory, or the District of Columbia the commanding officers thereof shall not be displaced."

Has the Congress the power, under the Constitution, to establish command relations under which the President (a) may place officers of the Regular Army in command over any part of the militia not in the service of the United States, or (b) may place officers of militia in command over any part of the militia of another State also not in the service of the United States?

10. The assignment of an officer to command an organization involves an exercise of command over both the officer and the organization. The section here under consideration is manifestly intended to be operative when the militia is not in the service of the United States for the purpose of executing the laws of the Union, suppressing insurrections, or repelling invasions (clause 15, sec. 8, Art. I, Constitution of the United States), and those purposes are the only ones for which the militia may be called into the service of the United States. Section 2 of Article II of the Federal Constitution provides that "the President shall be the Commander in Chief * * * of the militia of the several States, when called into the actual service of the United States." There is no other constitutional grant of power to the President to command the militia. It follows that the President may not, either by himself or through others under his authority as Commander in Chief of the Army, exercise command over any part of the militia not called into the service of the United States for one of the three constitutional purposes above mentioned. It would seem clear, therefore, that the President, under the Constitution, may not be authorized to assume such command over a militia organization not in the service of the United States as would necessarily be involved in assigning to the command thereof either an officer of the Regular Army or an officer of the National Guard; and further, that the President may not be authorized to assume such command over an individual officer of the National Guard as would be involved in assigning the latter to duty in command of a National Guard organization, neither being in the service of the United States. This leads me to the conclusion that both branches of the question stated above must be answered in the negative and to express the opinion that section 66 (64), supra, is not in harmony with the Federal Constitution.

(3) COURTS-MARTIAL.

11. In another group of provisions designed to federalize the militia, the solution of the problem is sought to be promoted by establishing a system of courts-martial and by providing a military criminal code. Those provisions are found in sections 104 to 110 (101 to 107). Section 104 (101) establishes for the militia not in the service of the United States a system of courts-martial, general, special, and summary, the composition and jurisdiction of which, except in the matter of punishments, is to be the same as those of courts-martial provided for by the laws and regulations governing the Army. Sections 105 (102), 106 (103), 107 (104), and 108 (105) specify the authority or authorities by which each of the various courts may be appointed, and prescribe the limits of the punishing powers of such courts. Section 109 (106), provides that no sentence of dismissal or dishonorable discharge, except when in the service of the United States, shall be executed until approved by the governor of the State or Territory or the commanding general of the militia of the District of Columbia. Section 110 (107) deals with the powers of courts-martial in the matter of warrants, subpœnas, etc., and with the manner and means of executing sentences. The consideration of this group of sections raises a constitutional question which may be stated as follows: Has the Congress power, under the Constitution, to provide for the militia not called into the service of the United States in the constitutional sense not only a system of courts-martial but a military criminal code defining offenses and prescribing punishments and the manner of executing the latter?

12. While the language employed in this group of sections is such as to raise doubts in respect of certain details of some importance, the intent is clearly to create military courts, general, special, and summary, with jurisdiction to try officers and enlisted men of the National Guard for offenses defined, denounced, and made punishable by the Articles of War for the government of the Armies of the United States, whether such offenses be committed at encampments, maneuvers, or elsewhere, including the home stations of National Guard organizations, or while on duty under State authority in aid of the civil power of the State; in other words, to create a military judicial system with jurisdiction to try officers and enlisted men of the National Guard for offenses committed when such officers and enlisted men are not in the service of the United States in any constitutional sense.

13. If the enactment of those sections is to be regarded as warranted by the Constitution, it would seem to be necessary to justify the enactment as an exercise of the power to provide for organizing and disciplining the militia, for, under the terms of the Constitution, the power of the Congress to provide for governing the militia may be exercised only in respect of such part of the militia as may be employed in the service of the United States. (Cl. 16, sec. 8, Art. I, Constitution United States.)

14. To organize is to determine what elements shall compose an organic whole and to arrange and dispose of them as constituent parts of the same. Authority "to provide for organizing" the militia implies authority to prescribe the arrangement of the personnel comprising the militia into units and grades standing in the relation of coordination or subordination in respect of each other, to the end that each unit and grade may have a definite systemic relation to others. Such is the ordinary signification of the phrase and such has been the practical construction placed upon it by the Congress in the enactment of militia legislation under the Constitution. To discipline, in the broadest sense of the term, is to educate; to develop by instruction and exercise, to train, to accustom to regular and systematic action, to bring under control so as to act systematically, to train to act together under orders, to teach subordination, to form habits of obedience; or, more narrowly, to improve by corrective and penal methods, to chastise, to inflict penalties. In which of these two senses is the constitutional phrase "to provide * * * for disciplining the militia" to be construed? The immediate context suggests an answer to the query, for the clause conferring upon the Congress authority "to provide for * * * disciplining the militia" also confers upon the Congress the authority to provide "for governing such part of them as may be employed in the service of the United States," while expressly "reserving to the States, respectively, * * * the authority of training the militia according to the discipline prescribed by Congress."

Seeking the meaning of the words "disciplining" and "discipline" from the associated word "training" and the contrasted word "governing," it is clear that the former have reference to a system of prescribed rules, in accordance with which the military exercises, instruction, and organizational activities, which constitute the training, are to be conducted; but this training is under the authority of the States. Discipline, therefore, as employed in the constitutional clause under consideration, is the basic rule upon which the training proceeds, but not the training itself. The training and the power of conducting, accomplishing, and enforcing it are expressly left to the authority of the States consonantly with the general power of governing the militia, of which, indeed, that authority is but a necessary part. This construction squares with the practice for more than a century under the Constitution. To govern is to exercise a directing or restraining power over, to control or guide, to rule or regulate by right of authority, to control and restrain the actions of men. In the Constitution the term "governing" is evidently not employed as equivalent either to "organizing" or "disciplining," but as having reference to a separate and distinct power to be exercised by the Federal Government only in respect of such parts of the militia as may be employed in the service of the United States. Furthermore, the Constitution, after conferring upon the Congress power to "raise and support armies," conferred also the power "to make rules for the government and regulation of the land * * * forces"; and it is under the latter clause that the Congress has from time to time enacted Articles of War and other laws specifically providing for the institution of courts-martial (1 Winthrop's Military Law and Precedents, 52) for the purpose of exercising the restraining and punitive powers which, in the final analysis, are the means of governing the Army.

15. The foregoing considerations lead to the conclusion that the power to establish a system of courts-martial and prescribe a military criminal code for the militia is not to be deduced from the authority to provide for organizing and disciplining the militia but must be deduced from the power to provide for governing the militia. Inasmuch as the latter power is conferred upon the Congress only in respect of such part of the militia as may be employed in the service of the United States, it may not constitutionally be exercised in respect of the militia under any other conditions. If the view here expressed is sound, as I think it is, the constitutional question last stated must be answered in the negative, and for want of constitutional support the enactment of sections 104 (101) to 110 (107) of the bill in reference would be without mandatory legal effect.

(4) AVAILABILITY FOR FEDERAL MILITARY PURPOSES (DUAL ENLISTMENT).

16. Thus far the discussion has been confined to the more important of those provisions of the bill designed to increase Federal control over the Organized Militia when not in the service of the United States. We now come to the consideration of certain provisions that may be regarded as designed to extend the availability of the National Guard for Federal military purposes.

Section 73 (71) prescribes that in addition to including "an obligation to bear true faith and allegiance to the United States and support

the Constitution thereof and obey the orders of the President of the United States and the officers appointed over them," the contract of enlistment in the National Guard shall contain the following agreement:

"In the event that the President of the United States shall order the National Guard into active service because of actual or threatened war within three years from the date of my enlistment I agree to serve as a member of the National Guard in the service of the United States, within or without the continental limits of the United States, for the period of three years from the date of said order or until discharged by order of the President of the United States."

Section 75 (73) provides in substance that no person shall continue in office or enter upon the duties of an office in the National Guard until he shall have "taken the prescribed oath, which shall contain the same agreement as to service prescribed for enlisted men."

Section 115 (112) provides that—

"When Congress shall have authorized the use of the armed land forces of the United States requiring the use of troops in excess of those of the Regular Army, the officers and enlisted men of the National Guard, who have signed an enlistment or agreement to render military service to the United States and have received and accepted compensation for training for such service under the provisions of this act, and who have passed the required physical examination at the time of their enlistment, may be ordered into the service of the United States by the President to serve for a period of three years within or without the continental limits of the United States, unless sooner discharged by the President. Officers and enlisted men in the service of the United States under the terms of this section shall have the same pay and allowances as officers and enlisted men of the Regular Army."

Here arises the question: If these sections be enacted, is their enactment properly to be regarded (a) as an exercise of the constitutional power to raise and support armies, or (b) as an exercise of the constitutional power to provide for calling forth the militia? If the proposed legislation is legally sufficient to create or to authorize the creation of the status of Federal soldiers, the individuals concerned may become available for all Federal military purposes; but if the legislation is not legally sufficient to create or to authorize the creation of such status, then the individuals concerned will remain militiamen, available to the Federal Government only when called forth to execute the laws of the Union, suppress insurrection, or repel invasion, and for those purposes only.

17. It seems clear that there is no intention to make Federal soldiers out of the individual beneficiaries under the act at the moment they become such beneficiaries. In effect, sections 73 (71) and 75 (73) provide that the prospective recipient of pecuniary benefits under the proposed act shall, in presenti, agree to render military service to the Federal Government in future. Furthermore, it seems clear that a man can not voluntarily agree now to render voluntary service in the future so as to preclude him from refusing to render that service when it shall become due. On general legal principles and upon authority the prescribed agreement can ripen into the Federal military status only by some act of the promisor done with the purpose of consummating the status and sufficient for the purpose (Tyler *v.* Pomeroy, 8 Allen (Mass.), 481, 485, 503, 504, 505), unless the Congress shall prescribe that the happening of some event or contingency, although unrelated to the promisor, or some action taken by a designated Government official, shall serve to accomplish, irrespective of the will of the individual, the consummation of the Federal military relation. In this view the agreement has little or no value as a step toward creating the status of Federal soldier solely at the will of the Federal Government, except that if section 115 (112) may properly be viewed as draft legislation, the individuals who have entered into the agreement and have accepted the resultant pecuniary benefits may be regarded as a specially designated class upon which the draft shall first operate.

18. The power of Congress to raise armies is plenary. That this power may be exercised by forced draft was determined during the Civil War; and I think that it may be asserted, both upon principle and upon authority, that in the exercise of this power Congress may compel all of the militia, whether organized or not, into the Army of the United States. Would the proposed measure, if enacted, represent an exercise of this power? In this connection it is to be borne in mind that an act to compel the citizen into the military service of the United States can operate only in derogation of his usual constitutional rights, and therefore that the language of such an act, to be sufficient to achieve its purpose, should be clear and unquestionable.

19. Section 115 (112) provides in substance that when Congress shall have authorized the use of land forces of the United States in excess of those comprising the Regular Army, the officers and enlisted men of the National Guard, the beneficiaries of the legislation, "may be ordered into the service of the United States by the President to serve for a period of three years within or without the continental limits of the United States."

The section contains no language suggesting that a change of character and status from militiaman to Federal soldier is in contemplation, except as it may be inferred from the clause, "to serve * * * within or without the continental limits of the United States."

However, this suggestion is neither convincing nor forceful when the fact is taken into consideration that substantially the same language is employed in section 4 of the act of January 21, 1903, as amended by the act of May 27, 1908 (35 Stat., 400), legislation which in terms authorized the calling forth of the militia only for one or the other of the three purposes specifically mentioned in that connection in the Constitution. Another suggestion, rather persuasive, upon which it would be possible to base an argument that the militiamen ordered into the service of the United States pursuant to the authority conferred by section 115 (112) are to be regarded as Federal soldiers is to be found in section 78 (76), which reads as follows:

"All vacancies which exist or occur in the grade of second lieutenant of any portion of the National Guard in the active service of the United States shall be filled by the President, by and with the advice and consent of the Senate, from the enlisted men of the National Guard of the State, Territory, or District in which the vacancy occurs. All other appointments and promotions shall, under like circumstances, be made by the President, by and with the advice and consent of the Senate."

This section assumes to vest in the President, by and with the advice and consent of the Senate, the power to fill all vacancies in commissioned grades in "any portion of the National Guard in the active service of the United States," a power that may be exercised by the President only in respect of the Army, as distinguished from the militia in the service of the United States. But putting upon the proposed legislation the most favorable construction from a Federal point of view and accepting, for the purpose of further discussion, the view that it does contemplate the formation of a branch of the Army of the United States from the militia personnel ordered into the Federal service under section 115 (112), there still remains the question: Is the language of the bill legally sufficient to authorize the President to compel the militia beneficiaries to serve therein—i. e., as members of the Army of the United States?

20. The authority to make the necessary order is coupled with a reference to the prior agreement to serve the United States. In terms there is no provision for compelling a compliance with the order, except so far as the power to exercise such compulsion may be inferred from the use of the term "ordered" and from the provision appearing in section 103 (100) that:

"The militia when called into the service of the United States shall, from the time they are required by the terms of the call to respond thereto, be subject to the laws and regulations governing the Regular Army * * *."

The language employed in this latter section, "called into the service of the United States," when considered in connection with similar language employed in the Constitution and also in prior legislation authorizing Federal use of the militia as such, points quite strongly to the conclusion that the section is to be construed only as having reference to the militia when called into the Federal service as militia. This would remit us, then, to section 115 (112) in the search for authority to enforce the transfer from a militia status to the status of Federal soldier. That section, viewed as authority to create an additional branch of the Army, is open to two constructions. Under the first the section would do no more than to confer upon the President authority to embody in the Army officers and enlisted men of the militia if they consent, or at least do not object, to the transfer; and under the second the section would authorize the President to draft or compel the militiaman into the Army. However, the application of accepted rules of statutory construction would seem clearly to lead to the adoption of the construction first indicated and to the rejection of the second. Therefore, whatever may have been the intention of the framers of the bill, I can not avoid the conclusion that the language employed is not sufficiently clear and positive to abridge the usual civil rights of citizens, and, in the absence of a voluntary response to the order, subject them to Federal military control, even though they may have signed the agreement provided for in sections 73 (71) and 75 (73); or, in other words, that the project, if enacted, would not amount to a draft act.

RIGHT TO CALL THE MILITIA INTO THE SERVICE OF THE UNITED STATES FOR TRAINING.

21. Although in the bill under consideration it is not expressed in terms, various provisions serve to give the impression that reliance is placed upon the theory that, under the Constitution, the Congress may provide for calling the militia into the service of the United States solely for the purpose of training. This would appear to justify a brief reference to the military bill (H. R. 12766) now pending in the House of Representatives. Generally speaking, the provisions above reviewed are parallel in the House bill, but in the latter they are associated with a specific provision, which reads as follows:

"SEC. 54 (55). * * * The President may call into the service of the United States the National Guard or any part thereof to participate in encampments, maneuvers, or other exercises, including outdoor target practice and field or coast-defense instruction, for at least 15 days each year. * * * And he shall have power to call said National Guard or any part thereof into the service of the United States in connection with units of the Regular Army for the purposes aforesaid." * * *

Here in plain terms is a provision calling the militia into the service of the United States solely for the purpose of training. As I view it, this provision is in direct conflict with clause 15, section 8, Article I of the Constitution, which confers upon the Congress the power "to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions."

This enumeration of the purpose for which Congress is empowered to call the militia into the service of the United States would be meaningless if its power extended to calling them forth for other purposes. I am unable to construe this constitutional provision in any other way than as limiting to the three purposes specified the power of Congress to authorize the calling forth of the militia. Such was the view of the Attorney General, who, in an opinion rendered to the Secretary of War on February 17, 1912, held as follows:

"It is certain that it is only upon one or more of these three occasions—when it is necessary to suppress insurrections, repel invasions, or to execute the laws of the United States—that even Congress can call this militia into the service of the United States or authorize it to be done." (29 Op. Atty. Gen., 323–324.)

Such also was the view taken by the House Committee on Militia in 1840, when it had before it a bill proposed by the then Secretary of War (Poinsett), substantially identical with the foregoing provision of the House bill. Secretary of War Poinsett was informed by the House committee, in substance, that the power of Congress did not extend to calling the militia into the service of the United States for such purpose, and upon further consideration he acceded in this view. And such, too, appears to have been the view of William Henry Harrison, who, on February 28, 1817, proposed a constitutional amendment in the form annexed to this statement for the purpose of conferring upon the Congress the very power which this legislation assumes to exist. Further reinforcing this view is the consideration that if the Congress may provide for calling the militia into the service of the United States for a period of 15 days each year of an enlistment therein for the purpose of training, a purpose not enumerated in the Constitution, it may also provide for calling the militia into such service for 365 days of each year of an enlistment, and for other purposes not constitutionally enumerated, and as this would result in placing the militia continuously under the command of the Federal Executive the substantial distinction between the militia and the Army would cease to exist.

SUMMARY.

22. Summarizing the powers over the militia sought to be exercised, either in express terms or by what appears to be necessary implication, in the pending legislation, they include:

(a) The power to provide for calling the militia into the service of the United States for the purpose of training—in conflict, as I view it, with clause 15, section 8, Article I, of the Constitution.

(b) The power to command the militia when not called into the service of the United States for a constitutionally enumerated purpose—in conflict, as I view it, with clause 16, section 8, Article I, and clause 1, section 2, Article II, of the Constitution.

(c) The power to establish courts-martial for the trial of officers and soldiers of the National Guard when not in the service of the

United States—in conflict, as I view it, with clause 16, section 8, Article I, of the Constitution.

23. I have already pointed out that sections 73 (71) and 75 (73) are ineffective to create the status of Federal soldiers in presenti, and the ineffectiveness of section 115 (112) as a draft to compel military service.

CONCLUSION.

24. For reasons hereinbefore outlined, I am led to the conclusion that so much of the bill here under consideration as relates to the militia would not serve in any large measure to accomplish the purpose of the bill, to make further and more effectual provision for the national defense: First, because certain material provisions contemplate no more than a Federal jurisdiction, if such it may properly be termed, based upon a consent that may be withdrawn at any time, generally, without penalty other than the interruption of the right to receive pecuniary benefits; second, because constitutional limitations upon the power of Congress to provide for calling the militia into the service of the United States and upon the power of Congress to legislate in respect of the militia not in the service of the United States would, in my opinion, render void certain basic portions of the proposed legislation and thus emasculate the same; and, third, because the provisions which contemplate the use of the organized militiaman for Federal military purposes would not, if enacted, represent such an unequivocal exercise of the undoubted right of the Congress to provide for drafting or compelling the manhood of the country into the Federal military service as to justify reliance upon them.

E. H. CROWDER,
Judge Advocate General.

—

AMENDMENT PROPOSED BY MR. W. H. HARRISON (AFTERWARDS PRESIDENT OF THE UNITED STATES) IN THE HOUSE OF REPRESENTATIVES, FEBRUARY 28, 1817, TO THE CONSTITUTION OF THE UNITED STATES.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring therein), That the following amendment to the Constitution of the United States be proposed to the legislatures of the several States, which, when ratified by the legislatures of three-fourths of said States, shall be valid, to all intents and purposes, as a part of the said Constitution:

Congress shall, concurrently with the States, have power to provide for training the militia according to the discipline prescribed for that purpose, and whilst engaged in that service they shall be subject to the rules and regulations prescribed for the government of the militia, when in the military service of the United States, and also to provide for teaching in the primary schools and other seminaries of learning in the several States the system of discipline prescribed for the militia.

DISCUSSION OF THE MILITIA PAY BILL (H. R. 8141, 62D CONG., 1ST SESS.).

MEMORANDUM FOR THE SECRETARY OF WAR.

FEBRUARY —, 1913.

Subject: The militia-pay bill (H. R. 8141, 62d Cong., 1st sess.).

This study of the above bill has been undertaken in response to a desire expressed by the Secretary of War for a discussion of the constitutional features of the proposed measure.

On February 17, 1912, the Attorney General, responding to a question submitted to him by the Secretary of War, gave it as his opinion that the Constitution affords no warrant for the use of the militia by the General Government, except to suppress insurrections, repel invasions, or to execute the laws of the Union, and forbids such use for any other purpose. Notwithstanding the fact that the militia is a considerable body of land forces well equipped and to an effective degree trained and prepared for war, the General Government is denied the general power to use them as such in those exigencies jeopardizing the very life of the Nation. During such emergencies the military strength of the Nation would be vastly increased if the militia organizations could pass without break from the service of the several States to the service of the United States and be made available as Federal soldiers and organizations for general military purposes. The bill under discussion was designed to accomplish such transfer. Its whole purpose is to render the individual militiaman and his organization available for general military use in time of war or when war is imminent, or in other grave emergency, unrestricted by those limitations placed in the constitutional grant upon the Federal use of the Organized Militia; that is, it is the purpose of the bill to render the militiaman and his organization as available for general military use as is the Army of the United States.

This general purpose and the particular method of achieving it are clearly indicated and expressed in the following sections. Section 4 provides, among other things:

"That no money appropriated under the provisions of this act shall be paid to any person * * * who has not voluntarily, in addition to his oath as a member of the Organized Militia, also agreed to render military service to the United States, as hereinafter provided."

Section 5 provides:

"That the President, with the consent of Congress, in time of war or when war is imminent, or in other grave emergency requiring the use of troops in excess of the Regular Army beyond the limits of the United States, may by order transfer to the Army of the United States any portion of the Organized Militia receiving, or entitled to receive, the benefits of this act, to serve therein for the remainder of their respective terms of enlistment or commission, unless sooner released by the President. * * *"

And the same section continues:

"* * * and any Organized Militia so transferred shall, from the date specified in the order of such transfer, become for the time being a part of the Army of the United States, and subject to the same laws in so far as the same may be applicable to them during their service under such transfer. * * *"

Said section further provides that any Organized Militia so transferred "shall be available for any duty for which the Regular Army or Volunteer Army may be employed."

The bill also carries with it the following penalty clause:

"*Provided*, That any member of the Organized Militia who, having agreed to render military service to the United States under the provisions of this act, refuses or neglects to present himself for service when so transferred shall be subject to the trial therefor by a duly constituted court-martial, under such regulations as the President may prescribe."

And when, in the discretion of the President, the necessity for their further use no longer exists, this section provides:

"* * * He shall release said organizations and the members thereof from liability to render further service under said order of transfer, and said organizations and the members thereof, when so released, shall cease to be a part of the Army of the United States."

Section 6 of said bill also provides, in part:

"That whenever organizations * * * are transferred to the Army of the United States under the provisions of this act, those organizations only must be * * * transferred to such Army which have already received compensation under the provisions of this act, and, in addition thereto, such other organizations as have become entitled to receive compensation hereunder between the time of the last semi-annual disbursements and the time when such transfer is made."

It is, then, the purpose of the bill to make a member of the Organized Militia, failing under and complying with its terms, a Federal soldier.

Congress can provide for a Federal soldiery only under its constitutional grant to "raise" armies, and it is self-evident that any army raised by Congress must consist of one or both of two classes only—those who volunteer under the law and those who are compelled by the law to enter the military service. Therefore the individual, whether a member of the Organized Militia or simply a citizen capable of bearing arms, becomes a Federal soldier by one or the other of these methods. Now, while the bill as drawn requires that no money appropriated thereunder shall be paid to any person who has not voluntarily, in addition to his oath as a member of the Organized Militia, also agreed to render military service to the United States when transferred by order of the President to the Army of the United States, nevertheless it is the evident purpose of the bill not to rely solely upon the virtue and binding force of such an agreement, the legal sufficiency of which will be hereafter noticed, but rather upon the positive power to be conferred by Congress upon the President to transfer, compulsorily if need be, the organizations and their members to the Army of the United States. Passing for the present, then, all question of the sufficiency of the language of the bill to empower the President to that end, the fundamental question which should be given first consideration is—

I.

IS IT COMPETENT FOR CONGRESS TO PROVIDE BY LAW FOR DRAFTING THE ORGANIZATIONS OF THE ORGANIZED MILITIA INTO THE ARMY OF THE UNITED STATES?

The power of Congress to raise armies is plenary and exclusive (Tarble's Case, 13 Wall., 397; Jacobson *v.* Massachusetts, 197 U. S., 11; and the cases hereinafter cited and discussed). That the power may be exercised by forced draft has not since the Civil War been open to question, for it was so determined in cases arising under the Federal and Confederate conscript laws of that period. The draft acts of the Federal Government were tested in the courts and sustained in the following leading cases: McCall's Case (5 Phila., 268 (1863)); Kneedler *v.* Lane (45 Pa. St., 238 (1863)).

The constitutionality of the conscript acts of the Confederate Government was much more vigorously contested, and was, without exception, sustained with corresponding firmness by the courts of last resort of all the States of that Government before which the question came, in opinions justly celebrated for having set at rest this constitutional question. The following well-considered opinions upon the various conscript acts of the Confederate States Government—whose constitution as regards this power was the same as ours—leave nothing to be questions:

Ex parte Coupland, 26 Texas Reports, 388; ex parte Tate, 39 Alabama Reports, 254; Fitzgerald *v.* Harris, 33 (Supplement) Georgia, 54; Jones *v.* Warren, 34 Georgia, 28; Jeffers *v.* Fair, 33 Georgia, 347; Burroughs *v.* Peyton, 16 Grattan (Virginia), 470.

The cases just cited sustain the following propositions:

(a) If there were no express grant "to raise and support armies," the right of the General Government could be sustained as a power inherent in national sovereignty.

(b) The power to "raise and support armies" is an express constitutional grant to the General Government; and there is no limitation as to the mode or manner of exercising it, by any other express provision, or by any necessary implication.

(c) The conscript laws do not violate any of the abstract or guaranteed rights of the citizen, nor assume over him any control not delegated by the Constitution.

(d) The grant of the power to make war and to raise armies carries with it by necessary implication, unless expressly withheld, the right to demand compulsory military service from the citizens; this express power, together with the implied power, is vested in the Congress of the National Government.

(e) The power to call out the militia, itself a compulsory service, does not limit the power to raise and support armies; nor is the right to raise and support armies to be taken in subordination to the power conferred over the militia.

(f) The General Government is not dependent upon the will either of the citizens or of the State, to carry into effect the power to raise and support armies.

Congress, then, has a general and plenary power to raise armies by draft or compulsion; and, at the outset, it will be informing to examine into the question whether a member of the Organized Militia is subject to the power of Congress in this regard like any other citizen, irrespective of his militia status. Legislative and judicial precedents show conclusively that his status in the militia affords him no constitutional exemption. Drafts of State troops were resorted to during the Revolutionary War (2 Jour. Cong., 458–459; 3 idem, 38), and the act of June 30, 1834, refers to "drafted militia" as in the service against Indians on our frontier. But the first instance in our history in which the Army of the United States has been recruited by conscription is that contained in provisions of the act of March 3, 1863 (12 Stat. 731), which was necessitated by the fact that owing to defects in the operation of the existing militia systems of the United States, the calling forth of the militia under the Constitution and the act of July 17, 1862, had proved quite inadequate to the emergencies of the period. The conscript act of 1863, supra, proved to be an effective measure, rendering liable to draft all able-bodied citizens of the United States and all aliens who had declared their intention to become citizens, between 21 and 45 years of age; but while the act provided for the acceptance of substitutes and for pecuniary commutation in lieu of service, it is a remarkable fact that the governors of the several States were the only officers of the State governments ex-

cepted from the provisions of the act and rendered exempt from liability to the Federal draft.

The present militia law defines the militia to consist of every able-bodied citizen of the several States, Territories, and the District of Columbia, and every male of foreign birth who has declared his intention to become a citizen, who is more than 18 and less than 45 years of age; it divides the militia into two classes—the Organized Militia, consisting of the regularly enlisted, organized, and uniformed active militia of the several States, etc., participating in the annual appropriations made by Congress, and the reserve militia, consisting of the remainder. The "militia" in the general and constitutional sense consists of the entire arms-bearing population of the several States, and it may be presumed that Congress in the present militia law has placed its own definition upon what is meant by the arms-bearing population in defining the militia of the several States. The only source from which armies may be raised is the arms-bearing population of the United States; the only source from which the militia may be organized is the arms-bearing population of the several States. These sources are one and the same. The unlimited power to carry on war and to raise armies is granted to the United States and denied generally to the States; as a common-sense proposition it can not be supposed that the enrollment and enlistment of a citizen in the Organized Militia of a State takes him, in and of itself, out of that source from which United States Armies must be raised. Though an Organized Militiaman of the State, he still remains a citizen of the United States and subject as such to the supreme power of the General Government to draft him in its armies. Such a proposition accords with the well-established theories that in the exercise of the war power the Union operates upon the individual citizen directly and not upon the States, nor upon the individual through the medium of the States; and that it is the effect of the Constitution to render the Federal Government supreme in all that pertains to war; it also accords with the theory that the power, exercised by the States under the confederation, of drafting their militia in response to a requisition made upon them by Congress for regular soldiers, was conferred by them on the General Government. So, too, the conscript acts of the Confederate States Government, and the draft act of the United States during the Civil War, evidently proceeded upon the proposition that enrollment in the militia or enlistment therein could not operate to place the citizen beyond the reach of the Federal power, as these acts made no exemption of enrolled and organized militia. And to the same effect are the judicial decisions.

None of the cases cited and quoted, supra, holding that Congress has the power to resort to draft, has excluded from the application of that power any of the Organized Militia; all of them, on the other hand, have affirmed the contrary view, in a general way, by the use of broad and emphatic language to that effect; while some of them, especially those decided by the courts of the Confederate States, where the point was specifically raised, have pointedly declared that the Organized Militia, as individuals, are subject to the compulsory power of Congress to raise armies. For instance in Ex parte Tate, supra, the Supreme Court of Alabama said:

"Until he (the citizen) ceases to be a citizen, with the rights and duties which pertain to a citizen, he can not exonerate himself or be excluded by the legislative power from the obligations which inherently attach to that relation. Protection is his right and allegiance his duty so long as he remains a citizen; and the highest duty of allegiance is to respond to the call of his country for soldiers when her liberty, including his own, is threatened and her existence endangered by an invading enemy."

In Fitzgerald *v.* Harris, supra, the Supreme Court of Georgia, after holding that Congress could not grant irrepealable exemption from draft, used the following significant language:

"Even in war, when it becomes necessary to send into the field a larger proportion of the population, it is greatly desirable that another portion be left at home. There are always men who can be more useful at home than others and more useful there than in the field. As, in the raising of armies, the course has not been to take the whole population, or even the whole of a class (where resort is had to classification), in the exercise of sound discretion exemptions may be granted as incidental to the general power, but they must be revocable at the will of Congress.

"No man or set of men can be placed without the pale of legislative control in this matter for a single day."

In Burroughs *v.* Peyton, supra, the Court of Appeals of Virginia said:

"It is true that the Constitution does recognize the militia and provides for using it, as well as the Regular Army, in the military service of the country. Well-regulated militia has (as it is stated in one of the amendments) always been regarded as necessary to the security of a free State. It was therefore proper that provision should be made in the Constitution for its organization, and for that authority to be exercised over it by the State government and Congress respectively. It was not probable that, in the exercise of the power to raise armies, Congress would, under ordinary circumstances, materially diminish the number of the militia. But it can not be true that, with a view to preserving the militia entire, it was intended to deny to Congress the right to take individuals belonging to it into the Regular Army. This construction would prevent Congress from obtaining from its ranks not only conscripts but volunteers also; but as the militia embraces the whole arms-bearing population, it would render it necessary that the Army should contain nothing but foreigners enlisted for the purpose and having no interest in common with the people of the country, nor can we imagine that such was the intention of the framers of the Constitution.

"The true interpretation of the Constitution with reference to this matter would seem to be that the power to use the whole military force of the country was conferred upon Congress, and it was left to their discretion to fix, as the varying interests of the country may require, the relative proportion of Regular troops and militia to be employed in the service. If it should appear at any time to be appropriate to increase the Army, it might be done by taking men from the militia, either as Volunteers or as conscripts, the action in either case being upon the individual citizen and not upon the militia as an organized body. As it is impossible to foresee how large an army the exigencies of the country might demand, the number of militiamen to be thus transferred to its ranks was wisely left to the discretion of Congress."

It will be noted that the court in this case expressed the view that the action of the General Government was upon the individual and not upon the militia as an organized body, which in a general sense is true; but later on in this discussion it will be shown that the court explained and modified its language to such an extent that this opinion may in fairness be quoted as authority for the proposition that the Government may also take the militia as organized bodies.

In Ex parte Coupland, supra, the Supreme Court of Texas, in answering the argument that the Organized Militia was not subject to draft into the Armies of the General Government, but could only be called forth as militia, as provided by the Constitution, said:

"The fallacy of the position seems to be manifest from the qualifications which they are forced to give it. For, as we have shown, the citizen has no right to exercise volition with regard to preference of military duty so as to impair or qualify the power of Congress to raise armies; and if the qualifications exist by reason of the rights of the State over the arms-bearing citizens as to militia, and to appoint their officers when in the service of the Confederate States, these rights can not be affected by the voluntary action of the citizen. Nor can the difficulty be gotten over by saying that it is further to be assumed that the State must be presumed to have consented to his voluntary enlistment, for it is as impotent as the citizen to destroy in this manner a constitutional right conferred upon Congress or thus to confer one not otherwise given. * * * The individual is equally an arms-bearing citizen whether he goes into the service voluntarily or otherwise. For surely the doctrine is not to be advanced that individuals, companies, or regiments of the 'well-regulated,' arms-bearing citizens 'necessary to the security of a free State,' which has been organized, armed, and disciplined as provided for by Congress, and for whom a call is made by the Confederate States in pursuance of the Constitution, cease to be integral parts of the arms-bearing citizens of the State because they preferred to volunteer their services directly to the Confederate Government and it is willing to accept them. It is said, however, that * * * the control of the State over its militia may be entirely destroyed, but would not the result be the same if an equal number of its militia were to volunteer into the service of the Confederate States? The truth of the matter is that when the citizen goes into the army raised by Congress, either voluntarily or in obedience to law requiring him to do so, he does this as a citizen and not as a militiaman. Congress has not the right to raise armies in either way beyond the necessities of the Government for carrying into effect its granted power, but in either case the citizen when placed in its service is temporarily withdrawn from the control of the State as a militiaman, and for the time being the right of the State—or, more properly speaking, the right of the State government over him—must yield to the more pressing and important demand for his services by the Federal Government to enable it to discharge the duties for which it has been authorized to raise and support armies."

It can not but be admitted that the reserve militiaman is subject to draft. If the Organized Militiaman is not it will aid to clarify the situation by asking why not, and seeking the possible objections to such a measure. If there be any constitutional objections they must be based upon only two possible grounds, namely, that such a measure would violate his constitutional rights as a citizen, or, would operate in derogation of the reserved rights of the State. The constitutional rights of the Organized Militiaman as a citizen are those of a citizen and of the reserve militiaman, nothing more or less, which statements is a sufficient dismissal of that ground. As to derogation of the reserve rights of the State, sufficient has already been said, it seems to me, to show that the State acquires only a subordinate power over him—as a matter of law, no power at all as against the supreme right and power of the United States.

Now, if it be conceded—and enough, I think, has already been shown or will be shown to cause the concession—that the individual militiaman may be compelled into the Army of the United States, then, as a general proposition, an aggregation of individuals in an organization may likewise be compelled, so far as the rights of the State are affected. If all the members of any organization, officers and men, may volunteer or be compelled to enter the Army of the United States as individuals, even to the last man, it is conceding to the State only a shadow of power to hold that she is entitled to the organization without the men composing it. Speaking practically, if indeed not legally, her rights are not adequately protected if she must yield the kernel though retaining the husk. The Constitution could hardly countenance such refinement, and the legislative and judicial precedents have not been derived from such close distinctions.

In any organization the composite parts are not independent but interdependent; they are not separate but bound together and regulated by established mutual relations. If the independent parts, as such, be taken with their interdependent relation, then are they taken as an organization. Those relations in military organization are marked by military hierarchy based on grades, with attendant rights and duties—officers, noncommissioned officers, and privates of various kinds and departments. The bill provides that the militia be taken as organizations—that is, with the relations and the grades to mark them. It is true that these military relations and officers, when once the organization becomes Federal, draw upon the United States and not the State as the source of authority. There may, indeed, be some question as to the sufficiency of the bill to reestablish or create anew these relations and offices as they must exist in the Army of the United States; but if the bill is defective in this regard it is because it does not go far enough in exercising the constitutional powers of the General Government. If the United States may draft an officer of the militia, not in his capacity as an officer of militia but as a citizen, without derogation from the right of the State, the latter may not complain if he be transferred, or drafted, to the Army of the United States with the corresponding office in that establishment. There is no question that the United States has the constitutional power to take the entire personnel of the Organized Militia as citizens and then establish among them the corresponding offices and relations previously existing in their organizations; and if the United States does so, or undertaking to do so, fails in its efforts because it does not exert the full power, that is a matter of Federal and not of State concern.

There is another consideration in point here: Under the Constitution Congress has the power "to provide for organizing, arming, and disciplining the militia," and even if this power is not exclusive, nevertheless, "when once Congress has carried its power into effect, its laws for the organization, arming, and disciplining of the militia are the supreme law of the land, and all interfering State regulations must necessarily be suspended in their operation." (Houston *v.* Moore, 5 Wheat., 51.)

Now, there is reserved to the States the right to appoint the officers of the militia, and at most the implied power to provide for the organization of the militia when the United States has not done so, or as regards matters not covered by Federal regulation, and no more. Not only may Congress determine who shall and who may not compose the militia; but, having done so, the State government has no legal authority to prescribe otherwise (14 Gray; — Mass., 619). Congress may also determine what part of the militia shall be organized and may appor-

tion the officers and men; it may determine what military officers there may be, although having so determined it is the right of the State, expressly reserved, to appoint the officers. Organization rests within the exclusive power of Congress, if it chooses to exert the power, although the State has the reserve power to appoint the officer it may not create the office nor define its place in the military hierarchy nor its relation to the organization, if Congress should choose to legislate to that effect. Relations, then, over which Congress may exert at its pleasure such an exclusive control are not relations based on and flowing from rights reserved to the State and necessary, within the intendment of the Constitution, to a State's indestructible character. The history, legislatively speaking, of raising United States armies, shows conclusively that the organizations of enrolled militia can be disposed of by the States to the General Government without affecting the indestructibility of the States. During the Government under the confederation the States maintained an active militia, and frequently used it to supply the requisitions made on them for regular soldiers in the Continental Army. In Burroughs *v.* Peyton, supra, the court cites many instances where Virginia made up the deficiencies in her quota by requiring drafts from the militia by legislation, which provided that "each man so drafted shall be considered to all intents and purposes as a regular soldier and shall serve as such for three years, if the war should so long continue." This power to compel the militia of the State into the Continental Army would appear to be one of the very powers relinquished by the States and conferred upon the General Government, the exercise of which is not subject to "interruption from a State or State authorities."

The States themselves have recognized the advisability of parting with their militia organizations when a national crisis has demanded it; nor have they ever hesitated to do so on the ground of destroying thereby a necessary State instrumentality. In the Civil War the several States parted first with their active militia and militia organizations in raising their quotas for the Army of the United States, and the State organizations, with their members, became, when mustered into the service, United States Volunteers. The same thing prevailed in the South during that period; and in the War with Spain the Volunteer Army was raised in the same manner. This is logical. A military organization already exists; the Federal Government has hitherto received the organization, or so much of it as has measured up to the required standard, and the State has not hesitated to give it up. But this has been accomplished, the State consenting, through a transmutation uncertain and troublesome from State militia to United States Volunteers. I do not mean to say that Congress has ever provided for taking such organizations; I only mean to say in all those instances the States have, as a matter of fact, relinquished control over their militia by offering them at once to supply their quotas as United States Volunteers, and usually no other militia has been organized instead. This long-continued course of conduct is some evidence of the correctness of the legal proposition that such organizations are not those necessary instrumentalities of the State which are placed by necessary implication beyond the power of the General Government.

Congress may provide for organizing the militia of the several States. If it may not also provide for taking the individuals thereof and such organizations as may have been prescribed by Congress or by the States, Congress silent and consenting, this one effective means for the "formation, direction, and support of the national forces"—the language used by the great publicists of that day in declaring that all such means for the common defense were necessarily conferred upon the General Government—is denied it. The Constitution puts no such limitation on the General Government. Intrusted with the common defense, it is vested with all the powers requisite to the complete execution of the trust. Any means for the formation of the national forces which, in the discretion of Congress, are adapted to the need and tend directly to the execution of the constitutional powers are in themselves constitutional. This was the view of our fathers. This view has become the law of the land through the authoritative decisions of the Supreme Court of the United States, followed by the courts of all jurisdictions without question. The decisions are a unit to the effect that in order to carry into execution the powers granted by the Constitution Congress may employ those means, in its judgment, the most advantageous. Where such means are really calculated to effect the object intrusted to Congress, the courts can not inquire into the degree of their necessity. Such is the rule laid down by the great Chief Justice Marshall in the celebrated case of McCullough *v.* Maryland (4 Wheat., 413), and the power to raise armies is construed in the light of this rule as being unqualified. (See Antrim's Case (1863), 1 Fed. Cases, 1063, and cases cited on page 4, supra.)

In Ex parte Coupland, supra (1862), the Supreme Court of Texas, in sustaining the validity of the Confederate conscript law, had occasion to examine into the extent to which Congress might go in the exercise of its power to raise armies without derogation of the reserve rights of the State. Though this court, as well as those of the several Southern States whose decisions are hereinafter discussed, was construing a constitution which, in its provisions under consideration, was the same as ours, it must be remembered, in view of the political conditions then obtaining, that the courts of the Confederate States were committed to a view of constitutional interpretation which, in determining the relative powers of the General Government under the several States, gave to the latter a latitude not conceded to them under the Union. In the Coupland case the court, after deciding that the law was not an unconstitutional limitation upon the rights of the citizen, proceeded to discuss thoroughly its effect upon the political rights of the States, in the course of which it said (p. 397):

"It is said, however, that unless this qualification is placed upon the power of Congress to raise armies, the control of the State over its militia may be entirely destroyed. But would not the result be the same if an equal number of its militia were to volunteer into the service of the Confederate States? The truth of the matter is that when the citizen goes into the army raised by Congress, either voluntarily or in obedience to the law requiring him to do so, he does this as a citizen and not as a militiaman. * * * In either case the citizen when placed in its service is temporarily withdrawn from the control of the State as a militiaman. For the time being the rights of the State, or, more properly speaking, the right of the State government over him, must yield to the more pressing and important demand for his services by the Confederate Government to enable it to discharge the duties for which it has been authorized to raise and support armies."

And further on the court said (p. 399):

"The origin of this grant of power to raise armies shows most conclusively that it was not intended to leave the Government dependent upon the will either of the citizen or of the State to carry it into effect. It is given in our constitution, as it was originally in the Constitution of the United States, and was placed in that for the purpose of correcting one of the leading defects in the Articles of Confederation, experience having proved it absolutely essential not only to the safety but to the very existence of the Confederacy."

Then, inquiring as to what disposition the sovereignty of the people had made of its right to military service from all citizens, between the two agencies by which they propose to administer their Government, the court said:

"We find that it has given to its Confederate agency, so to call it, the sole power to determine upon the question of peace and war, and that it has consequently made it the duty of their General Government to protect the State itself, and these local agents from the attacks of both domestic and foreign foes, and that it has clothed it with the power to do this by authorizing it to raise and support armies, and to provide by authorizing it to raise and support armies, and to provide and maintain a Navy, to the extent that, in its judgment, it should deem necessary. * * * These agencies, though possessing distinct powers, have to look for their performance to the citizens, and, consequently, as in many other grants of power to them, their action is concurrent over the same subject matter, and at times may themselves present seemingly conflicting grants is plain. The limited and subordinate must yield to the general and superior. Consequently, such as usually pertain to or are indices of sovereign power, must control, and be regarded as superior to those of local and domestic character. Ordinarily there should be no appreciable conflict between these grants of power, as the number of citizens the Confederate Government would require for its armies would be so inconsiderable with reference to the bulk of militia left under control of the local government, as to be, for practical purposes, unimportant in the latter. But great emergencies like that which now exists will sometimes arise when the Confederate Government is forced to exercise the entire military power that has been granted to it; and there is consequently a call for the great bulk of the arms-bearing citizens into its armies, and a corresponding diminution of those under the immediate control of the State government under the laws governing the militia" (p. 403).

In Burroughs *v.* Peyton, supra, the Court of Appeals of Virginia (1864), likewise sustaining the validity of the conscript act, after holding in a learned opinion that the power of Congress to raise armies is limited only to the extent that it might not rightfully take away the officers (evidently referring to civil officers), so as to destroy the government of the State, and that though such a transcendent power was liable to abuse the protection against abuse in any manner is to be found in the responsibility of Congress to the people, then proceeded to say (p. 483):

"If it should appear at any time to be proper to increase the Army, it might be done by taking men from the militia, either as volunteers or as conscripts—the action in either case being upon the individual citizen and not upon the militia as an organized body. As it was impossible to foresee how large an Army the exigencies of the country might demand, the number of militiamen to be thus transferred to its ranks was necessarily left to the discretion of Congress."

This case throughout recognizes the unqualified power of Congress to raise armies and that the discretion of that body as to the choice of means in doing so is limited only by their political responsibility. The guarded language in the opinion with reference to action upon the militia as a body is not to be construed as denying the rights of Congress to take the Organized Militia as organizations, but rather that the right to do so to some extent does indeed exist in Congress, for the court proceeded at once to qualify its former expression thus (p. 483):

"It may be difficult to say to what extent Congress has the right in the exercise of its discretion to affect the militia as an organized body. * * * It will be time enough when the case is brought before us, in which the organization of the militia is destroyed or impaired by Congress, to inquire what limits are fixed to their action in this respect."

The court's attention was not invited to, and since it was unnecessary to do so it did not discuss, the fact that the very organization of the militia itself is constitutionally within the control of Congress, if Congress sees fit to exercise its power.

In Barber *v.* Irwin (34 Ga., 37), another case in which the constitutionality of the Confederate conscript law was brought into question and again held valid, it was objected, among other things, that the unlimited power of Congress to place all citizens capable of bearing arms in the Army of the Confederate States is incompatible with State sovereignty and may be so exercised as to deprive them of their right to enforce their police power or to execute the mandates of their courts. To this argument the court replied that—

"Public exigencies, and especially military exigencies, require that the legislature be intrusted with ample powers. If the presumption that no power susceptible of abuse could have been intended to be given, is to govern in the construction of the Constitution, the palpable result is that our Government is too weak to accomplish the ends for which it was instituted. In the language of Gov. Troup, so understood, 'it is the weakest and most contemptible Government on earth; it is neither fit for war nor peace'" (p. 36).

The court said that it had been admitted in argument that in order to meet invasion Congress, by calling out the militia, had the power to place in actual military service all men capable of bearing arms, even to the last man, and, using this argument, the court reasoned as follows:

"Now, this done, what becomes of the sovereignty of the States, so jealously guarded in construing the other clause? Where would be their police force; where their sheriff's posse comitatus? Why is the presumption so vigorously wielded against one power allowed to slumber when the other is invoked?" (p. 37).

In Jeffers *v.* Fair (33 Ga., 348), it was argued that the proceeding by which the plaintiff in error was held in custody was of virtually calling forth the militia and violated the constitution in that it took from the State the right of appointing officers of the militia so called forth. The court replied that—

"This argument rests upon the fact that the men now being enrolled for service in the Army have been previously enrolled in the States as militiamen. The simple and obvious reply is that the status of the citizen is not merged in the militiaman; that the fact of enrollment with the militia does not exempt him from other duties and liabilities of citizenship" (p. 353).

In this case the further argument was advanced that the conscript law operated to interfere with the necessary instrumentalities of State government, and the question was asked of the court, If by any act of the Confederate Government such instrumentalities whilst in the exercise of their proper function, within any State, were forcibly withdrawn, would not that act violate the constitutional guaranty of a republican form of government? The court rather summarily dismissed the argument by concluding—

"That as to the use of means the power is unlimited, but clearly limited so as to exempt the civil officers of the several States" (p. 368).

Thus distinguishing between civil officers and officers of the militia.

It seems to me that in response to the above inquiry it might properly be said further that it is the duty of the General Government to guarantee to the States a republican form of government—that is, to protect it against itself—and the General Government may intervene for that purpose; in such a situation, so serious as to demand the execution of the guaranty upon the part of the Federal Government, it can hardly be conceived that the State government is putting its instrumentalities to a constitutional use. It would be inconsistent to contend that in such a situation the Federal Government has not the power to use the same instrumentalities for a constitutional purpose by placing them in the Army of the United States which is to restore republican functions.

In the exercise of the war power the General Government is supreme; this is true both as a practical proposition and a legal concept. Who, nowadays, thinks of a State repelling invasion and using all her men and means to do so, to the exclusion of the Federal Government? Who thinks of a State maintaining an army in time of war independently of the Army of the United States? The present improved condition of the militia is due to an increased interest on the part of the people; but that interest, even, has been inspired, not by a desire to render them more efficient as a State police force but by the appreciation of the necessity of a larger United States Army.

I think that, on the authorities and on general constitutional principles, it may be laid down as a general legal proposition that in the exercise of the power to raise armies the Federal Government is supreme and the State entirely subordinate; that there can be no conflict, for the State must yield; and, specifically, in the exercise of this power, that Congress may at its discretion, compel all the militia and militia organizations of the several States into the Army of the United States.

Assuming, then, that Congress has the power to compel the organizations, and the members thereof, of the Organized Militia into the Armies of the United States, and further assuming, as I shall hereinafter endeavor to show, that the voluntary agreement provided for by section 4 of the bill does not of itself create immediately or in the future the status of Federal soldier nor add to the sufficiency of the language of the act as a draft, it is pertinent to ask:

II.

IS THE LANGUAGE OF THE BILL LEGALLY SUFFICIENT TO AUTHORIZE THE PRESIDENT TO COMPEL THE MILITIA BENEFICIARIES TO SERVE IN THE ARMY OF THE UNITED STATES?

An act to compel a citizen into the military service can operate only in derogation of his usual constitutional rights, and, under the general rule, the language of such legislation, if sufficient to achieve its purpose, would have to be clear and unquestionable. Is the language of the bill of that character? *

Section 5 of the bill, which section provides for the transfer, is, in relevant portion, as follows:

"That the President, with the consent of Congress, in time of war, when war is imminent, or in other grave emergency requiring the use of troops in excess of the Regular Army beyond the limits of the United States, may by order transfer to the Army of the United States any portion of the Organized Militia receiving or entitled to receive the benefits of this act, to serve therein for the balance of their respective terms of enlistment or commission, * * * and any Organized Militia so transferred shall, from the date specified in the order of transfer, become for the time being a part of the Army of the United States and subject to the same laws, in so far as the same may be applicable to them during their service under such transfer, * * * and shall be available for any duty for which the Regular or Volunteer Army may be employed."

And said section proceeds to penalize a neglect or refusal to obey the order of transfer in the following language:

"*Provided*, That any member of the Organized Militia who, having agreed to render military service to the United States under the provisions of this act, neglects or refuses to present himself for service when so transferred shall be subjected to trial therefor by a duly constituted court-martial, under such regulations as the President may prescribe."

So it is provided that the President may, by order, transfer the beneficiaries under the measure to the Army, to serve therein for the remainder of their terms; that any beneficiaries so transferred to the Army shall become a part of the Army and available for any duty as such "from the date specified in the order of transfer"; that they shall be subject to the same laws as are Federal soldiers "during their service under such transfer"; and there is further provided a trial by court-martial of any of them who neglects or refuses to "present himself for service when so transferred."

Now, unless the power is conferred by statute, the President can have no authority to transfer a militiaman to the Army of the United States, although he may enlist him therein on his voluntary application, or compel him to serve therein, if the legislation be sufficient to that end. In the absence of legislation to that effect the President can have no authority compulsory to transfer to, and embody in, the Army of the United States any militia organization. Can section 5 be construed as anything more than a grant of power to transfer to and embody in the Army organizations of the Organized Militia and individuals thereof, if such organizations and individuals consent, or do not object, to the transfer?

Whatever may have been the intention of the framers of the bill, I apprehend that the language is not sufficiently clear and positive to abridge usual civil rights and subject citizens to Federal military service by force. It seems to me that the mere order of transfer, even when coupled with the voluntary agreement, is not sufficient to put the militiaman in the Federal service. And I am fortified in this conclusion by the special provision subjecting to court-martial any who neglect or refuse to present themselves for service under the order of transfer. If the order of transfer itself, or notice thereof to the individual, were sufficient to convert the militiaman into a Federal soldier, there could be no necessity for this special jurisdiction, as Federal soldiers are generally subject to military law and jurisdiction, by reason of their status. But the bill here provides for trial by a peculiar kind of court-martial, which is not a court-martial under the Articles of War at all, but one specially provided, and the Articles of War, by the terms of the bill, are not applicable to the militiaman until he shall begin to serve. It may well be that if the provision for this special jurisdiction were omitted, there would be some tenable reasons for holding that the order of transfer is legally sufficient to place the militiaman in the service of the United States on the date fixed in said order; yet, as the language stands, speaking with reference to those provisions which strongly suggest that military jurisdiction does not attach by the order of transfer, it might, and probably would be, authoritatively held that the President will have exercised to the limit his power to compel entry into the Army when he shall have subjected the offender to trial by court-martial and that neglect or refusal to obey an order of transfer subjects the delinquent to military trial, but that trial does not place him in the service, nor give the President the power to draft him therein.

The question of the sufficiency of the bill to authorize compulsory Federal military service has been discussed, and it is proper now to inquire what substantial legal function may be assigned to the agreement provided for in section 4 of the bill. The purpose of the bill must be to convert a militiaman into a Federal soldier, either by compulsion or voluntary agreement. It becomes necessary, then, to consider the question:

III.

DOES THE AGREEMENT REQUIRED BY SECTION 4 CREATE THE STATUS OF FEDERAL SOLDIER EITHER—(A) PRESENTLY UPON ENTERING INTO IT OR (B) AT SOME FUTURE TIME?

The term "military status" has no magic in itself. I understand that it means a condition or fixed relation, usually founded on agreement, though not necessarily so, for the Government has an unquestionable right to the military service of all of its arms-bearing citizens without regard to their consent. The important and peculiar incidents of the status flow not from the terms and means whereby the status is created, but they result from the fact—a fundamental and jurisdictional fact—that the Government and its citizens assume to each other a new and important and substantially changed relation; the constitutional liberty of the citizens becomes greatly abridged and the authority and control of the Government greatly enlarged; these new and changed rights and relations are recognized and provided for by the Constitution itself. Under such a status many of the usual constitutional rights of the citizen, as such, no longer exist; the power of military command is established upon the one hand and the duty of obedience on the other. The Government acquires a jurisdiction to compel specific performance of personal service by the exercise, if need be, of physical force to coerce the citizen thus placed to the discharge of his military duty. Such are the usual incidents. My mind becomes confused and led away from first principles if it essays for the present discussion a conception of more than two conditions—an Army status and a non-Army status. Obligations are of various varieties; if the obligation does not create a military status, it has no place in this discussion, because no status short of that of Federal soldier can be useful in testing the efficacy of this bill. The bill provides, in effect, that the recipient of the pecuniary benefits under the proposed measure shall in presenti agree to render military service as a Federal soldier in futuro. It may be noted that no difficulty is encountered in locating the terminus ad quem, but that it is not so easy to determine from the language of the proposed measure the terminus a quo, when the soldier's status begins, his duties and obligations spring into being, the Government's military jurisdiction over him attaches, and he may be held to the specific performance of his service. The bill provides, in substance, that the Federal status of the officer or enlisted man of the Organized Militia become a part of the Army of the United States in accordance with the terms of its provisions ceases upon the expiration of the term of commission or enlistment, or upon the earlier release by the President, or upon the release by the President when necessity for their further use no longer exists; but no such definite point marks the beginning of the status.

A new status usually ensues as an immediate result of the change in legal relations, and the change in such relations is usually evidenced and made definite by a paper writing or ceremony. Such is the case in ordinary enlistments, articles of adoption, apprentice bonds, naturalization papers, and the ceremony of marriage. Present words of promise do not create a present status, and are not sufficient to create a future status unless following and consummated by some act of the promisor with that intention or perhaps unless made sufficient by law for that purpose. Such are the common-law rules governing contracts which change the status and their construction. Applying them to the language of the present bill, the conclusion follows that the agreement to render military service is not an agreement to render military service presently and immediately; it is not an agreement which, in and of itself, creates the status of Federal soldier, which is our only concern; and when compared to that standard it falls short of it and into the realms of ordinary agreement, where it must remain until consummated by some act of the promisor with the intention to consummate it or until made by law sufficient for that purpose.

And this conclusion is in evident agreement with the general purposes of the bill; it could not be intended to make Federal soldiers out of the militia beneficiaries under this bill at the moment they become beneficiaries, and thus retain in the body of citizenry a vast number of Federal soldiers, with all the difficult incidents attaching to that status, and in disregard of the established traditions of our people.

(B) DOES THE AGREEMENT PROVIDED FOR AND REQUIRED IN SECTION 4 CREATE THE STATUS OF FEDERAL SOLDIER AT SOME FUTURE TIME?

Here is a voluntary agreement for future service. It seems to me to be self-evident that a man can not voluntarily agree now to render voluntary service in the future so as to preclude him from refusing to render the service when it may become due. He may back out when the future time contemplated arrives and accept the legal consequences, but specific performance will not be one of these consequences, unless perhaps the law, in unquestionable terms, should make it so. Under the present state of the law, and as it would exist upon the passage and approval of this bill, a man may not agree now to waive his right to refuse future service, accepting the legal consequences of such refusal; nor may he now agree in advance to waive any of his constitutional and legal rights hereafter. Though the Government gives a consideration for the promise of waiver the situation is not changed, for no consideration is necessary to support a waiver, and the presence of a consideration will not render binding an advance agreement to be specifically enforced, so as to work a forfeiture of rights when the occasion is presented sometime in the future. Such a waiver or promise is something like a gift which can only be made to take effect in presenti (2 Blk. Com., 441), and the subject of the transaction must be something in esse at the time. To waive a right implies a present act. If I say to-day that I will waive my legal and constitutional rights next week, this can mean nothing more than that, when the time arrives, I will not insist on my rights. In Home Insurance Co. *v.* Morse (20 Wall., 445), a case, however, which presents no analogies to the present question except on general principle, the Supreme Court of the United States said:

"In these respects any citizen may, no doubt, waive the rights to which he may be entitled. He can not, however, bind himself in advance by any agreement which may be specifically enforced thus to forfeit his rights at all times and on all occasions whenever the case may be presented."

A case, however, which has always been regarded with the highest respect is that of Tyler *v.* Pomeroy (8 Allen, Mass., 481), which presents, in principle, the same or very nearly the same question as is presented here.

On the 29th of July, 1862, plaintiff, with others, signed a paper which was in the form commonly used in the Commonwealth as enlistment contracts, in terms as follows:

"We, the undersigned, by our signatures hereunto annexed, do severally agree to serve for a period of three years from the date of our being mustered into the United States service, unless sooner discharged, as volunteers from Massachusetts, in the force authorized by an act of Congress of the United States, approved the 22d day of July, A. D. 1861, entitled 'An act to authorize the employment of volunteers to aid in the enforcement of the laws and protecting public property.' In accordance with the provisions of said act, and other acts in addition thereto, and if ordered into camp our number is not filled to the maximum number of 101 on or before (a certain day) we severally agree to serve in such companies as the governor and commander in chief may designate."

The plaintiff, sometime after signing the enlistment paper, refused to go into camp upon the request of the chairman of the selectmen, and the selectmen thereupon gave directions for him to be taken to camp, and these directions were executed by one of the other two defendants—one of whom was a constable—who went to the plaintiff's house and arrested him and carried him to camp and delivered him, with the enlistment roll, to the camp commander, a commissioned officer of volunteers. The commanding officer ordered the plaintiff confined in the guard tent of the camp for several days, after which he was released, the regiment having received marching orders. Plaintiff brought his action for false arrest.

In an opinion in which he reviewed both the ancient and modern law of military status, Judge Gray (later United States Supreme Court Justice) said (p. 485):

"Was the plaintiff then, at the time of the acts he complains of, a soldier? The words 'enlist' and 'enlistment' in the law, as in common usage, may signify either the complete fact of entering into the military service or the first step taken by the recruit toward that end. If this ambiguity is not borne in mind, the consideration of this matter may degenerate into a dispute about words. The question before us is no ordinary one of the force, construction, or validity of a contract—whether the plaintiff has made an agreement and broken it and is liable in damages for the breach; but of a change of status—whether by signing a particular paper or by any other act the plaintiff has changed his condition, given up some of the rights of a private citizen, and become amenable to military discipline. It becomes necessary, therefore, to ascertain the boundary between the civil and military States, and to inquire what acts, by the principles of the common law or the American constitutions, or by express provision of statute, are required to change a citizen into a soldier."

After reviewing the development of the English law on the subject from the time of Edward I, and finding under that law that the agreement to render future service did not of itself create the military status, but subjected the violator of the agreement to indictment and prosecution, the learned judge continued (p. 500):

"Congress had authorized the enlistment of volunteers for no longer term than three years. (U. S. Stat., chap. 9.) The only act done by the plaintiff toward entering the service was to sign an agreement to serve for a period of three years from the date of being mustered into the service in accordance with the act just referred to. He never agreed to enter the service to become a soldier immediately. He never submitted himself to nor contracted any engagement with any military officer. He never received any money from any officer, military or civil, of the State or Nation, nor any rations, uniforms, arms, or equipments. He was never examined by a surgeon, nor took any oath, nor was mustered into the service. And he never actually served as a soldier * * *."

"After the fullest consideration we are unanimous in the opinion that the plaintiff was not a soldier, nor subject to any military authority or discipline as such. The statutes and orders already cited seem to assume the mustering of a recruit into the service as the point at which the right to exercise military restraint over him is intended to begin. We are not, however, prepared to say that actual submission as a soldier to a commissioned officer would not be of itself sufficient. Still less would we be understood as intimating that a recruit of full age who had actually served or received money from the Government could be allowed to dispute the regularity or completeness of his enlistment; but we can have no doubt that the mere signing of a paper in the hands of a municipal officer, containing a promise to serve from a future day, to be fixed only by the performance of a distinct act, is not sufficient to change the state of a citizen into that of a soldier" (p. 501).

The distinguished judge further said that:

"Soldiers must have received money and come under actual command of a leader to warrant their punishment as deserters under those (English) statutes. And Judge Jenkins says, 'it seems that these statutes are only a declaration of the common law.' Jenk. 271."

Turning again to the question before him, he continued (p. 503):

"The fact that other recruits who signed the same enlistment paper as the plaintiff reported at the camp of rendezvous, and were received into the service of the United States had no tendency to prove that he was in that service before he had been reported or been received there.

"The acts and declarations of the plaintiff in the meetings held for the purpose of raising the quota of the town were offered to show that by signing the said roll he intended to place himself in the military service of the United States, and also in reduction of damages. But intention will not make a man a soldier unless accompanied or followed by the acts necessary to constitute a change of his state from civil to military. The question before us is not what he intended to do, but how much he actually had done, how far his intention had been carried out when the defendants assumed to exercise military authority over him. If he was not then a soldier, his previous expressions of an intention to become one, or even his supposition that he was, would not make him one."

He also said further on (p. 504):

"Proof that an enlistment paper signed by the plaintiff was in the form commonly used in the Commonwealth could not aid defendants without showing that the plaintiff had done some further act to make him a soldier. Testimony as to the usual mode of enlisting volunteers or the actual holding in the service of persons enlisted on such papers, would have no bearing upon the question at what stage of the enlistment the right of forcible restraint begins, or by whom it may be exercised."

And the judge then concluded (p. 505):

"The plaintiff, not being a soldier, was at perfect liberty to decline to become one and guilty of no breach of military duty in so declining."

This opinion has been quoted with approval of many Federal courts, including the Supreme Court. The gist of the decision is that an agreement to enlist is not an enlistment, either presently or at some future time, but that some act done by the promisor in furtherance of his agreement is necessary to make him a soldier. Under the present state of the law, and as it will be after the passage of the proposed measure (unless, indeed, the latter does prescribe a different rule), some act of the promisor contemporaneously with the creation of the status is necessary to create the status.

In the matter of voluntary enlistment, the Supreme Court held in United States *v.* Grimley (137 U. S., 147) that under the present law the taking of the oath was the pivotal and final act in the matter of making an enlistment.

Upon this same point and to the same effect much enlightenment, in my opinion, may be had from a consideration of the status of marriage. The military status and that of matrimony are analogous legal concepts. It is elementary that a mere promise of future marriage does not in itself create the matrimonial status, and a breach of the premise results in an ordinary action for damage. The status of matrimony may be made in only one of two ways—per verba de presenti, with or without consummation, and per verba de futuro, followed by the act of consummation. The latter is an executory agreement becoming perfect upon the performance of an act that consummates it; the former is a presently executed contract taking effect immediately.

The agreement then prescribed in section 4, on general legal principles and unless the proposed bill itself provides otherwise, can ripen into the military status only by some act of the promisor done with the purpose of consummating the status and sufficient for the purpose. It may be, however, that Congress can, if it chooses, arbitrarily prescribe that the happening of some event or contingency even unrelated to the promisor, or some action taken by a designated Government official, shall serve to accomplish by fiat or law an equivalent consummation. Congress has not yet done so, and whether it will have done so if it pass this bill will be examined a moment later.

Obviously, that point of time specified in the bill when the promisor might naturally be expected to perform and may perform that act, which, in connection with his former agreement, will, without further ado, consummate into the status of enlistment, is that point when he voluntarily presents himself and submits to Federal jurisdiction, either in compliance with his moral obligation or in terrorem to avoid the liability of court-martial.

It would seem, then, that when the transfer is ordered and the individual voluntarily presents and submits himself to military jurisdiction in either manner just mentioned, he becomes by that very act and at that very moment a soldier in the service of the United States. But if he neglects or refuses to present himself for military service and submit to military jurisdiction, he may, it is true, be court-martialed and punished, without becoming thereby a Federal soldier.

What substantial legal function can be assigned, then, to this agreement as a voluntary step toward making the militiamen a Federal soldier? I doubt that any such function can be assigned it. The agreement creates a future moral, but no future legal, obligation. It is nothing under the law as it now exists or will exist after the passage of this bill, but an ordinary contract for future personal service, and enforceable only as such. It has been suggested that the agreement constitutes a contract upon which, though it be for personal service, specific performance may be had; it is clear to me, however, that the suggestion results from a misapprehension of the meaning of specific performance as that term is used in connection with the military status. A soldier can be compelled to perform his duty because of the power of command held by the superior over the services of the soldier who is made to obey. And this power is now, and has been since feudal times, an incident of the military relation. Such power to command is not limited to the exercise of compulsion through the agency of the military judicial machinery, but includes in a proper case the application of physical force, coercion, and restraint. Service thus compelled is commanded under the power incident to the status and, of course, is not in a legal sense specific performance at all. If the right to specific performance is based on the agreement, and not on the status and the power to command flowing from the status, it may be had only through the operation of a decree in equity; such specific performance involves the judicial and not the executive function; the judicial decree from the very nature of the thing—even if Congress should ever undertake to confer the power of making such a decree on any court (and the legislative competency in that regard may well be doubted)—can never command service except by operating in personam—that is, the decree is effective in so far only as it may compel performance by the imprisonment of him who disobeys it. I presume that neither the legislative nor executive authority will ever desire in the matter of the military relation to resort to a court of equity to obtain a decree which of itself can bring no service; and it should be noted that the bill itself, through the convenient agent of a court-martial, does at least as much. The specific performance which the military relation demands and which may be compelled through physical force, if need be, by officers of the Army and the military machinery, and not that decreed by a court of equity.

Although the agreement has little or no assignable value as a step toward creating the status of Federal soldier, nevertheless if the bill be viewed as a draft act, the agreement, under that view, has, to my mind, considerable significance. It might then be held respecting it that those who have entered into it constitute the class designated by Congress as the class upon whom the draft should operate.

E. H. CROWDER,
Judge Advocate General.

MEMORANDUM FOR THE ADJUTANT GENERAL.

WAR DEPARTMENT,
OFFICE OF THE JUDGE ADVOCATE GENERAL,
Washington, January 29, 1916.

Subject: Pending militia pay bill (S. 1158).

1. I was directed by your letter of January 12, 1916, to give my immediate, concentrated consideration to an inclosed copy of S. 1158 (64th Cong., 1st sess.), "A bill to increase the efficiency of the Organized Militia, and for other purposes," introduced by Senator CHAMBERLAIN on December 10, 1915, particularly with reference to so much thereof as concerns the interests intrusted to my charge, in order that my views thereon may be placed before the department. I have interpreted

this reference to call for remarks from this office upon the legal effect of the various provisions of the inclosed bill as well as upon defects and conflicts in its provisions, and have prepared my report in accordance with that interpretation.

(Paragraph 2 of the opinion gives a history of militia pay bills considered by the Congress or its committees; paragraph 3 relates to the revision by this office of a draft of militia pay bill proposed by the Division of Militia Affairs.)

4. The words "and all persons who are exempted by the laws of the respective States and Territories" have been incorporated in section 3. Substantially similar provisions are found in the act of May 8, 1792, and in its substitute, the act of January 21, 1903 (the Dick bill). It has been questioned whether this is a Federal function, i. e., whether the power to declare exemptions is included in the power to provide for organizing, arming, and disciplining the militia. There is respectable authority on both sides of this question and no authoritative decision to govern us. Assuming that it is a Federal power, it is still an affirmative and not an exclusive power, so that it is competent for Congress to leave a part of that power unexercised, and thus invite the concurrent jurisdiction of the State. Congress has always legislated upon the theory that it had the power to determine who should compose the militia and who should be exempt, but has never exercised the power so completely as to deprive the States of the power to grant exemption. I am inclined to think that this power should be exercised in that complete way that would exclude the exercise of the same power by the States. An alternative to the existing provision would be to proceed by way of specific enumeration to exempt all officers, executive, legislative, and judicial, of any State, Territory, or the District of Columbia necessary for the operation of State, county, and municipal governments.

NOTE.—This recommendation has been carried into effect in section 59 of the pending bill (Calendar No. 285, H. R. 12766).—E. H. C.

(Paragraphs 5, 6, and 7 of the opinion relate to reserve corps for the militia as proposed in said bill; paragraph 8 to use of officers of reserve corps; paragraph 9 to indoor target practice; paragraph 10 to details; paragraph 11 to the right to utilize retired officers upon militia duty; paragraph 12 relates to appropriations; paragraph 13 to target ranges, encampments, and maneuvers; paragraph 14 to apportionment and expenditure of appropriations; paragraph 15 to disbursing officers; and paragraph 16 to the national militia board.)

FEDERAL STATUS IN PRESENTI.

17. As was provided in the January, 1914, draft, section 37 of this bill provides:

"That no money appropriated under the provisions of this act shall be paid to any person who has not, in addition to his obligation as a member of the Organized Militia of a State, Territory, or the District of Columbia, voluntarily subscribed an agreement to serve the United States in the manner provided in this act and in connection with such agreement taken an oath as a commissioned officer or enlisted man in the Army of the United States: *Provided*, That the obligation to serve in the Army of the United States shall be effective from the date of the agreement and oath herein prescribed to create the status of officer and enlisted man in the Army of the United States; but officers and enlisted men subscribing such agreement and oath shall not, without the consent of Congress, be ordered into the active military service of the United States as a part of the Army thereof, nor shall they be entitled to the pay and emoluments of officers and enlisted men in the Army of the United States except as otherwise provided in this act."

NOTE.—See sections 71 and 73 of pending bill (Calendar No. 285, H. R. 12766).—E. H. C.

I think this section has been accepted with a reservation by all who have studied it. It undertakes to bestow office in the United States Army without any exercise of the constitutional appointing power. The objection to it is, I think, a vital one. Assuming that the section has been amended so as to obviate this defect and made effective to bestow office in the Army upon an officer of the National Guard, so that at the same time he would be invested with the two military offices—one State and the other National—we have this further situation to deal with: The constitutions of Florida, Kentucky, Louisiana, Mississippi, Missouri, Utah, Wisconsin, and Wyoming prohibit persons who hold or exercise offices of trust, honor, or profit under the Government of the United States from holding or exercising offices of trust, honor, or profit under the State.

NOTE.—See attached list of State constitutional provisions.—E. H. C.

The provision is stated in varying forms in the constitutions of the States mentioned, but the substantial provision is as I have stated it. Office in the Organized Militia is clearly an office of trust and honor, and, when pay is attached, is one of profit. So, too, office in the Army of the United States, with which it is proposed to invest the officer of the Organized Militia, is likewise one of honor and trust. As I see the question, it would require amendments to the constitutions of the States named above in order that section 37, in so far as it deals with office, might have any execution in those States.

There is further question as to that provision of the section which undertakes to create dual military status for the enlisted men of the National Guard. The section assumes that a man may have two military allegiances to two commanders in chief, coexisting, but with the obligations of one deferred. I am not certain that these two relations can coexist.

All these objections are avoided in the form of bill now pending before the House Committee on Military Affairs. That bill relies solely upon the efficacy of a draft which reaches both officers and men of the Organized Militia as individuals. While the House committee draft contemplates a change of status for the Organized Militia from State troops to national troops, it deals with but one status at a time, and when the national status is assumed the State status is expressly canceled. Under the terms of the House bill the officer, having been drafted, is recommissioned by the President and is inducted into office, which he holds in the Federal service in the constitutional way.

I regard the question of what would be the ultimate construction of any law which would undertake to create dual military status to State and Nation as a matter of grave doubt, and therefore offer no substitute for section 37.

(Paragraph 18 of the opinion relates to period of service under draft.)

E. H. CROWDER,
Judge Advocate General.

PROVISIONS OF STATE CONSTITUTIONS RESPECTING DUAL OFFICEHOLDING (STATE AND FEDERAL).

Section 15, article 16, constitution of Florida, provides:

"No persons holding office or exercising the functions of any office under the Government of the United States shall hold any office of honor or profit under the government of this State."

Section 237, constitution of Kentucky, provides:

"No person holding any office of trust or profit under the United States shall be eligible to hold or exercise any office of trust or profit under this constitution or the laws made in pursuance thereof."

Article 164, constitution of Louisiana, provides:

"No person holding or exercising any office of trust or profit under the United States shall hold or exercise any office of trust or profit under the State."

Section 266, constitution of Mississippi, provides:

"No person holding office under the Government of the United States shall hold or exercise in any way the rights and powers of any office of honor or profit under the laws or authority of this State."

Section 4, article 14, constitution of Missouri, provides:

"No person holding any office of profit under the United States shall during the continuance of such office hold any office of profit under this State."

Section 23, article 7, constitution of Utah provides:

"No person holding any office under the United States Government shall hold any office under the State government of Utah."

Section 3, article 13, constitution of Wisconsin, provides:

"No person holding any office of profit or trust under the United States shall be eligible to any office of trust, profit, or honor under this State."

Section 19, article 6, constitution of Wyoming, provides:

"No person holding or exercising any office or appointment of trust or profit under the United States shall at the same time hold or exercise any office in this State to which a salary, fees, or perquisites shall be attached."

Mr. REED. I move the following amendment to the bill——

The VICE PRESIDENT. There is a pending amendment.

Mr. SMITH of South Carolina. Is not the pending amendment the one offered by myself?

The VICE PRESIDENT. There is an amendment pending to that amendment. It will be stated.

The SECRETARY. The Senator from Georgia [Mr. HARDWICK] proposes to amend the amendment offered by the Senator from South Carolina by striking out, on page 2 of the printed amendment, line 17, the words "and useful in the manufacture of fertilizers."

Mr. OVERMAN. Mr. President, we ought to have a quorum present if that amendment is coming up for action. The Senator from Georgia I know wants to address the Senate upon his amendment to the amendment.

The VICE PRESIDENT. Is that an intimation of the absence of a quorum?

Mr. OVERMAN. It is a suggestion to that effect.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hollis	Newlands	Smith, Ariz.
Borah	Hughes	Norris	Smith, Ga.
Brandegee	Husting	Oliver	Smith, Mich.
Bryan	Johnson, Me.	Overman	Smith, S. C.
Burleigh	Jones	Owen	Smoot
Chamberlain	Kenyon	Page	Sterling
Clapp	Kern	Phelan	Sutherland
Clark, Wyo.	La Follette	Pittman	Thomas
Colt	Lane	Poindexter	Thompson
Curtis	Lippitt	Pomerene	Tillman
Dillingham	Lodge	Ransdell	Underwood
Gallinger	McCumber	Reed	Wadsworth
Gore	Martin, Va.	Shafroth	Walsh
Gronna	Martine, N. J.	Sheppard	Warren
Harding	Myers	Sherman	Works
Hardwick	Nelson	Simmons	

Mr. KERN. I desire to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER], the junior Senator from Maryland [Mr. LEE], the senior Senator from West Virginia [Mr. CHILTON], and the junior Senator from Indiana [Mr. TAGGART], all of whom are paired. This announcement may stand for the day.

Mr. MYERS. The Senator from Mississippi [Mr. VARDAMAN] is necessarily detained from the Chamber by official business.

The VICE PRESIDENT. Sixty-three Senators have answered to the roll call. There is a quorum present. The pending amendment is the amendment offered by the Senator from Georgia [Mr. HARDWICK] to the amendment of the Senator from South Carolina [Mr. SMITH]. It will be again stated.

The SECRETARY. On line 17 of the printed amendment the Senator from Georgia proposes to strike out the words "and useful in the manufacture of fertilizers."

Mr. HARDWICK. Mr. President, I understand that the proposer of the amendment is willing to accept that suggestion; and, if so, there is no need of prolonging the discussion about it. Those words ought not to be in the amendment.

Mr. SMITH of South Carolina. Mr. President, I have no objection to the amendment of the Senator from Georgia [Mr. HARDWICK], because I think we can, with that amendment, pre-

serve the same purpose, and perhaps the provision will be in better language and in better form; but I want to state right here and now that I want it distinctly understood by the Senate that, along with the idea concerning which every one of us is fully agreed, it is absolutely essential for this country to provide itself with the chemicals the supply of which is sought to be anticipated in the amendment. They are absolutely essential, not alone for preparedness, but also for the continuance of the productiveness of our fields.

It is known to all of us that every great grain crop that is taken from the soil of America extracts just that much of the very chemicals provision for a supply of which is sought to be made by the amendment. Year by year our fields are being depleted; and this is an attempt right now, in the beginning of the process which has been developed for taking in unlimited quantities these ingredients from the air, to provide that the Government in supplying itself with the munitions of war, of which we stand so sadly in need, shall itself also make provision for the means of enriching our fields.

Mr. President, this is not a new subject. I want to take occasion in a moment or two to read a portion of an act passed in 1856 relative to an artificial fertilizer to be placed upon the fields of this country. From what I shall read it will become apparent that that was the object which the Government had in view in passing that act. Along about 1835 or 1840 it was discovered that on certain islands off the coast of South America there were certain deposits of guano, the application of which to the soil marvelously increased its yield. So wonderful was the effect upon the depleted soil of the Atlantic seaboard that Mr. Seward, of New York, at one time a Senator from that State and later Secretary of State under Mr. Lincoln, introduced and had passed a bill, section 2 of which I shall read. Before I read it, however, I want to call the attention of the Senate to the fact that the object was to furnish this country with an adequate supply of fertilizer. The United States exhausted every means in its power to reach the end, not only of providing us with an adequate supply but of controlling for the benefit of the agriculturists the price of the supply.

I understand that the act of 1856 to which I have referred was based upon the right of a Government to take possession of islands and lands not occupied by other Governments; but it sets forth clearly that the object in invoking that right on behalf of the United States was for the purpose of securing this fertilizer and controlling the price of it for the benefit of the agriculturists of this country.

There was something said here the other day about an attempt to control the price. I want to call the attention of the Senate to the parallel that exists between the purpose of the amendment which I have introduced and the act passed in 1856, which I am going to read. If the Government takes its own water power or uses steam power for the purpose of furnishing itself with the munitions of war, the surplus that it produces will be its own, produced by its own machinery, and this amendment attempts to have the Government dispose of that surplus for the very purpose for which the act of 1856 was passed. I read section 2 of the act of 1856:

SEC. 2. *And be it further enacted*, That the said discoverer or discoverers, or his or their assigns, being citizens of the United States, may be allowed, at the pleasure of Congress, the exclusive right of occupying said island, rocks, or keys for the purpose of obtaining said guano, and of selling and delivering the same to citizens of the United States for the purpose of being used therein, and may be allowed to charge and receive for every ton thereof delivered alongside a vessel, in proper tubs, within reach of ship's tackle, a sum not exceeding $8 per ton for the best quality or $4 per ton in its native place of deposit: *Provided, however*, That no guano shall be taken from said island, rock, or key except for the use of the citizens of the United States, or of persons resident therein, as aforesaid: *And provided also*, That said discoverer or discoverers, or his or their assigns, shall first enter into bonds, with such penalties or securities as may be required by the President, to deliver the said guano to citizens of the United States for the purpose of being used therein and to none others, and at the price aforesaid, and to provide all necessary facilities for that purpose within a time to be fixed in said bond; and any breach of the provisions thereof shall be taken and deemed a forfeiture of all rights accruing under and by virtue of this act.

In section 5 it is provided:

SEC. 5 *And be it further enacted*, That the President of the United States is hereby authorized, at his discretion, to employ the land and naval forces of the United States to protect the rights of the said discoverer or discoverers, or their assigns, as aforesaid.

Now, Mr. President, we are face to face with this issue. The necessity at the time of the passage of the act of 1856 for fertilizer for our soil has been increased in geometrical progression. It is true that the discovery of the vast phosphate beds in South Carolina, Tennessee, and Florida supplied a part of the necessity for soil enrichment; but we are to-day standing face to face with the problem of how we can support our population, which is rapidly increasing, while the fertility of our soil is decreasing.

The farmers have never come here and asked very much, and yet their contribution to the welfare of this country is the foundation upon which everything else is built. Scientists now declare that the process of extracting nitrogen from the air in unlimited quantities is a commercial success; and, in view of the fact that it is an essential ingredient for the enrichment of our soil, I think that Congress would be derelict in its duty unless some action were taken. I am not asking that the Government of the United States shall grant any special privilege, but I am asking that it shall develop, as far as may be, the opportunities of the farmers of this country, so that they may be put in the best possible position to feed and clothe the population of the United States.

Mr. HARDWICK. Mr. President——

The VICE PRESIDENT. Does the Senator from South Carolina yield to the Senator from Georgia?

Mr. SMITH of South Carolina. I yield to the Senator.

Mr. HARDWICK. Mr. President, I did not intend to discuss this matter at all until the Senator from South Carolina made some observations that make it necessary for me to do so. There is nothing like what the Senator suggests necessarily involved in this proposition at all, and if the Senator will not strip it of its socialistic features he will get it overwhelmingly beaten in the Senate.

Mr. SMITH of South Carolina. Mr. President, I am not concerned about whether the question may seem socialistic or whether it may seem populistic. The main thing that I am concerned about is, how we can best provide for that great class of people who bear the burden of this Government.

Mr. HARDWICK. Mr. President——

Mr. SMITH of South Carolina. Now, Mr. President——

Mr. HARDWICK. Just a moment.

Mr. SMITH of South Carolina. Allow me——

Mr. HARDWICK. I have the floor, if the Senator will pardon me, and I want to make a short statement myself.

The VICE PRESIDENT. Senators must remember the rule.

Mr. SMITH of South Carolina. Mr. President, I was not aware that the Senator from Georgia had the floor when I took it.

Mr. HARDWICK. Oh, yes; I have the floor, I think.

The VICE PRESIDENT. The Senator from South Carolina had not concluded.

Mr. HARDWICK. I beg the Senator's pardon. I addressed the Chair, and was recognized, and I thought the Senator had concluded.

The VICE PRESIDENT. The Senator was recognized for the purpose of addressing an inquiry to the Senator from South Carolina.

Mr. SMITH of South Carolina. If the Senator wants to ask me a question, I will yield.

Mr. HARDWICK. No; I will take the floor in my own right when the Senator has concluded.

Mr. SMITH of South Carolina. Mr. President, I want to say to the Senator from Georgia that I readily acceded to his amendment, and do so yet, with the hope that the object that I have in view may be attained without, in letter at least, doing violence to the Constitution.

Mr. President, I want to ask the privilege to have printed in the RECORD a statement by Dr. Baekeland in reference to the production and use of this wonderful chemical.

The VICE PRESIDENT. In the absence of objection, permission to do so is granted.

The statement referred to is as follows:

INTERNATIONAL SCOPE OF CHEMICAL RESEARCH.

The development of some problems of industrial chemistry has enlisted the brilliant collaboration of men of so many different nationalities that the final success could not, with any measure of justice, be ascribed exclusively to one single race or nation; that is best illustrated by the invention of the different methods for the fixation of nitrogen from the air.

This extraordinary achievement, although scarcely a few years old, seems already an ordinary link in the chain of common, current events of our busy life; and yet, the facts connected with this recent conquest reveal a modern tale of great deeds of the race—an epos of applied science. Its story began the day when chemistry taught us how indispensable are the nitrogenous substances for the growth of all living beings.

DEFICIENCY OF NITROGEN FERTILIZERS IN AGRICULTURE.

Generally speaking, the most expensive foodstuffs are precisely those which contain most nitrogen, for the simple reason that there is, and always has been, at some time or another, a shortage of nitrogenous foods in the world. Agriculture furnishes us these proteid or nitrogen containing bodies, whether we eat them directly as vegetable products or indirectly as animals which have assimilated the proteids from plants. It so happens, however that by our ill-balanced methods of agriculture we take nitrogen from the soil much faster than it is supplied to the soil through natural agencies. We have tried to remedy this discrepancy by enriching the soil with manure or other fertilizers, but this has been found totally insufficient, especially with our methods of intensive culture—our fields want more nitrogen. So agriculture

has been looking anxiously around to find new sources of nitrogen fertilizer. For a short time, an excellent supply was found in the guano deposits of Peru; but this material was used up so eagerly that the supply lasted only a very few years. In the meantime the ammonium salts recovered from the by-products of the gas works have come into steady use as nitrogen fertilizer. But here again the supply is entirely insufficient, and during the later period our main reliance has been placed on the natural beds of sodium nitrate, which are found in the desert regions of Chile. This has been, of late, our principal source of nitrogen for agriculture, as well as for the many industries which require saltpeter or nitric acid.

CHILE SALTPETER AND ITS APPROACHING EXHAUSTION.

In 1898 Sir William Crookes, in his memorable presidential address before the British Association for the Advancement of Science, called our attention to the threatening fact that, at the increasing rate of consumption, the nitrate beds of Chile would be exhausted before the middle of this century. Here was a warning—an alarm call—raised to the human race by one of the deepest scientific thinkers of our generation. It meant no more nor less than that before long our race would be confronted with nitrogen starvation. In a given country, all other conditions being equal, the abundance or the lack of nitrogen available for nutrition is a paramount factor in the degree of general welfare or of physical decadence. The less nitrogen there is available as foodstuffs, the nearer the population is to starvation. The great famines in such nitrogen-deficient countries as India and China and Russia are sad examples of nitrogen starvation.

And yet nitrogen, as such, is so abundant in nature that it constitutes four-fifths of the air we breathe. Every square mile of our atmosphere contains nitrogen enough to satisfy our total present consumption for over half a century. However, this nitrogen is unavailable as long as we do not find means to make it enter into some suitable chemical combination. Moreover, nitrogen was generally considered inactive and inert, because it does not enter readily in chemical combination.

William Crookes's disquieting message of rapidly approaching nitrogen starvation did not cause much worry to politicians; they seldom look so far a head into the future. But to the men of science it rang like a reproach to the human race. Here, then, we were in possession of an inexhaustible store of nitrogen in the air, and yet, unless we found some practical means for tying some of it into a suitable chemical combination, we would soon be in a position similar to that of a shipwrecked sailor, drifting around on an immense ocean of brine, and yet slowly dying for lack of drinking water.

OXIDATION OF AIR NITROGEN.

The Priestley-Cavendish experiment: As a guiding beacon there was, however, that simple experiment, carried out in a little glass tube, as far back as 1785, by both Cavendish and Priestley, which showed that if electric sparks were passed through air the oxygen thereof was able to burn some of the nitrogen and to engender nitrous vapors.

Bradley and Lovejoy: This seemingly unimportant laboratory curiosity, so long dormant in the textbooks, was made a starting point by Charles S. Bradley and D. R. Lovejoy, in Niagara Falls, for creating the first industrial apparatus for converting the nitrogen of the air into nitric acid by means of the electric arc. As early as 1902 they published their results as well as the details of their apparatus. Although they operated only one full-sized unit, they demonstrated conclusively that nitric acid could thus be produced from the air in unlimited quantities. We shall examine later the reasons why this pioneer enterprise proved a commercial insuccess; but to these two American inventors belongs, undoubtedly, the credit of having furnished the first answer to the distress call of Sir William Crookes.

Birkeland and Eyde: In the meantime, many other investigators were at work at the same problem, and soon from Norway's abundant waterfalls came the news that Birkeland and Eyde had solved successfully, and on a commercial scale, the same problem by a differently constructed apparatus.

Pauling and Schoenherr: The Germans, too, were working on the same subject, and we heard that Schoenherr, also Pauling, had evolved still other methods, all, however, based on the Cavendish-Priestley principle of oxidation in nitrogen. In Norway alone the artificial saltpeter factories use now, day and night, over 200,000 electrical horsepower, which will soon be doubled; while a further addition is contemplated which will bring the volume of electric current consumed to about 500,000 horespower. The capital invested at present in these works amounts to $27,000,000.

CYANAMIDE.

Frank and Caro, in Germany, succeeded in creating another profitable industrial process whereby nitrogen could be fixed by carbide of calcium, which converts it into calcium cyanamide, an excellent fertilizer by itself. By the action of steam on cyanamide, ammonia is produced, or it can be made the starting point of the manufacture of cyanides, so profusely used for the treatment of gold and silver ores.

Although the synthetic nitrates have found a field of their own, their utilization for fertilizers is smaller than that of the cyanamide; and the latter industry represents, to-day, an investment of about $30,000,000, with three factories in Germany, two in Norway, two in Sweden, one in France, one in Switzerland, two in Italy, one in Austria, one in Japan, one in Canada, but not any in the United States. The total output of cyanamide is valued at $15,000,000 yearly and employs 200,000 horsepower, and preparations are made at almost every existing plant for further extensions. An English company is contemplating the application of 1,000,000 horsepower to the production of cyanamide and its derivatives, 600,000 of which have been secured in Norway and 400,000 in Iceland.

NITRIDE PROCESSES.

But still other processes are being developed, based on the fact that certain metals or metalloids can absorb nitrogen, and can thus be converted into nitrides; the latter can either be used directly as fertilizers or they can be made to produce ammonia under suitable treatment.

Serpek process: The most important of these nitride processes seems to be that of Serpek, who in his experimental factory at Niedermorschweiler, succeeded in obtaining aluminum nitride in almost theoretical quantities, with the use of an amount of electrical energy eight times less than that needed for the Birkeland-Eyde process and one-half less than for the cyanamide process, the results being calculated for equal weights of "fixed" nitrogen. A French company has taken up the commercial application of this process which can furnish, besides ammonia, pure alumina for the manufacture of aluminum metal.

HABER'S PROCESS FOR AMMONIA.

An exceptionally ingenious process for the direct synthesis of ammonia, by the direct union of hydrogen with nitrogen, has been developed by Haber in conjunction with the chemists and engineers of the Badische Anilin & Soda Fabrik. The method has the advantage that it is not, like the other nitrogen-fixation processes, paramountly dependent upon cheap power; for this reason, if for no other, it seems to be destined to a more ready application. The fact that the group of the three German chemical companies which control the process have sold out their former holdings in the Norwegian enterprises to a Norwegian-French group, and are now devoting their energies to the commercial installation of the Haber process, has quite some significance as to expectations for the future.

THE FUTURE OF NITROGEN-FIXATION PROCESSES.

The question naturally arises: Will there be an overproduction and will these different rival processes not kill each other in slaughtering prices beyond remunerative production? Nitrogen fertilizers are already used at the rate of about $200,000,000 worth a year, and any decrease in price, and, more particularly, better education in farming, will probably lead to an enormously increased consumption. It is worth mentioning here that in 1825 the first shipload of Chile saltpeter which was sent to Europe could find no buyer, and was finally thrown into the sea as useless material. Then, again, processes for nitric acid and processes for ammonia, instead of interfering, are supplementary to each other, because the world needs ammonia and ammonium salts as well as nitric acid or nitrates. It should be pointed out also that, ultimately, the production of ammonium nitrate may prove the most desirable method to minimize freight, for this salt contains much more nitrogen to the ton than does the more bulky calcium salt in which form synthetic nitrates are now marketed.

WHY DID BRADLEY AND LOVEJOY NOT SUCCEED?

Before leaving this subject, let us examine why Bradley and Lovejoy's efforts came to a standstill where others succeeded.

First of all, the cost of power at Niagara Falls is three to five times higher than in Norway; and although at the time this was not strictly prohibitive for the manufacture of nitric acid, it was entirely beyond hope for the production of fertilizers. The relatively high cost of power in our country is the reason why the cyanamide enterprise had to locate on the Canadian side of Niagara Falls, and why, up till now, outside of an experimental plant in the South (a 4,000-horsepower installation in North Carolina, using the Pauling process), the whole United States has not a single synthetic nitrogen fertilizer works.

The yields of the Bradley-Lovejoy apparatus were rather good. They succeeded in converting as much as 2½ per cent of the air, which is somewhat better than their successors are able to accomplish. But their units—12 kilowatts—were very much smaller than the 1,000 to 3,000 kilowatts now used in Norway, and they were also more delicate, all of which made installation and operation considerably more expensive. However, this was the natural phase through which any pioneer industrial development has to go, and it is more than probable that in the natural order of events these imperfections would have been eliminated. But the killing stroke came when financial support was suddenly withdrawn.

Mr. SIMMONS. Mr. President, will the Senator from South Carolina yield to me?

The VICE PRESIDENT. Does the Senator from South Carolina yield to the Senator from North Carolina?

Mr. SMITH of South Carolina. I yield for a question.

Mr. SIMMONS. I did not rise merely to ask a question, but I did wish to ask the Senator if he felt himself able to accept an amendment to his amendment which I gave notice a few days ago I would offer? I think, if the Senator finds himself able to accept this amendment, it might measurably remove the objection in the mind of the junior Senator from Georgia [Mr. HARDWICK]. If the Senator will permit me, I will read the amendment and ask if he can accept it?

Mr. SMITH of South Carolina. I will state to the Senator from North Carolina that the remarks I am making are for the purpose of submitting my views before the bill and amendments are acted upon. I wish to state that a few days ago the question arose here as to whether or not the processes for the production of nitrogen have been sufficiently developed to justify the Government in appropriating money for the purpose of its production by these processes. At that time I put into the RECORD certain facts, which it is not necessary for me to now repeat. The fact, however, remains that as to the two processes, namely, the arc process and the cyanamide process, all of the experts and scientists now consider them commercial facts. The war in Europe is testimony to their success. They have also stated that this ingredient, nitrogen, which is so essential in fertilizer, under these processes can be produced at one-half the cost of the Chile saltpeter at antebellum prices, not the prices now, for the prices now have been quadrupled, but that it could be furnished for agricultural purposes at one-half the former price. So that whatever amendments may be offered to the amendment, the one essential feature which I shall insist shall remain in the bill is that after the Government has supplied itself with munitions of war the farmers of this country may be the beneficiaries of the surplus. If it is in accordance with the wisdom of the Senate that this shall be done by virtue of the Government leasing its power or by the Government leasing its plants or selling its power and still conserving the object in view, an abundance of this all-important element for agricultural purposes, I shall be very glad to have it put in that shape; but I can not accept an amendment which, in its very nature, will preclude the pos-

sibility of the great agricultural interests of this country being denied the very thing which these processes produce and upon which they are dependent. I am not wedded to any particular means of doing it, so that it is done, and done for the benefit of the farmer.

Mr. SIMMONS. Mr. President, the amendment which I wish to propose to the amendment of the Senator from South Carolina will not, in my judgment, interfere in any way with the agriculturists of this country getting the benefit of the production of any plant that the Government may establish for the purpose of supplying itself with nitric acid. If the Senator will permit me, I should like to have the amendment read.

The PRESIDING OFFICER (Mr. ROBINSON in the chair). Does the Senator from South Carolina yield to the Senator from North Carolina?

Mr. SMITH of South Carolina. Mr. President, I think I have spoken in general terms on the bill; I think it has sufficiently been discussed for the amendment now to be offered in due order; but the first amendment is the amendment of the Senator from Georgia [Mr. HARDWICK], which I am perfectly willing to accept, in view of other amendments.

Mr. SIMMONS. I was under the impression that the Senator from South Carolina might be willing to accept the amendment which I propose, and, if the Senator from Georgia will permit me, I will now have it read.

Mr. HARDWICK. I yield to the Senator from North Carolina for that purpose, if I have the floor.

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from North Carolina for a question?

Mr. HARDWICK. I yield for any purpose.

Mr. SMITH of South Carolina. Let the Senator from North Carolina have his amendment read.

Mr. SIMMONS. Let the Secretary read the amendment; and I ask that the Secretary read the paragraph in which the amendment is offered, so as to show the connection.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The SECRETARY. Beginning on page 3, commencing with the paragraph on line 12, the amendment of Mr. SMITH of South Carolina reads as follows:

That the plant or plants provided for under this act shall be constructed and operated solely by the Government and not in conjunction with any other industry or enterprise carried on by private capital.

Following the words "private capital," it is proposed to insert a colon and the following proviso:

Provided, That in time of peace and when not needed for the manufacture of nitric acid for governmental purposes and uses, the said plant or plants may be leased under such rules and regulations and upon such terms and conditions as may be prescribed by the Secretary of War for their use and operation and for the termination of such lease or leases when such plant or plants are required for the manufacture of nitric acid for governmental purposes.

Mr. HARDWICK. I think the amendment suggested by the Senator from North Carolina will help us solve this question, but I think it ought to be offered as a substitute for that part of the amendment embraced in lines 3 to 7, on page 3.

Mr. SIMMONS. I have no objection to that.

Mr. HARDWICK. That would be the proper place to put the amendment.

Mr. SIMMONS. That would be just as satisfactory to me as to have it inserted at the point I suggested.

Mr. HARDWICK. I suggest that change, if it be satisfactory to the Senator from South Carolina.

Mr. SMITH of Georgia. Mr. President——

The PRESIDING OFFICER. Does the junior Senator from Georgia yield to the senior Senator from Georgia?

Mr. HARDWICK. I yield to my colleague.

Mr. SMITH of Georgia. I understand that a substitute has been prepared which will strike out the language which the Senator from North Carolina [Mr. SIMMONS] is seeking to amend.

Mr. HARDWICK. And also the language which I read.

Mr. SMITH of Georgia. It is proposed to amend, on page 3, by striking out all of the paragraphs between line 8 and line 15, both inclusive, and inserting in lieu thereof the following:

That for the construction of the necessary dam, locks, substructure, power house, hydroelectric equipment, and all other necessary buildings or works, and for all expenditures necessary to carry out the terms of this act in accordance with the plans, specifications, and contracts made and prepared under the direction of the Secretary of War, the sum of $1,000,000 is hereby appropriated out of moneys in the Treasury not otherwise appropriated, to be immediately available: *Provided*, That a contract or contracts may be entered into by the Secretary of War for materials and work and for all other purposes necessary to carry out the terms of this act, to be paid for as appropriations may from time to time be made by law, not to exceed in the aggregate $30,000,000, exclusive of the amount herein and heretofore appropriated.

I read that in the absence of the Senator from Alabama. I understood from the Senator from South Carolina that this amendment had been prepared by the Senator from Alabama, and that he contemplated accepting it.

Mr. SMITH of South Carolina. Mr. President, I will state, in explanation of that, that as the question arose the other day as to the $15,000,000 perhaps not being sufficient as a lump sum, it might be better to authorize the expenditure of a sufficient amount to provide ourselves adequately for times of war, which the experts say would necessitate $30,000,000. For that reason I thought perhaps this amendment was better, and therefore I accepted it.

The PRESIDING OFFICER. The pending amendment is the amendment of the Senator from Georgia.

Mr. HARDWICK. Mr. President, I believe I have the floor. I only wanted to make a few observations on this proposition. I believe we can work this thing out——

Mr. KENYON. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Iowa will state his inquiry.

Mr. KENYON. We could not hear the statement by the Chair of the pending amendment.

The PRESIDING OFFICER. The pending amendment is the amendment offered by the junior Senator from Georgia [Mr. HARDWICK].

Mr. GALLINGER. Let it be stated.

The PRESIDING OFFICER. The Secretary will state the amendment.

The SECRETARY. On page 2, line 17, it is proposed to strike out the words "and useful in the manufacture of fertilizers."

Mr. KENYON. Mr. President, I should like to make another parliamentary inquiry.

Mr. HARDWICK. I yield to the Senator. Is the Senator asking me a question?

The PRESIDING OFFICER. No; the Senator from Iowa is propounding a parliamentary inquiry to the Chair.

Mr. KENYON. I wish to propound a parliamentary inquiry which can be answered by the Senator from South Carolina.

Mr. HARDWICK. I do not see just how that can be done. However, I yield to the Senator.

The PRESIDING OFFICER. If the Senator from Iowa desires to make a parliamentary inquiry, he will address the Chair. The Senator will state his parliamentary inquiry.

Mr. KENYON. I was out of the Chamber, and I wanted to get the run of matters. I understood the Senator from Georgia to state that the Senator from South Carolina had accepted the amendment on page 3, proposed, I think, by the Senator from Alabama. I should like to inquire of the Senator from South Carolina if that is so. If so, I should like to inquire of the Chair if the Senator can accept an amendment of that kind?

The PRESIDING OFFICER. The Chair will state to the Senator from Iowa that the amendment to which he now refers has not been offered. The Chair, of course, has no knowledge of private agreements between Senators.

Mr. HARDWICK. Mr. President, just a word or two on the general question.

I believe this matter can be worked out into such shape that every Senator, no matter what his views are about Government ownership or Government participation in all sorts of private enterprises, can suppport it; but no Senator who has anything like my views on the question of Government participation in business can support it on any such theory or for any such reason as those suggested by the Senator from South Carolina. Nor do I think the case to which the Senator refers—that of the act of 1856, where the United States gave to the patentees or discoverers of certain guano islands certain rights, and put on them certain conditions in granting those rights as to how they should conduct their private business—has any relation, direct, remote, or otherwise, to the question as to whether the United States Government itself is going into the business of manufacturing fertilizer and selling it to the farmers of this country. That is the thing to which I am opposed.

It is not that I would not like to see the farmers benefited. I guess I am just as truly their friend, just as loyal to their interests, as my friend from South Carolina or any other Senator in this Chamber, although there are Senators in this Chamber who protest very much more on that subject than I do. But whether the proposition be to manufacture goods of the cne kind or the other or to engage in the one sort of business or the other of a private character, it is utterly obnoxious to my own ideas of good government or sound policy. I believe that the one and only business in which the Government of the United States ought to engage is the governing business; and if it will attend to that job correctly it will have job enough at that, without going into all sorts of other enterprises.

Of course the language that I am moving to strike out, which I understand my friend from South Carolina is not particularly

opposing, is a proposition that the United States shall go into this improvement for the purpose of generating electrical or other power for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers. I have moved to strike out the words "and useful in the manufacture of fertilizers," because I think the governmental activities ought to be confined solely to governmental purposes. While I am quite willing to concede that it is a legitimate governmental function to provide the gunpowder which is necessary for the use of our Army and Navy in time of war, just as we provided armor-plate factories for the ships of our Navy the other day—I am not worried about that—I do not think, however, it is a legitimate governmental function to engage in the manufacture of fertilizer and the sale of it to the farmers, no matter how much we love them and no matter how often we protest that we do.

Mr. LANE. Mr. President, I should like to ask the Senator a question.

Mr. HARDWICK. I yield to the Senator from Oregon.

Mr. LANE. Does not the Senator think it would be as useful to the Government to increase the food supply, in case of war, as it would the gunpowder supply?

Mr. HARDWICK. Possibly.

Mr. LANE. Is it not actually just as useful?

Mr. HARDWICK. The Senator does not embarrass me by that question. There are a great many things that we do in time of actual war along that line that we would not think of doing in times of peace. For instance, during the Civil War almost every Southern State by statute limited the amount of cotton that could be planted. Of course, I would doubt the constitutionality of those statutes in times of peace, and I do not think they were ever upheld even in war times by any courts of last resort; but if they had come before the courts of last resort of the Southern States during the war I have no doubt they might have been upheld on the ground of military necessity.

Mr. LANE. Mr. President, I will ask the Senator, in connection with what I said before—premising the question with the statement that within the last 40 years the production of wheat in this country has gone down from an average of 30 bushels to an acre to 15, and we will say by way of comparison that in Germany it has increased from 15 to 40—whether it would not be just as wise and equally as much a governmental function to increase the food supply of the country as it would be to increase the gunpowder supply, and wherein lies the difference? Where does the Government's interest in its people stop? Does it exist only in time of war? Is it not its duty to prepare for war, and to feed its soldiers and to feed its population which is not at war, as much so as it would be to make nitric acid for explosives? And would it not be a better business for the Government to engage in, if you please?

Mr. HARDWICK. Answering the Senator's question, I want to say to him that it does not seem to me that there ought to be any division of sentiment or opinion on the question that the Government of the United States ought to do all that it properly and legitimately can to increase the yield of wheat in the United States under the circumstances as outlined. It ought to do all that the scientists and the experts in the Agricultural Department can find out and disseminate that knowledge among the people; but I do not think the Government ought to go into the business of farming in order to do it. That draws the line, I think.

Mr. LANE. I do not think it does quite draw the line.

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Oregon?

Mr. HARDWICK. Yes, sir.

The PRESIDING OFFICER. The Chair admonishes the Senator from Georgia that——

Mr. LANE. For a question, Mr. President; nothing else. Would it not be better for the people and for the Government if it had a well-fed and prosperous people than to go into war with a people who do not raise a sufficient supply of food to keep them in good trim in times of peace? Would not that be a far-sighted policy on the part of the Government, so as to have more able-bodied soldiers, with an interest in the Government, in return for the interest which the Government has taken in their affairs? Would they not more cheerfully go to war and help burn up this nitric acid which we must have from the air?

Mr. HARDWICK. Yes; I presume the people would in many cases be fatter and sleeker and more prosperous if the Government should feed them, but I do not want to embark in that undertaking just yet, as far as I am concerned.

Mr. LANE. I am not asking to have the Government feed them.

Mr. HARDWICK. It might be better for the Government to feed them out of the public crib, but I am not yet prepared to go that far. I think, Mr. President, as far as I am concerned, that the Government will have fully enough to do if it will just attend to the governing business and not go into the business of manufacturing and selling goods of various kinds. "The United States (Ltd.), manufacturer of and dealer in agricultural fertilizers, boots, shoes, and clothing," might sound well enough to some Senators, but it does not to me. That is just exactly my position about that matter.

I think the Senator from North Carolina has suggested an amendment that ought to go in the amendment in lieu of lines 3 to 7, inclusive, on page 3. In that way it will correlate with the amendment that is to be proposed, we are informed, by the junior Senator from Alabama [Mr. UNDERWOOD]. I think possibly with those changes we may be justified in supporting a proposition like this, because not even the strictest constructionist could very well object to the proposition that if the Government finds it necessary to develop water power in order to make a munition of war, and it finds it necessary to keep that water power where it can be used to a maximum capacity in the event hostilities were to break out, then while it is not being used for that purpose we might very well lease it out or dispose of that power in some other way. That would not offend against the very ideas and arguments I have suggested, because you just simply let private capital use it and employ it in any way they see fit, under lease from the Government or under sale from the Government with a right of recapture.

I think that is the substance of the idea embraced in the amendments proposed by the Senators from Alabama and North Carolina. If the amendment that I have suggested is to be agreed to—as I understand it is—and their amendments are to make modifications along the lines I have suggested, then I will have no objection to this proposition, and will be willing to support it under these conditions, which I have just outlined.

Mr. MARTINE of New Jersey. Mr. President, as I understand, the Senator's amendment is to strike out the words "and useful in the manufacture of fertilizers."

This may not sound quite as esthetic as some other language in the bill; but aside from that fault, I ask, what earthly harm can come from the use of those words in this bill? To my mind, it will be infinitely more to the benefit of mankind to grow wheat and food generally than to make gunpowder. I stand by that proposition broadly, but we need them both.

I am told by the Senator from Georgia that it is not a governmental function to make nitrates for fertilizer. Your Government, however, appropriates the people's money to stamp out the cotton-boll weevil in Georgia, and I have never heard a word of protest——

Mr. HARDWICK. Mr. President, if the Senator will pardon me just a moment, I suppose the Senator is directing his remarks to me.

Mr. MARTINE of New Jersey. Aye; the Senator is the man to whom I referred.

Mr. HARDWICK. Never have I asked for a cent for that purpose, and never has one cent been spent for that purpose in my State. There is no boll weevil in Georgia.

Mr. MARTINE of New Jersey. Well, whether it is or not, money has been voted for it.

Mr. HARDWICK. Not for Georgia.

Mr. MARTINE of New Jersey. Not necessarily for Georgia, but generally for the South, to stamp out the cotton-boll weevil that has afflicted the Senator and his constituency in common with the rest.

Mr. HARDWICK. No. Will the Senator yield?

Mr. MARTINE of New Jersey. Well, if it did not affect his constituency directly——

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Georgia for a question?

Mr. MARTINE of New Jersey. Certainly.

Mr. HARDWICK. The Senator, of course, does not want to misstate the facts.

Mr. MARTINE of New Jersey. I do not want to; but I say that if it has not affected the constituency of the Senator from Georgia directly, it has affected other sections of the South.

Mr. HARDWICK. The Senator is charging me with an inconsistency, and I do not propose to let it pass unnoticed. I have never done any such thing as he suggests.

Mr. MARTINE of New Jersey. Well——

Mr. HARDWICK. Wait a minute. I have never asked for such an appropriation, and, besides that, there has been no boll weevil in Georgia at all yet. The Senator ought to be sure of his facts before he makes suggestions of that kind.

Mr. MARTINE of New Jersey. I will accept the apology, as far as the Senator from Georgia is concerned.

Mr. HARDWICK. The apology?

Mr. MARTINE of New Jersey. But all the rest of the South that raises a sprig of cotton is daubed with this stick. You are all anxious to get public appropriations for stamping out the cotton-boll weevil. Now, I should like to be permitted to inquire whether the Senator voted against that measure?

Mr. HARDWICK. What measure?

Mr. MARTINE of New Jersey. The appropriation to stamp out the cotton-boll weevil in the South.

Mr. HARDWICK. I never heard of any issue being raised on it.

Mr. MARTINE of New Jersey. Then the Senator's ears have not been as acute as mine. I have heard it dingdonged in my ears from my fellow Senators over on this side of the Chamber very much.

Mr. HARDWICK. Not from the Senator from Georgia, however.

Mr. MARTINE of New Jersey. I am referring to the cotton interests of the South.

Mr. HARDWICK. Not from the Senator from Georgia, however, in spite of the Senator's intimations.

Mr. MARTINE of New Jersey. Well, I will except the Senator from Georgia. God knows he is a remarkable exception; but all the rest have been willing to take it. I want to say that Congress takes from the people's earnings, through a supposed legal process, their money to aid in the growing of sugar, putting on a tariff whereby the sugar interests may be subserved, and that seems to go without cavil or without the least of dissent. Now my distinguished friend the Senator from North Carolina comes along with an amendment, and the aim and purpose of his amendment is to take out the possible opportunity of the Government to engage in the business of manufacturing these nitrates for any purpose except for use in gunpowder. Whenever the Government shall not require the factory for the purpose of manufacturing nitrates for use in gunpowder, it may be leased to some other parties to proceed with the manufacture of fertilizers.

The one good provision in this whole amendment of the Senator from South Carolina to my mind is that it is the Government's right to manufacture in its own factory this necessary ingredient, nitrate. It is necessary in gunpowder and it is necessary in all fertilizers. That is the blessing of the Smith amendment to my mind over the proposition that was made by the Senator from Alabama. It is the fact that the Government is in this business, undisputed and alone, to manufacture this valuable ingredient for the purposes of the people, to manufacture it for use in gunpowder—and God knows I hope it will have occasion to manufacture but very little of it—and that the residue may go for the fertilization of the acres of our country.

This, to my mind, is the redeeming feature of the amendment. I can see no evil in the Government manufacturing a product that is vitally necessary to stimulate the growth of wheat, corn, and other foods. Certainly there can be no evil in that. The only objection is a sentimental objection upon the part of the Senator from Georgia, it seems to me.

I believe the adoption of the amendment proposed by the Senator from South Carolina will prove an infinite blessing to the country; and I shall vote against any proposition that would tend to limit or curtail the great results that must necessarily come, and the blessings that will follow, to the whole agricultural people of this country.

Mr. HUSTING. Mr. President, when this amendment was up the other day, I took occasion to say a few words in support of it upon the ground that it was to be a Government institution, not only for the manufacture of nitric acid for explosives but also for the manufacture of fertilizers to be used by the farmers. Now it is proposed to take out of this bill at least half of the purpose for which $15,000,000 is to be appropriated, upon the plea that it is socialistic.

As I said the other day, I think the time has gone by when by merely calling something by a name that any gentleman chooses to call a certain act or a certain piece of legislation it becomes so. That is merely expressing an individual opinion. Where a man applies an epithet to another person or to another act it is merely expressing his own private or public opinion. That is neither here nor there, in my humble judgment. The question is whether the proposed legislation is something that is going to inure to the benefit of the people of the country.

It is said here that the manufacture of fertilizers is not a governmental function. It has been stated by the Senator from New Jersey [Mr. MARTINE] that money has been voted for the cotton-boll weevil. I believe there is a bill before the Senate now, introduced by the Senator from Florida [Mr. BRYAN], to appropriate $500,000 for the eradication of the citrus canker, along that same line. But, Mr. President, the United States has not waited until this late day to vote money for the promotion of agriculture. We have an Agricultural Department that I know is costing a good many hundred thousands of dollars a year. I believe every Senator and Representative is taking his quota of seed and sending them all over the United States to his constituents at an expense, I presume, to the Government of hundreds of thousands if not millions of dollars. Money is being voted at every session of Congress that is not out of harmony at all with this purpose. This has become a well-defined policy on the part of the United States. If anyone wants to take the trouble of running through the statutes of the United States, he will find that hundreds of thousands and millions of dollars are being appropriated every year that have not the beneficent purpose that this bill seeks to accomplish. In election times we find that every Senator and every man, in fact, running for office is a good friend of the farmer and the farming industry. Here is an opportunity where this feeling can have a practical application.

Not only that, but here is an opportunity to do something of substantial value for the people of the United States. If the farmers of our country can get a cheap fertilizer, with the cheap land that we have, what country of the world can compete with us in the raising and the sale of our farm products? Everyone knows that what this Government has a primary dependence upon is the agricultural welfare of the country, and anything which tends to make two blades of grass grow where one grew before, in my judgment, is the best kind of a policy to adopt. The best thing in the world we can do is to advance this great industry, not for the purpose of enriching the farmer but for the purpose of enriching the future of the United States.

There is another reason why I do not want to see this amendment adopted, and that is because I can not understand why we should vote $15,000,000 to establish a plant that we are only going to use in time of war. When this matter first came up the Senator from Alabama [Mr. UNDERWOOD] expressed it as his idea that if this plant were built we would not use it all the time; that in times of peace the most natural thing in the world would be to lease it to somebody else for his use and only take it back in time of war to insure our supply of nitrates.

This country ought to adopt one plan or the other. It ought either to have a plant that is ready to any extent to manufacture what we need in time of war and use it for the purposes of the United States in the meantime or we ought to reserve the right to seize any water-power plant that we desire, and we can do it very easily by writing it into the permit, and use it in time of war.

But I can not understand why Senators want to vote $15,000,000 to build somebody else's plant. I am against the United States appropriating $15,000,000 to put somebody else in business and giving him the use of the plant so long as he wants to use it and only borrowing it of him when we must have it. That is the plain intent of this sort of an amendment.

It is proposed here that we should spend $15,000,000 to put up a water-power plant, and then if we are going to have a war once in a quarter of a century, and I hope hereafter we will have one only once in half a century or once in a century or never, we, after building that plant, will take somebody and invest him with property for his own private use until such time as we may hereafter need it, if the occasion should ever come that we must need it. Now, what is the object of doing that? If we are going to use it only in time of war, what is the use of having $15,000,000 invested in times of peace for somebody else to use?

It is to be done under the terms of the Shields bill, we will say. This is not a mere academic question as to what we may do in case we vote $15,000,000 to build somebody a dam or a water power. I think we have a right to take into consideration the provisions of a bill which passed the Senate and is now before the House of Representatives as declaring at least the idea, the sympathies, and the purposes of the men who voted for that bill and who fathered and helped to pass the bill. I for one will take it, and I do take it, as a fair understanding of what we should do with Government-owned property.

Now, what do we find in the Shields bill? What is to be done with Government-owned dams? The Shields bill provides that Government-owned dams—that is, dams built with Government money—shall be leased to private individuals or private interests upon the same terms as a privately owned plant. Not only that, but the provisions are that we can not recapture or take back our own Government-owned plant except under the like conditions that we can take over a private plant. What does that mean? It means that under the Shields bill, which passed the Senate, all dams built with United States money heretofore or hereafter known as Government-owned dams shall be leased to private

individuals under the identical terms and conditions that are imposed upon owners of privately owned dams. What does that mean? It specifically provides that section 6 shall apply as far as the term may be applicable. It provides that—

SEC. 6. That at any time after the expiration of said 50 years the United States may terminate the rights hereunder granted upon the giving to the grantee, either before or after the lapse of the period of the permit, of two years' notice in writing of such termination, and upon the taking over by the United States of all the property of the grantee which constitutes part of the plant of the grantee and dependent in whole or in part upon it for its usefulness and acquired, necessary, appurtenant, valuable, or serviceable in the distribution of water, or in the generation, transmission, and distribution of power, and upon paying to the grantee the fair value of said property, together with the cost to the grantee of the lock or locks, or other aids to navigation—

And so forth. Everything used and useful must be taken over by the United States in order to recapture its own property and its own water power.

Now, not only that, but it may be leased to anybody for a private business. If the Shields bill were in operation to-day and the amendment of the Senator from South Carolina were in effect, what would be the result? As I understand it, and I do not think there is any dispute about it, it would mean that the United States would take this money and go and build a hydro-electric plant, and that then, under the terms of the Shields bill, upon the mere application to the Secretary of War, the plant would be turned over to any private corporation—I do not care where it is, whether in the South or the North or the East or the West—upon the payment of money. I should say that the only compensation the United States would get out of that would be the money which would be used in the upkeep of the dam.

Any company—the Du Pont Powder Co. or the Cyanamid Co.—could come in here and take hold of this plant and could connect up its other business with this plant, and it would pay us only enough money for the upkeep of the dam or to increase the flowage of water, and then in time of war we would have to go and take it over, with their own plant, and pay them just damages, fair compensation, which would include, of course, consequential damages for prospective profit, and everything else the court could put into the meaning of the words "of fair value."

Now, $15,000,000 at 5 per cent amounts to something like $750,000 a year. We have not had a war since 1898. We may not have another until 1998. We will have to pay the interest on that money—$750,000 a year—with a chance of using it, with a chance of never using it, and at least with a chance of using it probably only 1 year in 25 or 30 years for the purpose of being able to take hold of that water power in case war should come.

I think if that is the object of the bill we had better let somebody else go into that business and manufacture nitrate and buy it and store it. Let them take their $15,000,000 and build this plant, and do not let us allow them to make us put $15,000,000 into their business, and then when we want to get it back have to buy them out.

I presume something would occur a good deal as did occur in the last war, when we had to go out and buy boats. I heard the Secretary of the Treasury speak at Madison about some of the figures then. We had no boats, and had to go out and buy them; and we bought them, I think, for $100,000, and sold them for something like $5,000 apiece, at least at about that ratio.

But here we would be in a position like that of building our boats and putting them in private hands, and running them, and then paying for their business when we wanted to borrow them. That is no business proposition. I am for one opposed to that bill and to this amendment. I say if we want to insure ourselves in the manufacture of nitrates for war purposes, that is all very well and good, let us manufacture them and store them at a place where they are safest, and then when we get through manufacturing nitrates instead of turning these plants over to private hands I say let them go on and manufacture something that will promote the welfare of this country.

I do not know why this idea of leasing these things comes up in all these discussions when the United States is attempting to do something for itself. The primary proposition, the primary idea, and primary object of this bill was to take care of the agricultural interests. The Agricultural Committee is certainly primarily concerned, I take it, in the promotion of agriculture. Why should they depart from the original idea, an agriculture idea, and in a preparedness bill the primary idea be abandoned and the secondary idea put into the bill, with an ultimate purpose it is evident, plainly stated here, that it is never to be used for agricultural purposes because perchance it might be considered socialistic by some one? In other words, the plain intent of the amendment of the Senator from Georgia is to destroy this amendment as an agricultural idea. It is plainly for the purpose of building a dam at the cost of $15,000,000 to be used only upon rare and very exceptional occasions, and, of course, in all the other years, in the other 99 per cent of the years, is going to put it in the hands of private interests under the terms of the Shields bill, if he would have his way, and if the other Senators who supported the Shields bill would have their way.

I say it is wrong, in my humble judgment, to go and invest money for the purpose of putting this investment into private hands. I would be glad to support most of this bill, if it carries out the object sought to be carried out in the start; but I for one absolutely refuse to support, and I shall vote against any bill which is going to invest the United States money for the interests of private individuals.

Mr. SHAFROTH. Mr. President, inasmuch as the Senator from Wisconsin [Mr. HUSTING] and I differ very materially as to the benefits of the Shields bill, it may seem somewhat strange that we should be in accord with relation to the amendment which is before the Senate—the amendment, I mean, of the Senator from South Carolina [Mr. SMITH]. The Senator from Wisconsin, I think, misconceives the Shields bill entirely. There is nothing in that bill which contemplates that the Federal Government shall undertake the construction of dams. It is purely at the expense of private individuals, and consequently whenever private individuals have built and invested their money—of course, if it is to be taken over by the Government it is right that they should be paid the amount which they have put in the same. Consequently, the allusion to the fact that certain things are similar in this case to the Shields bill is entirely, in my judgment, inappropriate, because they do not in any manner coincide.

I believe, Mr. President, that the bill as reported out of the Committee on Agriculture and Forestry is a good bill and should be passed. I recognize the fact the Senator from Georgia [Mr. HARDWICK] has so strongly emphasized, that the Federal Government has not under the Constitution the power to undertake a work purely for commercial purposes. But he can not deny, nor can anyone else deny, that if there is a governmental purpose to be served the Government has a right to undertake that thing which will produce the governmental purpose.

Under the amendment which is offered by the Senator from South Carolina we find that the purpose and the object as explained in the amendment itself is to erect a plant for a purely governmental purpose, namely, for the purpose of manufacturing nitric acid. Nitric acid, as everyone knows, is a most powerful explosive when it is mixed with certain other ingredients. It enters into the composition of a powder which is, perhaps, the most modern of all the violent explosives that are manufactured. That being the case, it is necessary, especially at a time when preparedness is supposed to be the order of the day, that we should fortify ourselves with something that will, in fact, make us prepared in the event that we have a war.

Mr. President, the importance of having a plant that can manufacture nitric acid, and will manufacture it both in times of peace and times of war, it seems to me, no one can deny. We are discharging our guns every day, even in times of peace. We are using powder; we are using explosives; we are experimenting and practicing with the guns of our Army and Navy. In my judgment the powder is something that should be manufactured by the Government, and I believe the Government should undertake the construction and operation of the plant itself. Improvements are always being made, new inventions are always being discovered. If the Government has a plant, its employees, while experimenting, will make important discoveries which the Government can keep secret and for its own use, and thereby have an advantage over an adversary in the event of war. For that reason I believe that munition factories ought to be run by the Government itself. Whatever inventions and whatever improvements in arms or in explosives are discovered by the employees belong to the Government. Our officers will utilize those inventions and will not give them to other nations, and by reason thereof we will have some advantage in case of conflict with another nation.

No one can deny that if the Government erects a plant for the purpose of manufacturing a product that is purely for a governmental purpose, and if by reason of the situation a surplus is manufactured or the plant is not needed all the time, the law authorizing the plant would be constitutional. It would be very foolish, indeed, for the Government not to utilize the plant, and utilize it for any purpose that could remunerate the Government in the way of getting a return for the investment which it has made.

There is no doubt but that in water-power plants themselves, the power generated is according to the flow in the stream,

The stream at one season of the year is only about one-fifth of the size of the stream in other portions of the year. Nay more, the capacity of the stream sometimes multiplies a hundredfold. Perhaps it may be that in three-fourths of the year the average of the stream is five times higher than it is at its lowest stage. Consequently, when you put up a plant it will not do to erect it with a capacity that will only utilize the water power for one-fourth of the time. It is economical to erect a plant with a reasonable regard to the flow of the water during three-fourths of the year. Especially is that true when nitric acid which is proposed to be manufactured is not a perishable product. It can be put up in carboys and kept for months and years. So the plant can run in the season when the water is high and thereby have the benefit of at least an average power.

Mr. HARDWICK. Mr. President——

Mr. SHAFROTH. I yield to the Senator from Georgia.

Mr. HARDWICK. If that be true, if nitrate can be conserved, why could we not just manufacture all of it for governmental purposes and store it up against future needs instead of disposing of the surplus product?

Mr. SHAFROTH. You can somewhat, but I suppose deterioration takes place to a certain extent. However, for the ordinary uses of the Government in the practices which they have on the battleships and also at the Army posts there would have to be a substantially increasing manufacture every year. It may be that it would be impracticable, and I expect it would be, to manufacture and keep in store nitric acid for long periods of time, but perhaps it might be done for a year or two.

Mr. President, in my judgment the plant which is erected should be sufficiently large to utilize more than the minimum quantity of water that could be used. We know that in time of peace the quantity of nitric acid that would be manufactured would be much less than in time of war. Of course, in time of war it would be multiplied a thousandfold, probably a millionfold, and you must have a plant that will to a reasonable extent be ready to supply the quantity of nitric acid that may be needed in time of war. If you do not do that, it is not a preparedness proposition at all. That being the case, it is necessary to have a plant much larger than that which would supply the needs of the Army and Navy in ordinary times and in peaceful times. For that reason a plant, by reason of legislation of this kind, must of necessity be much larger than that which is demanded in time of peace.

Now, what is to be done with the surplus? The plant is evidently to be erected under the authority of the Constitution of the United States. It may be a plant excessively large when contrasted with the demands for its products in peaceful times. It is erected under the Constitution and sanctioned by the law. Is it possible that when you do not need it you must shut it down and let it deteriorate in value? That can not be the object or the purpose of legislation of this kind. Inasmuch as it serves the purpose of preparedness and can be made to serve another purpose that is useful, and we have no other immediate use for it, the Government ought to utilize it to repay it for the investment which it has made.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield?

Mr. SHAFROTH. I yield to the Senator from Utah.

Mr. SUTHERLAND. I wish to ask the Senator from Colorado a question. I think we have now a comparatively small amount of money invested in some small-arms manufacture, have we not?

Mr. SHAFROTH. I do not know what amount is invested.

Mr. SUTHERLAND. I think we have, but waiving that, in time of war we would need, or might need at any rate, a very large supply of small arms. Would the Senator from Colorado object to adding a provision to this bill appropriating $15,000,000 for the erection of small-arms manufactories and carrying a proviso that when not needed for the manufacture of small arms these factories should be utilized for the purpose of manufacturing farm implements?

Mr. SHAFROTH. Oh, Mr. President, I do not think that is a fair analogy to the question which is before us now. The factories for arms contain entirely different machinery for the purpose of constructing firearms from those necessary for farm implements—so entirely different that you would have to make a new plant entirely.

Mr. SUTHERLAND. This war has demonstrated that these various factories may be very quickly transformed into manufactories of war munitions, and the converse of that is true.

Mr. SHAFROTH. The buildings could be used. I have no doubt that so far as the machinery that is used in the manufacture of firearms is concerned, it would be largely of no use whatever in the construction of agricultural implements.

Mr. SUTHERLAND. The machinery undoubtedly could be turned to account in the manufacture of something for commercial purposes.

Mr. SHAFROTH. Some of it could be. Of course, a motor or something of that kind could be used. Inasmuch as holes are to be drilled, both in the construction of firearms and in the construction of agricultural implements, no doubt there is some analogy, but at the same time, it seems to me, that they are so far apart that there would be very little utility in providing for a thing of that kind.

I want to say, further, that a nitric-acid factory can not be changed to anything else; it is purely for the extraction of nitrogen from the air, and the machinery that would be used in such a factory could not be used in the manufacture of anything else.

Mr. SUTHERLAND. The Senator from Colorado, if I understand him, is in favor of these manufacturing plants, which are to be built for the purpose of making small arms, lying idle when they can not be utilized for that purpose?

Mr. SHAFROTH. No; not necessarily. I am not in favor of their lying idle all the time. Of course, I think that there is a growing demand, and that there will continue to be a growing demand, for the supply of arms. I believe their production is one of the things in which there should be preparedness, because we ought to have a large quantity of arms ready to be put into the hands of men who would enlist in time of war. The very fact that we have not any great number of such arms would show our unpreparedness in case there was a war.

But now, Mr. President, I want to go a little further with relation to this matter. It seems to me that as to the construction of the plant which is proposed to be authorized by the amendment offered by the Senator from South Carolina [Mr. SMITH] the plant ought to be large. If it is not to be large, it will not be a preparedness proposition at all. If it is only going to be large enough for the purpose of supplying nitrogen in times of peace for explosives that are made for target practice, for salutes which may be made, and things of that kind, of course it would not constitute any preparation at all. Consequently we have to construct such a plant with relation, at least to some extent, to a state of war which possibly may come. Inasmuch as such a plant has to be constructed with that end in view, for the purely governmental purpose of being prepared, there is a surplus both as to product and as to plant that ought to be utilized in some way; and, inasmuch as it can be utilized by the farmers, and the product can be sold by the Government for the purpose of obtaining a return to the Government and an interest of some kind upon its investment, it seems to me that it is but proper it should be operated with a view, first, of supplying the Nation with means of defense, and, second—which is a subordinate, but nevertheless important function—with a view of giving to those who need the product something which would be beneficial to them and at the same time remunerative to the Government.

Now, I want to say, in addition——

Mr. SUTHERLAND. Mr. President, before the Senator from Colorado passes from that point, I desire to ask him another question.

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Utah?

Mr. SHAFROTH. Yes, sir.

Mr. SUTHERLAND. How large an expenditure does the Senator from Colorado think would be necessary to provide plants large enough to manufacture all the nitrates which will be required by the farmers of the United States?

Mr. SHAFROTH. Well, I must say that it would take probably hundreds of millions of dollars to erect such plants.

Mr. SUTHERLAND. Yes.

Mr. SHAFROTH. And I am not in favor of that.

Mr. SUTHERLAND. I thought the Senator would not be in favor of that. Now, let me ask the Senator this question: Does the Senator from Colorado believe for one moment if we once embark upon this socialistic scheme of manufacturing nitrates for the farmers that the farmers of this country, who cast at least one-third of the votes that are polled at every election, will ever rest content until the Government of the United States is manufacturing nitrates for all of them at a cost of many hundreds of millions of dollars?

Mr. SHAFROTH. I do not think that any such condition will ever arise. I am not a believer in the doctrine that the Government should supplant private enterprise. I do not believe it is wise; I do not believe it is to the best interest of the people; but whenever, as a part of a governmental function,

the Government undertakes the manufacture of something and has a surplus, it seems to me absolutely preposterous that it should not utilize that surplus in a way that will be of some benefit to somebody else and at the same time afford a return of some kind for its own investment.

Mr. President, I am not one of those who think that the Government can manufacture more cheaply than can individuals; I do not believe it. I am satisfied that that condition will never arise when the Government can afford to sell what it manufactures at as low a price as can the individual; but I do say that whenever we have limited conditions and a limited number of enterprises and those limited enterprises can control the market by reason of which they can charge exorbitant prices, either by combinations or by gentlemen's agreements—in such a case the Government can manufacture for a cheaper price than the price which such enterprises, for their own selfish interests, will put upon their products. It is for that reason also that I believe the Government, when it has a clear governmental function to perform, and as a result of that function has a surplus, has a right to let the people know by its own sales to them how much the product is worth and how much it costs to manufacture it, so that the private companies, by reason of gentlemen's agreements or combinations, can not set a price that is absolutely exorbitant to the farmer as well as to other people.

Mr. President, it seems to me that that purpose alone would be a strong reason for the erection of this plant—not the primary purpose, for the primary purpose is the performance of a governmental function; but when it is demonstrated that this article can be manufactured at a cost which is much less than the price which private companies might fix, it seems to me that, to prevent a monopoly, it is not a bad proposition as a part of this governmental function that the Government should assume the power and the privilege of letting the people know by its own sales how cheaply this product can be manufactured. Legitimate capital need not fear governmental undertakings of this kind, for I do not believe the Government can manufacture as cheaply as they can; but the Government can manufacture a good deal more cheaply than the combination price which a few corporations might make with relation to a product of this kind.

Mr. President, it seems to me that the amendment which has been proposed by the Senator from South Carolina [Mr. SMITH] is a good amendment; that it is wise. It can not be attacked on the ground of unconstitutionality, unless it be said that it is a mere subterfuge and that the real purpose and object, and all of the object practically, is for the purpose of entering into private business. That, however, can not properly be said to be the case, for everyone here recognizes that we would have no opportunity of getting nitrates if we should have a war with any nation that has a considerable navy. The only supply of nitrates which now exists in the world is that on the plains of Chile. Should that supply be seized or should that product be cut off by reason of submarines or otherwise, we would practically be left unarmed and subject to attack by other nations. That being the case, it seems to me it is imperative that we should do just as England has done, just as Germany has done—utilize the power which we shall take from the air, of which nobody can deprive us, and which consists of four-fifths nitrogen and one-fifth oxygen, and utilize that by converting it to our use under processes which are now well established, thereby keeping within the borders of our own country the power to prepare for an emergency, which might possibly be brought about, though we all hope it may never arise.

Mr. KENYON. Mr. President, I wish to make a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state his parliamentary inquiry.

Mr. KENYON. The Committee on Military Affairs have reported a substitute for the House bill. The Senator from South Carolina [Mr. SMITH] proposes an amendment to that substitute. The Senator from Georgia [Mr. HARDWICK], as I understand, then proposes an amendment to the amendment to the substitute. I ask the Chair if the latter amendment is not out of order, as being an amendment in the third degree? I make the point of order that the amendment of the Senator from Georgia is not now in order.

The PRESIDING OFFICER. The Chair will read to the Senate a part of Rule XVIII, which provides:

> But pending a motion to strike out and insert, the part to be stricken out and the part to be inserted shall each be regarded for the purpose of amendment as a question; and motions to amend the part to be stricken out shall have precedence.

The Chair therefore thinks that the amendment offered by the Senator from Georgia is in order, and is but an amendment in the second degree.

Mr. JONES. Mr. President, I want to suggest to the Senator from South Carolina that I believe he would make time in the consideration of his amendment if he would withdraw it and frame it along the lines that he expressed himself as willing to accept a short time ago. I understand that quite a number of Senators have amendments which they desire to propose, which are more or less acceptable to the Senator, and yet we do not know what they are.

Mr. SMITH of South Carolina. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from South Carolina?

Mr. JONES. Certainly.

Mr. SMITH of South Carolina. I rise to clarify the atmosphere, so far as the position of the author of this amendment is concerned, in order that we may have no misunderstanding.

Since this debate has developed I have been anxious to conserve two purposes: One was to furnish munitions of war, which we are all agreed are absolutely essential—and I need not enlarge on that as the helplessness of this Government in case of war has been so forcibly stated heretofore—and, secondly, as the Senator from Colorado [Mr. SHAFROTH] has so ably pointed out, that as a result of the manufacture by the Government, there will be a surplus of nitrogen. It therefore seemed perfectly reasonable that as that happened to be——

Mr. JONES. Of course, I merely yielded to the Senator for a question.

Mr. SMITH of South Carolina. I thought perhaps the Senator from Washington wanted me to state——

Mr. JONES. I understood the Senator from South Carolina to state what he has just stated awhile ago. That is the reason why I made my suggestion.

Mr. SMITH of South Carolina. Then I will wait until the Senator gets through and state exactly what I am willing to do and what I am not willing to do.

Mr. JONES. I thought the Senator had stated—at least, I thought I so understood him pretty clearly awhile ago—what he was willing to do. It was because of that suggestion and because I know that there were different Senators offering amendments, some of which have been suggested, one being by the Senator from North Carolina [Mr. SIMMONS], that it occurred to me that it would be better if the Senator from South Carolina would get together with those who are interested, and whose views he knows, and frame his amendment in such a way that it would present a concrete proposition here. With that end in view, I want to suggest one or two matters which have occurred to me with reference to the Senator's amendment.

I do not know as yet whether or not I shall vote for the amendment. I see many important things which ought to be done, or, at least, which I think ought to be done; and when I contemplate how slowly they come along I begin to think I should like to see the Government take hold of them; but when I see how the Government does or tries to do things—or, rather, how it fails to do things that it has undertaken—I am discouraged at the outlook of Government ownership or Government construction or Government operation of these great enterprises. So I do not know whether or not I shall vote for this proposition. It came here as a purely agricultural proposition in the first place. It was reported by the Committee on Agriculture as a separate measure, and was designed purely for the purpose of furnishing fertilizer to the agriculturists of the country. I want to see them get fertilizer; I am just as anxious, I think, about that as is the Senator from South Carolina. I do not think that anybody is more interested in promoting the welfare of the farmers than I am, so far as that goes, and I received a long letter this morning from the representatives of some organizations in the South, appealing to me as a Senator from the West who had assisted in having the Government enter into the field of irrigation, to support this proposition. I do not think that the two are on a parity—I do not think they are similar at all—but that would not make any difference to me if I thought it was possible to go into the undertaking.

As I have said, this matter came up here first as an agriculture proposition, and now, because we have a military bill under consideration, it is proposed to convert it into a preparedness measure and get it on to the bill on that plea.

Now, I want to suggest one or two matters that I hope the Senator will consider; at any rate, they might help me to come to a favorable conclusion with reference to the amendment. I think the Senator from Colorado [Mr. SHAFROTH] touched upon both of the propositions. One is that whenever development is undertaken at any site that may be selected there ought to be the highest possible development at that point. The amend-

ment, I think, does not provide for that, and I have presented an amendment to the amendment, and had it printed, to substitute for the words proposed to be stricken out by the Senator from Georgia [Mr. HARDWICK] the language that we placed in the Shields bill as it passed the Senate. After the provision concerning the development of power for the making of munitions of war, nitrates, and so forth, I propose to add the words "and best adapted to conserve and utilize the water resources of the region in the interest of navigation, the needs of the Government, and the public welfare."

That is very broad language, and I think it would cover the idea which the Senator from South Carolina has in mind; but something of that kind ought to be added to his amendment. If the Government acquires a site and puts in a dam which will develop power simply for the purpose of making munitions of war, and stops there, it stops all further development at such point. There may be many other lines of industry that would be promoted by a higher development, and they would not be promoted in any other way. So, it seems to me, that if the Government is going to put in a dam at any point, on any stream, in order to develop water power for any purpose whatever, it ought to put in such a dam as will develop water power for all possible purposes in the immediate locality tributary to such development. I take it that the Senator would probably have no objection to a proposition of that kind, because I know he wants the highest possible development that we can get.

Another point: The Senator from North Carolina [Mr. SIMMONS] had an amendment read, which I understood to relate to the use of the proposed plant and water power in time of peace and which contemplated that the plant might be leased to private parties. Mr. President, I doubt the advisability of the Government leasing any plant that it may have constructed for the purpose of manufacturing ammunition and munitions of war. There is a constant improvement in the manufacture of powder, or, rather, in the kind of powder being manufactured. New processes are being developed, and new machinery probably would be needed for these different processes. So, it seems to me, that it would be very unwise for the Government in time of peace to turn its plant over to private parties to be used possibly for some purposes entirely different from the manufacture of powder or munitions of war. The Government ought to keep its plant, at least its ordinary plant, in time of peace as well as in time of war, for the purpose of keeping on hand at all times a trained force and also for the purpose of experimenting, in the hope of developing more effective powder and more efficient scientists, mechanics, and experts in the manufacture of powder and munitions of war. If you turn the proposed plant over to private parties in time of peace, you will not get the benefit of anything of that sort.

One of the principal arguments with reference to having work continued to be done in our navy yards is that the Government may maintain an efficient organization and an efficient force. That is a very strong argument; in fact, it seems to me it is almost unanswerable. So, if the Government is going to have a plant for the purpose contemplated, the Government must maintain it in peace as well as in war. It will not be efficient in time of war unless it has been kept efficient in time of peace. So, it seems to me, that there is much danger in the proposition suggested by the Senator from North Carolina. I am rather inclined to think that whatever the Government may deem necessary in time of peace, the manufacture of ammunition and munitions ought to be kept always in control, and that the plants ought to be operated by the Government itself.

As the Senator from Colorado has said, there is bound to be a surplus if we have the highest development. Now, what should be done with that surplus power? Of course it should not be wasted. I doubt the advisability of the Government going into the manufacture of fertilizer, even with that surplus power, and entering upon the construction of plants for that purpose. I do not see any constitutional objection to it, however, in connection with the plant that it may see fit to install for the manufacture of nitrates for powder or munitions of war, and I have suggested an amendment which I think covers that situation. The amendment is on page 3 of the amendment of the Senator from South Carolina to strike out lines 3, 4, 5, 6, and 7 and insert something like this:

That the water power made available by such development and not needed for navigation and for the production of nitrates and other products needed for munitions of war shall be disposed of by the Secretary of War under such regulations as he may prescribe.

Mr. HARDWICK. Mr. President, will the Senator yield for a question?

Mr. JONES. Certainly.

Mr. HARDWICK. If the Senator's amendment were adopted, it would rob the pending amendment of its most objectionable feature, would it not?

Mr. JONES. I think it would remove the objection which the Senator has in mind. I do not know that I would oppose a proposition that would permit the Secretary of War even to use the surplus power for the development of outside industry if it were found to be advisable to do so.

Mr. CLAPP. Mr. President, I should like to make a suggestion to the Senator along that line. I quite agree with him in reference to his argument of a moment ago, that the Government should utilize any such plant as it may have in order to train an efficient force rather than to lease it; but still there might be a case when it would be advisable to lease. So, in reference to the point the Senator has just made, I think we should provide that the plant may either be disposed of or used directly by the Government. I think both methods might be provided.

Mr. JONES. I rather thank that that would be a good idea, because it will all rest with Congress, anyhow, as to what development can be carried on by the power of appropriating the money for it, and it might be found advisable even to use the surplus power by the Government itself, rather than to put it in the hands of somebody else or to lease it. Of course, I think that the Secretary of War, under the language which I have indicated, in disposing of the surplus power could do so by lease or by sale, with any condition that he saw fit to impose upon the purchaser or the lessee by means of which he could recapture this power if it were considered necessary for the benefit of the Government.

Mr. UNDERWOOD and Mr. CLAPP addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Alabama?

Mr. JONES. I think the Senator from Alabama rose first, and I yield to him.

Mr. UNDERWOOD. Mr. President, I see no objection in the world to the amendment the Senator from Washington proposes. I think the Government ought to have the right to dispose of power when it does not need it; but I do not think the Senator's suggestion goes to the point of the amendment which I expect to offer.

Mr. JONES. I do not know, of course, what is contained in the Senator's proposed amendment.

Mr. UNDERWOOD. I desire to call the Senator's attention to that portion of the amendment which I have suggested, and which was read from the desk to be offered by me, covering the idea I have in mind. So far as disposing of the water power is concerned, I think the Senator's proposition is entirely acceptable, but there is another end to the proposition. There is no provision in this bill whatever——

Mr. JONES. Mr. President, I hope I am not losing the floor.

Mr. UNDERWOOD. I do not intend that what I shall say shall have that effect; but I wish to call the Senator's attention to this proposition.

Mr. JONES. So far as I am concerned, of course, I am glad to yield to the Senator.

Mr. UNDERWOOD. There is no provision in this amendment by which the Government can acquire any of the processes for making air nitrogen—they are all patented and owned by private parties—except possibly through the general power of condemnation. It could condemn for war purposes, but it could not condemn for war purposes and then use the processes for agricultural purposes, and the object of the amendment that I intend to offer is to give some power to the Government to make a contract with the owners of the patents, to purchase them or lease them or acquire them in some way, so that when the Government acquires them for war purposes, to make powder, when it was not necessary to use the plant for making powder, the processes could be used for making fertilizer. There is no provision at all in this amendment as it stands for that purpose. You build the plant and build up the industry, and when you do not need the plant for making powder for the Government or for anybody else it may be used to manufacture fertilizer. That is the real purpose of the amendment I intend to suggest.

Mr. HARDWICK. Mr. President, does the Senator think the Government has the power to manufacture fertilizer?

Mr. UNDERWOOD. If the Government goes into this proposition for a war purpose, when it is not using the plant for a war purpose I think it has the entire right to lease the plant or to use the plant to make nitrogen and sell the nitrogen for fertilizer to help the farmers of this country. It is within the power of the Government, just exactly as we do every day down on the streets, or at our Army posts, where you can find the Government selling its surplus stock of rifles or its surplus

stock of clothing, because they are worn out or they have become discredited and there is no longer any use for them. Now, we build this plant for a war purpose, but when it is not employed for that purpose, why should we not give this Government the power to either purchase or lease one of these processes, so that it can use it for peaceful purposes as well as for war purposes; and I do not think the Senator's amendment goes to that point.

Mr. JONES. Mr. President, that may be true. I am not controverting the power that the Senator has suggested is in the Government; in fact, I stated a moment ago that I did believe there was no constitutional objection to the Government using any surplus power that it might develop at any of these points for any purpose for which it deemed wise to use it.

Of course, my amendment is a suggestion, and is intended only as a suggestion, to the Senator from South Carolina, with reference to the disposal of the surplus power. I did not know what was contained in the amendment intended to be suggested by the Senator from Alabama. I think that simply illustrates the advantage of the suggestion which I made to the Senator from South Carolina that he withdraw his amendment, and after this discussion pointing out these different propositions, confer with some of those Senators who are interested and frame an amendment which can be presented to us in concrete form, so that we may know what we are really considering.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Utah?

Mr. JONES. Yes.

Mr. SUTHERLAND. I understand the Senator from Washington sees no constitutional difficulty in the way of our disposing of any surplus stock that we may have on hand, such as obsolete rifles and things of that sort; neither do I——

Mr. JONES. I will say to the Senator that I did not have anything of that kind in my mind. What I had in mind was the surplus power developed at one of these dams.

Mr. SUTHERLAND. I agree with what the Senator from Alabama has said, and what the Senator from Washington has either said or acquiesced in, to that effect; but I ask the Senator from Washington this question:

Does the Senator think that the Government of the United States could appropriate money to build a factory for the purpose of manufacturing clothing for its Army, and then, upon occasions when the operation of the factory was not necessary to produce clothing for the Army, that it might go into the manufacture of other clothing, to be sold in the market in competition with the dry-goods merchants of the country?

Mr. JONES. I think the principle is exactly the same as in this other case. I can not see any difference.

Mr. SUTHERLAND. Mr. President, if the Senator will permit me, I think the two things are utterly different.

Mr. JONES. I can not see it that way. If the Government deems it advisable to put up a plant for the manufacturing of uniforms for its soldiers, I think it has a right to do it. As I understand, the Senator concedes that.

Mr. SUTHERLAND. Yes.

Mr. JONES. Now then, after it has the plant constructed and the power available and all the facilities necessary, and it has on hand all the clothing that it wants, I do not think it is required to keep that plant idle. I do not think it is required to close it up. I believe that until it is again needed to supply uniforms it can go on and use the power and facilities that it has there for any purpose for which they are suitable, provided, of course, Congress appropriates the money. I do not believe there is any difference in principle between that case and the other.

Mr. SUTHERLAND. Let me suggest——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Utah for another question?

Mr. JONES. Yes; I do.

Mr. SUTHERLAND. Let me ask the Senator this question as an illustration of the point I am trying to make. It is necessary, however, to make a statement as a foundation for my question.

I have not any doubt and the Senator has not any doubt that we can appropriate money to buy a piece of land on which to erect a public building, and that if it afterwards turns out that we do not need the land for that purpose we can sell the land; Congress can authorize the sale of the land. But does the Senator think that we could appropriate a sum of money to purchase land, and then, before it was spent, having ascertained that we did not need that land, that we could authorize some department of the Government to go into the real-estate business with the money?

Mr. JONES. Oh, I do not think that is a parallel case at all.

Mr. SUTHERLAND. The difference between the Senator and myself is that I think it is a parallel case.

Mr. JONES. I do not think it is.

Mr. SUTHERLAND. I think we can sell anything that we have on hand and have no use for; but I think that is a very different thing from a case where we find ourselves unable to carry on the manufacturing enterprise that we are authorized to do, and divert it into carrying on an essentially private business in competition with our own citizens.

Mr. JONES. Oh, Mr. President, the first case which the Senator put did not contemplate going out of this business entirely. He suggested the proposition of a plant for the manufacture of uniforms, and so on. That is a continuous business. There may be interruptions in it from time to time. The mere fact that we have on hand all the uniforms that we want at one time does not prevent us from keeping the plant or holding it and maintaining it and using it, in view of the fact that at some time our supply of uniforms will be all gone, and we will have to use the plant for a new supply. In the meantime we can use the plant for any purpose for which it may be available.

I believe this, as suggested by the Senator from Minnesota [Mr. CLAPP]: We have to have flour for bread for our soldiers. We would have authority to appropriate money and use it in the construction of a flour mill for the purpose of supplying flour for our soldiers. I do not think the Senator would even question that. It might be very inadvisable to do it, but we would have the constitutional power to do it. When we get enough flour on hand to supply our soldiers for any particular time, we do not need to continue to operate our flour mill. We are not compelled to dispose of it, however, and I do not think we would be compelled to close it. I believe we could operate our flour mill during the time that we were not needing it to furnish flour for our soldiers, and dispose of the product in any way that we saw fit. Then, when our supply for our soldiers is exhausted, we can go back and use our plant for resupplying ourselves; and that is a sort of continuous process.

If we were to appropriate this money for the construction of a flour mill for that purpose, but before we began to construct it we decided that we did not want the flour mill, then I do not think we could use the money in the raising of wheat; and that is an illustration which I think is more nearly parallel with the real estate proposition that the Senator suggested.

If it were to come to a matter of constitutional construction, I would much sooner take the judgment of the Senator than my own; but when we agree upon a fundamental proposition, I think I am pretty safe in following that to its ultimate conclusion.

There is another suggestion that I want to make to the Senator from South Carolina with reference to his amendment. It is a minor one. I have not any doubt but that that can be fixed up, too. I think there ought to be a more definite provision in here with reference to the restoration of any sites that may be temporarily withdrawn than that which is provided in this amendment.

Mr. SMITH of South Carolina. Mr. President, in answer to that I will state that it was at the suggestion of a member of the committee that we limited it to five power sites. I am perfectly willing to have a provision——

The VICE PRESIDENT. Is the Senator from Washington yielding for this purpose?

Mr. JONES. Yes.

Mr. SMITH of South Carolina. I am perfectly willing to have a provision that such lands as the Government may not need to utilize immediately upon the withdrawal shall revert under the original law.

Mr. JONES. Of course I do not believe that it is necessary, as far as that is concerned, to empower the President here to withdraw these sites. These sites are all withdrawn until somebody is given authority to construct a dam. Even if we pass the legislation that is now pending no one can get permission to construct a dam at any site in a navigable stream without first getting the permit of the Secretary of War; so that I really see no necessity for any provision of this kind. Possibly it does not do any harm to have it in; probably not.

Mr. President, I just want to make a suggestion with reference to this matter of yielding and this fear that we are going to lose the floor or talk more than twice upon a bill or an amendment in a day. I think the proceedings to-day have illustrated the importance of the practice we have been following in the Senate, especially upon occasions of this kind. A question comes up with reference to an amendment that a brief statement may throw much light upon and may facilitiate the discussion and consideration of the measure. I believe we ought

not to be so very strict, especially in the consideration of amendments, with reference to these interruptions. I am merely suggesting that as my own view about it. I have seen many instances in connection with this and in connection with some other amendments during the last day or two where it seemed to me it was almost impossible to carry on really a profitable discussion without these interruptions—without not only interrogations, but brief statements.

Personally I hope the Chair will not insist too strongly upon the rule when the discussion is going on in this way unless somebody on the floor makes the point of order that such interruptions ought not to be permitted. I think it will help us in the consideration of these matters, in developing the facts, and in developing the reasons why this should be done or that should not be done.

Mr. HUSTING. Mr. President, I wish to reply to the Senator from Colorado [Mr. SHAFROTH] in regard to some of the provisions of the Shields bill, so called.

The Senator from Colorado, with whose conclusions I entirely agree, raised some question as to the statement I made with regard to the provisions of the Shields bill. I should like to read to the Senate the provisions of the Shields bill. In section 10 it provides that—

> The Secretary of War may lease to any applicant having the capacity of grantee as herein defined, and having complied with the laws of the State in which a dam is constructed or to be constructed by the United States, the right to utilize the surplus water power over and above that required for navigation at any navigation dam—

Under the conditions there laid down.

I think the Senator from Colorado overlooked that provision, and I think he will agree with me that the statement I made with regard to the provisions of that bill was entirely accurate.

Mr. SHAFROTH. Mr. President——

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from Colorado?

Mr. HUSTING. Certainly.

Mr. SHAFROTH. I will state to the Senator that in the discussion of the Shields bill hardly any discussion, at least so far as I was concerned, was had on section 10, because the bill primarily contemplates the development of water power by private individuals. There is a clause there which says that the Government may lease, but knowing that it takes a separate act and a special appropriation to authorize the construction by the Government, I never laid much stress upon section 10.

Mr. HUSTING. I should like to ask the Senator whether he agrees with me now that there is such a clause?

Mr. SHAFROTH. Oh, yes; there is a clause of that kind, which does not become operative, however, without Congress making an appropriation.

Mr. HUSTING. Mr. President, it may be that the Senator from Colorado does not take much stock in section 10 of the Shields bill. I will say that I do not take much stock in it, either, and that is the reason why I have been criticizing it. It is true that there has not been very much discussion of section 10, although I devoted, I think, in my humble way, about 30 minutes to pointing out the danger of this particular section; and I thought the Senator from Colorado, who had devoted so much time to the bill, would certainly know all the provisions in the bill, and especially section 10, because that was one of the sections that was amended on the next to the last day when the bill was under discussion. That section was amended by inserting the following:

> The provisions of sections 3, 4, 5, 6, 7, 8, 9, 11, 12, and 13 of this act shall, in so far as applicable in each case, apply to structures erected, maintained, or operated under and in pursuance of the provisions of this section.

In other words, all of the provisions of the bill proper apply to Government-owned water powers.

There has been some talk here about leasing surplus power. That is not the idea of the bill—leasing surplus hydroelectric power under the Shields bill. It is leasing all of the water power not needed for navigation. Now, what does that mean? What water is needed for navigation that is consumed by the operation of a water-power plant?

Why, the only water that is needed for navigation is the water that flows down the stream, and the water power merely diverts it through the water wheel and back into the stream, so that, in fact, the surplus water power not needed for navigation is practically all the water that runs down the stream. In fact, it means the entire water power. The only waste of water not needed in a water power on a navigable river is the amount of water which is needed to fill the locks. That goes neither through the wheel nor down over the dam, but the locks are filled when the boats come down; and if there is sufficient water to fill the locks and pass the boats down or up, as the case may be, that is all the water that the Government, under this clause, would retain the right to have or to control. So that the primary object of the Shields bill is not to lease surplus hydroelectric power but it is to lease the water power not needed for navigation.

What does that mean? That means the dam itself; because if we are going to lease the water power, the lessee of that water power has to connect up his hydroelectric plant with the very dam itself, with the physical structure, and merge and combine his property with the property of the Government.

So, getting back to the primary idea that I tried to elucidate, it is that under the Shields bill the Government will lease its entire water power, will have to surrender the physical property itself, the dam, permit it to be combined with the property of the lessee, and can not get it back again unless it pays the same compensation that is required in the case of a privately owned hydroelectric power.

This specifically says that section 6 shall apply. Turning to section 6, it provides:

> That at any time after the expiration of said 50 years—

And that applies to Government-owned dams—

> the United States may terminate the rights hereunder granted upon the giving to the grantee, either before or after the lapse of the period of the permit, of two years' notice in writing of such termination, and upon the taking over by the United States of all the property of the grantee which constitutes part of the plant of the grantee and dependent in whole or in part upon it for its usefulness and acquired, necessary, appurtenant, valuable or serviceable in the distribution of water, or in the generation, transmission, and distribution of power, and upon paying to the grantee the fair value of said property, together with the cost to the grantee of the lock or locks, or other aids to navigation, and all other capital expenditures, required by the United States, and assuming all contracts—

And so forth.

The United States has reserved the power to terminate that permit; but if it does not terminate that permit, they retain the property and possession of the dam itself—the physical property—in perpetuity. So that when this water power once passes out of our hands we can not recapture it, under the terms of the Shields bill, except by taking over the property that is dependent upon or useful for the transmission of that power.

Under that bill, if any Government-owned dams have already been built—and we have been investing, as I have been told and understand, millions of dollars in some dams and water powers in the country—if we do that, we can not get it back. We part with possession of it in perpetuity unless we buy up all the property that comes within the designation of this clause. Now, if we put anybody in possession—private citizens or public-utility or private corporations—and they go into the business of selling power and transmitting power, and their lines ramify all over the United States, under my understanding of this section we would have to buy up the whole transmission system, lines and all, before we could get back our property. And what would we get in return for that? Nothing, except a sufficient amount of money to keep the dams in repair—our dams, the dams of the United States—and certain improvements of the stream, waterway improvements.

That is the idea of the Shields bill. I only injected this provision of that bill into this particular discussion for the reason that it is proposed to strike out of this amendment of the Senator from South Carolina something that will put this proposition squarely within the provisions of the Shields bill. When we do that we are simply investing $15,000,000, or whatever it costs, in order to put it into the possession of somebody else to use it forever under these terms, unless we want to use it in times of war, and then we can only do it upon paying the price laid down in this bill.

I say that if we build a dam, and want to use that dam for something that is useful in promoting the interests of the United States, I believe in keeping control of that dam and keeping control of the power. If hydroelectric power is developed by the Government of the United States, I have not any objection to the sale of power at so much a kilowatt. What I am objecting to is, not that they shall sell surplus power but that they shall turn over the object itself that they put in their money for and put it into private hands under such terms and conditions that we can not get our own property back without paying exorbitant prices. In other words, we use public money for private enterprises.

As I said before, this is not an academic discussion. It has been frankly stated here upon the floor by a number of Senators that we will not use this power except in time of war, because we want a power big enough to manufacture, I think they said, 160,000 tons of nitrates a year for a couple of years; and then in time of peace they say it is socialistic for us to use it for the purposes for which it was intended under this amendment. So it clearly indicates that unless we have a war immediately, we will simply put our money into this proposition to turn it over

immediately into the hands of somebody to run his private business.

They may say that this concern will do thus or so; that they will make nitrates. Under the provisions of the Shields bill this dam, if it were constructed by the United States, could be turned over to a private individual for absolutely his private use, with no strings at all to it, without any provision that he would have to use it for a certain purpose, without any provision the we could buy nitrates of him for a certain price. We would simply be turning over to him not only the land on which to build the dam and the water to use for this purpose, but a monopoly of the air, and furnish the money besides. It may be said that such strange things would not be done; but I pointed out here a little while ago what was done in the case of an institution in our State, whereby the United States now pays for the upkeep of the dam and gives private individuals not only their power free but the right to deprive others of their power.

There have been some questions asked here about whether this purpose of manufacturing fertilizer comes properly within a governmental function. The Senator from Utah asked a number of questions in regard to whether a plant for the purpose of making uniforms for the United States Army could be turned into a clothing factory in time of peace. I think that is entirely a different question. We have not gone into the uniform business yet, but we have gone into the business of taking care of agriculture; and, in fact, we have gone into the business of taking care of agriculture in a way very similar to that which is proposed here now. In States where some of the Senators appear to think it is populistic to do this now, we have irrigation dams, one of which, I understand, has cost $10,000,000 or $15,000,000—the Roosevelt Dam—and the Shoshone Dam has been built, and I understand that down in Texas a dam is being built into which the United States is putting millions of dollars. Now, what are these dams for? We understand that the primary object, whether it is so stated in the act or not, was for purposes of irrigation. They are irrigation dams. Irrigation dams for what? Why, for the purpose of furnishing water to make the lands fertile, to make the lands productive, to make the lands valuable.

It may be said that this is done on lands owned by the United States or for the purpose of serving or fertilizing lands owned by the United States. But these lands have all come from the United States. All the grantees have received their lands from the United States, and we have the same right to fertilize lands of the United States whether they are in present possession or whether they are in past possession.

If the United States has a right to construct a $15,000,000 dam for the purposes of irrigation to make lands productive, why have not we a right to build a dam and use the same water or lease the water held by the same dam further to fertilize and to make more productive the lands that the irrigation dam is going to serve? I can see no difference in principle or in the object the end sought. One does it by water and the other does it by air. One takes the water and runs it over the land and the other fixes the nitrogen from the atmosphere and applies it to the land—both by the same agency, both for the same governmental purpose, and that is to fertilize the land.

Not only that, but, as I said before, we have a Department of Agriculture that is engaged in business for this very purpose. Its existence is for this very purpose. Moneys are being appropriated, and we are appropriating money for other objects along the same line. There may be a little difference in practice, but at least they are the same in principle. Therefore there are abundant precedents not only to warrant but to justify the expenditure of money in this way.

Of course, as the Senator from Utah said, it might be rather alarming if the farmers got their nitrogen cheap, for, as he said, they constitute about one-third of our voters, and then there would be a clamor for the Government manufacture of all of the nitrogen or all of the fertilizer that they might need. Well, it would seem to me that while it is not necessary to pass upon what we ought to do in that instance, yet if the manufacture of fertilizers by the United States should become so popular after a trial in a small way like this and should prove so satisfactory that one-third of the industrial population of our country would clamor for it, I would consider that a vindication of the proposition, and I would think it would be worth very serious consideration as to whether or not under those circumstances the United States would be justified in providing one-third of our population with something that they can get better from the Government than they can get it from anybody else.

Not only that, but under the circumstances why should not the Government furnish it to them? Nobody else does it. As has been shown upon the floor, there is no other industry in the United States that is furnishing the people with these nitrates now. There is not one institution in the United States, as I understand, that is engaged now in the manufacture of nitrates for the purpose of fertilization. Here we need fertilizers. The Senators who have talked upon this subject have shown what fertilization means to the agricultural interests of this country. So I ask, when a great agricultural country like this has not in operation any plant for the purpose of providing this important and indispensable element to the agricultural interests, what is more proper than for the Government of the United States to go into this business and give them something that they are clamoring for, and that they ought to have, and that they must have if we are going to compete with other countries in our agricultural products?

So, from any point of view, I can not understand why something that is so obviously calculated for the general welfare and the public safety should not be properly linked with this measure, and one important link be kept inseparable in time of war, to have in our possession and immediate control something to manufacture our explosives and in time of peace to use the same instruments almost in the same identical manner for the purpose of promoting the interests of the country during times of peace.

So it would seem to me that from any point of view this amendment ought to be retained in the bill and passed as it has been proposed.

Mr. SUTHERLAND. Mr. President, I wish to say a word about this amendment.

The remarkable thing about it is that it comes from the Agricultural Committee. It never has received a moment's consideration at the hands of the Military Committee, which is charged with the responsibility of framing a bill for the public defense. So far as I know, no member of the Military Committee has spoken a word in favor of this proposition. I do not know what the opinion of the chairman of the Military Committee may be about it. I would very much like to know whether or not he has given it consideration, whether he believes it necessary, whether the subject matter has been investigated in such a way that it has been determined by that committee that an emergency exists which calls for this extraordinary legislation. I am not asking him to answer now, but I hope he will answer before this debate concludes.

Mr. President, I am not going to discuss the constitutional phase of this bill, although I believe the constitutionality of it is, at least, open to very grave doubt. But I realize from past experience in this body that when Senators have made up their minds to pass a certain piece of legislation constitutional arguments fall upon deaf ears.

However, I do call attention to the fact that all of this talk about it being constitutional to dispose of a surplus of any commodity that has been acquired under a constitutional power is quite aside from the question. I have no doubt that when the Government of the United States, in the legitimate exercise of a constitutional power, has acquired a certain commodity and it is found afterwards that it or some portion of it is not needed, it may, of course, be disposed of. But that is not what is contemplated here.

This bill contemplates from the beginning, as its principal purpose, that the surplus shall exist. It is not expected, it is not suggested, that this surplus shall arise fortuitously hereafter—accidentally hereafter—but it is contemplated in the bill itself that the Government shall manufacture the surplus.

The bill contemplates that we shall proceed to manufacture nitrates for two distinct purposes—first, in order to furnish powder to be used by the Government of the United States, which of course is a legitimate and a constitutional power; and, in addition to that, that we shall from the very beginning undertake to manufacture nitrates to sell to the farmers of the country.

Mr. GALLINGER. And continue to do it.

Mr. SUTHERLAND. And continue to do it. Indeed, that is the primary and principal purpose of the bill, as the Senator from South Carolina [Mr. SMITH] very frankly conceded.

Now, that is all I care to say with reference to that matter, except to suggest that the argument to which we have just listened from the Senator from Wisconsin [Mr. HUSTING], if it means anything at all, means that we may engage in any business or the manufacture of anything which may be for the benefit of the farmers of the country or that we may think is for the benefit of the farmers of the country. If we can engage in the business of manufacturing fertilizers to sell to the farmers of the country, then upon exactly the same sort of reasoning we can engage in the business of manufacturing farm implements for the farmers of the country.

Mr. REED. Mr. President——

Mr. SUTHERLAND. I yield to the Senator for a question. I am not permitted to yield for anything else.

Mr. REED. I intend only to ask a question. I simply wanted to get the Senator's view. Does the Senator see any distinction between erecting a factory manufacturing a product for the benefit of agriculture and buying seeds and raising seeds and distributing those seeds for the benefit of agriculture?

Mr. SUTHERLAND. Not one bit.

Mr. KENYON. Mr. President——

Mr. SUTHERLAND. I will yield in just a moment. In doing that, Mr. President, I have always believed we were doing something that we have not any right to do, but it is something that has been acquiesced in. It never has been presented, and it can not in the nature of things be presented, in any justiciable form so that the courts can pass upon it. I yield to the Senator from Iowa.

Mr. KENYON. Does not the Senator believe that in fairness if we continue to send out these seeds we ought to send fertilizers with them? [Laughter.]

Mr. SUTHERLAND. Perhaps so. I am not defending the seed proposition. I repeat, I think we have not any business to do that, and I think we have not any business to do this. I want to see this Government operated as a government. I do not want to see it degenerate into a business concern. I do not think it was in the contemplation of the framers of it that it was to go into business either to monopolize it or in competition with its own citizens. It is utterly unfair to do it.

What is the situation of the citizen who is compelled to operate business in competition with the Government of the United States? The Government can conduct its business, and very likely will conduct it, at a loss, and that loss it can recoup by taxation. The citizen who competes with the Government has no such power to recoup his losses. When he loses in business he faces bankruptcy; and not only is he compelled to do that, but when the Government competes with him he is compelled, as one of the citizens of the United States, to contribute his part of the taxes toward his own undoing.

If we go into the business of manufacturing nitrates for fertilizers, it will of itself constitute a discouragement to private capital. It will have a tendency to if will not entirely succeed in keeping private capital out of the business.

Mr. President, this is attempted to be justified upon the ground that it is for the purpose of meeting some future emergency; that if war shall be made upon this country a condition may exist which will require the Government of the United States to instantly begin the manufacture of this article in order that it may defend itself.

Mr. President, that is exactly what has happened in Europe during the present war, but they met the emergency by building their manufacturing establishments and operating them by steam. That, in case the emergency should arise, we could do. We all hope it will not arise. The chances greatly preponderate that it will not arise; but if it does, we can meet the emergency precisely as those countries across the sea have met it, and, in my judgment, it is far better to do that than to embark upon a socialistic experiment of this sort.

Now, I predict one thing about this measure if it becomes a law. If it becomes a law this manufacturing establishment will probably be built in Alabama. I have not any objection to that, if Alabama is the proper place for it. I am not speaking of it for the purpose of making an objection, but it will probably be erected there. Now, mind you, the prime purpose of this legislation is to make fertilizer for the farmer. The farmer will believe that is a governmental function. The Senator from Colorado [Mr. SHAFROTH] conceded, when I asked him the question, that the investment of $15,000,000 or double $15,000,000 would not produce enough of that material to furnish fertilizers for all the farmers of the United States. It will furnish the material for only a small proportion of the farmers, perhaps only for the farmers of the South or in the immediate neighborhood of the locality of the establishment. Does anybody believe that the farmers in the Middle West, the farmers of the far West, or the farmers of New England will be content to have an enterprise of this kind running in the South, manufacturing cheap fertilizers for the South which they can not obtain without paying a substantial addition to the cost which is paid in the South? The cost of transporting articles of this kind to the far West would be considerable, and so at once the demand will go up that additional plants shall be established in various parts of the country. I have no doubt in my own mind, if we embark upon this experiment at all it will mean the expenditure before we get through with it, and that within a very few years, of hundreds of millions of dollars.

It seems to me that we ought not to embark in that kind of a proposition without at least giving it more consideration than can be given to a thing of this kind upon the floor of the Senate. We do not know what is going to be the condition——

Mr. SHAFROTH. Mr. President——

Mr. SUTHERLAND. I will yield in just a moment. We do not know what is going to be the condition in the future with reference to this commodity. It may be that within two years, three years, or five years methods of production will have been developed and discovered by which this article can be manufactured at half the cost or one-tenth the present cost. We are only in the early stages of it. We have been manufacturing it, I understand, for only a very few years, yet in that time it has been greatly cheapened. Why not let private capital embark in this business? Why not leave the door open to private capital instead of closing it by this sort of legislation, and let the matter develop as other commercial and manufacturing matters develop? I yield to the Senator from Colorado.

Mr. SHAFROTH. Does not the Senator recognize, though, that if this plant is erected and furnishes all the nitric acid that is needed by the Government, and is of sufficient capacity to furnish it in case of war, then any other plant that might be attempted or bills introduced for the purpose might meet the objection he raises with force, because in that event it would not be a governmental function, but would simply be a commercial enterprise? But why does the Senator undertake to say that in this instance, where it is imperative, the Government should not have this means of defense? Why should he say the main object is the other instead of a governmental function?

Mr. SUTHERLAND. I say it because the Senator from South Carolina conceded it, and he is the author of the bill and chairman of the committee which reported the bill.

Mr. SHAFROTH. I will state to the Senator that I stated to the contrary, in my judgment, and I think I am entitled to my view just as well as the Senator from South Carolina is entitled to his view.

Mr. SUTHERLAND. I think the bill on the face of it shows that that is the principal object.

Mr. SMITH of South Carolina. Mr. President——

Mr. SUTHERLAND. I will yield in a moment. The fact that it was referred to the Agricultural Committee shows it. Does the Senator from Colorado think that if this was purely a military proposition it would have been referred to the Committee on Agriculture? You might as well refer a military question to the Committee on Fisheries.

Mr. SHAFROTH. Nevertheless, no matter to what committee it was referred, it recites in the body of the bill itself, as reported by the Agricultural Committee, that it is for the purpose of supplying this necessary ingredient in the manufacture of powder and explosives, which of itself is a matter of defense and preparedness against attack.

Mr. SUTHERLAND. The purpose of that is perfectly evident. It is a subterfuge. It is simply a pretext to attempt to tie it to some provision of the Constitution, when, as a matter of fact, the principal purpose of it is to put the Government into a business which it has not any right to engage in.

Mr. CHAMBERLAIN. Mr. President, I shall detain the Senate only a moment. The Senator from Utah [Mr. SUTHERLAND] desired to know the attitude of the chairman of the Military Affairs Committee with respect to this proposed amendment. I explained a few days ago that inasmuch as the bill which was originally introduced was referred to the Agricultural Committee and investigation was had by that committee covering the whole subject, the Military Affairs Committee did not consider it at all. The first suggestion that committee had of the pendency of any such legislation was the amendment offered by the Senator from Alabama [Mr. UNDERWOOD]. The investigation in the Agricultural Committee at that time had been about concluded, and therefore our committee did not feel that it would be justified in going into an investigation of a subject that had already occupied the attention of the Agricultural Committee for some days or possibly weeks.

Personally, Mr. President, I do not think that this measure ought to be attached to a bill which has for its purpose the reorganization of the Army. I concede the necessity for the manufacture of nitrates, for the fixation of atmospheric nitrogen for the manufacture of explosives, but the amendment proposes to appropriate a large sum of money that ought not to be saddled upon the Army proper. The matter was submitted to the committee and the committee did not see fit to act upon it. There was a division of sentiment with regard to the matter. It had not been investigated and the committee made no report upon either the Underwood amendment or the Smith bill.

So I think I am safe in speaking for the committee, although no action was had upon it, and speaking for the committee, I do not think the amendment ought to be attached to the pending measure.

Mr. SMITH of South Carolina. Mr. President, in reply to what the Senator from Utah [Mr. SUTHERLAND] said about this being a substitute, I introduced the bill because the Government had no provision for supplying itself, with an absolute necessity for munitions of war. Everything in our entire process for the defense of this country rests upon these ingredients, and I also saw that the very chemicals that were to be manufactured would be useful in agriculture. I have no apology to make, but I stand here to plead that wherever it can be done those upon whom the prosperity of this country rests shall be given the benefit of whatever we may legitimately do here.

I knew that in the manufacture of this process chemicals are used which are so costly in their nature that private individuals would have to combine their capital, and in the very nature of things it would become a monopoly, while the rank and file of the farmers can not combine, and yet we are all dependent upon them.

I thought if I could combine the two things, and there would be a benefit by enriching the soil upon which we are all dependent, it was a happy incident, and that every Senator on this floor ought to be happy to avail himself of the opportunity to help those who stand so much in need of it.

I do not think it is very becoming to us, under the obligation we are to this class of people, to quibble as to whether or not in the clear discharge of a governmental function in providing for the defense of the country there should be something which would help those who are supporting the life of the country.

It is for that reason that I introduced the bill and referred it to the Agricultural Committee. There is no man here who questions that we need a nitrate factory for the purposes of war. There is no one who questions the fact that we are standing here absolutely dependent upon Chile. No one questions the fact that we may be in war at any time. No one could predict the European war. For that reason we ought to agree, and I take it we are all agreed, that it is a reflection on the Government of the United States that we are dependent upon a strip of land on the coast of Chile for our supply of munitions of war when our own chemists come to us and tell us we have a process, which has passed the empirical or experimental stage, by which you can take the air and your wonderful water power and your chemical genius here and produce it as cheaply as or cheaper than in any other country.

In the process you necessarily will be manufacturing the very exact ingredient that the agriculturists of this country are so sorely in need of. I have no apologies to make for having carried to the committee that information, and I have no apologies to make for the bill as it now stands. If I am to be dubbed a Socialist or a Populist because I stand here and attempt to help the farmers of this country, I have no apology to make.

The Senator from Utah, I believe, from the position he has assumed in the Senate, would rather run a straight road down a constitutional question than to help the agriculturists of the country by some liberal interpretation of it which runs counter to his interpretation when we are dependent upon the depleted fields of the country.

I want to state another thing. When the hog cholera struck this country, being purely agricultural, and millions of hogs were being swept out, jeopardizing the food supply, a proposition was made here to appropriate money for the Government to manufacture hog-cholera serum in order to eradicate that disease. We have here right now a proposition for $500,000 to eradicate the citrus-fruit disease. For what purpose? Because it is jeopardizing the supply of citrus fruits. We have here a proposition for the Government to go into a process which will result in a distribution among farmers chiefly to do what? To eradicate that fatal disease in the land, the depletion of nitrates. If we have the power to do one, we have the power to do the other. It is not a question with us here as to whether or not this is going to be a constitutional provision. It is settled that the Government has the power to enter into the manufacture of munitions of war and to sell the surplus that results; and if it is not enough power for that, it at least gives us power to know the cost of production and to defend the agricultural interests of this country from the extortion of private capital.

Mr. President, I have offered this amendment to the bill because I do believe, and I think every Senator here will agree, that you may have your Army, you may have your greatest improved guns, you may have them at the highest standard of efficiency, and without an adequate supply of the material that is used in modern warfare, known as nitric acid, your Army is useless.

So far as I am concerned, if the Senate sees fit to amend the amendment, it may do it; but the bill in its original form, in my opinion, should be passed without amendment by this body.

Mr. SIMMONS. Mr. President, I do not rise for the purpose of discussing the bill but to address myself for a few minutes to the amendment which I gave notice I would offer to the amendment of the Senator from South Carolina. That amendment, I want it distinctly understood, was not drawn by me, nor is it proposed by me in any spirit of antagonism to the Senator from South Carolina. I think the Senator from South Carolina understands that I am in sympathy with the purposes of his amendment. I appreciate, as he does, the necessity of the Government providing some way to supply itself with nitric acid, and he recognizes, as I do, that the farmers are in a very embarrassing situation with reference to this necessary element in the fertilization of the soil. I did not prepare the amendment until I had conferred with the Senator from South Carolina, and I probably would not have introduced it if I had thought he was in any way antagonistic to it.

Mr. President, what I want is that the Government shall be independent as to this necessary ingredient, the manufacture of powder and explosives, and that the farmer shall not be wholly dependent for his supply of nitrogen on the Chilean nitrate mines.

Of course, I understand that a plant which would cost $15,000,000 would not, even if devoted entirely to the manufacture of nitrogen for fertilizers, supply the demand of the American farmers, but the supply would afford some relief to the farmers, and I want them to have it.

I do not believe, Mr. President, under the provisions of this bill the Government would manufacture more of this commodity than is needed for supplying military and naval needs. There is nothing in the bill that provides that the Government shall manufacture it for any other purpose. The amendment simply provides that power shall be generated for the production of nitrates and other products needed for munitions of war and useful in the manufacture of fertilizers. When it comes to the question of the operation of the plant and the disposition of the product it simply provides that the product of such plant shall be used for military and naval purposes, and that any surplus not so required may be sold.

I apprehend, unless there is provision to the effect that when it is not necessary to operate the plant for supplying the naval and military requirements it shall be operated for manufacturing fertilizers, we will find the Government would simply use it for the making of powder and explosives when needed.

My amendment does not require, but simply authorizes, the Government to lease the plant when it is not needed for governmental purposes; not to lease it with a right on the part of the lessee to use the plant for any purpose he may see fit to use it, but to lease it only on such terms and conditions and for such uses as may be prescribed by the Secretary of War. It also provides that the lease shall contain a provision for its termination whenever the Government shall again need the plant for the purpose of making material out of which powder and other explosives are manufactured.

As I repeat, I would probably not have offered this amendment if I had not thought it was satisfactory to the Senator from South Carolina, and I offered it because, hoping to strengthen his amendment and to more certainly accomplish its purpose, I believe, as a matter of public policy, the Government should provide against dependence upon the foreign supply of nitric acid, but I believe it would be better for the Government, if it could make suitable arrangements, when not needed to make powder and explosives, to lease the plant, with the express condition and requirement that it should be operated solely and exclusively for the purpose of manufacturing nitric acid for private use. I am as heartily in favor, as is any Senator here, of helping the farmers to get this necessary element for the fertilization of their lands, and I want to see that thing happen which will most certainly give them some part of the needed supply, through the operation of the plant that it is proposed to authorize by the amendment of the Senator from South Carolina. I fear they will not get it under this bill, while I am certain they would get it if my amendment were adopted. My only purpose in offering the amendment is to meet the situation I have suggested.

I understand the Senator from Alabama [Mr. UNDERWOOD] has drafted an amendment, which incorporates the amendment which I have offered along with some other things that meet my approval; and if the Senator from Alabama offers that amendment I shall not offer my amendment.

Mr. REED. Mr. President, I rise to express the hope that the discussion upon this amendment may be brought to a speedy termination. We have entered into a unanimous-consent agreement by which general debate will be cut off at 12 o'clock noon

on the day after to-morrow. Therefore, there remains only a few hours for general debate. There are a number of important amendments that ought not to be crowded into the period of time which is covered by the 10-minute rule. This question has been very thoroughly discussed. There are some observations I myself should like to make on it, particularly in reply to the claim that the provision is unconstitutional. I do not agree with that doctrine; but I do not intend to take the time of the Senate, because I think we have discussed this matter until every Member of the Senate understands it. I therefore hope we can now get a vote on the amendment of the Senator from South Carolina.

Mr. ROBINSON. Mr. President, when the Senator from Missouri [Mr. REED] announces himself as ready to conclude debate——

Mr. REED. I did not mean to shut any other Senator out.

Mr. ROBINSON. It is time to vote. His suggestion is always very forceful with me, as it is no doubt with all other Senators here, and I accept it, with the modification that I may be permitted to consume just a few minutes, not in discussing this amendment in detail but in giving some of the reasons why I shall vote for it.

It has been demonstrated clearly during the discussion of this amendment that our supply of saltpeter comes almost exclusively from Chile. In case of an interruption in our commerce with that country, which would be certain to occur in the event of war between this Nation and a great military and naval power, our supply would be entirely discontinued. Whatever might be the size of our Army and our Navy, they would both be ineffective and unavailing without we could procure this necessary constituent of high explosives, which are indispensable to the active operations of both the Army and the Navy. To state the matter is to argue it. It seems absurd to greatly increase the Army or the Navy, either, and at the same time permit conditions to continue which make doubtful our ability to use them in the event this country should be attacked.

The amendment authorizes the selection and reservation of water-power sites or navigable streams and the condemnation of private property necessary in the construction and operation of Government plants necessary and convenient for the generation of electrical or other power for the production of nitrates or other products needed for the manufacture of munitions of war and useful in the manufacture of fertilizers.

The amendment further provides that the products of such plants shall be used by the Secretary of War and the Secretary of the Navy for military and naval purposes, and any surplus not so required is to be disposed of by the Secretary of Agriculture under such rules and regulations as he may prescribe.

If we now had a domestic source from which might be obtained necessary nitrates in the manufacture of munitions of war, the necessity for this legislation might not be urgent; but it is admitted that there are now practically no plants in the United States engaged in the production of this indispensable element. It would therefore seem rather more important as an emergency measure than increasing the size of our present military organizations, for the inability to make or obtain munitions of war discloses glaring inefficiency in our defense system.

It is regrettable that the Committee on Military Affairs has not considered and reported this provision; but the measure has been carefully worked out by a great committee of the Senate, which has procured a large amount of information during the course of its consideration of the subject.

It is not always possible or practicable here to consider legislation under ideal conditions, or even under satisfactory circumstances, and one is often compelled to accept measures embracing principles he approves, even though the circumstances under which the subject is presented and surrounding the discussion and consideration of it are not calculated to develop a perfect measure.

The incidental benefits to agriculture resulting from the production of fertilizer, as contemplated by this amendment, can not in my judgment form the basis of a valid objection to the legislation. It is not only imperative that this Government provide an abundant and unfailing source from which to acquire nitric acid in order that its existing military organization may be efficient, but it is also true that if, in the accomplishment of this primary purpose, we can also promote the fundamental industry of agriculture and increase the prosperity of the millions who thrive by it, we should for these reasons be spurred on to enact the legislation.

The suggestion has been made and amendments have been discussed, but have not yet been offered in the Senate, contemplating the leasing to private individuals of the plant provided for in this amendment to be operated during periods of peace. In my judgment the Senator from Washington [Mr. JONES] suggested a very glaring vice in those amendments, and that is, restating his suggestion, that it is quite necessary that, if the Government is to have a plant capable of producing the elements which enter into the manufacture of munitions of war when we need them, we must, in advance of that time, organize a force which is capable of doing the work that will be required when the emergency arises. It would be futile, in my judgment, to expend millions of dollars for the construction of a plant, deliver it into the possession and control of individuals, and wait until the hour of peril arrives before taking control of it and beginning the operations which are necessary for the production of nitric acid; in other words, in order to make this a defense measure the Government must retain control of the plant and maintain an organization for its operation. It could not be an effective defense measure if the Government must wait until after war begins before it organizes the force to operate the plan.

For more than a half century this Government has recognized by legislation the necessity for obtaining and conserving the supplies of fertilizer. Unless this policy is vigorously pursued, the momentum which agriculture in the United States has acquired will be retarded, if not entirely stopped. In 1856 the Congress passed a law, as pointed out by the Senator from South Carolina this morning, authorizing citizens to occupy uninhabited islands rich in guano, and upon the condition that the citizens so occupying the islands should sell the fertilizer at not exceeding $8 per ton, this Government guaranteed protection to such citizens in the enjoyment of their possession of such islands, even to the extent of using the Army and Navy of the United States. So this can not be said to be a new proposition. The primary idea of the act of 1856 is not different from that which enters into the amendment offered by the Senator from South Carolina, and, in my judgment, it is not inconsistent with, and it can in no sense be regarded as a violation of the fundamental principles of this Government, to authorize the Government itself, while engaged in the necessary act of providing itself with munitions of war, to also afford the people of the country who are engaged in agriculture the opportunity to acquire the surplus product in the form of the fertilizer necessary for enriching their soil.

This, Mr. President, is all that I care now to say concerning the subject.

Mr. WALSH. Mr. President, I may be able to quiet some apprehensions which have been expressed during the course of this debate and to dispel some illusions that are harbored by submitting some information concerning the power sites which will be available to the Government for utilization in case the amendment offered by the Senator from South Carolina shall receive the sanction of Congress.

It was stated before the Committee on Agriculture, when considering the bill introduced by the Senator from South Carolina, and it has been repeatedly stated upon the floor, that, inasmuch as at least 100,000 horsepower are necessary in order to conduct the business of the fixation of atmospheric nitrogen upon an economical basis, there are but two power sites available, namely, the Muscle Shoals site on the Tennessee River and the Priest Rapids site on the Columbia River. Then, it was added that the northwestern power sites are to be entirely ignored because the freight rates are so high as to forbid their utilization, and therefore the Senator from Iowa has said to the Senate that the bill offered by the Senator from South Carolina as an amendment to the pending measure might as well be declared to be a bill for the establishment of a Government plant at the Muscle Shoals site on the Tennessee River, and the Senator from Utah has just expressed himself as entertaining the same view.

I have before me, Mr. President, a letter sent me on day before yesterday by the Director of the Geological Survey which conveys the information that within the State for which I am permitted to speak upon the floor of the Senate there are at least three power sites capable of producing all the power that is requisite for the operation of a plant such as the amendment contemplates, and that in the neighboring State of Idaho is another site having all the capacity that is requisite.

Mr. President, at one place on the Pend d'Oreille or Flathead River, which empties the Flathead Lake in the State of Montana, that lake being the largest body of fresh water between the Mississippi River and the Pacific Ocean, energy can be developed to the amount of 150,000 horsepower; and I would not have you understand that that is the amount that can be de-

veloped during periods of high water only. With respect to that matter, I read from the letter of the director, as follows:

In response to your telephone request of April 7, 1916, for data regarding undeveloped water powers in Montana:

It is understood that you desire particularly a list of the larger and most feasible individual power sites and their capacities. The following brief list has been very hastily prepared, and is not as complete as could be desired. The figures of capacities are, in some cases, rather rough estimates. All figures are for the continuous horsepower possible, the actual water-wheel capacity which may reasonably be installed at the sites being from one and one-half to three times the figures given, depending on the load factor, amount of auxiliary power, and various other conditions.

I ask, Mr. President, that the entire letter be printed in the RECORD as part of my remarks.

The VICE PRESIDENT. In the absence of objection, permission is granted.

The letter referred to is as follows:

DEPARTMENT OF THE INTERIOR,
UNITED STATES GEOLOGICAL SURVEY,
Washington, April 8, 1916.

Hon. THOMAS J. WALSH,
United States Senate.

MY DEAR SENATOR WALSH: In response to your telephone request of April 7, 1916, for data regarding undeveloped water powers in Montana:

It is understood that you desire particularly a list of the larger and most feasible individual power sites and their capacities. The following brief list has been very hastily prepared and is not as complete as could be desired. The figures of capacities are in some cases rather rough estimates. All figures are for the continuous horsepower possible, the actual water-wheel capacity which may reasonably be installed at the sites being from one and one-half to three times the figures given, depending on the load factor, amount of auxiliary power, and various other conditions. The capacities of the sites on Flathead and Clark Fork Rivers are the capacities estimated with Flathead Lake fully utilized for storage purposes.

Undeveloped water-power sites in Montana.

Stream.	Locality.	Capacity in horsepower.
Madison River	T. 3 S., R. 1 E	12,000
Do	Ts. 3 and 4 S., R. 1 E	26,000
Do.[1]		20,000
Do.[1]		20,000
Do.[1]		20,000
West Gallatin River[2]		20,000
Do.[2]		20,000
Missouri River	T. 14 N., R. 3 W. (Holter site).	35,000
Do	T. 21 N., R. 5 E	20,000
Bighorn River	At mouth Bighorn Canyon	33,000
Do	Upper half of Bighorn Canyon.	30,000
Kootenai River	Kootenai Falls	16,000
Clark Fork	Rock Island Rapids, T. 26 N., R. 32 W.	90,000
Do	Cabinet Gorge (part in Idaho).	90,000
Flathead River	T. 22 N., R. 21 W., sec. 12	150,000
Do	T. 22 N., R. 21 W., sec. 22	38,000
Do	T. 21 N., R. 22 W., sec. 1	19,000
Do	T. 19 N., R. 22 W., sec. 1	70,000
Do	T. 19 N., R. 21 W., sec. 31	15,000

[1] Assuming upper Madison River will be developed in 3 units.
[2] Assuming development in 2 units.

Yours, very truly,

PHILIP S. SMITH,
Acting Director.

Mr. WALSH. In explanation of the letter I desire to add that on the Flathead River, within a distance of 7 miles of the place where energy can be developed to the extent of 150,000 horsepower, energy can be developed by successive dams aggregating 292,000 horsepower, and these can be easily connected by a transmission line; so that there is available there a site that will produce not only 100,000 horsepower necessary for the operation of a plant such as is contemplated, but will produce additional power to be disposed of for other purposes almost double that amount.

Mr. President, it is not necessary to have a single site capable of a development of a hundred thousand horsepower; you can develop a half dozen sites and connect them with a transmission line. That is a very simple problem for an engineer. In that way a half dozen sites upon the Gallatin and the Madison Rivers can be connected at which can be produced 118,000 horsepower. Another site in the State of Montana at one single place will develop 90,000 horsepower; and then across the line in the State of Idaho is another site on the same river which can be connected with a transmission line, not to exceed 10 miles in length, at which 90,000 more horsepower can be developed. So, there will be no difficulty encountered at all in finding available sites.

Mr. MARTINE of New Jersey. Mr. President, I want to ask whether the same difficulty to which reference has been made as to transportation will not present itself in the case of the sites the Senator has suggested?

Mr. WALSH. I am glad the Senator has asked about that, because I was going to pass to that very point. It has been urged that these sites are so remote from the regions in which the nitric acid would have to be used, at least for agricultural purposes, that they would be unavailable on account of excessive freight rates. I was informed that there was nothing at all to that contention; but, in order that I might have the matter in some shape to submit to the Senate, I addressed a telegram to Mr. Earling, president of the Chicago, Milwaukee & St. Paul Railroad, asking what the fact about that matter is, and I have from him the following telegram:

[Telegram.]

CHICAGO, *April 8.*

Hon. T. J. WALSH,
United States Senate, Washington:

Your wire this date. I know of only one specific instance where it was proposed to develop hydroelectric power for the purpose of manufacturing nitric acid. That was in the far West, and the rates that were quoted to the promoters by this company were entirely satisfactory. Development of this project still under consideration, with favorable prospects.

So that the difficulty of freight rate seems to be entirely obviated; and I may say, in this connection, that I have personal information about negotiations which have been going on for the past two years looking to the establishment in that region of two plants for the fixation of atmospheric nitrogen.

Mr. SMITH of Georgia. Will the Senator allow me to interrupt him?

Mr. WALSH. I will yield in a moment. And to-day I learn of a third enterprise that is under consideration for the utilization of a great power site near the line between the States of Nevada and Arizona. I now yield to the Senator from Georgia.

Mr. SMITH of Georgia. I wish to ask the Senator if, under existing laws, it is practicable for companies desiring to develop such plants to obtain the necessary concessions for their development, or is additional legislation required?

Mr. WALSH. I am glad the Senator asks that question, and I am obliged to state to him that it is not practicable; that all of these sites are upon the public domain; and I seize this opportunity to say that the bill which would make available to the country these power sites for the development of power for the operation of plants for the fixation of atmospheric nitrogen and for other industrial purposes has had some consideration here in the Senate, but has unfortunately been, in a way, pigeonholed. I am exceedingly glad that the discussion of this bill has served to bring home to the minds of Senators the enormous importance of that measure and the necessity of speedy action with reference to it; that is to say, the necessity for doing something to make available these power sites, whether or not that something conforms with the ideas expressed in the bill referred to.

Mr. SMITH of Arizona. Mr. President, will the Senator permit an interruption?

Mr. WALSH. Yes.

Mr. SMITH of Arizona. Preliminary to the question which I wish to ask I will state that the difference between the Senator and a good many other Senators from the West is as to whether or not the Government should be given control of these power sites, many of us believing that it would be better in States where nonnavigable streams are found to permit the States to get the revenue instead of the Federal Government, and to permit the States to make the regulations. If that were permitted by the Government, if the States were permitted to use these sites and to retain some power over them, which it is proposed to lodge in the Federal Government by the bill to which the Senator has referred, would not the bill pass?

Mr. WALSH. The Senate understands that the Senator from Arizona and myself do not agree as to the principles that should control in that bill. All I ask about the matter is that the bill have the consideration of the Senate. Let the Senator from Arizona, if he does not agree with the principles on which the bill is based, propose his amendment, let him argue it to the Senate as powerfully as he can—and we know how effective he is in persuasive argument—let us submit the two ideas to the Senate for determination, and let it adopt that one which conforms to its judgment as to what is wise in the premises and pass the bill in some shape.

Now, Mr. President, I want to say another word in that connection. I have a communication here, a very interesting one, received this morning from a gentleman by the name of R. F. Bower, who, from the letterhead, appears to be special legislative agent of the Farmers' Educational and Cooperative Union of America. I am going to ask that that letter be printed in the

RECORD as a part of my remarks, because it contains some information which is exceedingly valuable in this connection, although many of the ideas in the letter do not meet my approval at all. I will refer to those immediately. I want to invite your attention to these facts recited in the letter. It says:

> The fertilizer farmers in the United States in the year 1914 paid a bill for fertilizers of $177,000,000. Of this amount, $78,000,000 was paid for nitrogen, $65,000,000 for phosphoric acid, and $43,000,000 for potash. The farmers in the cotton-growing States of the South pay a bill annually of about $100,000,000 for fertilizers.

Then the writer goes on to argue, Mr. President, that private capital will not engage in the business of establishing nitrate plants so that the farmer can be supplied with nitrogen for the production of fertilizer. With that statement, Mr. President, I do not at all agree; and I am unable to give any support whatever to those who argue the necessity of this legislation because private capital will not go into this industry. There need be no fear about that at all. Open the water-power sites and you will have plenty of capital immediately available for the development of factories of this character. I am, Mr. President, notwithstanding that, most earnestly in favor of the amendment proposed by the Senator from South Carolina.

The problem is a simple one of utilizing water power to take nitrogen from the air and holding it so that it shall be made available either for the manufacture or production of explosives or for fertilizing purposes. The air, as a matter of course, is entirely free, and the Government now owns the power and the power sites at which the essential element can be produced.

I submit, sirs, that it is a business proposition that could receive countenance nowhere, in any aggregation of business men, that when you have the very elements of the thing you should turn those elements over to some one else and allow him to utilize them and then buy the product from him. I do not think you can sustain the plan of turning over these great power sites, that are already owned by the Government, to private parties and allow them to develop nitric acid and then buy the nitric acid from them.

Furthermore, Mr. President, I am glad to vote for this amendment upon exactly the same principle as that upon which I voted for the erection of an armor-plate factory; and that is, sir, to take, so far as we reasonably can, the profit out of the business of war; as far as we can, to remove every temptation from anybody in this country to agitate for war, to argue in favor of great military and naval establishments, because there is a chance to make some money out of the proposition. I would have the Government go in and utilize these great power sites that it has available for the development of power necessary for the fixation of atmospheric nitrogen so that no one would be tempted to go into it in order to make money out of it.

Mr. President, I share none of the alarm that seems to trouble the Senator from Utah, for instance, that that means that private capital will not go into the business. Why, Mr. President, the Du Pont Powder Co. is here asking that the Government shall not go into this business but that we shall turn over to that company one of these great power sites in the West so that it may go into the business and utilize that power site in the production of nitric acid and in the manufacture of ammunition which it expects to sell to the Government. Why, Mr. President, we are in the business of manufacturing ammunition now. Has the Government factory driven the private maker of ammunition, of explosives used in war, out of business? Not at all.

Mr. SAULSBURY. Mr. President, will the Senator permit me to correct a statement that I think he made inadvertently?

Mr. WALSH. I shall be glad to have the Senator do so.

Mr. SAULSBURY. I noticed that in a letter which the Du Pont Powder Co., or the president of it, wrote to the Senator from Alabama [Mr. UNDERWOOD], they stated their position to be that they were not asking any exclusive privilege; and the bill which I introduced at their request certainly does not attempt to exclude the Government from the manufacture. It simply asks to use the power which may be necessary for it to do it, and, while not providing that the Government shall be compelled to take their product, stipulates that they shall agree to furnish to the Government, at a price fixed by the Secretary of War, whatever they make.

Mr. WALSH. That is exactly the point I wanted to impress upon the Senate in this connection. The Du Pont Powder Co. ask that they may have the privilege of developing these powers for the purpose of producing at them nitric acid; but they say that if the Government does establish a plant they want to have an opportunity also to establish a plant. In other words, they are quite willing to go into the business even though the Government does establish a plant; and why should not they be, Mr. President? There are abundant uses for nitric acid in addition to meeting the wants of the Government. Explosives of all kinds now depend upon this necessary element. It is used in mining, it is used in railroad building, it is used in a thousand ways. Then, as a matter of course, in the course of time the demand for fertilizer purposes will be great. It is not contemplated that any plant that the Government can build, or any number of plants that it can build, at an expense of $15,000,000, will meet the demand of the Government as well as supply the entire commercial demand. There will be a large field there for the operations of private capital, even though this policy is entered upon.

I think, therefore, we may safely adopt this amendment without in any way whatever imperiling the prospect of the development of many of these power sites by private capital and the fixation of atmospheric nitrogen in commercial quantities by them.

I now ask that the letter of Mr. Bower to which I have referred may be published entire in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The letter referred to is as follows:

THE FARMERS' EDUCATIONAL AND
COOPERATIVE UNION OF AMERICA,
NATIONAL UNION,
Washington, D. C., April 11, 1916.

Hon. THOMAS J. WALSH,
United States Senate, Washington, D. C.

SENATOR: I write you as a Senator from the arid or irrigation States of the West.

Speaking for the farmers in the fertilizer-using States, we can not keep from hoping you will sympathize with us in respect to our present almost pitiable needs in regard to fertilizers, and we feel that you will sympathize with us, because you so well understand what water means to the arid lands in your State and what a contribution the irrigation projects of the West, carried forward at a cost to the Government of more than $116,000,000, have been to agriculture, and how fully justified the expenditure on the part of the Government in its reclamation policy in the arid States of the West has been.

The fertilizer farmers in the United States in the year 1914 paid a bill for fertilizers of $177,000,000. Of this amount $78,000,000 was paid for nitrogen, $65,000,000 for phosphoric acid, and $43,000,000 for potash. The farmers in the cotton-growing States of the South pay a bill annually of about $100,000,000 for fertilizers.

At the present time we can get neither potash from Germany nor nitrates from Chile, and we are paying for phosphoric acid about twice the price paid before the European war began. Ocean freight rates on Chilean nitrates have increased since 1914 from $3.75 and $5 to $18.75 and $20 a ton. German farmers have the advantage of having a supply of potash at home, and now Germany is producing within her own borders 600,000 tons of air nitrogen annually, where as before the European war she produced less than 60,000 tons, and now German authorities boast that Germany is independent of the Chilean nitrate monopoly, both for military and agricultural purposes, whereas the farmers of the United States are still dependent upon Germany for potash and still dependent upon Chile for nitrates.

We are told by some that we should depend upon private enterprise and capital for our nitrate developments, but we press upon you as strongly as possible the fact that the farmers in the fertilizer-using States can no more rely upon private capital to develop the necessary water power to provide our needed nitrogen fertilizers than the farmers in the arid States of the West could have relied upon private capital and enterprise to have developed the great irrigation projects of the arid West. Fertilizers are just as great a necessity for increased crop production on the farms in New England, the Middle States, and especially the South, as water is a necessity for crop production and fertility upon the lands in the arid States of the West.

The Roosevelt Irrigation Dam in Arizona, costing nearly $13,000,000, and the Arrowrock Dam in Idaho, costing over $5,000,000, never would have been built by private capital; and if they had been built by private capital the cost of water irrigation owing to the higher rates of interest that private capital would have had to pay, would have made the cost of irrigation so high the farmer could not have used the water.

Likewise if the farmers in the fertilizer using States are to depend upon private capital, the cost of air fertilizers will be so high that they no more could use air nitrogen fertilizers than they can to-day use Chilean fertilizers at the present exorbitant and prohibitive costs.

Suppose a dam cost $10,000,000 and that the power at this dam would produce 300,000 tons of nitrogen-phosphorous fertilizer and that 3 per cent is paid on the $10,000,000. This would be $1 per ton fixed charge. If the interest was 6 per cent it would be $2 per ton, and if 9 per cent it would be $3, and we are informed that few power companies can secure capital for less than 9 per cent when all interest costs for capital are paid.

Therefore the fertilizer-using farmers of this country are asking you to do for them just what Congress has done for the farmers of the arid States of the West in providing water for irrigating western lands. The cost of water irrigation measures the cost of crop production in the arid States of the West and the cost of fertilizer measures the cost of food products and cotton products in the Southern States.

As an example of this please read the little pamphlet I am inclosing, showing comparative use of cottonseed meal nitrogen as a fertilizer as against air nitrogen as a fertilizer. If the Government builds dams for producing nitric acid for national defense, the power at these dams can be used for manufacturing cheap fertilizers in times of peace, and the little comparison I am inclosing you between cottonseed meal and air nitrogen fertilizers illustrates what cheap water power will do and how cheap electricity will contribute to decreasing the cost of cotton and food crops in fertilizer-using States.

Our inclosures herewith will, we believe, support our contention that the Government itself should take steps to relieve the fertilizer situation and free the farmers of this country from the Chilean saltpeter monopoly, and if you will read the inclosed statistics and facts we can not doubt that you will assist us.

I call your attention to a copy of a letter herewith from a Florida grapefruit grower who has experimented successfully in using cyanamid, or lime nitrogen, in his grapefruit grove, and the day will come when nitrogen will be a necessity to the fruit grower of your State.

Yours, very truly,

R. F. BOWER.

Mr. WORKS. Mr. President, earlier in the day I had occasion to submit some observations on the present-day tendency to legislate all enterprise and all responsibility upon the National Government, and I called attention to the temptations that presented themselves to do just that thing.

We have before us right now a conspicuous example of that kind of legislation and what leads to it. The people in the South especially, and, of course, in other parts of the country, need fertilizer. They ought to have it. I shall be glad to see them have it; but why should the Government of the United States be called upon to go into the fertilizer business and supply this necessity to the people of the South or anywhere else?

I agree with the Senator from Montana [Mr. WALSH] that there is no necessity that the Government should go into the business if the Government itself gives the opportunity to improve these power sites and use them for the common good. The Senator from Montana and I disagree as to the manner in which this should be done. I think both of us desire that full opportunity should be given to private capital to improve these power sites and put them to beneficial use. I agree also with the Senator from Montana that the Government should manufacture for itself the nitrogen that it uses for national purposes, because I believe, as I think I have said before, that the Government should manufacture everything that is to be used in war, and not allow it to be speculated upon by private individuals.

But, Mr. President, as I suggested earlier in the day, we are going a long way in centralizing government. I do not know whether or not other Senators feel as seriously about that situation as I do, but I am beginning to believe that there is not a State rights Democrat left in the South. They may be in theory—they possibly think they are yet—but the course of legislation here proves absolutely to the contrary. I reiterate what I said this morning—that the Democratic Members of the Senate are leading in just this kind of legislation that is giving away the sovereignties of the States and imposing upon the Government the obligations that belong to the States.

Mr. HARDWICK. Mr. President, if the Senator will permit me, I hope he will except me from that statement.

Mr. WORKS. I beg the Senator's pardon. I very much approved of what he said on this question, and he seems to be one exception to what I have said.

The VICE PRESIDENT. The question is on the amendment of the Senator from Georgia [Mr. HARDWICK] to the amendment of the Senator from South Carolina [Mr. SMITH].

Mr. CURTIS. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Bankhead	Hughes	Overman	Smith, S. C.
Brandegee	Husting	Owen	Sterling
Bryan	Johnson, Me.	Page	Sutherland
Chamberlain	Jones	Pittman	Swanson
Clapp	Kenyon	Ransdell	Thomas
Clark, Wyo.	Kern	Reed	Thompson
Culberson	La Follette	Robinson	Tillman
Cummins	Lane	Saulsbury	Underwood
Curtis	Lewis	Sheppard	Vardaman
Dillingham	Lodge	Sherman	Wadsworth
Gallinger	Martine, N. J.	Shields	Walsh
Gore	Nelson	Simmons	Warren
Gronna	Newlands	Smith, Ariz.	Williams
Hardwick	Norris	Smith, Ga.	Works
Hollis	Oliver	Smith, Md.	

Mr. LEWIS. I desire to announce that the senior Senator from New York [Mr. O'GORMAN] is absent on official business, and is paired with the senior Senator from New Hampshire [Mr. GALLINGER].

The junior Senator from Maryland [Mr. LEE] has been called to his State. He is paired by transfer with the junior Senator from West Virginia [Mr. GOFF].

The junior Senator from South Dakota [Mr. JOHNSON] has been called out on official business.

The junior Senator from Indiana [Mr. TAGGART] has been called to his State on official business.

Mr. WALSH. I wish to announce that my colleague [Mr. MYERS] is absent from the Chamber on account of official business.

The VICE PRESIDENT. Fifty-nine Senators have answered to the roll call. There is a quorum present. The pending question is the amendment of the Senator from Georgia [Mr. HARDWICK] to the amendment of the Senator from South Carolina [Mr. SMITH].

Mr. KENYON. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. TOWNSEND], and therefore withhold my vote.

Mr. GALLINGER (when his name was called). I have a general pair with the senior Senator from New York [Mr. O'GORMAN], but upon matters connected with this bill I am privileged to vote. I vote "yea."

Mr. MYERS (when his name was called). I have a pair with the junior Senator from Connecticut [Mr. MCLEAN], who is absent. I transfer that pair to the senior Senator from Nebraska [Mr. HITCHCOCK] and will vote. I vote "nay."

Mr. SUTHERLAND (when his name was called). I inquire whether the senior Senator from Arkansas [Mr. CLARKE] has voted?

The VICE PRESIDENT. He has not.

Mr. SUTHERLAND. I have a pair with that Senator, and for that reason withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the junior Senator from West Virginia [Mr. GOFF] to the junior Senator from Maryland [Mr. LEE] and will vote. I vote "nay."

Mr. SMITH of Michigan (when Mr. TOWNSEND's name was called). I desire to announce the unavoidable absence of my colleague [Mr. TOWNSEND], on account of sickness in his family. He is paired on this matter with the senior Senator from Florida [Mr. FLETCHER].

Mr. UNDERWOOD (when his name was called). I have a general pair with the junior Senator from Ohio [Mr. HARDING]. As he is absent, I transfer that pair to the junior Senator from Indiana [Mr. TAGGART] and will vote. I vote "nay."

Mr. WEEKS (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. JAMES]. I transfer that pair to the senior Senator from Idaho [Mr. BORAH] and will vote. I vote "yea."

Mr. WILLIAMS (when his name was called). I transfer my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the senior Senator from Tennessee [Mr. LEA] and will vote. I vote "nay."

The roll call was concluded.

Mr. BECKHAM. I am paired with the senior Senator from Delaware [Mr. DU PONT]. As he is absent, I transfer that pair to the junior Senator from Louisiana [Mr. BROUSSARD] and will vote. I vote "nay."

Mr. OWEN. I transfer my pair with the junior Senator from New Mexico [Mr. CATRON] to the junior Senator from South Dakota [Mr. JOHNSON] and will vote. I vote "nay."

Mr. CURTIS. I have been requested to announce that the Senator from Idaho [Mr. BRADY] is paired with the Senator from Florida [Mr. FLETCHER], and that the Senator from New Mexico [Mr. FALL] is paired with the Senator from West Virginia [Mr. CHILTON].

The result was announced—yeas 24, nays 47, as follows:

YEAS—24.

Brandegee	Gallinger	Oliver	Smoot
Burleigh	Hardwick	Overman	Sterling
Clark, Wyo.	Jones	Page	Stone
Colt	Lippitt	Pomerene	Wadsworth
Curtis	Lodge	Smith, Ga.	Weeks
Dillingham	Nelson	Smith, Mich.	Works

NAYS—47.

Ashurst	Johnson, Me.	Owen	Smith, Ariz.
Bankhead	Kenyon	Pittman	Smith, Md.
Beckham	Kern	Poindexter	Smith, S. C.
Chamberlain	La Follette	Ransdell	Swanson
Clapp	Lane	Reed	Thomas
Culberson	Lewis	Robinson	Thompson
Cummins	McCumber	Saulsbury	Tillman
Gore	Martin, Va.	Shafroth	Underwood
Gronna	Martine, N. J.	Sheppard	Vardaman
Hollis	Myers	Sherman	Walsh
Hughes	Newlands	Shields	Williams
Husting	Norris	Simmons	

NOT VOTING—25.

Borah	du Pont	Johnson, S. Dak.	Sutherland
Brady	Fall	Lea, Tenn.	Taggart
Broussard	Fletcher	Lee, Md.	Townsend
Bryan	Goff	McLean	Warren
Catron	Harding	O'Gorman	
Chilton	Hitchcock	Penrose	
Clarke, Ark.	James	Phelan	

So Mr. HARDWICK's amendment to the amendment of Mr. SMITH of South Carolina was rejected.

Mr. GALLINGER. Mr. President, I have never yet been able to bring myself to believe that the Government ought to engage in business in competition with private parties; and for that reason I have, with some degree of consistency, I think, voted against all propositions looking to that end.

I voted against the bill to establish a Government armor-plate plant, believing that it was not good policy for us to engage in that business; and for the same reason I expect to vote against the amendment which is now under consideration, although I have tried to bring myself to the view that I might with some degree of consistency support it.

Recently I have been handed a letter written by an intelligent Englishman, printed in the New York Sun, on the armor-plate proposition, in which he, to my mind, conclusively shows that it is a very dangerous thing for any Government to establish a plant for the manufacture of munitions of war when it probably will drive out of existence the private plants; and he discusses the matter with so much intelligence and, to my mind, with so much conclusiveness that I desire to ask permission to print it in the RECORD. I would read it were it not for the fact that I am quite as anxious as any Member of this body to facilitate as much as possible the business of the session, so that we may in due time be able to return to our homes for a little rest and recreation.

I now ask that the article which I send to the desk may be printed as a part of my remarks.

The VICE PRESIDENT. Without objection, it will be so ordered.

The matter referred to is as follows:

[From the New York Sun of Wednesday, Apr. 5, 1916.]

THE ARMOR-PLATE QUESTION—AN ENGLISHMAN'S IMPRESSIVE STATEMENT OF BRITISH EXPERIENCE.

To the EDITOR OF THE SUN.

SIR: An Englishman can wish nothing better for America than that she may profit by British experience in this war. If I might venture an opinion based on a 20-years' acquaintance with the United States I should say that both in what we have done and in what we have left undone during the past 18 months there are some lessons well worthy of American attention. One of those lessons, perhaps, indeed, the supreme lesson, is the vital importance of encouraging during the years of peace as many private manufacturers as possible to engage in the production of war material.

If that is really a desirable end, and all the belligerent nations have learned in a pretty hard school that it is the alpha and omega of preparedness, then I can not help thinking that the armor-plant bill now before Congress defeats it. I can not help thinking that instead of increasing it positively diminishes your industrial readiness for war.

Neither can I help giving thanks to Providence that the British Parliament was never tempted to act as the American Congress now apparently contemplates acting; that it never thought of legislating the private armor-making firms out of existence and of putting all its naval eggs in the basket of a Government plant; and that when the storm burst we were able to turn to immediate account the organization and the skill and the equipment and the unequaled practical knowledge of a host of firms that knew the armament business from top to bottom and that a wise public policy had induced to keep themselves in a state of instant efficiency and responsiveness.

Let me say without a moment's hesitation that we could not have built up the British fleet on any other policy; that it, and it alone, has enabled us to turn England into one vast arsenal of war; and that nothing but a disastrous confusion and delay could have ensued had we depended exclusively upon a Government plant for any of the indispensables of naval or military material.

Suppose that 5 or 10 years ago the British Admiralty had called together the heads of the armor-making firms in the United Kingdom and addressed them thus: "Look here, you are making too much money. You are not charging us a reasonable price. You form a ring among yourselves and you have ceased to compete with one another. We are not going to stand it any longer. We are going to put up a Government plant and make our own armor. The fact that we begged you to go into the business and encouraged you to persevere in it, to invest new capital and to build new shops to meet our requirements, no longer weighs with us. We are through with you; and so far as we are concerned you can dismantle your plants, disband your organization, turn all your skilled workmen adrift, and convert your shops into purely industrial establishments."

Suppose the British Admiralty had taken this stand, what would have been the result? The result would have been that in August, 1914, outside of a solitary Government plant, managed, of course, as negligently and inefficiently as all such bureaucratic enterprises must be, we should have had neither the men nor the machines to make even a single plate. All the skill and experience which our private firms had amassed would have been dispersed. All the plant that they had accumulated, plant that is useless for any other purpose, would have been scrapped or sold. Instead of half a dozen splendid organizations, on which to build and from which to expand, we should have had but one—and that one, by its very nature, wrapped in the comfortable stupor of officialdom, inelastic, unbusinesslike, totally incapable of rising to even half the height of so tremendous an emergency.

What would it then have profited us to have saved a few thousand pounds in time of peace if when the war came we had to squander millions of pounds in a vain effort to recover all we had thoughtlessly cast away? How should we have gained if in lopping off the profits of the armor makers we had imperiled the nation? Could any one conceive a more perfect example of the penny-wise and pound-foolish policy than one which, in the name of economy, weakened the navy, risked an irreparable defeat, and prevented us on the day of Armageddon from utilizing the country's industrial resources?

Of course, nothing of the kind occurred, or was ever even thought of. We have in Great Britain, I believe, five or six armor-making firms. The Admiralty experts consult with them continuously, apportion the work among them, arrange the price—Parliament very wisely never attempts to meddle with such details—and drive the best bargains they can in the interests of the nation. With common sense and a rational spirit of give and take on both sides the system works admirably.

Very possibly these private companies earn large and liberal profits on their Government contracts. If they do, what of it? Every Englishman is well content that they should, because every Englishman knows that by merely remaining in existence and in a condition to fill the Admiralty orders they are rendering the nation a supreme service. This war has taught us that there is no imaginable profit which it would not have been well worth our while to pay over to the armor-making firms simply to keep them in being, and that no saving to the treasury could ever have compensated us for having driven even one of them out of business.

As a matter of fact, I am very confident that the British armor-plate manufacturers, while always treated with a businesslike generosity, have never been allowed to reap extravagant or illegitimate rewards. My confidence is grounded in the fixed conditions of the case. People talk of the Government being at the mercy of the manufacturers. But the manufacturers are equally at the mercy of the Government. It is by far their largest, in most cases it is their only customer. It is in just as good a position to dictate the terms as they are. It depends on them, but not a bit more than they depend on it. With the merest modicum of honesty and business intelligence and diplomacy the situation becomes entirely manageable, and if Englishmen, under such circumstances, were to find a British Cabinet advocating a national armor plant as the only method of escaping the exactions of the manufacturers, they would say at once and unanimously, "This Government is convicting itself and its agents either of gross dishonesty or gross inefficiency."

It is with such reflections at the back of my head that I contemplate the bill that is now before Congress, the bill appropriating $11,000,000 to build an armor plant with a capacity of 20,000 tons a year. So far as I can make out the effect of this measure, if it passes in its present form, will be to force the private armor-making firms out of the business. I should probably seem exaggerating if I were to express the intense apprehension with which an Englishman and a friend of America, who has known something of the difficulties of his own country during the past 18 months of war, views such a prospect.

As an outsider, I have no call to discuss the details of the bill. But I have been very much struck with one point—that, except Italy, the United States pays less than any other naval power in the world for its armor, and very substantially less than we pay in England. It is surely a puzzling world. Here is America prepared to make the manufacture of armor plate a Government monopoly, because she can not buy it cheap enough. And here is England, which also is a business nation, and really does know something about naval administration, paying for her armor plate a considerably stiffer price, and yet perfectly satisfied with the arrangement on broad grounds of national security. Are we wrong, or are you?

It would be an impertinence on my part to answer that question dogmatically. But I may perhaps be allowed to summarize roughly the conclusions to which experience has led the British people. They find:

1. That no greater disservice can be done to a country than by discouraging its manufacturers in the production of the material of war.
2. That no matter what profits the manufacturers may make out of the Government in times of peace, they will all be returned to the nation multiplied one thousandfold in war.
3. That the problem of industrial preparedness for war is far more than a mere matter of finance, and that higgling over prices and profits, from any comprehensive standpoint of national defense, is the smallest and least relevant part of the whole issue.

SYDNEY BROOKS.

NEW YORK, *April 4*.

Mr. UNDERWOOD. Mr. President, I desire to offer as an amendment to the amendment offered by the Senator from South Carolina [Mr. SMITH] the matter which I send to the desk.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. On page 4, at the end of the proposed amendment, it is proposed to insert:

That the Secretary of War is authorized and directed, for the purpose of securing a suitable air-nitrogen process for the use of the Government of the United States, to make a contract or contracts with the owners thereof, for the use, rental, lease, or purchase of a suitable air-nitrogen process, and the Secretary of War is authorized to operate or lease the plant, hydroelectric power, or works provided for in this act for the making of nitrogen products for the manufacture of fertilizers in times of peace when the output of said plant is not needed for the manufacture of explosives.

Mr. UNDERWOOD. Mr. President, the purpose of this amendment is twofold. As I read the bill, there is no provision in it for the Government to acquire an air-nitrogen process. As I understand, all of the processes are owned by private parties and are patented. If we are going to pass this bill and build a great power plant to make air nitrogen, we must acquire a process.

It is possible that under the general power of condemnation in the Government we could, in times of peace, condemn a process for war purposes. I think undoubtedly we could in times of war. No power of condemnation is given in the bill. But if we can condemn, under the general power of the Government, an air-nitrogen process for war purposes, we certainly can not condemn it for any other purpose than war purposes.

If we are passing this bill to prepare the Government for a war emergency, we will have to develop a capacity for making nitrogen that would serve us if the possibility of war happened. It has been stated, I think, by those in authority that Germany to-day is using 270,000 tons of nitric acid, and that it is supposed this Government would need at least two-thirds of that quantity—at least 180,000 tons of nitric acid—in the event of war.

Mr. HARDWICK. How in the world can the Senator tell what sort of a war it is going to be?

Mr. UNDERWOOD. Certainly not.

Mr. HARDWICK. Does he figure that on a war of the very greatest magnitude?

Mr. UNDERWOOD. It is based on the supposition that we are preparing an army for the time of a world-power war. We build an air-nitrogen process on the same basis.

I will state to the Senator from Georgia that if it is proposed to build a plant to make nitric acid only for peace purposes there is no occasion for our building one at all, because we can get Chilean nitrate in time of peace to fill the requirements of the Government. It is only in the event that we became involved in war with a great war power that our Chilean nitrates might be cut off, and we would need a supply of nitric acid at home. Therefore, if we are going to build this plant for a preparedness purpose, it ought to be of sufficient capacity to meet that possible emergency. It is apparent that we will have no use whatever in times of peace of a plant that has a capacity to produce 180,000 tons of nitric acid.

Mr. TILLMAN. Except for the farmers.

Mr. UNDERWOOD. But I am talking about its use for war purposes. You will have no possible reason for the use of that amount in time of peace for war purposes. The practical question confronts the Senate: Are we going to build a plant of that kind, invest millions of dollars in it, and continue to send to Chile and pay a tax to the Chilean Government of $11.60 on every ton of Chilean saltpeter that comes from there, and have an idle plant in the United States that we have built to protect us in time of war and decline to use it? I take it that the common sense of the American people would repudiate any such proposition.

If we are going to use this plant in times of peace to make nitric acid, we have got to acquire the process by purchase or lease. I think it can be done. If it can not be done, then the whole proposition falls down, and the Government will spend no money. But there is no provision whatever in the bill to authorize the Secretary of War to make a contract for the purchase of any air-nitrogen process or for the lease or the use of it. My amendment merely gives the Secretary of War the authority to make a negotiation and purchase the right to use one of these processes.

Mr. WALSH. Mr. President——

Mr. UNDERWOOD. I yield to the Senator from Montana.

Mr. WALSH. Is it not the view of the Senator from Alabama that the power given by the act to construct and operate a plant necessarily implies the right to acquire any patented process?

Mr. UNDERWOOD. It is not, but why should we leave it in any doubt, I ask the Senator?

Mr. WALSH. I was wondering whether there could be any doubt.

Mr. UNDERWOOD. I think there is very serious doubt. If the Senator's contention is correct, that the statement to build a plant gives power to purchase a process, I have no desire to have this amendment adopted; but I think it is in serious doubt, and certainly there can be no harm in what I state here, "that the Secretary of War is authorized and directed, for the purpose of securing a suitable air-nitrogen process for the use of the Government of the United States, to make a contract or contracts with the owners thereof for the use, rental, lease, or purchase of a suitable air-nitrogen process." He might be able to lease it satisfactorily or he might be able to purchase it. I merely make the language broad enough so that the Secretary of War can properly exercise his discretion. If the bill is now broad enough itself, my amendment can do no harm. It is not in conflict with the purpose of the bill. If it is not broad enough to allow him to acquire this process, then the amendment certainly ought to come in or you negative the whole purpose of the bill.

Mr. WALSH. For information, I ask the Senator from Alabama if the patents are not upon the machines that are in use in the equipment of the plant, and you can not put them in the factory at all without permission to use these machines?

Mr. UNDERWOOD. I think this amendment will authorize the Secretary of War to make a contract with the men who own these patent rights. We can not go and take it away from them for peaceful purposes. I admit, of course, the Government of the United States in the stress of war could do it, but there is no power in the Government to take it away in time of peace. We have got to see if we can not negotiate a contract by which it can be done. If a satisfactory contract can not be made, then the whole bill goes down.

Mr. LIPPITT. Will the Senator from Alabama yield for a question?

Mr. UNDERWOOD. Yes.

Mr. LIPPITT. I wish to ask the Senator how large a proportion is the present use of nitrates. He spoke of 180,000 tons. Is that equal to the present peace consumption of nitrates in this country?

Mr. UNDERWOOD. Not of nitrates. I spoke of the concentrated nitric acid.

Mr. LIPPITT. It all depends upon nitrates.

Mr. UNDERWOOD. There are some differences; but of the concentrated nitric acid, of which I am speaking, I am informed the peace needs of our Army and Navy are about 20,000 tons, and that would leave about 160,000 tons that could be disposed of for commercial purposes. I am satisfied that that amount, or more than that amount, of nitric acid can be easily consumed in the country, although I have not the figures and can not state it definitely.

Mr. LIPPITT. Does the Senator know how large a proportion of nitrates used in this country are used in agriculture?

Mr. UNDERWOOD. Very much the larger proportion. I can not give the figures. I have not them here.

Mr. LIPPITT. I am informed that it does not exceed 25 per cent of the present consumption of nitrates.

Mr. UNDERWOOD. I am satisfied that the Senator's information is entirely wrong.

Mr. LIPPITT. It may be. I will give my information. My information is obtained from a very intelligent and able essay that was written by Mr. Cushman, of this city, upon the consumption of chemicals in the war. In that essay he states that not over 25 per cent of the total consumption of nitrates in the country are used for agricultural purposes—for fertilizers. The balance of it is used for explosives of various kinds for peace purposes, for digging, for blasting for subways, tunnels, and things of that sort, and for the general chemical uses of nitric acid.

Mr. UNDERWOOD. I will say to the Senator that I do not controvert his statement, because I am not informed; I have not the figures. I think he is mistaken. I will state also to the Senator that there is the possibility of a wonderful consumption of fertilizers in this country if they could be acquired at a cheap price, but the limitation on the consumption of fertilizers in this country to-day is the price that the farmer has to pay for them. The possibility exists in the development of this plant of cheap nitric acid, and that means cheap fertilizers.

Mr. LIPPITT. Of course the same thing applies to cotton. If the Government would establish cotton fields and sell cotton to American consumers at cost, as the amendment proposes to sell this article to agriculturists at cost, America would do a large part of the cotton manufacturing. However, I will speak about that. I just wanted the Senator's view.

Mr. UNDERWOOD. As I said, I would be glad to furnish the Senator the figures accurately if I could. I have not the figures and I can not give him accurate information.

The second clause of this amendment provides:

> And the Secretary of War is authorized to operate or lease the plant, hydroelectric power, or works provided for in this act for the making of nitrogen products for the manufacture of fertilizers in time of peace when the output of said plant is not needed for the manufacture of explosives.

In other words, the amendment leaves it discretionary with the Secretary of War in time of peace, when it is not necessary to use the plant to make explosives the Government needs, to either operate the plant and make the nitric acid that is to go into fertilizers to be sold for fertilizers or to lease the plant, the power, for somebody else to do it. I do not seek to ask the Congress to decide which way it shall be done. I think it would be unwise for us to write in the bill the question as to whether the Government shall operate or the Government shall lease. The Government will continue to own, the Government will continue to control the plant, the Government will have its hands on the plant, and I assume that the intelligence and patriotism of the Secretary of War will protect the rights of the American people and the Government when he determines whether he will operate the plant for the Government in times of peace or whether he will lease the plant to somebody else to operate in times of peace with a reversion in times of war.

Mr. GALLINGER. Mr. President, will the Senator permit me?

Mr. UNDERWOOD. I yield.

Mr. GALLINGER. Are we to understand that the amendment the Senator has now offered is to take the place of the printed amendment the Senator proposed?

Mr. UNDERWOOD. No; I merely offer this amendment as a new paragraph to the amendment of the Senator from South Carolina. I, myself, have an amendment to the bill that is entirely independent of this, but I am so anxious——

Mr. GALLINGER. Just one other question. I assume I am right in the supposition that the terms of the Senator's amendment now offered contemplate that the Government for an indefinite time, for all time, if you please, shall engage in this business in times of peace?

Mr. UNDERWOOD. Yes; I think that is a fair conclusion. My own proposition that I offered was to authorize the Secretary of War to investigate this whole question and make tentative contracts, or see what contracts could be made, and report that matter back to Congress; but I feel that this question is so important to the American people as a preparedness proposition, a Government proposition, and so important to the great agricultural interests of this country, that I do not propose to come in in conflict with the amendment offered by the Senator from South Carolina.

It has been charged on the floor that I had offered an amendment here for a particular purpose to carry a development somewhere else. I have no such purpose.

Mr. OVERMAN. Mr. President——

Mr. UNDERWOOD. Just allow me to answer this, please. I have no such purpose. It is my desire to put an amendment on this preparedness bill that will protect the Government in time of war and will relieve the people in time of peace, and if I can not have my way about it I am willing to have the way of the Senator from South Carolina. My amendment is not in conflict with his purpose. I think that the Senator from South Carolina will vote for the amendment that I offer. It is merely to perfect his amendment so that we can utilize this process for all purposes. I yield to the Senator from North Carolina.

Mr. OVERMAN. The only difference I see—and I will ask the Senator if I am right—between the first paragraph of the amendment of the Senator from South Carolina, on page 3, and the amendment of the Senator from Alabama is that the Senator from Alabama proposes to lease and there is no provision to lease in the paragraph named. The amendment of the Senator from South Carolina says:

> That the products of such plants shall be used by the Secretary of War or the Secretary of the Navy for military or naval purposes, and any surplus not so required may be sold and disposed of by the Secretary of Agriculture under such regulations as he may prescribe.

The difference between the amendments is as to leasing?

Mr. UNDERWOOD. The last part of the amendment I have offered merely adds to the powers of the amendment of the Senator from South Carolina, because it gives the power to lease the plant.

Mr. HARDWICK. Does not the Senator, however, authorize in express terms the Secretary of War to carry on a fertilizer business?

Mr. UNDERWOOD. The bill itself authorizes it.

Mr. HARDWICK. The Senator makes it plainer that he is also to embark in the fertilizer business.

Mr. UNDERWOOD. I expect to vote for the amendment offered by the Senator from South Carolina. This bill would be futile if it were intended to let the plant lie idle. I merely emphasize what I consider to be the purpose of the bill.

But, answering the junior Senator from North Carolina [Mr. OVERMAN], that is not the only purpose of my amendment. The other purpose is to give the Secretary of War the direct authority to make a contract to acquire one of these processes, which I think is the most important if we are going ahead with this business.

Mr. SAULSBURY. Mr. President——

The VICE PRESIDENT. Does the Senator from Alabama yield to the Senator from Delaware?

Mr. UNDERWOOD. I yield.

Mr. SAULSBURY. I desire to ask the Senator from Alabama if it was intended—as I think the words necessarily mean in the latter part of his proposed amendment—that the operation or lease of the plant when not needed for the manufacture of munitions of war should be limited to nitrogen products for the manufacture of fertilizers alone, or if the suggestion of the senior Senator from Rhode Island [Mr. LIPPITT] is correct, that of the whole product of nitric acid made in this country 75 per cent is used for other purposes than fertilizers, whether the Senator from Alabama intended that the product of this plant should be used for the general purposes of the country?

Mr. UNDERWOOD. No; I intended just what it says. I am free to say to the junior Senator from Delaware my purpose is to limit the use of the nitrates coming from this plant to fertilizers in order that the agricultural interests of the country could get the benefit of it rather than the business interests.

Of course, if we strike out the word "fertilizers" they could use it for other purposes; but I am satisfied in my own mind that the agricultural interests can be benefited, and that they can consume in time of peace the entire production of this plant. It is my purpose to direct that the product of this plant in time of peace shall go to the promotion of agriculture. If that does not meet with the approval of the Senate it is very easy to strike out that word. I think it ought to stay in.

Mr. SAULSBURY. I ask the Senator whether that would not practically mean the cyanamide process?

Mr. UNDERWOOD. No; I do not think so, but whatever process is the best for agriculture I think ought to be adopted. If the cyanamide process is the only process that can be utilized both for war and for peace, for powder and for fertilizers, I say candidly I propose to vote for that process; that is the process for me.

Mr. HARDWICK obtained the floor.

Mr. WALSH. Mr. President——

Mr. HARDWICK. I will yield to the Senator from Montana, if I may do so without losing the floor.

Mr. WALSH. I wish to ask the Senator from Alabama how he justifies, either from the standpoint of governmental policy or the standpoint of law, his proposition that this excess of nitric acid may be sold for the use of farmers for fertilizer purposes but should not be sold to anybody else who desires to use it in any other line of business?

Mr. UNDERWOOD. I think if the Government has the power to sell it at all the Government has the power to direct to whom it shall be sold. If the Government has a surplus number of uniforms on hand that it is going to dispose of, not needed for the Army, I think the Government could say at what price they should be sold and to whom they should be sold. I do not think there is any constitutional trouble about that.

To the part of the Senator's question directed to me as to why we should discriminate in favor of agriculture and not discriminate in favor of other business, or why we should not put the business consumption of nitric acid upon the same basis as we do agriculture, the only answer I have to make is, that I think it is more important to the general benefit of the country that agriculture should be preferred with reference to acquiring nitrates for fertilizers than that general business should be favored.

Mr. WALSH. If the Senator from Georgia [Mr. HARDWICK] will pardon me for just a moment, I wish to say that we have two great industries in the State of Montana—agriculture and mining. Both of them need nitric acid; the mining interest for the purpose of supplying themselves with explosives to carry on their business; the agricultural interest with nitrogen for the purpose of supplying fertilizer. How could I go home to my State and justify myself in thus discriminating in favor of one class of my people as against the other?

Mr. UNDERWOOD. I will say that I represent a great business district, where probably—I would not say as much, but I would say probably—as much explosive is used as is used in the State of Montana, and that is the district where my home is; but when you come down to the disposal of the product, when you dispose of it to agriculture for fertilizers, it means cheaper food for the masses of this country; it means that preparedness of which nothing else can take the place; it means the preparedness that raises strong men for this Government.

Mr. HARDWICK. May I resume the floor, Mr. President?

Mr. LIPPITT. Mr. President, does the use of nitrates in the raising of cotton mean cheap food to the people?

Mr. UNDERWOOD. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from Alabama?

Mr. HARDWICK. I do.

Mr. UNDERWOOD. Fertilizer is not used alone for cotton fertilization, but if it were it would be very useful to the Senator from Rhode Island.

Mr. LIPPITT. May I ask the Senator——

The VICE PRESIDENT. The Senator from Georgia [Mr. HARDWICK] was recognized about five minutes ago, and he still has the floor.

Mr. HARDWICK. Mr. President, I believe I will proceed myself just a little bit on this proposition. I have had the floor a long time, and I have not yet said a word.

Mr. President, not only is the amendment proposed by the Senator from Alabama [Mr. UNDERWOOD] remarkable, but his position is still more remarkable. His position is a position that no Democrat of his conspicuous ability and performance has ever before assumed in this country; and I regret it, because I love my friend from Alabama personally as well as any friend in this body, and few men anywhere hold a higher place in my regard. I therefore deeply regret that he should be the first conspicuous Democrat to take such a position.

The Senator from Alabama goes even further than the pending amendment in his repudiation of every Democratic tradition and in his violation of every Democratic principle that has ever been uttered by a sound Democrat since the foundation of this Government. He goes further, I say, in violation of those things than does even the Senator from South Carolina [Mr. SMITH]. The Senator from South Carolina at least, Mr. President, had

the modesty to cloak for a while his real design. The Senator from South Carolina insisted that this was purely and properly a governmental function that the Senate of the United States was called upon to authorize the Government to exercise, and that his amendment only proposed that we should manufacture or sell such surplus product as was necessarily produced in the proper performance of a governmental function, to wit, the manufacture of gunpowder for the Government of the United States; but now the Senator from Alabama, one of the most distinguished leaders of our party, and a so-called conservative—God save the mark!—comes into this Chamber with a proposition like this. He says: "I want to develop a power so great and I want to build a plant so large that it would supply the maximum requirements of this Government if it were engaged in war with all the balance of the world." That is not an event that we think is likely to happen; it is not an event that any of us desire; so that part of it is a mere prop upon which the rest of the Senator's proposition rests. Then the Senator from Alabama turns on us and says: "While this tremendous plant, geared to maximum capacity to produce all the powder and all the other explosives that this Government of ours could possibly use if we were engaged in war with the balance of mankind, is not being operated for the purpose of supplying our needs during a world-wide war we will operate it to the maximum capacity for the express purpose and for the sole purpose of making fertilizers to sell to the farmers of the United States."

The Senator from Alabama ought to apologize to Debs and to every other Socialist that he has ever criticized during his whole political career. I am grieved to see a Democratic Senator, nurtured in the faith of Thomas Jefferson, one of the most distinguished and able members of our party, and one of my best-beloved friends, make such a mistake. If Jefferson were here and could have heard this proposition of the distinguished Senator from Alabama, I think he would have left this Chamber in disgust; and if he could, although dead, hear it now, he would turn over in his grave in holy horror. Yet we belong, forsooth, to the party of Jefferson, and believe in the doctrine that Jefferson preached and believe in the faith that Jefferson professed!

Let me ask my friend from Alabama, if the Government is going to manufacture cheap fertilizers for the farmer, why not manufacture cheap clothes, cheap shoes, cheap food, and cheap everything else for the laboring man?

Mr. SMOOT. And agricultural implements?

Mr. HARDWICK. Why not manufacture agricultural implements, as is suggested by the Senator from Utah? Why not manufacture every necessity of life? Where will you stop, let me ask the Senator from Alabama, the business activities of this Government if the Senate and if the other House of Congress ever make the mistake of adopting so radical a proposition as that which he has presented? Can we discriminate along these lines? Can we differentiate between these things? Can we say to the farmer, "We will put up an enormous plant and manufacture and sell to you at cost all the fertilizer you need," and then turn around and say to the starving laboring men in the great centers of population—who suffer far more than our farmers, and at whose door want stands far more often than it does at the door of any farmer in this land, North, East, South, or West—"Your children can starve; you can go in rags, unemployed it may be, if hard times are on and the Republicans are in; but in spite of that, in spite of your condition, we will not give you food or clothing or shoes or hats or even bread at cost"?

Of course, my friends will understand my remarks about the Republicans were jocular. My own honest belief about that is that hard times come when Republicans are in power and when Democrats are in power, and neither party has very much to do with that, although we of both parties poke fun at each other across these aisles on this subject, and the country is occasionally treated to a lot of claptrap about it.

But I think, with the utmost good feeling and with the utmost friendship for my friend from Alabama, that, as bad as is the proposition of the Senator from South Carolina, as patent as is its purpose, and as plain as is the subterfuge about it, the pretense that what you are trying to do is really to furnish the Government with its gunpowder—in spite of all that, in principle the amendment suggested by the Senator from Alabama is infinitely worse. The Senator from New Hampshire [Mr. GALLINGER] caught it very quickly. He asked my friend from Alabama: "Does not this mean that you have embarked the Government of the United States permanently into the business of manufacturing and selling fertilizers?"

Mr. UNDERWOOD. No; manufacturing and selling nitric acid.

Mr. HARDWICK. Well, for use in manufacturing fertilizer. Nitric acid is one of the elements of fertilizer; it is one of the constituent elements from which fertilizers are made. I do not blame the Senator for being a little restless.

Mr. UNDERWOOD. I am not restless; and, if the Senator from Georgia will yield——

Mr. HARDWICK. I yield to my friend.

Mr. UNDERWOOD. I have not any doubt in the world about this. My friendship of nearly 20 years with my friend from Georgia is so great and our views usually so similar that I regret that the Senator from Georgia can not see that the proposition of using this idle factory to make nitric acid that may benefit the agricultural interests of this country is a mere incident to the war purpose, instead of having the plant lying idle; but I take, of course, with all good nature, the criticism of my friend from Georgia. I merely wanted the RECORD to show that my purpose is to make nitric acid, not fertilizer.

Mr. HARDWICK. What is the difference whether you make it in the raw state or in the second stage of manufacture? Is there any difference in the fundamental principle between the two? What is the difference between making and selling nitric acid or fertilizer to the farmer and making and selling shoes or boots or bread to the laboring man? What is the difference, and how are you going to deny the appeal of the laboring men when they turn on you, and say, "You furnish the farmers of this country with their fertilizer at cost; we are starving; give us our bread at cost; give us our food at cost; give us our shoes at cost; establish for us a great department store in every great center of population. The Government of the United States with its great capital"—you all remember the arguments during the progress of this debate—"with its superior business facilities, will be able to run a business of almost any kind more cheaply than private capital can do it. Now we count on you, and we make the same request of you that you have granted to them; give us all these things from the Government at cost."

Mr. President, it is a sad day for this body and for this country when distinguished and able Senators, who occupy the high place in the public regard and the warm place in the affections of their colleagues that the Senator from Alabama so justly holds, make a mistake like this. I am not here to lecture him; I am not trying to do that; I may be wrong; I may be absolutely in error; but if I am I have learned my Democracy at the wrong source, and I have got to unlearn all the Americanism I know. I was taught, Mr. President, at my mother's knee that individualism was the corner stone of this Republic and that the individual citizen was the edifice upon which was built American greatness and American glory; and yet I come to this body and find distinguished Senators, much older than I am, a great deal wiser than I am, far wiser, advocating before this body and before the American people such a socialistic proposition as this, that, under the guise and under the pretext of equipping a Government factory so big that it can supply this country with powder enough and explosives enough to war with all the balance of mankind, we are going really to equip a mammoth guano factory, to sell at cost to all the farmers of the United States the fertilizer they require, or as much of it as possible.

Mr. GALLINGER. Mr. President——

Mr. HARDWICK. I yield to my friend from New Hampshire.

Mr. GALLINGER. Does it not, after all, resolve itself into this, that the Government will go into the manufacture of a certain product that the farmers use and sell it to the farmers who own farms at cost, and do nothing for the men who do not own farms and can not possibly acquire farms?

Mr. HARDWICK. It may come to that; it is an endless circle, I will say to my friend. Once we embark on this sort of enterprise, what man can say where or when we will halt? Once we start on this course, who can tell whither it will lead or how long it will take us to arrive at utter destruction?

Mr. President, there may be, although I dislike to believe it, Senators in this body, distinguished and dignified as it is, who may think that it is necessary for them to make capital with their farmer friends at home by favoring all sorts of wild propositions and holding in terrorum over the Senate the threat that if you vote against this proposition the farmers of your State will know that you are not for them or not for their interests. I know that my distinguished friend from Alabama is not in such a category as that, if there are, in fact, any such Senators here.

Mr. STONE. Mr. President, will my friend yield?

Mr. HARDWICK. With pleasure.

Mr. STONE. I want to get a little clearer view of this subject than I have. I understand the proposal of the Senator

from Alabama to be that the Government shall interest itself in establishing a hydroelectric plant in order to extract nitrates from the air for powder making for public purposes. Does the Senator favor that?

Mr. HARDWICK. Undoubtedly; I am not opposed to that.

Mr. STONE. I am not opposed to that. I voted with the Senator to strike out the provision he moved to strike out, but now what I wish to ask the Senator is this: If he and I, cooperating with the Senator from Alabama, should succeed in erecting such a plant as I have indicated, with large amounts of Government money invested in it, and we should come to a point at a time of profound peace when that immense power is not needed and is not used for public purposes, would the Senator have it lie idle or would he be willing that some individual, some corporation, might come along and purchase that power, paying the Government for that power and utilizing it in making fertilizers or anything else?

Mr. HARDWICK. Has the Senator finished his question?

Mr. STONE. I wish to know what the Senator's position is.

Mr. HARDWICK. I will state it to the Senator frankly. I agree with the Senator, I think, if I get the drift of his mind, on this question. Of course, if we build a factory—and that is not necessarily involved in this proposition at all—one phase of it is that we should develop the water power necessary in order to make nitrogen, or to run the machinery of the factory that would make it, for gunpowder purposes; but whatever we did along that line for purely legitimate public purposes, whether we merely developed the water power or whether we constructed the factory, undoubtedly, if we did not use it or when we did not need to use it to make gunpowder, I would favor leasing it or selling it or disposing of it in some way, under competitive bidding, so as to give no one man or no one corporation an advantage over another, to private parties, firms, or corporations, to be used by them in any business in which they might desire to engage, and then to be retaken by the Government whenever it needed it to make still more powder for public purposes.

Mr. BRANDEGEE. Mr. President——

Mr. HARDWICK. I yield to the Senator from Connecticut.

Mr. BRANDEGEE. What does the Senator think of the proposition to leave to the Secretary of War the decision of a governmental policy, as to whether the Government shall continue in this business or whether it shall lease the power?

Mr. HARDWICK. I thank the Senator for the suggestion. I was just coming to that. The Senator from Alabama [Mr. UNDERWOOD] now proposes an amendment. The part about the patents is unimportant. I think the Senator from Montana [Mr. WALSH] is right that in the general power to construct such a plant the power will be implied to acquire the patents. Be that as it may, the Senator's rejoinder that it will not do any harm to put it in is good; but the important point comes in the second paragraph of the Senator's amendment.

The Senator from Alabama proposes what? That the Secretary of War, while this country is at peace, after we have erected this mammoth factory—large enough to supply the needs of this Government for explosives if it were engaged in war with all the balance of the world—shall either lease it out or operate it himself in the manufacture of commercial fertilizer. The Secretary of War is to run a mammoth guano business; and, Mr. President, my friend the Senator from Alabama absolutely leaves to the determination of the Secretary of War, a Cabinet officer, the decision of the great governmental question as to whether or not the Government of the United States is going into the fertilizer business or is going to lease out its property to private persons who desire to engage in that business.

In other words, we have sunk so low that the Congress of the United States can no longer decide these great questions of governmental policy for itself, but it has got to put it in the disjunctive and let a mere Secretary, elected by nobody, responsible to nobody except his chief, say whether or not we shall embark on a socialistic business of this kind and character.

Mr. MARTINE of New Jersey. Mr. President, will the Senator yield to me for a question?

Mr. HARDWICK. Just for a brief question; yes.

Mr. MARTINE of New Jersey. I want to ask whether the Senator does not realize that fertilizers are of prime necessity to agriculture in the United States?

Mr. HARDWICK. Undoubtedly; and I want to say one thing——

Mr. MARTINE of New Jersey. Then I——

Mr. HARDWICK. I will not yield any further right now, because I catch the drift of the Senator's question.

Mr. MARTINE of New Jersey. I just want to ask another question.

Mr. HARDWICK. No; I want to answer one at a time. I am going to answer the Senator's question. Wait a while. I will yield to the Senator again directly.

Mr. MARTINE of New Jersey. I have another question I want to ask the Senator.

Mr. HARDWICK. All right.

I do not believe my friend from Alabama is any closer to the farmers of the South than I am. I was reared on a farm and I live in a small agricultural town of 2,000 people; not in a great manufacturing and industrial center, like that in which the Senator from Alabama resides. The people of my own town and county have no other industry than agriculture. I know fully as much about the needs and aspirations and the sufferings and privations of the agricultural masses of this country as either my friend from Alabama or my distinguished friend from New Jersey; and yet I am making no particular protestations of my undying love and extraordinary partiality for these people. My life has been spent among them, and I do not have to do it; and I have told them repeatedly, in private and in public, that I would do no more for them and no less for them than I would for any other class of people in this country. I do not believe in class legislation. Jefferson did not believe in it. Jefferson said, "Equal rights to all men; special privileges to none."

Mr. MARTINE of New Jersey. That was before the day of Standard Oil.

Mr. HARDWICK. What was the Senator's suggestion?

Mr. MARTINE of New Jersey. If the Senator will permit me, I said that was before the day of the Standard Oil Trust, when Jefferson made that announcement.

Mr. HARDWICK. And the Senator from New Jersey is not more opposed than is the Senator from Georgia to any special privileges that may have been given, by acts of either commission or omission, to the Standard Oil and other like monopolies. I neither cater to the great corporations of this country—who have received, I think, undue legislative privileges—nor do I attempt to make unsound appeals to the farmers of this country because there are so many of them. I do not have to do it, thank God, among the people among whom my life has been spent.

Mr. MARTINE of New Jersey. Now will the Senator yield to me?

Mr. HARDWICK. No; not for the present, Mr. President. I want to proceed. I have told them recently, repeatedly, "I shall not ask, and you ought not to expect, special favoritism before the law. It has been your motto always, as it was Jefferson's battle cry, that you did not want any special privileges; you did not require any special rights." And why on earth, Mr. President, any Senator should think that the great farming masses of this country, the men who live close to nature and who commune with her, and who keep their standards correct and their ideals pure, should expect or require of us any such treatment is more than I can understand. There may be walking delegates among them. There may be so-called leaders of unions and organizations among them who will advocate just such propositions as this, and who will condemn Senators or Members of the other body who do not support every proposition of this kind that they favor; but of those men I have not the slightest fear, and for them I have not the slightest regard. I do not propose to be dragooned by them into violating the fundamental principles not only of Democracy but of Americanism and of right and of justice between man and man. I do not think the farmers of my State require it, and, if they did, they would not get it at my hands, no matter how much they required it. I believe they are too just and too fair-minded people to require of me that I should vote special privileges to them. All they want me to do is to give them an equal chance with everybody else in the Republic and to see that nobody else puts his hands in their pockets. That I always try to do and am always willing to do.

As for the proposition that we must, forsooth, because the farmers or some of their officers tell us that they want it, insist upon establishing a mammoth guano factory, whether it is located at Muscle Shoals or in Georgia or anywhere else, I want to say to my friend from Alabama, in order that he shall not misunderstand me, that if this sort of thing is done over my protest I hope it will be established at Muscle Shoals, because I believe, from all I have heard, that at Muscle Shoals is located the greatest power in the South, and one of the greatest in the Republic. If this power is utilized it ought to be utilized upon correct governmental principles, and I agree that Muscle Shoals will not have to do anything but stand on its own merits in competition with all the water powers of the Republic; but that is neither here nor there. Because some men are saying—officers, it may be, of so-called farmers' organizations—that it is neces-

sary for the Government to go into the business of manufacturing fertilizers in order to serve the farmers of this Republic, I do not believe my people will expect or require me to yield to any such demand as that. I do not think we ought to go into such a business, either for the farmers or for the laboring men, for the lawyers, or the doctors, or the merchants, or the business men, or anybody else.

As I said this morning, I think the Government of the United States will have fully enough to do if it will not engage in any other sort of business except the governing business. It seems to me like its hands will be full if it will do that, because multitudinous and vexatious problems are already pressing on us from that standpoint alone. But this proposition that the Government of the United States is to embark first in this business and then in that business and then in the other business, on land and on sea, and it may be after a while in the air, is far too much for an old-fashioned Democrat like myself.

Mr. MARTINE of New Jersey. Mr. President, will the Senator yield to me for one second?

Mr. HARDWICK. I will; yes.

Mr. MARTINE of New Jersey. I have no purpose of making any speech, but I only want to impress one fact upon the Senator from Georgia. I think he is not aware of the fact. He admits that fertilizer is a necessity. I want to impress upon him the fact that all the great fertilizer plants in this country are owned and controlled by one corporation, and that is the Standard Oil Co. The Mapes and the Bokers, the Millers and the Listers—you can sail along the Kill Van Kull, in the State of New Jersey and see these great, ponderous plants presenting their frontage to the water, and you will find each one of them says: "Principal office, Standard Oil Building, 26 Broadway"—"Standard Oil Building, 26 Broadway." So I say to the Senator from Georgia that the farmers of this country are in a dire situation so far as that is concerned, and it illy becomes the Senator to characterize as being special pleaders for buncombe effect to the farmers those who advocate some system whereby fertilizers may be made cheaper.

Mr. HARDWICK. Mr. President, I am glad the distinguished Senator from New Jersey has given me that information. He seems to be better acquainted with what the Standard Oil Co. is doing than I am. But I can say to him that so far as Georgia is concerned, the Standard Oil Co. has no hold there that I know of on our fertilizers. The Virginia-Carolina Chemical Co. is supposed to have some. Be that as it may, have we not got laws on our statute books, put there by a Democratic administration, broad enough and strong enough to meet that situation? Have we a Republican Attorney General, or a Democratic Attorney General? Are we obliged to embark on all sorts of socialism because we can not get the laws that we have on the statute books enforced with our own administration in power? Is that what the Senator means?

Mr. MARTINE of New Jersey. Well, I have heard it stated that the process of the law is eternally slow.

Mr. HARDWICK. Yes; it is eternally slow. It is not as fast as the rate at which you would send this country to perdition if you could embark it on all such schemes as this.

Mr. MARTINE of New Jersey. What constitutes a scheme in the Senator's eyes would not constitute it in mine.

Mr. HARDWICK. That is all right. The Senator and I—I am happy to say—disagree about many things. But I do not think the suggestion of the Senator that because fertilizer is a necessity of life the Government ought, therefore, to engage in its manufacture and sale, will appeal to the reason of the Senate. It does seem to me that the suggestion of the Senator that because fertilizer is a necessity of life, therefore the Government ought to manufacture it and sell it to its people, answers itself.

Mr. President, I know not what course any other Senator in this body, Democrat or Republican, may take, but as far as I am concerned my decision is irrevocable on this question. I can not and will not embark on enterprises of this sort to please anybody in this Republic, in my own State, or anybody else's State, be he farmer, laborer, workingman, or what not.

Mr. OWEN. Mr. President, the issues which appear to be drawn in the discussion which has taken place would seem to be as to whether or not, under any circumstances, the Government of the United States should use the powers of nature now going to waste in the water powers of this country for the manufacture of fertilizers or explosives or other uses to which nitric acid may be properly put.

I do not feel willing to allow the occasion to pass without saying that, for one Democrat, I am in favor of using the combined powers of the people of this country in using these water powers and turning them, not in a slight way, as this amendment proposes, but on a large scale, into the service of mankind. I want to see in this country, as a measure of proper preparedness for the future, abundant and cheap food, abundant and cheap raw materials, abundant and cheap explosives for protective purposes and for internal purposes. I should like to see the Government harness these water powers, which it owns with money costing the Government 2 per cent, and I should like to see these nitrates furnished to whoever wants them to increase the productive capacity of the land of this country. I do not, as a Democrat, apologize for that position, nor do I sympathize with the condemnation of the Senator from Alabama [Mr. UNDERWOOD] because he wished to use in a small way these powers.

Thomas Jefferson taught good doctrine for his day, but Thomas Jefferson had no conception of the combined powers that exist now in the hands of a few men to control, as the Senator from New Jersey [Mr. MARTINE] pointed out, the entire output and delivery and use of fertilizing agents. Thomas Jefferson had no conception of the modern monopoly. Thomas Jefferson strongly and violently opposed monopolies of every character; but here is one place where the Government of the United States can use the cheap water powers now going to waste. Here is one place where the people of the United States, acting through their representatives on this floor and in the other Chamber, can use their combined powers for the common welfare and the general good. I do not feel willing to hear that doctrine denounced here by the Senator from Georgia, and I have no sympathy whatever with his views upon that subject.

RECESS.

Mr. CHAMBERLAIN. Mr. President, I move that the Senate take a recess until to-morrow at 12 o'clock.

The motion was agreed to; and (at 5 o'clock and 58 minutes p. m.) the Senate took a recess until to-morrow, Thursday, April 13, 1916, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *April 12, 1916.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Lord our Lord, how excellent is Thy name in all the earth! who hast set Thy glory above the heavens.

Look down, we beseech Thee, from Thy purity with compassion upon our infirmities, our weaknesses, and our sins which doth so easily beset us. Inspire us with pure thoughts, high ideals, and noble purposes, that we may meet the conditions of life with brave and manly hearts and fulfill every obligation Thou hast laid upon us with patriotic zeal and fervor; that under Thy guidance we may further every good and render unto the people valiant service with patience and perseverence, that our Republic may fulfill its purpose to the good of mankind and to the glory and honor of Thy holy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

EXTENSION OF REMARKS.

Mr. HICKS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. FAIRCHILD. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the Agricultural appropriation bill.

The SPEAKER. Is there objection?

There was no objection.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed bills and concurrent resolution of the following titles, in which the concurrence of the House of Representatives was requested:

S. 5229. An act granting the consent of Congress to the county commissioners of Warren County, Pa., to construct a bridge across the Allegheny River in the borough of Warren, County of Warren, in the State of Pennsylvania;

S. 3606. An act for the relief of contributors of the Ellen M. Stone ransom fund; and

Senate concurrent resolution 20.

Resolved by the Senate (the House of Representatives concurring), That the President of the United States is hereby authorized and requested to appoint a representative of this Government to appear at the celebration of the landing of Sir Francis Drake on the shores of Marin County, Cal., on the dates of May 19, 20, and 21, 1916: *Provided*, That the expenses of such representative shall be paid by those in charge of the celebration, and that no expense whatever shall be required of the Federal Government.

The message also announced that the Senate had passed with amendments the bill (H. R. 11471) to amend an act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913, in which the concurrence of the House of Representatives was requested.

SENATE BILLS REFERRED.

Under clause 2 of Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committee, as indicated below:

S. 4014. An act to supplement existing legislation relative to the United States Court for China and to increase the serviceability thereof; to the Committee on Foreign Affairs.

S. 4432. An act to amend section 8 of an act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914; to the Committee on Banking and Currency.

Mr. GARNER. Mr. Speaker, I ask unanimous consent that for the present the bill just referred to in the message from the Senate, the sugar bill, remain on the Speaker's desk, without prejudice, until the return of the gentleman from North Caroline [Mr. KITCHIN].

The SPEAKER. It does not take unanimous consent to have that done, unless there is a desire to have it printed for the information of the House.

Mr. GARNER. I do not know but that it might be advisable to do that.

The SPEAKER. It will be held on the Speaker's table.

DEED TO HOMESTEAD OF ABRAHAM LINCOLN.

The SPEAKER. This is Calendar Wednesday, and the unfinished business is the bill (H. R. 8351) to accept a deed of gift or conveyance from the Lincoln Farm Association, a corporation, to the United States of America, of land near the town of Hodgenville, county of Larue, State of Kentucky, embracing the homestead of Abraham Lincoln and the log cabin in which he was born, together with the memorial hall inclosing the same; and further, to accept an assignment or transfer of an endowment fund of $50,000 in relation thereto.

Mr. CLARK of Florida. Mr. Speaker, I ask unanimous consent that in addition to the time allowed under the rule for general debate, one hour be added, one half to be controlled by the gentleman from Illinois [Mr. MCKINLEY] and the other half by myself.

The SPEAKER. The gentleman from Florida asks unanimous consent that the general debate on the bill H. R. 8351 be extended to three hours, one half to be controlled by himself and the other half by the gentleman from Illinois [Mr. MCKINLEY]. Is there objection?

There was no objection.

The SPEAKER. The House will automatically resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 8351, with Mr. BARNHART in the chair.

Mr. CLARK of Florida. Mr. Chairman, I believe when the committee rose on last Wednesday I had 15 minutes remaining?

The CHAIRMAN. The gentleman had 18 minutes remaining.

Mr. CLARK of Florida. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. FOSTER].

Mr. FOSTER. Mr. Chairman, I am very glad to support this bill, which provides for the acquiring by the Federal Government the birthplace of Abraham Lincoln. If this bill becomes a law, it will forever preserve to the people of the United States the birthplace of this illustrious and greatly beloved man who stood not only for the preservation of the free institutions of our own country but was an example for all the world. His birthplace was a log cabin and his parents were humble though respectable people. His useful and honorable life well demonstrates to the world what a man may accomplish for himself in this country by building up character, integrity, and unselfish work in the interests of the people. Mr. Lincoln did not have the opportunity of an education in any great college or university, but he did learn the value of character, the principle of fair dealing, and recognized the rights of humanity. He came from Kentucky to Indiana and then to Illinois at an early age and followed surveying, was postmaster and a village merchant in New Salem, Menard County. He studied law, was admitted to the bar, and practiced his chosen profession, going from court to court, or, as it was known in that early day, by riding the circuit. Many of those with whom he was associated in early life and practiced law with him became famous as lawyers and occupied responsible places, not only in Illinois but in the Nation. Nearly all of the associates of Abraham Lincoln in Illinois at that early time have passed away. There is, however, in this House one who knew Lincoln, practiced law with him as a young man on the circuit in the eastern part of the State along the Wabash River. I refer to Hon. JOSEPH G. CANNON, ex-Speaker and at present a Member of this House. Mr. CANNON also had the distinction of being present at one of the great joint debates which took place between Lincoln and Douglas, at Charleston, Ill., in 1858. These debates between these intellectual giants will never be forgotten by the people of Illinois, and each spot where these men met to discuss the great issues then before the people has been carefully marked, that they might be preserved throughout all time. Mr. Lincoln was a member of the Illinois Legislature in 1836 and 1837, which met in the city of Vandalia. The old statehouse is still there and now used as a courthouse. Among those who served with him in that legislature and afterwards became distinguished were Stephen A. Douglas, James Shields, Archy Williams, Ninian Edwards, John J. Hardin, Jesse K. Dubois, John A. McClernand, and Usher F. Linder, and others that might be mentioned. He also served in the legislature of 1838–1840. Mr. Lincoln did not specially distinguish himself during his term of service in the legislature, but did take an active interest in local affairs in the State. He afterwards became a Member of Congress, serving one term in the House of Representatives.

The stirring times which brought on the Lincoln-Douglas debates in 1858 throughout the State of Illinois, in which they held joint discussions in every congressional district of the State, developed great interest in the questions of that time, which then divided the North and South, and made Mr. Lincoln famous throughout the Nation and had much to do with making him President of the United States. Mr. Lincoln was a remarkable man in the fact that he never seemed to hold revenge or resentment against a man in the world. His kindly disposition toward those who differed with him in what he believed to be right was one of the strong characteristics of his nature. Many harsh and unkind things were said about Mr. Lincoln as a public man, and he was severely criticized in his public acts as President, but with all the abuse which was heaped upon him it did not cause him to return this ill treatment or say any unkind things. No President of our country ever suffered more anxiety in regard to the welfare of the Nation than he, and no one ever bore it with greater fortitude. When we read of his life and the many slanderous things said of him one sometimes wonders how he was ever able to bear up under it all. It seems that our Presidents must many times remain silent during severe criticism. Theirs is the welfare of the Nation, and they have a duty to perform as its Chief Executive and must not turn from the right as they see it, however much they may be criticized. People are often too prone to criticize a President for partisan purposes; not only was this the case in Lincoln's time but down to the present. Lincoln did not hesitate to change his mind whenever he was convinced it was for the best interest of the country to do so, but every time he did so he was abused for it. He was personally abused, yet all this criticism failed to change his nature, but he went forward determined to perform his duty as he saw it. He did not spend his time abusing those who indulged in abuse of him, but went about his work determined, as he said—

With malice toward none and charity for all to do the right as God gives us the power to see the right.

His chief desire was to preserve the Union, that our country might be united and the flag once more be the emblem of liberty for all the people in every part of this Republic. His solicitude for the welfare of the individual soldier was many times demonstrated during those long four years by his kindness, and his sympathy and encouragement to those who were unfortunate in losing their relatives and friends in the Army was well known to all. His memorable speech at Gettysburg will live as long as time lasts as one of the greatest ever delivered in all the history of the world. His second inaugural address showed in every word his determination to prosecute the war to a successful conclusion and save the Union, and our duty when the battle was over to care for those who fought for our country, but to forgive those who fought on the other side. He recognized they were our brothers and our own people, and if this country was to again be united we must treat them as such. They fought for what they believed right, and when the surrender at Appomattox took place the Old Flag was again acknowledged as the emblem of peace and liberty, and we can all say—

Your flag and our flag,
And now it floats to-day
O'er your land and my land
And half the world away.
Blood red and rose red,
Its stripes forever gleam;
Snow white and soul white,
The good forefathers' dream.

Sky blue and true blue,
With stars that beam aright;
A gloried guidon of the day,
A shelter through the night.

Your flag and my flag—
Oh, how much it holds
Your heart and my heart
Secure within its folds.

Your heart and my heart
Beat quicker at the sight;
Sun kissed and wind tossed,
The red and blue and white.

The one flag! The great flag!
The flag for me and you!
Glorified, all else beside,
The red and white and blue.

It was unfortunate for the North, but more especially for the South, that he should have been taken away at a time when his service was so much needed in reconstructing that devastated portion of our country which had suffered the ravages of war. Had he lived, it is believed that the unfortunate condition which resulted after the close of the war would never have taken place. He held no enmity to the South, but it was believed his love and solicitude for the people there was such that the outrages committed after peace was declared would never have taken place had he been permitted to serve out his term and give his assistance to the people in rebuilding their homes and country. To-day our country is happy, indeed, in the knowledge that we had an Abraham Lincoln during those trying times. The people of Illinois are proud that they furnished to this country and to all the world an Abraham Lincoln who preserved this Union that they who follow after him might enjoy these blessings of a happy and a united country and that our country will be a beacon light to all the world as a land of liberty. Let us preserve these blessings to all our people. We can not be true to the flag unless we are true to the principles for which the flag stands. We are all thankful that there is no sectional feeling within our borders and the bitterness of 1861 and 1865 is gone, and that men meet without sectional quarrel and only with kindly feeling to each other. We thank God that upon this floor those from the South are here to speak in praise of Lincoln. They had their heroes in battle, whom they praise. Why should they not? Shall they be criticized for doing so? Their loved ones fought for the cause they believed just, and many lost their lives on the battle field. The example of the life and character of Abraham Lincoln is an inspiration to every individual to put forth his best efforts for his country. Times may come when people take sides upon great questions and contend for what they conceive to be the best, and it is right that such should be the case with every true American. With such questions settled by the majority, they acquiesce in what is best for the greatest number. In no other way can our Republic be preserved. We should emulate the life and character of this illustrious martyr that we, too, may render some valuable service to our country. Let us not endeavor to take from society in this world without giving something in return. With rights and privileges come responsibility. We should do our part. Let us perform our work so that it may be said of us, "We have fought a good fight and have kept the faith."

Abraham Lincoln is gone, but the inspiration of his life will live forever. [Applause.]

Mr. RAINEY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. McKINLEY. Mr. Chairman, I yield such time as he desires to the gentleman from Illinois [Mr. CANNON]. [Applause.]

Mr. CANNON. Mr. Chairman, Lincoln was born in Kentucky, if I recollect right, on the 12th day of February, 1809. No one could have dreamed what his future would be. They have found the log cabin where he was born, the place upon which it stood, the farm upon which his father failed to make a living, and it has been purchased and endowed with $50,000 and is now tendered to the Government of the United States. It is meet and proper, in my judgment, that this bill should pass. We are building a great memorial here in the city of Washington to Lincoln, and I am glad of it, as is everyone, but that memorial, located just beyond the Washington Monument, marks his service as a lawyer, as a statesman, as President. That memorial is not so high as the Washington Monument, but it is broader and longer; it is not dwarfed by the Washington Monument, nor by the Capitol, nor should it be. But, after all, if he had not been born he would not have been President. I am not a believer in special providences, but if I were I would say that he was born with a mission. Mr. Chairman, there is an old Greek myth that one of the tasks of Hercules was to meet and overcome Antaeus.

He ascertained that the secret of Antaeus's strength was that every time he touched the earth his strength was renewed. So, placing his arms about him, he held him up in the air until he died for the want of sustenance. The Greek myths, many of them, tell the story of strength renewed by touching the earth. We all understand that in this country, and, in fact, in all countries, in the main the men who lead in achievements are of the generation or near to a generation that has touched the earth. [Applause.]

The genesis of Lincoln was a happy one. The family moved over into Indiana on the way to Illinois. They halted first in Indiana, and then settled in Illinois, in the county of Coles, and then over in the county of Menard. He was a boatman, then a surveyor, a merchant, soon became a lawyer, and a successful one, and went to the legislature. He had everything in common with the people of the borderland. Politician as well as lawyer, though not a reformer, he was a partisan. He was a member of the Whig Party, and one of his principal opponents at the bar in the early days was Mr. Douglas. Douglas forged ahead, came to the House of Representatives, was elected and reelected to the Senate of the United States, and became the leader of his party, being a wonderfully strong man.

Lincoln was ambitious. He possessed a law practice that would not be counted lucrative now, although it abounded in a large number of cases. If fees had been paid then of the size of the fees now, with the amount now involved, he would have had a wonderful income. Judge Davis, upon whose circuit he practiced, told me that the largest fee which Mr. Lincoln ever received was $5,000, in a litigation for the Illinois Central Railway, touching the 7 per cent of the gross earnings that went into the treasury of the State and freeing the railway from taxation. Mr. Lincoln was successful for his client, and held his breath, and charged $5,000, but had to sue the corporation to make it pay. Mr. Davis, afterwards Justice of the Supreme Court of the United States, told me that Mr. Lincoln never before had received such a fee, and rarely as much in the aggregate as $5,000 a year.

He had this equipment for his afterlife work. Born in Kentucky, he came to Illinois, which was settled in the central and southern portions from Kentucky, Tennessee, North Carolina, and Virginia principally. For a long time settlements were sparse in the northern part of the State, although there was a considerable settlement there from the East. But the early settlements were mostly from the Southland. There came some Democrats and some Whigs, about evenly divided in politics, and they used to say when they spoke of the Kentuckians—Whigs, Democrats, strong partisans—that the Kentuckian took his politics like he did his whisky, namely, straight. And so it was.

Mr. Lincoln became a candidate for the Senate after the passage of the Kansas-Nebraska bill. In 1858, Mr. Douglas being a candidate to succeed himself, he was Mr. Lincoln's opponent; and this was the issue, in substance: Lincoln was not an abolitionist; nor was Douglas, for that matter. Douglas was for squatter sovereignty; that is to say, Lincoln took the position that slavery was not national; that it was sectional, and that a State when it came in, or even after it came in, could legalize slavery, but that in the national domain there was no law to protect the property where it was invested in the slave, the South taking the position that it was property, and therefore it was entitled to protection in the national domain.

Mr. Douglas said that he would be, to a certain extent, neutral. Said he, "We will let the Territorial legislature, the people of the Territory, determine whether slavery shall exist in that Territory or not, prior to its admission as a State, if it be admitted as a State afterwards. And the contest was a fierce one. The Whig Party was divided in twain; the Democratic Party in the North was divided in twain; and there never was, I dare say, in all the history of the country such a campaign as was made by Mr. Lincoln and Mr. Douglas. Lincoln held his own, but Douglas had a national reputation. Lincoln's reputation was as a lawyer in the Middle West, north of the Ohio River. This campaign brought him to public notice because he could hold his own with the "Little Giant." It was the foundation which made him a candidate for the Presidency and which resulted in his election. Of all men living, in my judgment there was no man in the United States who was so well equipped from his early life to be President as Abraham Lincoln. [Applause.]

My colleague, Dr. FOSTER, said that I had known Lincoln and attended the Lincoln-Douglas debates in 1858. That is true in a measure. As a young man I met Lincoln on a number of

occasions—on the ninth judicial circuit of Illinois, at the Illinois convention which made him the candidate of the State for President, and during that memorable campaign in 1860. I attended the debate between Lincoln and Douglas at Charleston, Ill., in September, 1858. The prairies of central Illinois were vacant that day, for all the people went to Charleston to hear the two champions in the fourth debate. They were pretty equally divided in their loyalty to the two men, and in that section at that time men were virile in their partisanship. There were banners and bands, and the little town was overrun with people from far and near. The meeting was held on the fair grounds, and each party had its chairman to welcome its leader and preside together.

It was at that meeting that Lincoln took advantage of Douglas to make the Democratic chairman testify against him. The Hon. O. B. Ficklin, a former Representative in Congress, was the Democratic chairman and had welcomed Douglas and introduced him to the audience. In that speech Douglas repeated his charge that Lincoln had refused to support the administration's conduct of the War with Mexico. Lincoln had denied this charge at Freeport and at Jonesboro, but when it was repeated at Charleston he showed that old human trait of "getting even." When he referred to the charge and his former denials, he whirled about, reached out his long left arm, and, taking Chairman Ficklin by the collar, yanked him out of his chair and to the front of the platform, much as an old-fashioned schoolmaster brought out a bad boy to be trounced. The crowd, anticipating a fight, became excited, but Lincoln remarked: "I am not going to hurt Col. Ficklin; I only call him as a witness. Now, the colonel and I were in Congress together, and I want him to tell the whole truth about this Mexican business." Col. Ficklin was in an embarrassing place; he told the audience that he was the friend of both Douglas and Lincoln and did not want to be a party to the dispute, but that Lincoln had voted just as he did for the supplies for the Army in Mexico, though Lincoln had voted for the Ashmun amendment, declaring that the President had exercised unconstitutional powers in beginning the war. It was Lincoln, the lawyer on the circuit, compelling the witness for the prosecution to testify for the defense.

The Republicans were wild with enthusiasm and the Democrats disappointed over the incident; but there was no further disturbance, and the adroitness of Lincoln disposed of the charge that he had been disloyal to the Army in refusing to vote the necessary supplies to the troops in Mexico. Lincoln lost in that senatorial contest, but it made him the Republican leader in 1860, as it made impossible the election of Douglas to the Presidency by dividing his party on the slavery question.

Lincoln did not suit the extreme North, because in the main it was extremely radical, with the Garrisons and the Phillipses, and many others. Of course, he did not suit the extreme South, because there too was radicalism; but when you came to Missouri and Kentucky and portions of Tennessee, Pennsylvania, Ohio, Indiana, Illinois, and Maryland, there was a division almost half-and-half. They were virile men. The Caucasian race is virile, and where they honestly have convictions you know that they are ready to fight for them. Lincoln knew how far he could go in that great contest with our arms, and whether he could succeed or not, by being able to keep his hand upon the public pulse on the very stage where the war was principally conducted, namely, in the borderland. He could place his hand upon his heart beats, shut his eyes, put the question to himself, and determine what it was necessary to do and say, and receive the support not only of the Republicans, but the Democrats in the main, strong partisans as they were. And it was necessary to have a substantial vote. We all know what happened in Missouri. In Kentucky the Kentuckians boast that their quota was full in both armies, which was true, and so on along the borderland. There were specks of war at times in Illinois and in Indiana. Battles were fought, one or two in the district that I now represent, in the circuit upon which Lincoln traveled, between men, our kind of men, our blood—Americans.

In the meantime the radicals in the North were not satisfied. They said he went too slow. Ministers in the pulpit, many of them, openly said he was not performing his duty. There was an abolition sentiment in the North; the farther north you got the stronger the abolition sentiment. It was not so strong in the borderland as it was in New England and in New York and in northern Pennsylvania and northern Ohio. Delegations of preachers came to see him and put it up to him: "Why don't you free the slaves?" They said the Lord had sent them. He gave them this answer, in substance: "It seems to me if the Lord had a communication to make to me, I being chiefly responsible as leader, He would give it to me direct." [Laughter.]

Friends of his grew lukewarm. I read the weekly New York Tribune, the only real newspaper we had in our township. It came in—two or three hundred copies—at a dollar a year. When I was a boy it was a great champion of protection and bore testimony against slavery—a radical. And yet when the real trouble came Horace Greeley in the Tribune said, "Let the erring sisters go in peace," and quarreled with Lincoln, because Lincoln would not help contribute to that end. And so it was all along the line.

By the by, will you bear with me? I do not want to weary you——

SEVERAL MEMBERS. Go on!

Mr. CANNON. For the first two years of the war the Union Army did not have great success. In the fullness of time came Vicksburg and Gettysburg and victory. People took heart. Two million two hundred thousand men, most of them enlisted, by that time were trained. We had in our Army more than were in the Confederate Army. We greatly exceeded them in number. We were much better off. We had more of railways than they had. But they were fighting, do not you see, upon their own ground, as France is now fighting. It is easier to defend the hearthstone than it is to conquer the hearthstone. Well, there was much of trouble. People in the North wanted to compromise. In the South they did not want, in considerable number, to compromise. They were fighting for what they conceived to be their rights under the Constitution. [Applause.] Lincoln, you recollect, in answering one of his letters in 1862, said to Greeley:

> If I could save the Union without freeing any slave, I would do it; and if I could save it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone, I would also do that.

Strange—he was criticized, especially in the Northland as well as in the Southland. He was reminded that the Constitution guaranteed property in the slaves. He acknowledged it. He said:

> I have taken an oath to defend the Constitution—but he added in his homely way—was it possible to lose the Nation and yet preserve the Constitution? By general law, life and limb must be protected, yet often a limb must be amputated to save a life; but a life is never wisely given to save a limb.

And in the time of war for the preservation of the Union and the preservation of the Constitution, when it became necessary, laws were silent, and in three weeks after the preachers had visited him he gave notice by proclamation, if the States of the South did not return to their allegiance by the 1st of January, as a war measure he would declare the slaves free, and he did.

Now, the partisan papers of the North, including the New York World and the New York Herald and Greeley in the New York Tribune, were firing into him. Greeley was not pleased—and I will tell you about that a little later on, if you will indulge me. Those partisan newspapers did not want to see him reelected. They attacked him from every angle, fiercely and vigorously, not striking above the belt, but below the belt. No man in my time was abused as he was by the press. But it did not seem to bother him. He did not complain. It was wonderful how the papers commended and patted on the back Fremont, who was our first leader in 1856, and took him up when the radicals, you know, held a convention at Cleveland. The newspapers were full of Fremont's candidacy, and the radicals who were to nominate him did not say much about Lincoln's political prospects. I sometimes think that history repeats itself when I recollect the action of the newspapers of that time. Well, I will not come nearer speaking of more recent history. [Applause.]

Greeley, editor of the greatest Republican paper of the country up until the beginning of the war for the Union, had a personal grievance against Lincoln. When the convention met at Chicago, with factional troubles in New York, Thurlow Weed and Seward and that faction prevailed over Greeley, and he could not go to the convention as an original delegate, but he got a proxy from a delegate for Oregon, and he was in the convention and worked for the nomination of Lincoln. Lincoln elected, Greeley had the right to believe that he ought to have been in his Cabinet. He began to fight and find fault. The situation grew worse and worse. Lincoln picked Chase and those who had opposed him in the convention for nomination, including Seward, and put those two in his Cabinet. The great trouble was upon Seward, his Secretary of State, and Lincoln said to Greeley's friends: "We can not take two men from New York; I am pursuing this policy." The politicians did not see as well as the statesmen. Greeley became aggrieved, and they fought all through until 1864 came. I will not take time to tell what he said and what Lincoln said in reply. It is good

reading. You will find it in McPherson's History of the Rebellion.

A MEMBER. Tell that story.

Mr. CANNON. The gentleman says, "Tell that story." The surroundings are not as good as they could be for telling that story (the surroundings are good, you know, but we are all prohibitionists now). [Laughter.] But I will tell that story, if you will indulge me, because it throws a strong light upon Lincoln's character. Lincoln was nominated; McClellan was nominated; Lincoln for the preservation of the Union and the prosecution of the war. And, mind you, you did not, down South, have anything to do with McClellan's nomination. He was nominated by the Democratic North, upon a platform declaring the war a failure and advocating an armistice, that we might preserve the Union by compromise. Lincoln, in his characteristic way, said, referring to it as reported in conversation, "Suppose we were to try to compromise. We talked about that, and many people tried it before the war began. But can one man make a bargain?"

Well, it looked as if Lincoln was to have a hard time for reelection. He believed that he ought to be reelected. The Republicans believed that he ought to be. Many Democrats in the North believed that he ought to be; but the campaign was hot.

For four or six years, along about 1878, 1879, and 1880, I had a colleague in the House here by the name of Waldo Hutchins. He was a Democrat at that time, although prior to Greeley's candidacy for the Presidency he had been a Republican. In the Greeley campaign he became a Democrat, voted for Greeley, and then later was elected to Congress as a Democrat. He was a strong, honest, square man, and a truthful man, I have no doubt. He knew Mr. Lincoln very well. Mr. Hutchins told me that one evening he climbed the long stairway in the Tribune Building, then, I believe, the highest building in New York, and found Greeley in his office, and said, "Mr. Greeley, what's the news?"

"Oh, nothing, nothing," said Greeley.

After a little conversation Greeley said to Hutchins, "There is a letter I received."

Hutchins said he took the letter and read it, and it was from Mr. Lincoln's secretary, addressed to Greeley, and it said, "The President instructs me to say that he would like to have an interview with you, and as matters are at present he finds it impossible to get away from Washington. Is it asking too much to ask you to come to Washington?"

The letter was two days old. Said Hutchins to Greeley, "Have you answered the letter? Have you been to Washington?" "No," said Greeley.

"Why don't you answer it?"

"Oh, I don't care to."

Hutchins told me that he grabbed the letter and said, "I will take it."

Greeley said, "As you choose."

Mr. Hutchins said he rushed down the stairway and found a hack, and said to the driver, "I will give you three times your fare if you will catch the last boat to Jersey City."

The driver laid on the whip, and Hutchins caught the last boat and caught the train, although it was in motion when he got on board for Washington. Hutchins came to Washington and went to breakfast at the Willard Hotel. Then he went to the White House. The messenger said, "Why, Mr. Lincoln can not see you now. He is just getting up."

Said Mr. Hutchins, "I must see him."

"Oh, well, you can not see him now. It is impossible."

Said Hutchins, "Take this card to the President"; and he told me, "I scribbled upon my card that I had come in consequence of that letter that his secretary had written to Mr. Greeley."

The messenger came back and said, "The President says to show you up."

"He was dressing, and we talked, and I told him what Greeley had said. Lincoln said, 'I am glad you came. Greeley has a just grievance from his standpoint against me. He voted for my nomination and advocated my election. He had a right to believe that he would be recognized, and he would have been under ordinary conditions, but under the conditions as they then were and now are I could not, performing my duty as President, ask him to be a member of my Cabinet. I believe I shall be reelected. I believe I ought to be. God knows if it were not for the sense of duty that I owe to the people and to civilization I could not be hired to be President. If I am reelected, I believe it will be but a short time until this great struggle will close. Seward is a great man, but of a different faction from Greeley. When this war closes we will have great need for a diplomat at the Court of St. James. We have a long account to settle with Great Britain. Seward has performed great service as Secretary of State. I believe he could perform better service as ambassador to the Court of St. James. By the by, Franklin perhaps was the greatest man that ever lived in this country—philosopher, statesman, scientist. He was Postmaster General under the confederation.'"

Hutchins said, "Yes; so he was."

Lincoln said, "Franklin was a printer. Greeley is a printer. Do you know I believe Greeley would make a good Postmaster General. I think I am right in saying that is the position he would rather occupy than any other."

Hutchins said, "Am I at liberty to say that to Mr. Greeley?"

"Oh, you can say it, but, mind you, I am not making a promise to bind me in the constitution of my Cabinet. I am telling you how I feel toward him personally. I am honest about it."

Hutchins departed, went to New York on the next train, climbed the stairway again, and repeated the conversation to Mr. Greeley. Greeley said, "Did Lincoln say that?"

"Yes."

Without another word Greeley wheeled in his chair, sat at his desk, and for 20 minutes wrote, and then read to Hutchins that greatest of all bugle calls published in the New York Tribune, which I think did much, perhaps more than all the other papers put together, to reelect Lincoln, lining up the Republican Party from the standpoint of patriotism, and the salvation and preservation of the Union.

Sequel: Said Mr. Hutchins, "The day before Mr. Lincoln was assassinated I got another letter from his secretary stating that the President desired to meet me, and asking me if I would come to Washington. I left on the next train, the same train that I had taken in September or October before. I arrived in Washington in the morning, and when I got off the train the newsboys were crying that the President was assassinated. I have no doubt on earth but that he called me to Washington to tender through me the Postmaster Generalship to Mr. Greeley."

So Mr. Lincoln was a politician. He was a partisan, but he had that great common sense as a leader which led him up to the preservation of the Union. Greeley and some of Lincoln's generals and some members of Lincoln's Cabinet criticized him. Some members of his Cabinet were perfectly willing to take the whole thing out of his hands and run the Government. He just let them stay. You know they were useful. He went on in the even tenor of his way. I will not go into that further. You all recollect about it who are old enough, and the rest of you have read about it. Nobody regarded Lincoln as a hero during that great contest. His recognition as of heroic mold came after his death. You know heroes are great fellows. Sometimes the people regard them as heroes, and sometimes they proclaim themselves as heroes. [Laughter.] Let me say to you that that does not apply to one party alone. There are other pebbles on the beach. [Laughter.] With his great good sense, with his feet in the soil, with no collegiate course, God made him, and his associations in youth and manhood had been such that he was enabled to lead and lead successfully.

You remember what George William Curtis said in notifying Lincoln of his second nomination:

> Amid the bitter taunts of eager friends and the fierce denunciation of enemies, now moving too fast for some, now too slow for others, they have seen you throughout this tremendous contest patient, sagacious, faithful, just, leaning upon the heart of the great mass of the people and satisfied to be moved by its mighty pulsations.

By the by, I am reminded of the Gettysburg speech. Edward Everett made a great speech there. Everybody was listening to Everett. Nobody knew that Lincoln's little three-minute speech was a jewel. It was not said to be a jewel until long after he was dead. After it was made the partisan press attacked it. Some of them said it was ridiculous and vulgar. Well, you know how it was in a hot campaign, and the campaign was very hot in 1864 in the Northland. Yet there is not one school boy in a hundred in the United States in a high school who knows that Edward Everett made the principal address on that occasion, but I dare say that ninety out of a hundred of the bright-faced boys and girls can repeat Lincoln's three-minute Gettysburg speech. It is a classic, and will live when you and I are dead and gone and forgotten.

Then take the letter that he wrote to the Irish woman in Boston, who lost four or five sons in defense of the flag. That was a wonderful letter. I had rather have the capacity to write that letter, or to make such a speech if the occasion arose, than to have all the property of all the earth. [Applause.]

Now, I have catch 'heads here enough to last me a long time, but I have talked too long. [Go on! Go on!] Well, not much.

Listen to one of the radicals during the campaign of 1864. Wendell Phillips was an extreme radical of the North. He said:

If William Lloyd Garrison stood in the President's place I should have no fears. Can I put the same trust in Abraham Lincoln? In the first place, remember he is a politician, not like Mr. Garrison, a reformer. Politicians are like the foreleg and shoulder of a horse, not an upright bone in the whole column.

[Laughter.]

That which is not itself crooked stands crooked—

[Laughter.]

and but for the beast, could not move. Reformers are like Doric columns. Might may crush them, but can neither bend nor break.

I suppose a reformer has his place. I sometimes think they get pretty thick. They say that their province is to fight with the Almighty, that the Almighty and one are a majority. Well, they have their place. I am not here to abuse them. Nearly all of them are honest, but once in a while one of them is a hypocrite, makes his living by being a reformer, but who would think of one of them for a Member of Congress, or Senator, or President. For those offices we want a politician, a man of affairs, a man whose range of vision can cover the whole country, and if necessary the whole world.

Lincoln was assassinated by a crazy man. Later on Garfield was assassinated, and later on McKinley; and when Lincoln was assassinated it was the saddest day for the Southland and the Northland. [Applause.] There would have been no mistake made, in my judgment, if Lincoln had not been assassinated. When the proposition was made to put South Carolina and Virginia together in one military district he said, "No; I want to keep the States separate so far as I can to preserve their autonomy and to help strengthen the Union." [Applause.] But he was assassinated. If he had remained President when your State governments were being formed you would not have had reorganizations that made peons practically of the late slaves, and when that happened then came reconstruction with all the hardships that followed. It was a great loss to the North and a great loss to the South.

I believe the hand that used the weapon to take the life of Lincoln was inspired by the press, North and South, that denounced Mr. Lincoln. I believe the same thing is true of Garfield, and the same thing is true of McKinley. I believe in the freedom of the press, but, oh, at times a terrible effort is required to guarantee that freedom when the liberty of the press gets to be the license of the press.

Now, one further word and I will sit down. When I get to talking about Lincoln in common conversation, I suppose I could talk all day, as many of you and millions of others could throughout the country. Who are the men that have effected civilization in all the days from the Master born in a manger? Who were His disciples, the fishermen. And from the time of His crucifixion down to this time He has grown and grown, and His teachings, notwithstanding the great struggle we are having now among three hundred millions on the other side—His teachings grow more powerful and useful to the human family.

The men that have been the strongest leaders of the world are men born in the cabins, in humble life, and of humble parentage. A Member referred to Napoleon the other day. Napoleon was of the first generation that we know anything about, and substantially when he died that was the end of the generation, although there is one man who is respectable in ability and a citizen of the United States.

And so you run along. Take it in poetry. Robert Burns, a son of the soil. Robert Burns speaks of the people in his wonderful songs, and, in my judgment, has done more for civil and religious liberty than any man for many, many generations—and I was going to say centuries. [Applause.]

Who was the father of Shakespeare? He had no descendants, so far as I know, and yet his plays will live through all time. And then there were Goldsmith, Whittier, Dickens, Thackeray, Tolstoi, Andrew Jackson, Garfield, Morton, Sherman, Grant, Carnegie, Bell—and I could stand, if you had the patience to listen, and read a list by the hour. The old saying on the Wabash, homely as it was, is true, "It is three generations from shirt sleeves to shirt sleeves." It was true then and true now, and has been true substantially in the whole history of the world.

You know that if you go into New York or into Chicago or the great centers you will find that three out of four men in business who direct the affairs of men were sons of farmers or others who lived in the sweat of their faces, who worked in early life and have become qualified for their subsequent career. Once in a while one of them makes a very great fortune, and if he gets too strong somebody tries to take it away from him, and sometimes succeeds, and we call him a plutocrat; he commenced as a democrat and became a plutocrat. [Laughter.]

By the way, I have for the first time in my life been reading Emerson a little bit, and in his essay on Napoleon he winds up near the close with this statement. Napoleon, you know, became first consul, overrun Europe substantially, was then Emperor, then came St. Helena. He was a democrat and ran through all of the stages before he died, but Emerson uses this sentence, "The democrat is a young conservative; the conservative is an old democrat; the aristocrat is a democrat ripe and gone to seed." [Laughter.] The first part of this definition applied to Lincoln, who was thoroughly democratic and also conservative, but never aristocratic. Emerson said of him, "He stood, a heroic figure, in the center of a heroic epoch. He is the true history of the American people in his time." [Great applause.]

Mr. CLARK of Florida. Mr. Chairman, I yield 15 minutes to the gentleman from Ohio [Mr. SHERWOOD].

Mr. SHERWOOD. Mr. Chairman, sitting here to-day in this presence I could not help but grow reminiscent listening to the splendid tribute to Abraham Lincoln by my old friend, Mr. CANNON. That vital historical recital reminded me of the time when we came into the Forty-third Congress together on the first Monday of December, 1873. [Applause.] I believe that Mr. CANNON and myself are the only Members in either branch of Congress now in public life who were Members of that Congress. There were historical characters in that Congress, men called to deal with both ethical and fundamental questions growing out of the Civil War, questions that stirred the blood and commanded the most potent mental endeavor. Just across this aisle sat two intellectual athletes—Gen. Benjamin F. Butler, of Massachusetts, and S. S. Cox, of Ohio and New York—who continuously measured the strength and potency of their rasping scimitars at close range. Near the seat where now sits our able and alert leader of the minority [Mr. MANN] sat my old Army comrade, James A. Garfield, then chairman of the Appropriations Committee, afterwards President of the United States. Right in front of the Speaker's desk, in his wheeled chair, was Alexander H. Stephens, of Georgia, late vice president of the Confederate States, a man of intense and powerful intellectuality, a true type of that array of intellectual giants that made both the House and the Senate great forums of debate during and after the war.

James G. Blaine, the idol of his party, was Speaker of the House and the recognized leader. On the Republican side sat 6 representatives of the negro race, just enfranchised, and on the Democratic side 10 or 12 of the battle-scarred veterans of the Confederate Army. I had the honor of a seat between Gen. "Joe" Hawley, of Connecticut, and George Frisbie Hoar, of Massachusetts, the former then famous as a soldier, the latter as the exponent of the highest culture in the domain of civics. But lest I be classed as a reminiscent, I will not indulge in reminiscences further. I am not a pessimist. I believe in to-day, I believe in the future, I believe in the better day to come. And if the debates I have listened to in this Congress seem tame and commonplace, it is because no vital questions to stir men's blood have been under consideration, questions to waken the full force of high intellectual effort. Should a great crisis confront this Congress, I sincerely believe that there is material on this floor on both sides of this historic Chamber to equal in forensic power the record of the past. Such a crisis may not be far off. I remember also the first speech of my colleague, Mr. CANNON, made 43 years ago on the floor of this House, and then, as to-day, we all sat up and took notice. [Applause.]

THE LOG-CABIN MEMORIAL TO LINCOLN.

You will all concede that nothing new can be said of Abraham Lincoln. History and biography and the muse of poetry have been busy with his name and fame for over a half a century, and history has said its last word. It was that crash of cannon shot against the walls of Fort Sumter which started the movement that made the name of Abraham Lincoln the most sacred heritage of the redeemed Nation. Without the titanic conflict that followed the name and fame of Abraham Lincoln might never have inspired a national lyric.

It is not great men who make great epochs of history. It is great epochs that make great men. Had there been no Trojan War there would have been no Homer. Had there been no conflict of the kings in the formative period of English literature there would have been no Shakespeare. Had there been no War of the American Revolution, there would have been no George Washington, and had there been no Civil War from 1861 to 1865, there would have been no Abraham Lincoln.

The American people were leading a dull and melancholy life before that awful struggle of arms, but with that crash of cannon shot against the walls of Sumter came a new and in-

spired life. When the storm burst, the finger of God dropped the plummet into the Dead Sea, and with the overflow came new hopes, new ambitions, and new inspirations. And throughout that four years' struggle, the most desperate and long continued of modern wars, the leading hand, the guiding spirit in the camps and courts and capitols of the Nation was Abraham Lincoln, the President and Commander in Chief.

I remember on the 4th of November, 1864, we were on a march in Tennessee, a forced march, toward the battle field of Franklin. The Ohio Legislature had passed a law (they had the old ballot system then before we had imported the system from Australia) that the soldiers in the field should vote. The Ohio presidential tickets had been sent to me for my regiment, the One hundred and eleventh Ohio. We were on a forced march the day of the election for President of the United States. We were to start at daylight. Just before daylight I had my horse saddled and rode back 3 miles to the rear and borrowed from our brigade surgeon, Dr. Brewer, an ambulance and a camp kettle. Whenever we rested that day, on that rapid march the soldiers of my regiment voted in that old camp kettle in the ambulance. We counted the votes at night by the light of the bivouac fires. One-third of my regiment were Democrats and yet there were only seven votes against Abraham Lincoln in the whole regiment.

I remember also after the Battles of Franklin and Nashville, and after we had driven Gen. Hood and his army across the Tennessee River, we were placed on transports and carried up the Tennessee and the Ohio to Cincinnati; then across Ohio and Virginia on the Baltimore & Ohio Railroad to Washington. We reached this city March 3, consigned to an ocean voyage to some point in North Carolina to meet the army of Gen. Sherman coming up the coast from Savannah. Abraham Lincoln was to be inaugurated the following day, March 4, 1865. I was looking for a war horse in Washington, as my last horse was shot at the Battle of Franklin, but I was determined to see Lincoln and hear his second inaugural address. I had never seen Abraham Lincoln. There was a vast crowd on the east front of the Capitol. It seems to me there must have been 20,000, with many hundred boys in blue, and officers in full uniform, including Gen. Joe Hooker. I had on my old war-worn uniform, once a blue uniform, now tarnished with grime from the red clay roads of northern Georgia and the sticky mud of west Tennessee. My old slouch hat with a hole burned in the crown, caused by sleeping with my head too close to a bivouac fire, was not a fitting crown for inauguration day, but I worked my way through that vast throng to within 6 feet of Abraham Lincoln, and I heard him deliver his last oration on earth. I heard him say:

> Fondly do we hope, fervently do we pray, that this mighty scourge of war may speedily pass away. With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle and for his widow and his orphan.

[Applause.]

Over a half century has passed since that eventful day. I can see Lincoln now as I saw him then—a tall, gaunt man, with deep lines of care furrowing his cheeks, with inexpressible sadness in his face, the face of a man of many sorrows. A sad face, a strong face, a face radiant with the inspiration of a great soul, as he voiced in prophecy the ultimate destiny of this Nation. As a soldier of the Republic I heard Abraham Lincoln voice his national ideals in his last message to the American people.

Two million soldiers fought under Abraham Lincoln, the revered President and Commander in Chief, in the most desperate and longest enduring war of modern times. Over and above the 2,000,000 soldier graves that are, or soon will be, there rises triumphant in the radiant glory of a world-wide beneficence, the prescient prophet of emancipation, the leader in the grandest epoch-making era of all civilization. [Applause.]

Then I recall another scene that I shall never forget. It was the day after the surrender of Lee's army at Appomattox. Our Army was marching up the right bank of the Neuse River, in North Carolina. I saw in the distance a man on horseback, riding a splendid horse—riding like mad—and as he approached the head of our column it was plainly to be seen that he must have been riding hard, for his horse's flanks were white with foam, his eyes flashed fire, his nostrils red as blood. As he neared our front he shouted at the top of his voice, "Lee's whole army has surrendered." Every marching soldier behind a gun voiced the gladness of his heart. The whole Army went wild. That line of march was about 10 miles long, and I could almost hear the last shout of joy away down to the end of the line. That officer was Lieut. Riggs, on the staff of Gen. Schofield, the commander of our Army corps. We were all tired of war, and that was the gladdest day that Army ever saw. It was the proudest day any Army ever saw since God created the world. We had fought the good fight, we had kept the faith, and we knew that the war was nearing its end, and that we could again go to our homes and clasp again the angels of our own household. And what a terrible change from universal joy to the deepest gloom followed this gala day. On the 15th of April, 1865, after we had reached the environs of Raleigh, I saddled up my horse to ride into the city. I had to pass through the camps of about 60,000 soldiers. Camps are always noisy. There are always some soldiers who are singing songs, and our Army was always buzzing with cheerful voices. They were all cheerful then, because we were seeing the end of the war. But that morning the camps were as still as the grave. I met a staff officer and inquired, "Why this silence in the camps?" He replied, "President Lincoln has been assassinated." There was universal mourning in the Army. Every soldier loved and revered Abraham Lincoln, and that whole camp was as silent as this House in the midst of the prayer of the chaplain. That is how the Army regarded Abraham Lincoln. Every soldier loved him as a brother.

Now, as to this log-cabin tribute: We have built many monuments to Lincoln. We have dedicated many statues in bronze and marble; we have four in the city of Washington. I was under the great dome this morning. I saw Vinnie Ream's marble statue of Lincoln in the plain clothes of an American citizen; I saw Borglum's representation of the face of Lincoln, double heroic size. In Judiciary Square there is another figure in marble of Lincoln, and in Lincoln Park there is a true-to-life figure of Lincoln in bronze in the act of unshackling a slave. We are building a splendid temple to him on the banks of the Potomac. That is all right. But monuments and temples and statues have no emotion, no human sympathy, no voice. But here is Lincoln's old Kentucky home. Here is the log cabin where he was born. Here is a silent monitor teaching a vital lesson in patriotism. Here is a symbol of hope and cheer to every poor boy struggling against poverty for an honorable career. Here is a Mecca where all the children of the Nation can gather and take courage in the story of a man, born in a rude log cabin, who learned to read books at night in the silent woods by the light of a pine-knot fire, and who became the guiding hand—the leading spirit—in one of the greatest epochs of all history. [Continued applause.]

Mr. CLARK of Florida. Mr. Chairman, I would like to inquire how much time there is remaining on this side.

The CHAIRMAN. The gentleman from Florida has 21 minutes remaining and the gentleman from Illinois [Mr. McKINLEY] 35 minutes.

Mr. McKINLEY. Mr. Chairman, I yield five minutes to the gentleman from Minnesota [Mr. SMITH].

Mr. SMITH of Minnesota. Mr. Chairman, under ordinary circumstances, after hearing the able and exceedingly interesting speeches of Hon. JOSEPH G. CANNON and the Hon. ISAAC R. SHERWOOD and others upon the life and deeds of Abraham Lincoln, I would not be so presumptuous as to attempt to add anything to what has already been said about "the greatest memory of our earth."

The transfer by the patriotic Commonwealth of Kentucky of the log cabin in which Lincoln was born to the gentle care and protection of the United States is no ordinary occasion.

I never expect to witness a more patriotic and inspiring scene. It is an event that arouses in every American heart a desire to give expression to the love and veneration in which he not only holds the great emancipator but everything connected with his life from childhood to the grave.

From the fullness of the American heart the mouth speaketh of the things that make life worth living; of the things that ennoble and sanctify God's heritage to man.

Would that I had the ability to depict for you my heart's image of Abraham Lincoln; it would fill you with thanksgiving to Almighty God for having sent in the hour of our country's direst need Abraham Lincoln—the greatest power for good and the greatest leader of men since Christ—"a Christ in miniature," said Tolstoy.

Filled with such emotions, I know that my generous and patriotic colleagues will bear with me while I in my humble way on this historic day lay a sprig of laurel on the tomb of one of our own kind and generation—the immortal Lincoln—the friend of man.

Born of humble and illiterate parentage, on Nolan Creek, in a wild and unsettled hickory forest of Kentucky, in this rude cabin—a very strange and unlikely place for the birth of the Nation's saviour. From this lonely home in the wilderness, devoid of books, schools, and churches, and even of the stimulus of educated companions, this incomparable child of the forest by

sheer force of character advanced step by step in knowledge and statecraft until he reached the highest position in the gift of the greatest Nation on earth. And this, too, at a time when that Nation needed its greatest genius to save it from self-destruction.

These inspiring exercises testify more eloquently than any words of mine how completely he restored the Union as it was before the mighty rebellion, in which he was the matchless leader. To-day the Southland is vying with the Northland in paying homage to the memory of the preserver of our Commonwealth, its flag and free institutions. If the shades of the venerated and martyred Lincoln could witness this scene of a reunited and happy people, its cup of joy would overflow.

His was a life filled with greatness and sadness—free from malice, jealousy, and revenge.

His solicitude for the welfare of the South after the fall of the Confederacy was beautifully expressed in these words:

I want the people of the South to come back to the old home, to sit down at the old fireside, to sleep under the old roof, and to labor and rest and worship God under the old flag. For four years I have seen the flag of our Union riddled with bullets and torn with shell and trailed in the dust before the eyes of all the nations, and now I am hoping that it will please God to let me live until I shall see that same flag unsullied and untorn waiving over the greatest and most powerful Nation of the earth—over a nation of freemen—over no master and over no slave.

When Lincoln gave expression to these noble sentiments his heart was filled with solemn joy over the close of the war, and his mind was occupied with hopes for the future welfare of his country and his countrymen. For some time he had been laying plans by which the States could be reunited, and the brave men who had fought on both sides of the mighty struggle could live in peace and happiness ever after. Events followed each other in such quick succession the great President did not have an opportunity to impart to his associates his plans of reconstruction before he was removed from this earth by an assassin's bullet, and the earthly career of the "best-loved man that ever trod this continent was translated by a bloody martyrdom to his crown of glory."

Though the soul of Lincoln had returned to its God as white as it came it left behind a grief-stricken Nation—a Nation in tears. He had won for himself a place in the hearts of his countrymen that will endure until the end of time. While we love our great benefactor as an individual, he loved us as individuals and collectively. The secret of his remarkable life was his intense love not only of man and mankind but of all nature. He was so constituted that he grieved at the pains and rejoiced at the pleasures of his fellows. His sympathy knew no bounds, going so far as to forget himself in his desire to be useful to mankind. It was his strongest instinct, inherited from his refined, gentle, and sensitive mother and wonderfully developed through his childhood association with nature.

Lincoln's lowly birth served to develop him to the fullest perfection and endowed him with the highest and noblest qualities in man.

His childhood association with running brooks, vine-clad rocks, and hickory forests teeming with song birds, and overrun with wild flowers, had much to do with forming his simple, earnest, and truthful character.

He grew to man's estate with a heart in full sympathy with every phase of life, capable of consorting and sympathizing with all things. In this respect he differed from his associates, for they were only capable of sympathizing with a few things. Though many of them were intellectual giants, they lacked the power to develop a broad human outlook; they were limited to their particular point of view, the political, the social, the commercial, and the religious, and judged life accordingly. Hence, anything outside their contracted sympathies, they condemned as a thing of evil, and spent their energy trying to save it from damnation.

What was true of Lincoln's associates applies with equal force to the men of this day and age. Prejudices and antipathies originating in birth are seldom eradicated, and never if the child is brought up in a narrow groove.

Our environment exerts upon us a strong incentive to think, act, and judge as others do.

Lincoln's success in life and his usefulness to mankind was his ability to rise above this parrot-like existence and to place himself in the position of others in order that he might understand them and be of use and service to them. Because of his broad, human, educated sympathies he was enabled to do this to a greater extent than any other historic personage of the world. There was no misguided sentiments in his make-up. Is it any wonder that constituted as he was he became the matchless leader of men? While an idealist in the truest sense, he was, at the same time, unusually practical and sound on all questions that affected man's relation to society.

That Abraham Lincoln was in fuller sympathy with mankind than any other man is evidenced by what he said and what he did for mankind during his earthly existence.

When a man said to him, "The people will go wrong on this subject," he replied, "Intellectually, probably they may; morally, never. In the multitude of counsel there is safety," said he, quoting from the Bible. Expressions of this kind flowed from his lips in countless number:

God must have loved the common people, for he made so many of them.

You can fool all of the people some of the time, some of the people all of the time, but you can not fool all of the people all of the time.

He always saw the distinction between an attempt to suppress public opinion and direct public opinion.

Our duty is to direct public opinion in the right channels; never to attempt to suppress it. That was Lincoln's philosophy, and his life and works are an exemplification of that philosophy.

Under Lincoln the Nation had a new birth of freedom, and it is for us, the living, to dedicate ourselves to the preservation of that Nation to sustain which he gave the last full measure of devotion.

Mr. McKINLEY. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. HICKS].

Mr. HICKS. Mr. Speaker, it is not for me to review the story of Lincoln's life or relate the memories and traditions which cluster around his name. That story, with its pathos and trials, its tragedies and triumphs, its humor and its sadness, has been told so often that it is impossible to illuminate the picture or add to the reverence and the homage which the world pays to Abraham Lincoln.

Born in obscurity, nurtured in abject poverty, he closed life's fitful course the grandest figure of his generation, the noblest contribution of America to an enlightened civilization.

For many and many an age proclaim,
At civic revel and pomp and game,
With honor, honor, honor to him,
Eternal honor to his name.

The life of Lincoln, with its contrasts and contradictions, defies analysis and refutes the theory of heredity. The environment in which he was reared is in direct antithesis to the inspiring significance of his life. Misjudged, maligned, ridiculed, yet undaunted and undismayed, sustained by the unseen Hand that guides the destinies of men, he trod the weary path alone.

In the mysterious laboratory of Nature he was touched with the magic wand. In the murky night of his early years there glowed that invisible flame within. In the quiet of the nighttime, through the silence that is in the starry sky, there came to him that long, far call.

In Lincoln were combined the noblest attributes of the mind, the heart, the soul. The stones in the foundation upon which was reared the structure of his life were simplicity, honesty, sincerity, and sympathy, bound together in enduring strength by his faith in his fellow men, his faith in his country, and his faith in his God. Where was the touch that raised him to such heights? What was the loadstone of his power? Wherein lay the secret whereby he stands forth the embodiment of the ideals and the personification of the spirit of the Nation? We ask, but we ask in vain. No positive, final answer has yet been given to the query.

In the crisis through which the Nation is passing let us keep constantly before us the memory and deeds of Lincoln; let his unswerving courage and lofty patriotism be our guide in this hour of trial and tribulation. We may be divided upon issues affecting our domestic policy, but upon the preservation of the rights and dignity of the Nation there can be no division. Upon that subject, Mr. Speaker, we stand united as Americans, and our determination to maintain absolute and inviolate the honor of the flag must rise supreme to all prejudice for or against any of the contending powers; superior now and always to the selfish interests of other nations. Let the spirit of Lincoln the patriot, Lincoln the American, strengthen our hands and give courage to our hearts, and so enable us to face the problems of the present as he met those of the past, with the full measure of devotion to our country.

The acclaim of loyalty and patriotism which wells from the hearts of the Nation's representatives on the floor of Congress upon every allusion to the name of Lincoln is a benediction of the past and an inspiration for the future. Forgetting sectional animosities, rising above political prejudices, every State offers its tribute of affection and veneration to the memory of the martyred President and proclaims its loyalty and devotion to a great united country. The honor of that name is the heritage of all, North and South. The bitterness and the anguish engendered by the mighty conflict of a half century ago have faded away; the dark clouds of hate and jealousy which hardened the hearts of men on both sides of that struggle have given

place to the sunshine of respect and confidence. Under the softening influence of that noble sentiment of Lincoln, "With malice toward none and with charity toward all," the line of Mason and Dixon has been obliterated. Across the chasm once drenched with the blood of heroes are extended the hands of brothers, brothers who like—

The mighty mother turns in tears
The pages of her battle years,
Lamenting all her fallen sons.

To you gentlemen of the Southland in whose veins flow the blood of the soldiers in gray, who in your magnanimity claim that Lincoln is yours as well as ours, let me answer, as one from the North, Yes; Lincoln is yours as well as ours, and Lee is ours as well as yours. [Applause.] But in revivifying the memories of the past I would rather forget that there are any yours. I prefer to remember only that it is all ours; that American greatness and American heroism knows no section and belongs to no generation; that in our nationalism we are all Americans united in a common cause, possessed of a common love for country and for flag. [Applause.]

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. HICKS. Mr. Chairman, I ask permission to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. CLARK of Florida. Mr. Chairman, I yield two minutes to the gentleman from Missouri [Mr. RUSSELL].

The CHAIRMAN. The gentleman from Missouri [Mr. RUSSELL] is recognized for two minutes.

Mr. RUSSELL of Missouri. Mr. Chairman, I have no prepared speech, and will not in the short time I have make any extended remarks, but I want simply to express my favorable consideration and my approval of this bill, the purpose of which is to accept for the Government the cabin home and birthplace of Abraham Lincoln as a donation from the present owners, the Lincoln Farm Association of the State of Kentucky. I believe that is a patriotic and a proper thing to do, both because we owe it to the memory of this great man to accept this donation of his birthplace and because I believe it is important as an inspiration and encouragement to other boys of our country who have been or who may hereafter be born in humble homes and of humble parentage. It helps to impress upon the minds of all American boys that the humblest in birth or station among them may aspire to places of the highest distinction and honor.

I knew of Lincoln when I was a boy. I remember the Civil War very distinctly, and when the war began, and when my eldest brother went to fight on the side of the South for four years. I as a child was prejudiced against Abraham Lincoln. I was taught to believe he was an enemy of the South; but before that war was over we took a different view of it, and our people got to believe that he was our friend, a patriotic man in the discharge of a great duty to humanity and to his Government. I was, as an 11-year-old farmer's boy, in the cornfield dropping corn on the 15th day of April, 1865. My father went to town to get his mail, and when he came back he told us that Abraham Lincoln had been assassinated. There was no man in this Union more deeply grieved than my father, and all of his family shared in his genuine grief.

I overheard the minority leader of this House [Mr. MANN] about five years ago say one day when Washington's Farewell Address was being read that he hoped the time would some time come when some Democrat would have the patriotism to read in this House Abraham Lincoln's Gettysburg speech. I accepted the suggestion, and four times on Lincoln's birthday I have read that great and masterful speech, and, with the permission of the Speaker of this House, I intend to read it every year on Lincoln's birthday as long as I remain a Member of this House. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. McKINLEY. Mr. Chairman, I yield 10 minutes to the gentleman from Nebraska [Mr. SLOAN].

The CHAIRMAN. The gentleman from Nebraska [Mr. SLOAN] is recognized for 10 minutes.

Mr. SLOAN. Mr. Chairman, I can not hope to bring a new message on Abraham Lincoln to the House of Representatives. It is a tribute to the general intelligence of the American people that few men, either of learning or of experience, can bring any new message to the American people with reference to this primal American character.

I talked a short time ago with the author of this bill. He expressed the thought that seemed specially pertinent, that the discussion on this floor at this time should be related largely to the nativity, rather than to the achievements of America's statesman and martyr. I was pleased that in the preparation of the few remarks I shall submit I confined myself to facts touching his nativity rather than his achievements or death.

The devotees of Christianity have among their finest pictures, upon which has been expended the genius of many artists in all the ages, the "Nativity." The "Nativity" graces the walls of all the great art galleries where the divine touch of the artist has been made imperishable for the view and admiration of men. I trust that some American artist in the years to come will make classic the American "Nativity"; and that the subject will be the birthplace of Abraham Lincoln.

The Lincoln homestead of which we speak has a record running first from the Crown of England to the colony of Virginia. Then resting in the State of Virginia, and finally through private conveyances it reached the name of Thomas Lincoln, the father of the martyred President. What a strange train of events has passed since the title granted by the crown to the title now granted to the Republic. During that time, of course, there has been much added value. The acreage has been reduced and the wildwood has been removed. Spacious and imposing buildings have been erected thereon. There is carried, in addition to the value of realty, valuable personal property amounting to $50,000. But how insignificant is that added value when we consider the value that the name, fame, and achievements of Abraham Lincoln have contributed to the American Republic.

Clustering around Lincoln's natal year are grouped the birth of many characters far-famed for their achievements.

Charles Robert Darwin, whose study and communion with nature passed its artificial bounds, was born the same day as Lincoln. He saw demonstrated far-reaching and progressive laws which, now indorsed by the scientific world, has advanced scientific research further than had been accomplished since Lord Bacon's inductive philosophy overthrew the system of Aristotle 300 years before. February 3, 1809, over in Germany, Mendelssohn, whose divine touch, combined with creative genius, made him one of the world's princes of harmony, was born.

January 19, 1809, came Edgar Allan Poe, that weird poet of the night and storm, whose eccentric genius, both assailed and defended by critics, has left its impress on American verse, furnishing that rare accomplishment—a distinctive style.

In the same year Lord Tennyson, Britain's greatest laureate, was born in England. He said "Better fifty years of Europe than a cycle of Cathay." Well might it now be written: "Better a century of America than a millennium of Europe."

In that same year Gladstone, Britain's greatest statesman since the day of Pitt and Peel, first saw the light.

In America that year gave us Oliver Wendell Holmes, wit, humorist, poet, and philosopher, to lighten the hearts and instruct the minds of his countrymen.

That year also gave us Cyrus McCormick, who invented the American reaper, which has contributed so largely to our agricultural production.

In the Hall of Fame, based upon the world's general estimate, all of these occupy commanding positions, but easily towering above them all stands Lincoln.

He first looked upon the sun from a lonely environment, the wildwood cabin in the then county of Hardin (now county of Larue) in the new State of Kentucky, which had at that time, through the chronicles of Boone and his contemporaries, earned the sanguinary appellation of "Dark and bloody ground." Christ was born, not in a walled city, nor yet in the contending capitals of Samaria or Jerusalem. His nativity was humble Bethlehem. The nativity of Lincoln was not in intellectual Massachusetts, commercial New York, or chivalric Virginia. His parents were as unambitious as their forest home would indicate. What ancestral strain of purpose, character, and mind with which he was endowed came from his mother. One of those mothers who, suppressed by her position and burdened by her cares, can seldom command the recognition due, except it be in the generation delayed, when the plaudits are given to the words and deeds of a wise or successful son. And in this way will the American people remember Nancy Hanks Lincoln.

At this time Thomas Jefferson, the inspired author of the Declaration of Independence and the strict constructionist of the American Constitution, was just closing his second presidential term. Napoleon had but recently strengthened America and weakened Europe by the sale of the Louisiana Territory to the United States. He was at that time walking on the writhing forms of European kings. The sun of Austerlitz had risen, Jena and Friedland had been won, and Europe rocked at his feet as he stood at the zenith of his power, while kings

became his subjects, and emperors, to no purpose, were combining against him. When Lincoln was born there was yet to come the conflagration of Moscow, the snows of the north, Waterloo, St. Helena, and a rocky tomb. Such was the setting surrounding the date which ushered Abraham Lincoln into the world.

Nor would this setting be complete if it were not noted that in the same dark and bloody realm, in a community now part of the county of Todd, within less than a year of Lincoln's birth, Jefferson Davis was born. Less than a hundred miles separated their birthplaces, but throughout their momentous careers there was little convergence, yet had a strange relation.

Two companion snow drops, pure, clear and crystalline, as they fall touch the loftiest peak of the mountain chain. They freeze into a mighty mass which yields to nothing except the wooing of the summer sun; and while they lie but a few inches apart, in their melting mass each moves down a different slope; each finds its mountain torrent conveying it to flooded river, and that swollen river to the sea. One reaches the turbulent Atlantic, the other the peaceful Pacific. Davis moved southwardly to Mississippi, the then great cotton State, where slavery thrived. Lincoln found his way through Indiana to the prairies of Illinois, where labor was free.

One year's schooling was the measure of Lincoln's scholastic opportunity. Jefferson Davis, well taught, was later educated at West Point.

Each presided during four years of tragedy over a Republic. The one Republic struggled for an existence, the other battled to maintain its integrity undiminished. There was citizenship sufficient for the two greatest Republics on earth, but I rejoice to hear from either side of this hall the satisfaction that but one remains.

The cabin home this afternoon being considered was in the State which produced these two great characters. In that great struggle it seemed, as it were, that that State could not decide between the fortunes of her two matchless sons. It presented a divided allegiance. This measure furnishes to-day a fitting text for fraternal, patriotic sentiment from every part of this expanded Union.

Above his body at the Springfield home stands a monument viewed annually by tens of thousands. At the entrance to the great park at Chicago which bears his name, in heroic mold stands in imperishable bronze one of the most imposing statues of America. It was a triumph of the genius of St. Gaudens, America's premier sculptor. Hundreds of thousands who visit the great metropolis by the lake view it annually, departing with inspiration of renewed patriotism. At the National Capital, soon to be completed near the scene of his activities, is a magnificent Greek temple erected to the memory of Lincoln. Few out of the multitudes annually visiting Washington will fail to visit it and render tribute to Lincoln's memory. But down in Kentucky is the fourth Lincoln shrine. In point of reference and sequence it should be first, because it points to origin as the others call our attention to achievement, fame, mortality. Collectively they evidence to all the ages the miracle of the Republic. Humility of origin with greatness of soul are the stepping stones to primacy among men. [Applause.]

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

Mr. SLOAN. I would like to have about three minutes more.

Mr. SLAYDEN. Mr. Chairman, how much time is left altogether? I understand 13 minutes on this side.

The CHAIRMAN. Nineteen minutes. The gentleman from Florida [Mr. CLARK] has 19 minutes remaining, and the gentleman from Illinois [Mr. MCKINLEY] has 15 minutes.

Mr. SLOAN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. MCKINLEY. Mr. Chairman, I yield one-half a minute to the gentleman from Ohio [Mr. FESS].

The CHAIRMAN. The gentleman from Ohio [Mr. FESS] is recognized for half a minute.

Mr. FESS. Mr. Chairman, listening to the address of Gen. SHERWOOD, a reference to a certain event—the bombardment of Fort Sumter—indicated to me that the significance of the vote to-day will be intensified when we recall that this is the anniversary of the opening of the Civil War.

Fifty-five years ago to-day Edwin Ruffin fired the first gun at Fort Sumter, and I thought that it would be significant just to remind Congress of that incident.

And 51 years ago day after to-morrow will be the anniversary of the assassination or of the shot that eventuated in the death of Abraham Lincoln, so that these two incidents give intensity to the vote upon this occasion to-day. I wanted by recalling those incidents of that particular time to refresh the memory of the House.

Mr. MCKINLEY. Mr. Chairman, I yield five minutes to the gentleman from Ohio [Mr. SWITZER].

Mr. SWITZER. Mr. Chairman, it will always be to me a fond remembrance to recall that as a Member of the American Congress I not only had the opportunity but that I availed myself of the privilege to vote for the appropriations made for the construction of that magnificent memorial, now nearing completion, in the Capital of the Nation to the memory of the great Civil War President, "God's grandest gift of man to men"—Abraham Lincoln. From the ranks of the frontiersmen he rose to the Presidency of the Nation. This obscure country lawyer did not believe that the Nation could survive half slave and half free. He was firmly convinced that "a house divided against itself could not stand." Regardless of the contention that it would be unconstitutional so to do, he found a way to liberate 4,000,000 bondsmen and still preserve the Union.

Charged with the commission of all manner of high crimes and misdemeanors and unconstitutional acts while in office, no man was more reviled than he; yet to-day no name is more lauded and revered than his. All sects, creeds, and parties vie with one another in loud protestation of their great loyalty and high respect for the opinions held and for the principles and policies advocated by Abraham Lincoln. Time has vindicated the absolute justice of his course, and silenced the carping criticisms of his enemies beyond the peradventure of a murmur.

In dedicating to the Nation the birthplace of this illustrious American, there is given to Kentucky renewed luster and added fame. The Nation through its Congress accepts this token of high respect to the memory of our martyred President as the most magnanimous of the many generous and noble deeds for which the people of the great State of Kentucky are so famed. The dark and bloody ground, the home of Daniel Boone and other noted pioneers, by this patriotic act is consecrated anew to that Jeffersonian idea of liberty, the equality of all men before the law, which was ever so near and dear to the heart of Abraham Lincoln. As the generations come and go, we trust that they may not only travel to the last resting place of this great man and visit the Nation's memorial to his name, but that they may also journey to the scenes of his childhood, and at the fountain head of his noble life drink deep the holy inspiration which has animated this tribute of patriotic citizens to the crowning glory of the Nation—the final memorialization of the birthplace, the life, and the last resting place of Lincoln. [Applause.]

Mr. MANN. I yield five minutes to the gentleman from Vermont [Mr. DALE].

Mr. DALE of Vermont. Mr. Chairman, a new Member finds it interesting to watch a bill on its way through this House and to observe the statements that carry effect in its passage.

During the past week there have been indications that sectional and conflicting interests will continue as long as there is water in rivers and harbors; but, Mr. Chairman, to one coming from the far North and meeting in this forum the generous, loyal men of the South it is pleasant to quickly perceive that the time is past when argument can gain force here from those old war issues that lie buried under principles that we now all welcome as immortal. [Applause.]

When we speak here of the leaders of that period of strife that was we summon quickest response at mention of the human sympathy in each for all the embattled hosts. In the final judgment of mankind upon the great men of history it is kindliness which survives the brightest. It is that which ennobles the manner in which the heavy obligations of the South were assumed when they were laid on the well-nigh breaking heart of Robert E. Lee. Because the man of whom we speak to-day was, in his high position, distinctly gentle and considerate, Members from the Southland give cordial support to this pending measure. For this reason they express tender and heroic sentiments that are tributes of the finest nature to the character of Abraham Lincoln. Artistic skill may well exhaust itself in memory of the kindliness of this supreme man; but the substance of the expression of that quality is elusive, and it may leave the marble hall for the log cabin, its natural home. There we find the best expression of that broad sympathy that went out through all the cabins of the North and of the West and awakened heroic impulse in the youth of the common people.

When the Third Regiment from the State of Vermont was formed it included many men who were born in log cabins. In that regiment as it camped up here on the Potomac 10 miles

away was a boy, William Scott, who, while doing double service for his comrades, fell asleep on picket, was court-martialed, and condemned to be shot. Then in the darkness of the night the President of this great Nation at war, wearied as he must have been, ordered his horse and carriage and rode out to save the life of that young boy. In the pitiful affair at Lees Mill he fell, whispering a prayer for Abraham Lincoln. Enlisted with him were three Stevens brothers, sons of a widowed mother in my home. One of those boys fell at Lees Mill, one was the first to be shot out here on the Rockville Pike in the battle for the defense of this Capital, and one went home disabled for life. These boys and all those like them felt the inspiration of this great man, and it enabled them to face danger more easily, and it took away from them the sting of death.

Incomparable man that he was, where do we find the source of his inspiration?

In that humble home there came to him, earlier than memory, the consciousness of one who was the very substance of patience and tenderness and mercy, and was to him the origin of justice. In her face he beheld first the expression of the infinite qualities that made his own character sublime. In that there is reason enough to save the old log cabin.

All his life was unnatural in that it forced ill causes to good effects. In form and feature he was rough shapen and plain, but through relief of agony to many he became the handsomest man in all the world. The legislature rejected him for the Senate, and out of disappointment he made humor by saying that he felt like the boy who stumped his toe—too hurt to laugh and too big to cry.

He came to his inauguration in a guarded train along a line where the telegraph wires had been cut that men might not shoot him, and above the cloud of threatened intent rose the spirit that impelled him to drive all night to save a boy from being shot.

The multitude beseiged him to dull weariness, and it made sensitive a tone in his nature that felt response to the cry of an infant in the throng, and he said, "Send in next that woman with a baby." He was called a countryman, unfit for official place, but when the telegram came from the man in command of the Armies in the great crisis of the war indicating the fearful loss of life that must follow, Dr Edward Everett Hale, observing him as he moved among and counseled with the polished and able gentlemen of his Cabinet, said that his grace of manner and wisdom of expression were superb. When at last that group of eminent statesmen who had concurred in the opinion that he lacked the ability to be President stood over him, and it was said "now he belongs to the ages," his life closed in a splendor of blending contrasts.

In that rude shelter of his childhood there dwells more than in statue or memorial the emotion of that process by which his own want increased his sense of human need and made him generous.

The common comforts of life, the just estimate of men, and all the elements of equity, he knew only through the giving of them to others.

Out of longing that grew intense by denial the very passion of his humor and tenderness and mercy became supreme. That which he found not for himself he gave in abundance to others, and his whole life was passed in bringing from resisting conditions marvelous results.

Nothing indicates so well the life that was itself a contrast, a paradox, the meager compensation that came to him and his rich bestowment to the Nation as the log cabin and the marble hall by which it is inclosed.

Ah, Mr. Chairman, let us preserve this old log cabin, that generations may learn from it the qualities that there had birth and are changeless and deathless forever. [Applause.]

Mr. CLARK of Florida. Mr. Chairman, I yield 10 minutes to the gentleman from Kentucky [Mr. BARKLEY].

Mr. BARKLEY. Mr. Chairman, if it were necessary to apologize to the House on this occasion for occupying its time for a few moments, I feel that it would be sufficient to say that my reason for speaking is not only the fact that I, in part, represent the State in which Lincoln was born, but also from boyhood I have been tremendously interested in his character and career.

It is very appropriate that during this year the Lincoln farm should be donated to and accepted by the Government of the United States, for it is the one hundredth anniversary of the removal of Abraham Lincoln from Kentucky to Indiana, he having crossed with his family the Ohio River in 1816, never thereafter having returned, so far as I know, to the place of his birth.

If time were afforded I should like to recount the names of those men who, during the history of this Nation, have gone out from Kentucky to bless the civilization of every State in the Union and the Nation itself as a whole. If I could recount the names of the governors and Senators and Members of this House, the ambassadors to foreign nations, the ministers of the Gospel, the teachers of men, and the long list of worthy sons in every walk of life, whose birthplaces were in the same State in which is located this remarkable home which gave Lincoln to the Nation, I am sure I might be able to enlist your admiration for the product of that great State on whose soil Lincoln himself was born. To Kentucky has frequently been ascribed the honor of producing a variety of things for the benefit of humanity, but I think we may properly, on this occasion, refer to the great men, as well as the great women, who have gone out from that State and mingled with the people of every section, all with honor to themselves and credit to their native State.

In all this list two names stand out preeminent. One is the name of Jefferson Davis and the other is the name of Abraham Lincoln. We frequently marvel at the peculiar and fortuitous circumstances by which the careers of men are hedged about. But who can explain on any other theory than the guidance of a providential hand, the fact that both Jefferson Davis and Abraham Lincoln, rival leaders in the great Civil War, were born under Kentucky's sun, and were nestled to the bosom of two of her noble women?

I shall not attempt in this brief address to refer, except incidentally, to the statesmanship or to the achievements of Lincoln in public life, because, after all, these are not the things that grip our hearts; these are not the things that cause us to shed a tear to-day over the grave of Abraham Lincoln. I prefer, on this occasion, to let my mind run back to the little humble cabin in Kentucky, where Lincoln, in 1809, first looked upon a world of wonders. I prefer to think of him "cooning" a log across Knob Creek at the age of 5 and falling into its waters and having to be pulled out by a companion just in time to prevent him from drowning. I prefer to think of him at the age of 7, holding to his mother's hand, as he and she performed their last duty before leaving Kentucky by visiting the little grave of the baby boy, who was born and died in those lonely hills, from which, so far as I am aware, he was never removed. I prefer to think of Lincoln to-day reading the Holy Scriptures to his mother night after night as she lay upon her deathbed in that lonely home in Indiana.

I prefer to think of him as he wrote his first letter, at the age of 10 or 11, asking an old Kentucky preacher, whom he had known before his removal to Indiana, to come over and preach his mother's funeral, a service which could not be performed for lack of a minister at the time of her burial. I prefer to think of Lincoln to-day as he wept over the grave of beloved Ann Rutledge, his heart bleeding as no other heart could bleed, and exclaiming as he fell upon the new-made mound: "Here lies the body of Ann Rutledge and the heart of Abe Lincoln."

These are the things that endear Lincoln to us and to our memory, because these are the things that touch our sympathy, these are the incidents which appeal to us most strongly in the early life of him whose whole career comprises the greatest individual tragedy which has been enacted upon the stage of American national life. These touch the tender cords and the wellsprings of the human heart, and we forget the Gettysburg speech and the second inaugural address and the Douglas debates. We forget his struggle with his Cabinet and with the tremendous problems with which he was surrounded and confronted. All these things for the day are put aside, and we remember the lonely, tragic boyhood of this wonderful man and faintly realize the moral foundation, formed as he passed through these crucibles of the human heart, which enabled him to give expression in the heat of a great political campaign to the sublime sentiment, "I am not bound to win, but I am bound to be right," a sentiment whose meaning ought to be applied with double force in the perilous times in which we live both to public problems and to public men.

As we think of this great character, coming as he did from Kentucky, we remember with great pride that in his veins was infused the same blood and in his heart the same spirit that emboldened Daniel Boone, the Kentucky pioneer, to cut and fight his way into a wilderness and help to carve out of it one of the greatest Commonwealths of this Nation, for Lincoln himself was a relative of Daniel Boone, his grandfather having been a cousin of the great pioneer. And I am glad to say in passing that this rugged courage which guided the life of Lincoln and of Boone is still to be found among the sons of old Kentucky, for we have it typified in the rugged honesty and sterling character of our own Speaker of the House, CHAMP CLARK, of Missouri, who himself was born and reared in Kentucky, and also in the leader of the minority, Mr. MANN, who although not having been born in that State itself, yet boasts that his for-

bears came from that soil which gave to the Nation and to the world Jefferson Davis and Abraham Lincoln. [Applause.]

We have heard many stories of Lincoln, and I confess that I never tire of reading or hearing the stories about him. These stories which illustrate the humanity of Lincoln are not confined to his boyhood, nor to his young manhood, but are found all through his mature manhood, when the burdens of public duties were heaviest upon his shoulders. The other day I read a very pathetic story which touched my heart, and which illustrates forcibly the truth of the quotation, "He who stoops to lift the fallen, does not stoop but stands erect." There was a schoolhouse somewhere near the back yard of the White House, and as the boys played across the fence, from day to day, Lincoln frequently went out to watch them. One day the teacher decided to give the boys a lesson in neatness, and commanded them that they should have their shoes fresh shined before coming to school the following day. The next day the boys came to school with their faces and hands clean, with clean clothes upon themselves, and with their shoes all shined. There was one little one-armed boy, however, the son of a dead soldier who had given his life in the Civil War, whose mother made her living here in Washington as a washwoman, who had no blacking in the house, and consequently he undertook to shine his shoes with stove polish. When he reached the school, his shoes shined with stove polish, the other pupils began to ridicule him, and his little heart was filled with sorrow and humiliation. Mr. Lincoln, hearing the gibes at the little one-armed fellow, made a detailed inquiry and ascertained the cause of the trouble. The next day Mr. Lincoln took this little boy and bought him two new pairs of shoes, two suits of clothes, and bought for his sisters new linen and dresses, and sent groceries and clothes to the home of his mother. He then put in the boy's hands a note to the teacher, in which he asked her to place upon the blackboard the following words: "Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it also unto Me." A few days later he took occasion to visit the schoolhouse in person, and finding the quotation still on the board, he asked for a piece of crayon, and going to the board he said, "Boys, I have another quotation from the Bible in my mind that I want to put under this other one, that you may observe it and apply it to your future lives." And then he wrote, "It is more blessed to give than to receive," and wrote under it his simple signature, "A. Lincoln."

Mr. Chairman, in the turmoil of our modern-day politics, in the confusion of our political rivalry, and in the narrowness and bitterness of our partisan fights in Congress, let us to-day rekindle our hope and faith in the destiny of that Nation to which Lincoln gave his life, and let us hope that in the years that are to come we and our children and our children's children, for a thousand generations may more and more appreciate the simplicity and sublimity of Lincoln's character, to the end that we may contribute to the consummation of that spirit of public devotion and common well-being, which will enable us to say with him, "I am not bound to win, but I am bound to be right." [Applause.]

The State of Kentucky is glad to give to the Nation this humble, yet sacred little farm, whose one great product is to-day the admiration of the world, and when future generations shall view this little home, this log cabin in the hills of Kentucky, may they be inspired with the hope that the flag which hangs above your head, for which Lincoln, as well as countless others before and after him, gave all that they had—their lives—and the Union for which it stands, may always mean what he thought it ought to mean, the equality of man before the law, and the equality to pursue the legitimate objects of happiness and of service without regard to clime or creed or section. [Applause.]

As the Nation will this day accept the gift of the Lincoln farm, may we not hope that at a day not long postponed a similar acceptance may be registered of the Davis home, and that these two spots, not far from each other in the soil of Kentucky, may be enshrined in the love and imagination of patriots everywhere, typifying the reunion of heart and hope and hand through which our common country shall more and more become the land of opportunity and the beacon light of liberty for us and all who shall follow us, which shall become brighter and brighter unto the perfect day. [Applause.]

Mr. CLARK of Florida. Mr. Chairman, I ask that the bill be read for amendment.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Be it enacted, etc., That the United States of America hereby accepts title to the lands mentioned in the deed of gift or conveyance now in possession of the President of the United States of America, together with all the buildings and appurtenances thereon, especially the log cabin in which Abraham Lincoln was born and the memorial hall inclosing the same, which deed or conveyance was executed on the —— day of ——, 1913, by the Lincoln Farm Association, a corporation, to the United States of America, describing certain lands situated near the town of Hodgenville, county of Larue, State of Kentucky, which lands are more particularly identified and described in said deed or conveyance. The title to such lands, buildings, and appurtenances is accepted upon the terms and conditions stated in said deed or conveyance, namely: That the land therein described, together with the buildings and appurtenances thereon, shall be forever dedicated to the purposes of a national park or reservation, the United States of America agreeing to protect and preserve the said lands, buildings, and appurtenances, and especially the log cabin in which Abraham Lincoln was born and the memorial hall inclosing the same, from spoliation, destruction, and further disintegration, to the end that they may be preserved for all time, so far as may be; and further agreeing that there shall never be any charge or fee made to or asked from the public for admission to the said park or reservation.

Mr. MANN. Mr. Chairman, I ask unanimous consent that the word "apurtenances" be correctly spelled, in line 9, page 2.

The CHAIRMAN. Without objection, it will be so ordered.

There was no objection.

The Clerk read as follows:

SEC. 2. That the United States of America hereby also accepts title to the endowment fund of $50,000 mentioned in the assignment and transfer, now in the possession of the President of the United States of America, which assignment and transfer was executed on the —— day of ——, 1913, by the Lincoln Farm Association, a corporation, to the United States of America, transferring and turning over all its right, title, and interest in and to said endowment fund, heretofore invested in certain stocks, bonds, and securities held and owned by the Lincoln Farm Association, and more particularly identified and described in said assignment and transfer. The title to said endowment fund is accepted upon the terms and conditions stated in said assignment and transfer, namely, that the United States of America shall forever keep the said tract of land described in said deed, together with the buildings and appurtenances thereunto belonging, dedicated to the purpose of a national park or reservation, and that there shall never be any charge or fee made to or asked from the public for admission to the said park or reservation; and, further, shall forever protect, preserve, and maintain said land, buildings, and appurtenances, and especially the log cabin in which Abraham Lincoln was born and the memorial hall inclosing the same, from spoliation, destruction, and further disintegration, to the end that they may be preserved for all time, as far as may be, as a national park or reservation.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word. I assume there is a purpose in withholding inserting the dates of the conveyance.

Mr. CLARK of Florida. Yes; those dates are left blank to be filled in later. I think the deeds have not been executed as yet.

Mr. MANN. That is not a very good reason, because the date is 1913.

Mr. CLARK of Florida. That can be arranged later.

Mr. STAFFORD. As I understand the bill, the deed has already been tendered.

Mr. CLARK of Florida. That is what I thought.

Mr. JOHNSON of Kentucky. It is at the White House.

Mr. CLARK of Florida. The gentleman from Kentucky is looking for a copy so that we can put in the dates if we find it.

Mr. STAFFORD. It is better to have the dates inserted or else to describe the deed generally.

Mr. JOHNSON of Kentucky. This bill was introduced in a former Congress, when Mr. Taft was President, and the papers were left there.

Mr. STAFFORD. So the deed is already executed and is being held in escrow awaiting acceptance by the Government?

Mr. JOHNSON of Kentucky. That is my information.

The Clerk read as follows:

SEC. 3. That the President of the United States of America and the Secretary of State are hereby authorized to execute, in the name of the United States of America, such instrument or instruments as may be or may become necessary to comply with or carry out the terms and conditions of such gift or gifts and to secure the full benefit therefrom.

Mr. CLARK of Florida. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amend, on page 3, line 25, by striking out the word "State" and inserting the word "War."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. CLARK of Florida. I also offer the following amendment.

The Clerk read as follows:

Amend, page 4, by adding the following section:

"SEC. 4. That upon the passage of this act and the vesting of the title to the property accepted thereunder in the United States it shall be under the control of the Secretary of War and administered under such regulations, not inconsistent with the law, as he may from time to time prescribe."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. CLARK of Florida. Mr. Chairman, I move that the committee now rise and report the bill with amendments to the

House with a recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. BARNHART, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 8351 and had directed him to report the same back with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The SPEAKER. Is a separate vote demanded on any amendment? [After a pause.] If not, the Chair will put them en grosse. The question is on agreeing to the amendments.

The amendments were agreed to.

The SPEAKER. The question is now on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

Mr. JOHNSON of Kentucky. Since there was no objecting vote, I think, on account of history, it ought to be announced by the Chair that the bill was unanimously passed.

The SPEAKER. The Chair announces that the bill was passed unanimously.

On motion of Mr. CLARK of Florida, a motion to reconsider the vote by which the bill was passed was laid on the table.

Mr. CLARK of Florida. Mr. Speaker, I ask for the present consideration of the resolution which I send to the Clerk's desk. I think there will be no possible objection to it.

The SPEAKER. The gentleman from Florida asks unanimous consent for the present consideration of the resolution, which the Clerk will report.

The Clerk read as follows:

House resolution 200.

Resolved, That the speeches delivered on H. R. 8351, accepting from the Lincoln Farm Association title of the farm on which Abraham Lincoln was born, be printed as a House document, 10,000 copies to be distributed among the Members equally through the folding room.

Mr. MANN. I have no objection if it is to come within the limit of cost. If it does not, I suppose it will not be done.

The SPEAKER. Is it 10,000 or 15,000?

Mr. CLARK of Florida. Ten thousand.

Mr. MANN. If it is going to be printed, it ought to include the bill, too.

Mr. CLARK of Florida. I will make it include the bill—that the bill and speeches be included in the House document.

The SPEAKER. The Clerk will report the resolution as amended.

The Clerk read as follows:

Resolved, That the speeches delivered on H. R. 8351 and the bill in relation thereto, accepting from the Lincoln Farm Association title of the farm on which Abraham Lincoln was born, be printed as a House document, 10,000 copies to be distributed among the Members equally through the folding room.

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The resolution as amended was agreed to.

Mr. CLARK of Florida. Mr. Speaker, I make also the request that all gentlemen who have spoken on the bill be allowed to extend their remarks in the RECORD for five legislative days.

The SPEAKER. Is there objection?

There was no objection.

Mr. MADDEN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the bill.

The SPEAKER. The gentleman from Illinois [Mr. MADDEN] asks unanimous consent to extend his remarks on the bill just passed. Is there objection?

There was no objection.

ORIGINAL MANUSCRIPT OF RECORD.

Mr. SLAYDEN. Mr. Speaker, I move to call up the bill H. R. 4678——

Mr. MANN. Before the gentleman does that, can not we pass the Senate joint resolution No. 24 in a minute?

Mr. SLAYDEN. I am afraid to begin it, I will say to the gentleman frankly.

Mr. MANN. I do not think there will be any objection.

Mr. STAFFORD. There is not any serious objection.

Mr. MANN. Try unanimous consent.

Mr. SLAYDEN. Before the gentleman puts that, I can not afford to do it, I will say to the gentleman frankly. I expect to call that up immediately——

Mr. MANN. I was going to ask unanimous consent that as it is on call it be brought up and that it be read and considered as passed.

Mr. SLAYDEN. That is certainly very brief.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

Resolved, etc., That the Librarian of Congress is hereby authorized and directed to return to Williamsburg Lodge, No. 6, Ancient Free and Accepted Masons, of Virginia, the original manuscript of the record of the proceedings of said lodge, which is contained in one bound volume now in the Manuscript Division of the Library of Congress, marked "Williamsburg Lodge, 5775," and which manuscript was taken from the files of said lodge during the Civil War by some party or parties unknown.

The SPEAKER. The gentleman from Illinois [Mr. MANN] asks unanimous consent that this resolution be considered as passed. Is there objection? [After a pause.] The Chair hears none.

AMERICAN ACADEMY OF ARTS AND LETTERS.

Mr. SLAYDEN. Now, Mr. Speaker, I was suggesting that on the Speaker's table is the bill S. 1424, which is identical in phrasing with the bill I have just moved to take up. Therefore I move to substitute that for the House bill.

The SPEAKER. The gentleman from Texas moves to substitute the Senate bill S. 1424 in lieu of the House bill of similar tenor called up on Calendar Wednesday. Is there objection?

Mr. DIES. Reserving the right to object, would that in any way interfere with the consideration of this resolution?

The SPEAKER. Not a particle. All there is to it is that the Senate passed a bill, and the House has one on the calendar exactly like that. He asks to have the Senate bill considered in lieu of the House bill. Is there objection? [After a pause.] The Chair hears none. The Clerk will report the Senate bill.

The Clerk read as follows:

An act (S. 1424) incorporating the American Academy of Arts and Letters.

Be it enacted, etc., That William Dean Howells, of Maine; Henry Adams, of the District of Columbia; Theodore Roosevelt, of New York; John Singer Sargent, of Massachusetts; Daniel Chester French, of New York; John Burroughs, of New York; James Ford Rhodes, of Massachusetts; Horatio William Parker, of Connecticut; William Milligan Sloane, of New Jersey; Robert Underwood Johnson, of New York; George Washington Cable, of Massachusetts; Andrew Dickson White, of New York; Henry van Dyke, of New Jersey; William Crary Brownell, of New York; Basil Lanneau Gildersleeve, of Maryland; Woodrow Wilson, of New Jersey; Arthur Twining Hadley, of Connecticut; Henry Cabot Lodge, of Massachusetts; Edwin Howland Blashfield, of New York; William Merritt Chase, of New York; Thomas Hastings, of New York; Hamilton Wright Mabie, of New Jersey; Brander Matthews, of New York; Thomas Nelson Page, of the District of Columbia; Elihu Vedder, of Massachusetts; George Edward Woodberry, of Massachusetts; Kenyon Cox, of New York; George Whitefield Chadwick, of Massachusetts; Abbott Handerson Thayer, of New Hampshire; Henry Mills Alden, of New Jersey; George de Forest Brush, of New Hampshire; William Rutherford Mead, of New York; Bliss Perry, of Massachusetts; Abbott Lawrence Lowell, of Massachusetts; James Whitcomb Riley, of Indiana; Nicholas Murray Butler, of New York; Paul Wayland Bartlett, of New York; Owen Wister, of Pennsylvania; Herbert Adams, of New Hampshire; Augustus Thomas, of New York; Timothy Cole, of New York; Cass Gilbert, of New York; William Roscoe Thayer, of Massachusetts, Robert Grant, of Massachusetts; Frederick Macmonnies, of New York; Julian Alden Weir, of Connecticut; William Gillette, of Connecticut; Paul Elmer More, of New Jersey; George Lockhart Rives, of New York, and their successors, duly chosen, are hereby incorporated, constituted, and declared to be a body corporate of the District of Columbia, by the name of the American Academy of Arts and Letters.

SEC. 2. That the purposes of this corporation are and shall be the furtherance of the interests of literature and the fine arts.

SEC. 3. That the American Academy of Arts and Letters shall consist of not more than 50 regular members, and the said corporation hereby constituted shall have power to make by-laws and rules and regulations; to fill all vacancies created by death, resignation, or otherwise; to provide for the election of foreign, domestic, or honorary associate members, and the division of such members into classes, and to do all other matters needful or usual in such institutions.

SEC. 4. That the American Academy of Arts and Letters shall hold an annual meeting at such place in the United States as may be designated and shall make an annual report to the Congress, to be filed with the Librarian of Congress.

SEC. 5. That the American Academy of Arts and Letters be, and the same is hereby, authorized and empowered to receive bequests and donations of real or personal property and to hold the same in trust, and to invest and reinvest the same for the purpose of furthering the interests of literature and the fine arts.

SEC. 6. That the right to alter, amend, or repeal this act is hereby expressly reserved.

Mr. SLAYDEN. Mr. Speaker, I ask that this bill be considered in the House as in the Committee of the Whole.

The SPEAKER. This is on the House Calendar.

Mr. SLAYDEN. My colleague from Texas [Mr. DIES] was making some request for information now as to debate on the bill.

Mr. DIES. There are a number of gentlemen who want some time on the bill under discussion.

Mr. SLAYDEN. We have reached it now. How much time does the gentleman want to use?

Mr. DIES. I can not speak for other gentlemen, but I would like about 20 minutes myself.

Mr. SLAYDEN. There will be only two hours, I will say to the gentleman.

Mr. MANN. If the gentleman will yield——
Mr. SLAYDEN. Yes, sir.
Mr. MANN. The gentleman from Nebraska [Mr. SLOAN] will ask for recognition in opposition to the bill.
Mr. DIES. That is precisely, Mr. Speaker, what I propose to do—to ask for recognition in opposition to the bill.
Mr. SLAYDEN. Mr. Speaker, I will say to the gentleman from Illinois, the reason I waited a perceptible length of time was that no one rose.
Mr. MANN. No one had occasion to rise. There was no chance for anybody to rise. Nobody had the floor.
Mr. SLAYDEN. But I asked the question, I will say to the gentleman from Illinois, and was trying to find out whether or not there was to be opposition on that side, and then I turned to my colleague, Mr. DIES.
Mr. MANN. The gentleman from Nebraska [Mr. SLOAN] will probably be able to give the gentleman from Texas [Mr. DIES] some time.
Mr. DIES. Oh, the gentleman from Texas probably will be able to give the gentleman from Nebraska some time.
Mr. MANN. The gentleman will not get time on that basis.
Mr. SLAYDEN. I was endeavoring to ascertain if we could not agree upon a time for debate, perhaps short of that provided by the rule.
Mr. MANN. The rules provide for the limitation of debate.
Mr. SLAYDEN. I said "short of that provided by the rule."
Mr. CLARK of Florida. Mr. Speaker, if the gentleman from Texas will yield to me for a moment, I suggest we take an hour for debate and divide it equally between the opponents and proponents.
Mr. MANN. Personally I am in favor of the bill, but if the gentleman from Texas and other gentlemen in opposition want time, I do not think you can limit it to 30 minutes to a side.
Mr. DIES. If the gentleman from Texas [Mr. SLAYDEN] controls half the time and the gentleman from Illinois controls half the time——
Mr. MANN. The gentleman from Texas [Mr. DIES] is not as bright as he usually is, because I specifically stated that the gentleman from Nebraska [Mr. SLOAN], who was opposed to the bill, was willing to yield to the gentleman 20 minutes, but that did not seem to satisfy the gentleman from Texas.
The SPEAKER. The recognition naturally goes under the practice of the House to the minority side, and the Calendar Wednesday rule fixes two hours for general debate on one of these bills unless it is changed by a vote of the House.
Mr. SLAYDEN. Then, it is understood, Mr. Speaker, that the gentleman from Nebraska [Mr. SLOAN] controls the time in opposition to the bill. I understood the gentleman's position, and I was trying to see if I could reduce the time to less than two hours.
The SPEAKER. The Chair will recognize the gentleman from Texas for an hour and the gentleman from Nebraska for an hour.
Mr. SLAYDEN. Does the gentleman from Nebraska desire to use his time now? I will ask him to consume part of his time now.
The SPEAKER. The gentleman from Nebraska [Mr. SLOAN] is recognized.
Mr. SLOAN. Mr. Speaker and gentlemen, this same measure having been before the House at a former session I opposed it. As I saw it coming up on this day I sought some way to meet the courtly suggestion of the gentleman from Texas [Mr. SLAYDEN] to aid in its passage. I should have been glad to have seen my way clear to do so. I find it difficult to resist the wishes of the gentleman from Texas, whose good fellowship and courtesy are proverbial in this House. His devotion to the public interests, and especially the artistic and æsthetic features of our National Government, the Members of Congress have long known and recognized.
But I find that the title to the bill at this time is "American Academy of Arts and Letters." We should note particularly what we propose to do in the passage of this bill. We authorize the organization of a national corporation under the name of "American Academy of Arts and Letters," and thereby establish in America an organization that will from its name and from location constitute itself a standard for literary and artistic productions in this country.
We must, however, not blind ourselves to the fact that by granting the proposed charter to the eminent gentlemen named in this bill, with its imposing name, we place in the hands of a body of very distinguished men not only the power to standardize literary and artistic achievements and say yea and nay to the ambition of all aspirants outside its pale but we give the membership the power to perpetuate itself through coming generations.
Now, if Congress will amend this bill so that it will be fairly representative, so that it will include the men and women of America, the novelists and historians, poets and philosophers, artists and sculptors, the native born and the naturalized, in every section of this country, and not be open to the charge of provincialism or favoritism, then we ought to favor it. Until that is done we should not grant the power that is evidently included in this bill.
A grant of this power should have such a broad and well-defined purpose and such a fairly distributed personnel as to constitute a guaranty that an artistic and literary aristocracy might not be established which would give mayhap unwarranted advantage to its membership and throw serious obstacles in the way to preferment and advancement of aspiring and deserving outsiders.
I want to call your attention, gentlemen, to the peculiar fact that residences of the 50 names given in the bill, candidates to become the immortals of America, are confined to Maine, New Hampshire, Massachusetts, Connecticut, New York, Pennsylvania, New Jersey, Maryland, and the District of Columbia. But as if to take the curse of provincialism from it, they have reached to far-off Indiana and named one, James Whitcomb Riley.
Now, then, this district or province within which these men come is less than one-sixteenth of the area of the United States; less than four-fifths of the area of the State of Texas. It seems to me that this great Nation of ours, expanded as it has from its early history, not only in area but population, wealth, and education—it is remarkable that all these have followed the course of the sun. It is peculiar that genius in art and literature is confined to the colonial area. This bill would forever confine it to the colonial area by leaving it in the power of these 50 men to appropriate the name of the "American Academy of Arts and Letters," and having the membership, self-selected, continue to confine it within these narrow limits. I am in favor, if you organize an association of this kind, of its being so broad that it will include all the genius of America, as well on the Atlantic as on the Pacific coast, in the North and in the South. [Applause.]
Mr. RAINEY. Mr. Speaker, will the gentleman yield there?
The SPEAKER. Does the gentleman from Nebraska yield to the gentleman from Illinois?
Mr. SLOAN. Yes.
Mr. RAINEY. Does the gentleman think of anybody in Nebraska that he thinks ought to be in the organization?
Mr. SLOAN. Mr. Speaker, I do. Out in the State of Nebraska to-day, if oratory is not a lost art, there lives as a resident of that State a member of the party of the gentleman from Illinois, a man who has talked to more people in this world, to more audiences, up and down more parallels of latitude and along more meridians of longitude than any of the orators among the 50 candidates for immortality named in this bill. [Applause.] What I say of Mr. Bryan has no relation to his political beliefs or practice, and is wholly without regard to whether his political fortunes are now at flood or ebb. More than that, the poet-philosopher of Lincoln—Bixby—is read by more for his quaint humor and his philosophy than is any of the poets or philosophers named in this list of 50 of the "immortals." He should be entitled to that man-made immortality. And, answering the gentleman further, since he has challenged it, we have a companion State out there—Kansas—which together with Nebraska have a greater area than this province of the immortals.
Mr. MONTAGUE. Mr. Speaker, will the gentleman from Massachusetts permit me to ask him a question?
Mr. SLOAN. From Nebraska.
Mr. MONTAGUE. I mean Nebraska.
The SPEAKER. Does the gentleman yield?
Mr. SLOAN. Yes.
Mr. MONTAGUE. Does the gentleman think the distinguished gentlemen he mentions desire to be of the incorporators of this academy?
Mr. SLOAN. I do not know whether they do or not. I speak of them, not for them. But I do not propose, where we have ability such as these men have, that we shall vote away to a province the right not only to be and to represent the American Academy of Arts and Letters, but to put it within the power of these 50 self-selected men to say who their successors shall be.
Let me say further that we have in our twin State—Kansas—Ed Howe, the editor-philosopher of the plains, whose quaint sayings, both in practical and profound philosophy, are distributed in nuggets throughout the United States. He is entitled to be one of a body whom we might call the elect.
Mr. MADDEN. Will the gentleman yield?
Mr. SLOAN. I yield to the gentleman from Illinois.

Mr. MADDEN. Does not the gentleman think that the establishment of an organization such as is here proposed would have a tendency to create a body of able critics, who would encourage men to rise to a higher standard of excellence in letters and art?

Mr. SLOAN. I presume they would in the little province that they represent, but they have not been able thus far to take over, and I do not want to trust to them the custodianship of the standard of arts and letters of America for the centuries to come. Now, I want to finish in reference to Nebraska and Kansas, and then I will yield to the gentleman from Ohio [Mr. LONGWORTH] and deal with that great State, which has been left without representation among the immortals. Let me also speak of the poet who comes from my own district, loaned temporarily to the State of Kansas, the poet who is read in every community where the English language is presented in print, the poet whose wit and humor appeal to more of the English-speaking people of the world than all the poets named among the proposed 50 immortals. His works are read more than any other poet of any language, living or dead, outside the sacred writings. He is, moreover, the best-paid poet in the world; and yet Walt Mason, whose homely rhymes, breathing rhythmic wit, piquant humor, and quaint philosophy, is not here even suggested for a place among the immortals——

Mr. CLINE. Will the gentleman yield?

Mr. SLOAN. I yield to the gentleman.

Mr. CLINE. I want to ask, just for information, how did the number come to be limited to 50, and who prescribed the rules and qualifications for getting into this body?

Mr. SLOAN. The 50 eminent gentlemen who expect to constitute this body, and by power granted in this bill perpetuate themselves and their neighbors under the broad name of America and the narrow limits of their membership.

Mr. LONGWORTH. Will the gentleman yield?

Mr. SLOAN. I do.

Mr. LONGWORTH. To what tribunal would the gentleman propose that it be left to determine whether proposed members have attained to such a condition of literary excellence?

Mr. SLOAN. This is how I would dispose of it: I propose to introduce an amendment that these people, to whom this bill attributes all the brains of America, and who have seen fit to reside in this little province in the northeast, let it be called the Academy of Northeastern America. [Laughter.]

Mr. HICKS. Will the gentleman permit an interruption?

Mr. SLOAN. Briefly.

Mr. HICKS. I would like to ask the gentleman what relationship there is between State lines and literary ability?

Mr. SLOAN. There should not be any relation, but I do not propose to allow without objection an aristocracy to be established by men many of whom do not seem to know that there is anything or anybody west of the Allegheny Mountains or south of Washington. [Applause.]

Mr. LONGWORTH. Will the gentleman yield?

Mr. SLOAN. I yield to the distinguished gentleman from Ohio.

Mr. LONGWORTH. The remarks of the gentleman [Mr. SLOAN] a moment ago might seem to indicate that I was averse to this bill because I did not see in this list the name of anybody from my State. Even if that were true, Mr. Chairman, I do not see that this bill can be regarded in any sense as a pork measure. [Laughter.]

Mr. SLOAN. The gentleman may support the measure. He occupies an important position. I do not like to go into private affairs, but his position has become important in this country. He is the son-in-law of one of the proposed immortals, Theodore Roosevelt, who, of course, regardless of his splendid career as President of the United States, as historian and author is entitled to be one of the American immortals. In fact, I do not challenge the standing or ability of any of the distinguished men who make up the 50. We do object to their viewpoint that there are no others and that there is no other source. I believe it is an unsound theory that intellect can only thrive where soils are barren.

Mr. ADAMSON and Mr. SLAYDEN rose.

The SPEAKER. To whom does the gentleman yield?

Mr. SLOAN. I yield to Admiral ADAMSON, or, as some one has called him, A-DAM-SON of Georgia. [Laughter.]

Mr. ADAMSON. I wish to inquire if the admirable and facetious gentleman from Nebraska realizes that no mere act of Congress could make these "high brows" as smart as we are. [Laughter.]

Mr. SLOAN. It could not make the "high brows" as smart as the gentleman is. Of course, as to the use of the word "we," my modesty forbids. [Laughter.]

Mr. SLAYDEN. Will the gentleman yield?

Mr. SLOAN. I yield to the gentleman from Texas, who, I desire to say, Mr. Speaker, is one of my candidates for the list of immortals of the United States.

Mr. SLAYDEN. The gentleman from Texas never hopes to achieve such distinction as that.

Mr. SLOAN. Yes; but the gentleman knows that some are born great, while others will have greatness thrust upon them. Of the latter class is my distinguished friend.

Mr. SLAYDEN. Mr. Speaker, some targets are so small that they could not possibly be hit by the lightning of "high-brow" fame. But, Mr. Speaker, I want to call the gentleman's attention to the facts with regard to the birthplaces of these 50 men. Of course, the personnel of this association changes from time to time, because it is composed mostly of elderly men, and they die. A very distinguished member of that body died in Washington last year, Charles Francis Adams. At the time this list was made up there were 17 members whose birthplaces were in New England, 14 were born in New York, New Jersey, and Pennsylvania, 9 were born in the South, 7 in Ohio and Indiana. One was born in England——

Mr. SLOAN. I can not yield further, and I can not agree to pay the price for desertion of the South and going up into the northeast province.

Mr. SLAYDEN. I thought the gentleman would like to know the fact about that.

Mr. SLOAN. I want to call attention further to the fact, as an evidence of its provincialism and exclusiveness, that in this list of immortals who would perpetuate themselves there is not included the name of one American woman. You can not write American history and leave out American womanhood. You can not have a fair representation of American literary and artistic genius and leave out American womanhood. Even out in yonder hall of fame, Statuary Hall, there is a statue erected to a noble woman, Frances Willard, and she seems to get along very well with her cold and silent companions. But there was no room among these 50 American immortals for American womanhood to be represented.

The President of the United States is one of this list, and he is entitled to it, unaided by his proud position as the head of this Government, because of his achievements in the line of letters, as an author, historian, and orator.

Mr. LONGWORTH. I will remind the gentleman that he also has a son-in-law.

Mr. SLOAN. Yes; he has a son-in-law; but you should not make ado (McAdoo) about that. [Laughter.]

More than that, gentlemen, in the Senate of the United States the great HENRY CABOT LODGE, orator, statesman, diplomat, is one of the immortals, and he is entitled to be there. It is suggested that he has a son-in-law, but he is in Massachusetts and he is within the province.

Now, I fail to find an immortal among the 435 distinguished Members of this body. From this body I would have the courtly cavalier from Texas as my first choice [applause], because, in the early days when knighthood was in flower, on the field of battle he would have been known as the "Knight Courageous." In hall of council or on jousting field he would have been called the "Knight Courteous." And on ladies' carpet among the stately dames and damsels fair he would have been known as the "Knight Irresistible." [Laughter and applause.]

I have also read the Sacred Writings; have studied Wordsworth's Intimations of Immortality, and further dwelt upon that deathless soliloquy placed in the mouth of Cato by Addison; and I have come to the conclusion that man is immortal. So I have sat five long years on the side of this aisle content with being a friend to MANN. And then I look up yonder, to that seat of power, where by the side of the eagle and under the flag sits the Speaker. Of him I must say, paraphrasing the old kingly salute, "O Speaker! live forever." [Applause.] But this corporation, if organized, would bar the way, because the Speaker, regardless of his genius, is from Missouri, a part of the proscribed district.

I am in favor of all advancement that may be made. But I am not in favor of giving away to any section or sex of this country, or to any unfairly representative body of men in this country, the right to call itself the American Academy of Arts and Letters, with the power to perpetuate itself, and say to artistic or literary genius in every part of the United States you may or may not have the opportunity of becoming one of the immortals.

Of course, I might be expected to vote for this because one of my name is in the list. That is probably on the same theory that the river and harbor and public-buildings bills are worked, because I, apparently, have a project in William Milligan Sloane. He is a great historian, but a remarkably poor speller. He seems

unable to dispense with that final "e." Darwin's doctrine of elimination of unnecessary finals should be invoked.

Mr. SLAYDEN. Will the gentleman yield?

Mr. SLOAN. Yes.

Mr. SLAYDEN. I want to suggest that already this Congress has chartered seven associations and conferred upon them the right to call themselves the American Historical Association, the American National Red Cross Association, the American Numismatic Association, and the American Academy of Science, and so on. So Congress has set the precedent or adopted the custom.

Mr. SLOAN. The first followed by the second may have been a precedent. As the gentleman suggests, the others added may have grown into a custom, but I do not propose that it shall now by this addition become a disease without a protest.

Yet neither the American Historical Society nor the National Academy of Science are valid precedents for the action proposed here.

The American Historical Society started in with few members, but without limitation. Yet with less charter members it was more representative of the body of the country than is the list proposed in this bill. Any proper person may become a member of that society upon being approved by the executive council, and may continue by the payment of reasonable dues. Further, that society must make periodical reports to Congress and to the Smithsonian Institute.

The National Academy of Science was chartered in 1863, during the Civil War, with special purpose and duty, to serve the country in its stress. Its charter membership, then limited to 50, came from the following:

Maine, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Virginia, Ohio, Indiana, Illinois, Kentucky, Missouri, and California; also the District of Columbia.

It will be recalled that the Southern States were then in secession, and California was the only Northern State then in the Union west of the Missouri River except Kansas. Later, in 1870, Congress passed an amendatory act to that organization's charter, removing the limit on number of members. So that so far as the important and essential objections raised to this bill are concerned, the proceeding is without precedent or parallel.

Mr. PLATT. Will the gentleman yield?

Mr. SLOAN. Yes.

Mr. PLATT. Does not the gentleman think he could accomplish his purpose by introducing a bill to prevent Members from further flocking together?

Mr. SLOAN. No; I could not do that. That is the difficulty here. Men seek to obtain this exclusive name, American Academy of Arts and Letters, giving them the power to hold themselves before the American people as the artistic and literary censors; to say what poem should be authoritatively approved and what pictures may be hung. We want no aristocracy in letters any more than we do politically.

Mr. PLATT. Will the gentleman yield again?

Mr. SLOAN. Yes.

Mr. PLATT. If William Jennings Bryan was elected a member of this society, would he naturally move to New York?

Mr. SLOAN. He might. Mahomet went to the mountain. It was merely a place to be walked on. What I have said of Mr. Bryan relates to his matchless art. Of course, New York would like to get all of our literary talent. They need it. It might raise the general average of the little old town. I challenge the gentleman to say that these 50 men or anyone through their authority have asked any of these western gentlemen to become members of this exclusive body. Rather than establish this organization by congressional authority in this manner, we should wait until America's votaries of letters and arts, after discussion and full deliberation, give in crystallized expression a broad, sound, and liberal basis for an organization representing all America. It should have a basis coextensive with America's boundaries, worthy of her genius, and as varied as the excellence of her brilliant sons and daughters. [Applause.]

Mr. Speaker, I reserve the balance of my time.

Mr. SLAYDEN. Mr. Speaker, I yield 10 minutes to the gentleman from Illinois [Mr. RAINEY].

Mr. RAINEY. Mr. Speaker, I understand from the argument of the gentleman who has just taken his seat that his principal objection to the bill we are considering is that it provides for the incorporation of a self-constituted body of men who shall proceed to perpetuate themselves indefinitely. Now, if that is the objection the gentleman makes to the proposition of incorporating the American Institute of Arts and Letters, there is nothing in his position.

I want to tell the gentleman how these 50 names were selected. They did not select themselves. The American Academy of Arts and Letters was founded in 1904. It was a branch or an interior organization of the National Institute of Arts and Letters, and the National Institute of Arts and Letters was in its turn founded in 1898 by the American Social Science Association. The American Social Science Association was incorporated by Congress. So this proposed organization traces its origin back to the American Social Science Association, and the authorization of the incorporation of that association was made by this body.

This is the way in which these 50 gentleman were selected: In the first place, 7 members were selected by ballot as the first members of the academy, and this selection was made by the members of the National Institute of Arts and Letters. These 7 members selected 8 others. Those 15 members selected 5 others, and the 20 members thus chosen selected 10 other members, and these 30 members constituted the original American Academy of Arts and Sciences. Many of them are not now living, but here are the first 7 members, selected as I have indicated, who formed the nucleus of this organization: William Dean Howells, editor of magazines; Augustus Saint Gaudens, sculptor; Edmund Clarence Stedman, author; John La Farge, mural painter and decorator; Samuel Langhorn Clemens, man of letters—and of Missouri, as somebody has suggested—born in Missouri, on the banks of the Mississippi River; John Hay, man of letters; Edward McDowell, the greatest musical composer this country has yet produced. These were the 7 original members. These members selected the next 8 and the 15 selected the next 5, and the 20 so chosen selected the next 10.

Now, can even the gentleman from Nebraska [Mr. SLOAN] suggest any substitute for any one of these original seven members of the American Academy of Arts and Sciences? William Dean Howells is the only one who is now living. It is proposed to incorporate the American Academy of Arts and Sciences, and the object of incorporating it is to enable it in a more effective way to further the interests of literature and of the fine arts.

That is not a sectional matter. In the old days of the literary supremacy of Athens, if they had been organizing an academy similar to this, they would have found no qualified members anywhere in the world except in Athens, an exceedingly small part of the earth's territory, and yet, if the gentleman from Nebraska [Mr. SLOAN] had been living in Athens in those days, with his ideas of arts and literature, and methods in which these matters ought to be promoted, he would have insisted on selecting some member from the middle of Asia and some one else from Siberia. According to his theory, if an organization of this kind were being effected in the days of the literary and military supremacy of the Roman Empire, he would have insisted that the biggest part of that Empire was the Desert of Sahara, and that they ought to go somewhere out into the Desert of Sahara and find some savage Arab chieftain and put him on the list, in order that the Desert of Sahara might be properly represented. [Laughter.]

I am not aware of the fact that we do much here in this body to perpetuate the arts and literature. We make speeches here, and we print them in the CONGRESSIONAL RECORD, but even the speech which was just made by the gentleman from Nebraska [Mr. SLOAN] is not much of a contribution to the literature of the world, and I doubt whether it will be read to any considerable extent outside of his district, and it will not be read there unless he sends a copy of it to every home in his district, to show how anxious he is that the wheat fields of Nebraska and the sand dunes of the western section of his district shall have the opportunity of having a member on this original board, so that somewhere out amid the wind-blown barrens of Nebraska a St. Gaudens may be developed.

Mr. CARAWAY. And what is the gentleman going to do with his speech?

Mr. RAINEY. It will be printed in the RECORD to-morrow morning. It is not my present intention to send it out. I will say to the gentleman, I have the right to send it out, but the gentleman need not worry about that. I am not pretending to make any contributions to either literature or art, though I believe I can make as valuable a contribution as the gentleman who is now interrupting me can make, and it will live just as long, and that would not be very long.

Mr. CARAWAY. And the gentleman has taken ten times more time to make it than I would, though it would not last ten times as long.

Mr. RAINEY. Mr. Speaker, this organization is to be empowered to receive bequests and donations and to hold the same in trust and to invest and reinvest these funds for the purpose of furthering literature and the fine arts. Can there be any possible objection to that? A nation makes a place in history proportionate to the place it attains in literature and the arts.

The SPEAKER. The time of the gentleman from Illinois has expired.

Mr. SLAYDEN. Mr. Speaker, I yield five minutes more to the gentleman.

Mr. RAINEY. Here in this body we occupy much time inventing methods of getting money into the Treasury, and then we occupy the rest of the time in inventing methods of getting money out of the Treasury; about the only contribution we make to the arts is to frequently authorize for some sixty or seventy thousand dollars some one to manufacture representations of soldiers with dangling swords and cocket hat, mounted on impossible prancing horses, and we put them on every corner of this Capitol until we have now almost as many statues of that kind as they have in all the rest of the world—every one of them offending and violating all of the ideals of beauty and art that have prevailed in the world since the days of the literary and artistic supremacy of the Grecian States. It is not going to hurt this country or its Capital, and it is not going to hurt Members of Congress to authorize the incorporation of an association which shall have for its object, and its sole purpose, the furtherance of literature and of fine arts.

New York and New England have a way of attracting men who become prominent in literature and in the arts. The great publishing houses are there, the great magazines are published there, the great centers of population are there, the great contributions to art and to the beauty of our present civilization are there, and of course these men who love art and literature and beauty flock to that section of the country. Why, Mark Twain, one of the original seven, came to New York from Missouri; and if any of these men mentioned by the gentleman from Nebraska [Mr. SLOAN] as being entitled to consideration really do anything that establishes for them the reputation of being great artists, or contributing something to the literature of the country which is going to last throughout the ages, we will find them coming to the northeastern section of this country.

Mr. LONGWORTH. Mr. Speaker, will the gentleman yield?

Mr. RAINEY. Certainly.

Mr. LONGWORTH. May I suggest to the gentleman that the criticism of my very good and distinguished friend from Nebraska [Mr. SLOAN] carries with it an implied criticism upon the activities of the two gentlemen who represent his State in another body because they did not lift their voices against this bill—in fact, no Member of that other body did, as it passed unanimously?

Mr. RAINEY. That is true.

Mr. MADDEN. Perhaps the gentleman is jealous because the distinguished orator from Nebraska, Mr. Bryan, is not one of the 50.

Mr. RAINEY. Mr. Speaker, I have never heard from that side so many compliments for Mr. Bryan. [Laughter.] And I never heard that Mr. Bryan claims a place in any organization of this kind.

Mr. SLOAN. And, Mr. Speaker, I never have heard such a lack of defense of the peerless leader as I am observing now upon that side. [Laughter.]

The SPEAKER. The time of the gentleman from Illinois has expired.

Mr. SLAYDEN. I will ask the gentleman from Nebraska [Mr. SLOAN] to use some of his time now.

Mr. SLOAN. I yield 20 minutes to the gentleman from Texas [Mr. DIES].

Mr. DIES. Mr. Speaker, we have in the past killed this bill. Is it two or three times? Somebody tell me how many times we have killed it?

Mr. SLAYDEN. Does the gentleman want information in reference to that?

Mr. DIES. Yes; I will be glad to have it.

Mr. SLAYDEN. The only time the bill came up for consideration before was on a motion to suspend the rules, and a clean, effective, satisfactory majority voted for it, but not quite the two-thirds.

Mr. DIES. My recollection is that I have spoken against it twice myself.

There never was any old reason offered in the House for the passage of this bill. It has been up a number of times. Not one real reason has ever been offered for its introduction here, or any reason offered why we should pass it and make it a law. I have heard no new reason offered to-day for its passage.

There is a reason why you gentlemen ought not to deal with this question. Now, these 50 persons are perfect strangers to you, most of the time. Of course, my friend RAINEY and my friend SLAYDEN and myself understand their writings and paintings perfectly well; but most of you gentlemen—"honest injun" now—you are about to put your provincial hands to the stamping of 50 immortals, when there are not 50 men in the House who have ever read a book or seen a painting written or painted by any one of these persons, except it was written by Mr. Roosevelt about that bewhiskered bird that cracks nuts in the middle of the night. [Laughter.] And some of us have read The New Freedom. [Laughter.] The Members of Congress, most of you, come from States which have no person within the limits of the State sufficiently erudite to be in this list of immortals, from Nebraska, from Texas, from Illinois, from Ohio, from Michigan—from Detroit—and also, we are going to put our——

Mr. MADDEN. What about Ford?

Mr. DIES (continuing). Novitiate hands to the task of placing the stamp of immortality on others.

Do you know, if these gentlemen came in here now, Mr. Sloan and Mr. Underwood Johnson—I believe the latter is better known than the rest, having lobbied for the bill—unless somebody told us they were coming, I would not know them. [Laughter.] Of course, my friends RAINEY and SLAYDEN understand the question. They have had three years to look it up. They have read Who is Who in America, and they know these gentlemen. You see when a man puts himself in Who is Who, he writes it himself, and that is about the only literary product of any of these 50 outside of The New Freedom and the bewhiskered bird incident that the gentlemen are familiar with.

There are some provisions in this bill that have a funny sound to me, or rather would have had a funny sound to me before I came to Congress. I have learned to accustom myself to all sorts of sounds since I have come here. This says:

> The American Academy of Arts and Letters shall consist of not more than 50 regular members, and the said corporation hereby constituted shall have power to make by-laws and rules and regulations; to fill all vacancies created by death, resignation, or otherwise; to provide for the election of foreign, domestic, or honorary associate members, and the division of such members into classes, and to do all other matters needful or usual in such institutions.

Of course, the thing would not be entirely what the toadies want it to be, unless we can get a scorbutic duke or ramrodded count from across the way, and when they bring the aforesaid Italian or Frenchman, or whoever they bring over to give added respect to the nobility here, they set in to make classes. I can see now class No. 1, with Prince So-and-So, or Baron Astor, or Sir Hiram Maxim. If they get the Maxims, they ought to put Hudson in. He wrote a book called Defenseless America. He is an employee of the Du Pont Powder Co. and author of the Battle Cry of Peace, that has made more ignorant women and little children shudder in this country than anything else.

Now, right along with that bewhiskered bird, Hudson Maxim, with his defenseless America and smokeless powder, ought to be nobility. It would be an oversight on the part of gentlemen not to put him in there. When they start with these classes, of course, first having shown the courtesy to the foreign gentlemen to arrange them into class 1, then there should be a different distribution of classes.

Of course if Confucius were living now he would not be in it, because he said a man who would not live upon rice and use his bended arm for a pillow, that he might apply himself to study, was not worthy the name of a scholar. They kicked him out in his day, and so they would in this country. If Shakespeare were living now, well—he committed several unpardonable sins, so far as this Congress is concerned, anyway. I recall one thing he said:

> Get thee glass eyes, and like a scurvy politician seem to see things thou dost not.

That would debar Shakespeare. [Laughter.] If Robert Burns were living now—I am told they have practically nothing in the library now to remind one of Robert Burns. He certainly was so uncouth a man that he, the author of Tam O'Shanter, would not be allowed in these 50 immortals.

You remember he says:

> Kings may be blest, but Tam was glorious,
> O'er a' the ills o' life victorious.

[Applause.]

> As bees flee hame wi' lades o' treasure,
> The minutes wing'd their way wi' pleasure.
> But pleasures are like poppies spread,
> You seize the flow'r, its bloom is shed;
> Or, like the snow falls in the river,
> A moment white—then melts forever.
> Or like the borealis race,
> That flit ere you can point their place.

Tied, the tenant of a landlord, to his plow, too poor, too neglected by the literary men of his time even to be given a place of decency; not the President of the United States, ex or present, not the discoverer of unknown and whiskered birds, not the author of the Battle Cry of Peace, but an excise man, whose job it was to test the strength and gravity and purity of the liquors they drank in merry old Scotland. [Applause.]

I do not know; I have been a great reader of books in my time, but I confess I have never read anything that has been written by any of this aggregation, except the President and the ex-President. [Laughter.]

Now, there was Samuel Johnson, the author of Rasselas and other publications that now escape me——

A MEMBER. The dictionary!

Mr. DIES. Yes; he wrote the dictionary, but his Rambler was his best work. He said a book was not fit to be read until after it had been written more than seven years. The great philosopher of France—his name has escaped me; not Montesquieu, but Miguel Montaigne, the great philosopher—said it was never safe to pronounce greatness upon any man until he was dead.

Now, gentlemen, I could not understand or fully appreciate a painting when I see it, or know whether it had been gotten up by the O. N. T. Thread Co. or one of these immortals. [Laughter.] Here we sit, taking up the time—and I am taking up the time—of the American Congress, imitating and toadying to foreign institutions, and wanting to reach out and connect Americanism with something that is un-American. [Applause.] John Randolph of Roanoke, whose liver was somewhat out of fix, never said a truer thing than when he said there is a universal frailty in human nature, a desire to connect yourself with somebody that is great.

There is a spirit of toadyism about this bill. Let these 50 men elect themselves to immortality as Shakespeare did; as Confucius, the Chinese philosopher, did; as Burns, the Scotch poet, did, and Gray, the English poet, did, when he wrote his Elegy. Let them elect themselves to immortality by writing themselves into worthiness of immortality. [Applause.]

If I were going to put the stamp of my approval on Mr. Roosevelt and on Mr. Wilson—two excellent gentlemen [laughter]—I would include the entire Cabinet of each one of them. What can a President do without his Cabinet? [Laughter.] I would get GARNER, of my State, on it. He is on the Committee on Ways and Means, that appoints committee assignments here. [Laughter.] I would like to have the Speaker on it. And I regard the ex-Speaker of this House [Mr. CANNON] as one of the keenest intellectual blades I have ever known in my life. [Applause.] I do not know that anybody can say I am toadying to him. [Laughter.] If he does, it would be the first time. I regard him as the brightest intellect I have known since I have been in Washington, I will say. Why not put him in there? You have put in alleged statesmen and politicians and people who have painted pictures that you never saw and which you would not understand if you did see them; men who have discovered birds with whiskers, that crack nuts all through the night, birds that were seen and commented upon a hundred years ago by Von Humboldt, of which he has left a record for our memory.

I understand that some of the men who have written books and articles in this list have retracted some of their works. [Laughter.] I ask, Is the immortality based on the books themselves or on the retractions thereof? [Laughter.] Sometimes recantations possess more literary value than the things recanted. I remember Andrew Carnegie protested there was no such thing as a trust, but later on he retracted that and organized a trust, and now he says there ought not to be such a thing as a trust. [Laughter.]

This House is a fine body to make laws, to get what is coming to us in the various bills that have been passed, to see that our relatives in the Army and in the Navy are properly taken care of, to see that we get what is coming to us for our streams and waterways in river and harbor bills, to see to it that the people's money is voted away for this, and that, and the other thing. That is our business. We are hard-headed, practical men, but we are not judges of what constitutes literary or artistic merit. I have not met any literary men in this Congress since I have been here. [Laughter.] I have met nobody except, perhaps, Mr. RAINEY and Mr. SLAYDEN who are competent to put the stamp of their approval on those who shall go down through the ages as "immortals," whose works should not be allowed to die. There are some practical politicians here, but no profound literary critics. Some of us read the headlines, some of us read the large print in the CONGRESSIONAL RECORD; but this House is not what I should call a literary body. [Laughter and applause.] I would not submit to the Congress for its approval an article that I expected would make my name immortal. [Laughter.]

Of course, there have been some very unfortunate things along that line. The French philosopher, Montesquieu, submitted his two volumes, from which our existing Government is in a large measure taken, the Spirit of the Laws, to three friends, and what about it? The whole three agreed unanimously that if he published it he would make an ass of himself for all time. [Laughter.] But his egotism, Mr. Speaker, was such that he published that work in spite of the unanimous verdict of his three friends that it was worthless, and it is the only thing that he is now remembered by. There are critics in the world that could pass upon those who should be immortals; but we, gentlemen, who are almost perfect strangers to their works and arts, should not attempt to pass upon them. I do not think this type of bill should be brought in here. Let these gentlemen, taken from three or four States—let Massachusetts, Pennsylvania, and New York stamp them as immortals. Why come down here and get provincial persons like myself or provincial persons like my friend GARNER and my friend SLOAN and MARTIN MADDEN, or anybody else nearly, to attempt to do it? [Laughter and applause.]

Why do not they get the State that has produced this wonderful crop to stamp them? [Laughter.] It seems that the 48 States did not do it. The United States did not do it. These rare plants of literary genius and works of art; this wonderful aggregation were produced in three or four States. Let those States under their State laws incorporate them and stamp them. But if I, as a Member of Congress, am to vote upon a work of art, be it poetry or history or painting, rough though I am, uneducated, untutored, and provincial as I am, you must trot out your poetry and let me hear it read. [Laughter.] Let the men who want this bill bring in a painting and let us see it, and we will pass upon it. Of course we are not capable of doing it. We would not know whether it was one of GUSSY GARDNER'S preparedness maps or a painting by one of the distinguished Members of this organization. [Laughter.]

But before I vote for it, not knowing a person in this list and never having read anything written by one of them that is worthy to be perpetuated as a work of literature—I say that advisedly; I do not know a thing written by a man in this list that will go ringing down the corridors of time as great literature. As long as they print the Bible, the works of Shakespeare and Bunyan, and Æsop's Fables men will never stop to read much of the writings written by those who constitute these 50 so-called immortals. [Applause.] I suppose when we become sufficiently effete, if they will print some of this stuff in large headlines and run it in the current daily papers we will read the headlines in regard to it, but never unless something of that kind occurs; and I say it, meaning just what I say, I am not competent to pass upon the literary merits of any man. I would take Burns and Æsop's Fables and Shakespeare and the Bible and I would stop there, and if I were a hermit and going to live in a cell, as sometimes I wish I was, I would not want much else than the Bible and Shakespeare and Burns and Æsop's Fables to make my shelf a library. I am not competent to pass on the works of these gentlemen. I do not know them. I do not know their works. I do not know anybody who knows enough to do so, unless it is my friend RAINEY or my friend SLAYDEN, and if they know anything about it they do you wrong not to tell you what they know about it. [Laughter.]

Of course, if we are going to put in the names of any politicians, why, I would select three men who I think have done more useful work here since I have been a Member of Congress than any other three men in the House, barring the Speaker. You always want to take consideration of the men in power, of course. But BEN JOHNSON, of Kentucky, saved about $2,000,000 to the Federal Government. CLYDE TAVENNER showed that the greedy hands of the men who would profit by it were behind the preparedness movement. The other gentleman's name will come to me in a moment. Oh, yes; Judge Witherspoon, now deceased, who proved that the American Navy was second in the world. [Applause.] Put their names in. Put in the names of men who stand here in an unpopular cause and who are the champions of what they conceive to be right. Do not wait until such a man gets elected to some big office to put in his name.

Now, with all due respect to Mr. Roosevelt and Mr. Wilson, it takes the very best that is in any man to read anything that either one of them ever wrote. Their works are tremendously profound, punctuated with erudition. They tell us of great makers of States and the destinies of nations, but a man has got to drink coffee every 15 minutes if he sits up at night to read them, I will tell you that. [Laughter.] Moreover, they are both young men, in their prime. They are seeing things differently now than they saw them when they wrote those books. I am afraid we ought to hesitate in writing them down as immortals, for they may retract the balance of what they have said before this bill finally passes. [Laughter.] Think of putting the stamp of the American Nation on men and calling them immortals while they are holding office and alive and kicking around. Why, they may disgrace themselves utterly before they die. We all have self-respect. We know that we do not

know scarcely anything about a majority of these men. We are offering here to put the stamp of our approval by our vote "aye" on men whom we know nothing about, who have written articles in uplift magazines that we have never read, or who have painted paintings that we never see, and whose meed, whose equipment for immortality is utterly and absolutely unknown to us, and I suspect is unknown to a great many other people; in fact, all other people. I am not making this speech for distribution. I am not making this speech to be funny. I am not making this speech in order to parade myself as a plebeian, as a Democrat, as an American. I make it because I get sick and tired of this spirit of toadyism that asks the American Congress to put the brand of immortality on men whom we know nothing about. You might as well select a committee of pork packers to pass on the works of art of ancient Greece and Rome. [Laughter.]

Mr. SLAYDEN. Mr. Speaker, I yield 20 minutes to the gentleman from Illinois [Mr. CANNON]. [Applause.]

Mr. CANNON. Mr. Speaker, I have been very much interested in the remarks of my friend the gentleman from Texas [Mr. DIES] and my other friend the gentleman from Nebraska [Mr. SLOAN]. I do not know but they have ridiculed this bill out of the House. I wish I had one-hundredth part of the power that either of the gentlemen has on that line, because perhaps I might be able at least to bruise their heels while they would bruise my head. But, all said and done, what is this bill? The names have been read. Here is one power that is given:

SEC. 2. That the purposes of this corporation are and shall be the furtherance of the interests of literature and the fine arts.

Then they have the power to receive bequests, if anybody is wise enough or foolish enough to make any bequests to them.

"There is no world but this in the vast universe. Men may talk about suns and planets and comets and all that kind of thing, but there is no world but this." "How do you know?" "I have never been on any of them." Gentlemen have ridiculed the names of men here. Well, there are many of them whom I never met. I have had much pleasure, however, in reading the productions of William Dean Howells. I have had much pleasure in reading the graphic and virile descriptions in the Winning of the West, by our late President. I have had much pleasure in reading the works of Mark Twain. Ah, the gentleman from Texas and the gentleman from Nebraska never heard tell of Mark Twain.

Mr. DIES. Is the name of Mark Twain or Samuel Clemens in that list?

Mr. CANNON. I thought he was a member of it.

Mr. DIES. He is dead.

Mr. CANNON. Yes; but was he not one of them?

Mr. SLAYDEN. He was a member of this organization.

Mr. CANNON. Yes.

Mr. SLOAN. If this organization was in full swing when Mark Twain was on earth, why do you want to give it a new lease of life? Let it go on the life that Mark gave it.

Mr. CANNON. You indorse Mark Twain, do you not?

Mr. SLOAN. Yes; I indorse any good man after he is dead. [Laughter.]

Mr. CANNON. Precisely. I indorsed the gentleman both times while he was living, and that is the difference. [Laughter and applause.]

Now, you go along further. Hamilton Mabie, of New Jersey; Thomas Nelson Page, of the District of Columbia, now our diplomatic representative abroad. I like Thomas Nelson Page and I believe I have read everything he has ever written, to my entertainment. HENRY CABOT LODGE, Senator LODGE, one of the most virile writers of biography of great men and of history that has lived upon this continent. So, after all, there is here and there a grain of wheat. I might read further. Andrew Dickson White—Dr. White, of Cornell—eminent in diplomacy and scientific attainments, eminent from every standpoint.

Most of these people, if they do not trot in that class—and I can not say how many do have the right to trot in that class—shall they be ridiculed because, as I look through my gimlet hole at the universe, whether it be of literature or art, the size of it is according to the range of my vision. [Applause.]

Now, I have the highest respect for these gentlemen; but, gentlemen, take the National Academy of Science. Great Heavens! I can appreciate it, although what I do not know about science and literature would make a book. Let us be honest and square. My primary education was gotten before I was 13 in a little log schoolhouse. If I am educated at all, it is by virtue of my experience in reading since I arrived at the age of 21. I am not educated greatly. I can prove that by these reporters here when I revise my remarks, or, if not, by the typesetters at the Government Printing Office, for I can not correctly punctuate a half a dozen sentences to save my life. Oh, yes; I know what a comma is, and I know what a period is, and I know what a dash is, and I know what an interrogation point is, and there it ceases. That interrogation point is very useful to me in punctuation, and I would like to put it in the brain of gentlemen in these two magnificent speeches, so full of wit and ridicule. Why? Oh, gentlemen, we have got to take something on trust; we have got to admit that somebody in the wide world is wise besides ourselves. We would not get along very well if we did not. Let me give you some of my experience with these men. Did gentlemen here ever know Prof. Langley, late head of the Smithsonian Institution, who was succeeded by Mr. Walcott? He was an old bachelor and college professor, although I do not know what college he was connected with. I had the honor at that time to be at the head of the Committee on Appropriations, and when the estimates would come up Prof. Langley would come in to explain them. Let me give you a little thing that happened in the appropriation room. He had gone through the estimates, and then I said, "Professor, is there anything else you want to say?" I had learned to have a very high respect for his scientific attainments, his industry, and his ability. He said, "Yes, Mr. CANNON; I would like $10,000." I said, "What for?" He said, "To experiment in inventing a flying machine." "Great Heavens," I said, "a flying machine, to ride up in the air." He said, "Now, Mr. CANNON, look here. I don't wonder at that, because you have not given the subject any investigation. Is not a bird heavier than the air? Is not the eagle who soars above in the sunlight heavier than the air?" "Yes," I said. "Don't you think we could devise a machine by which the human animal can navigate the air?" He did not have to make any more speeches, but the subcommittee agreed to it and the full committee agreed to it. Then he said further, "I want $5,000 to found an astrophysical laboratory." I said, "What is that?" He said, "You know what physical is?" I said, "Yes." "You know what astral is?" I said, "Somebody told me once it was something about the stars." He said, "Mr. CANNON, through all the ages we have had people who have studied the heavens, and we want to study the influence of the sun on the earth's atmosphere and upon the earth." I said, "Five thousand dollars isn't much. You want to make a little laboratory?" He said, "Yes." I said, "Is that all?" He said, "No; there is another very important thing, and that is the study of the rays of light beyond the red." I said, "Great Heavens." [Laughter.] "Are there any rays of light beyond the red?" I knew about orange and green and blue and the other colors of the spectrum. "Well," he said, "there are. I do not know how many, but in the future—I may not live to see it—but it may revolutionize the world."

Well, that went in, and you ought to have seen the magazines and the newspapers, and some of them had almost as much power as the gentleman from Nebraska and the gentleman from Texas: "An astrophysical laboratory." "Going to fly like a bird." Well it did not deter me. I had been ridiculed and cartooned, and I rather liked it, because it gave me a notoriety for profanity and wickedness. [Laughter and applause.]

Well, you know that man did construct a machine, put it on a scow, and went down the Potomac River. It did fly for a minute; it did fly, but the engine was imperfect. He was the discoverer; and then the Yankee Wrights caught on to it a little later and improved the engine, and you now have the aeroplane. It is the same plan exactly. But, gentlemen, after all, if we are to legislate upon what we know absolutely, each man giving advice—and there are 425 of us—if we have to get around and can not take anything from anyone but from each other, we would not have much legislation.

Now, you talk about art. I do not know much about art; and you talk about literature, and I do not know much about that; but I want to tell you that when we are dead and gone, most of us—and that especially applies to me—Indiana's favorite poet, James Whitcomb Riley, will live. [Applause.] Mr. Speaker, once when the Clover Club, during the days of the World's Fair, came to Chicago a man who is now dead, then the head of the Chicago Record-Herald, entertained the club, and I had the honor of being present. There was present also Oglesby, Henry Watterson, George F. Root, the man who composed the music for the songs during the war and since, and a great many others. We had a great time. While we were drinking water—it was colored a little bit—Mr. Sol Smith Russell, the actor, who was there, got up, with his swallow-tail coat on—and he looked just as he always did on the stage—and he gave just a little twist to his hair and then recited, "Good-by, Jim; take keer o' yourself." And when he had finished that recital Henry Watterson jumped up from his seat and ran to him and put his arms around his neck and, with tears streaming out of his eyes, said, "My God, say it again, say it again; say it all night!" [Applause and laughter.] They put every-

body down who was called on; but finally, just after the incident closed, I was called on, and I had sense enough not to try to talk long, but they let me talk long enough to say one sentence. I said, "I have paid many, many dollars to listen to you, Mr. Sol Smith Russell, and I never knew before how you were made up. God made you up." [Applause.]

Now, then, take art. I do not know how many of you gentlemen have gone out to the western end of this Capitol and seen on the wall that picture entitled "Westward the Star of Empire Takes its Way." A great artist, I do not now recall his name—I am like my friend, I can not call his name—painted that picture on the wall. There it is. It represents the pioneer from the Atlantic coast on his way westward. There are the steer and the mule hitched up together; there is the woman with the babe in her arms, sitting in the wagon; there is the little grave by the side of the road; and there is the pioneer with his coon-skin cap and the little boy with his coon-skin cap, the grandson or the son, carrying a rifle, followed by the faithful dog; another stands upon the mountain and looks to the westward. Ah, Mr. Speaker, I was a part of that picture in a way, and by that I mean that I experienced most that it represented in the pioneer days, and as I looked upon that picture the first time, though I am not given much to tears, I caught myself crying, and during all the years since I have never glanced toward it without saying to myself, "God bless the man who painted that picture." [Applause.]

Take the statue by French of the Minute Man at Concord. Who is French? Why, since Saint Gaudens, French is, in my judgment, the greatest living sculptor. He is a great man; Saint Gaudens was a great man. Take Saint Gaudens's statue of Lincoln as it stands in Lincoln Park at Chicago, in all its majesty. No American can look upon it without being a better man, a more patriotic man. Then, you have great architects. "Well," you say, "are not some of them fools?" Yes; but I will tell you what is a fact. These architects and "literorians," as a constituent of mine called them once, have not any monopoly on foolishness. [Applause and laughter.]

The SPEAKER. The time of the gentleman from Illinois has expired.

Mr. SLAYDEN. Mr. Speaker, I yield five minutes to the gentleman from Ohio [Mr. FESS].

Mr. FESS. Mr. Speaker, two great speeches—there have been more than that—but, at least, two great speeches were made to-day, both by one man. It has been really a great day for the individual membership of this House. Through the versatility of the Member from Illinois [Mr. CANNON] we have had a fresh view of the great Lincoln. Among the many fine things said by him in the address on this bill now before us I think the most significant was that reference to Sol Smith Russell. It reminded me of Mathew Arnold, the great English writer, the son of the great Dr. Thomas Arnold, when he visited this country, made a trip to Chicago and was there given a dinner. Among other things he said on that occasion was the following: "I have not come to see the great acres of the West, nor the skyscrapers of your great cities; I have come to see the author of 'Little Boy Blue.'" [Applause.] That is an expression of the estimate of a great mind upon the value of letters. It was the same Mathew Arnold who in that masterful essay, "Culture and anarchy," made the statement that the greatness of a nation is not a marketable quantity, that it can not be bought and sold, that it has no commercial value put upon it. The greatness of a nation must consist in a spiritual condition of that nation as expressed in art and letters. [Applause.] He also added that if a nation would prove that it is great it will show its appreciation of that element of greatness. It is now pertinent to ask what is our attitude as a Nation toward these higher qualities. I had hoped that the opposition that has developed here would not develop, not because there is any reason for me to say that men ought not to take a position as they have, but because it might classify the Nation before the world as not appreciating these things that are worth while.

Mr. SHERLEY. Mr. Speaker, will the gentleman yield?

Mr. FESS. I appreciate the situation of the opposition. I yield to the gentleman.

Mr. SHERLEY. Might not some of us so appreciate art and letters as not to be willing to undertake to incorporate the greatness of it?

Mr. FESS. The purpose of this bill is to give a legal entity to a group that can promulgate the interests of art and literature.

Mr. MONTAGUE. Mr. Speaker, will the gentleman yield to me in order to ask him a question?

Mr. FESS. Yes.

Mr. MONTAGUE. As suggested by the gentleman from Kentucky [Mr. SHERLEY], might not some of us appreciate education so greatly as to refuse to incorporate an educational institution?

Mr. FESS. I think it is a very apt question and a complete answer. What I had in mind was this: That if we desire to promulgate letters and art we ought not to refuse to give this purpose a legal entity by which this sort of interest in our country can be furthered.

When you charge that it is trying to make 50 men immortal, certainly that is an unfair statement. You can not incorporate without having incorporators, and this is purely an arbitrary number, and it is not to be a fixed number except as to regular members. There is a provision here to increase the membership by adding associate members to any limit, and the question that we have to answer is, Do we, as a Nation, favor promulgating the interests in literature and in art? If we do, this is one way it must be done. A famous English writer sneeringly asked back in the twenties, "Who reads an American book?" He meant to make sport of American literature. The inference was that we were nothing but money grabbers. We have so been held by the old countries.

The SPEAKER. The time of the gentleman has expired.

Mr. FESS. May I have just a minute more?

Mr. SLAYDEN. I will extend the time of the gentleman two minutes more.

Mr. FESS. When the question was asked, "Who reads an American book?" that was a suggestion, as I just said, that we had no interest in letters, and it was an English criticism which from a literary standpoint was hurtful. That question was at last answered by Ralph Waldo Emerson in that famous address of his entitled "The American Scholar." And I wish that the friends of the opposition to this proposal would refresh their memories by reading that great treatise on the proper appreciation of what American letters and art should be in the country. Ralph Waldo Emerson's "American Scholar," which was our declaration of independence in the matter of literature compelled foreign recognition.

Mr. LONGWORTH. Will my colleague yield?

Mr. FESS. I will.

Mr. LONGWORTH. My colleague has been on the faculty of a college which has granted honorary degrees. Was the question of the geographical residence of a man upon whom those degrees were conferred ever considered?

Mr. FESS. I will answer my friend, that would be totally out of place, because honors are not granted in that way. They know neither geography nor sectionalism—only achievement in their particular field of activity.

Mr. SLOAN. Will the gentleman yield?

Mr. FESS. I will.

Mr. SLOAN. Was not your institution, referred to by the gentleman from Ohio, a coeducational institution?

Mr. FESS. It is a coeducational institution. The pioneer in eliminating all discrimination in education.

Mr. SLOAN. Why do you not make the society a coeducational one?

Mr. FESS. This is not to exclude any particular people. The gentleman spoke of Miss Willard, whose statue graces the hall out here. That was after she was gone. And the gentleman asks why certain other persons are not here. This group is not to exclude so much as to include. No particular person or persons are excluded. It is simply to meet necessary conditions to give a group of people interested in letters and art a legal entity.

The SPEAKER. The time of the gentleman has expired.

Mr. SLOAN. Mr. Speaker, I yield five minutes to the gentleman from Mississippi [Mr. QUIN].

[Mr. QUIN addressed the House. See Appendix.]

Mr. SLAYDEN. Mr. Speaker, I will ask the gentleman from Illinois [Mr. MANN] if he is ready to take advantage of the five minutes? I yield five minutes to the gentleman from Illinois.

The SPEAKER. The gentleman from Illinois [Mr. MANN] is recognized for five minutes.

Mr. MANN. Mr. Speaker, I had not expected to have time yielded to me, although I am in favor of the bill. I think gentlemen misapprehend a little bit what the bill is. This is not a selection by Congress of 50 gentlemen, celebrated in either art or literature, for the purpose of organizing them into a body corporate. The selection was made by the society growing up as a voluntary organization. They do not ask to have themselves called "immortals." They only ask to have this society incorporated under the name which they now have, and gentlemen on the floor and elsewhere have pointed ridicule at them as "immortals," because these gentlemen recognize the fact—not claimed by the persons themselves, but recognized by their critics—that this body does constitute the cream in America of art and literature of living men. [Applause.]

And, after all, we are a young country. We have not yet attained the heights either in art or literature; we have not yet developed as have the older countries; but we are due to make the development and reach the highest crest that the world has ever seen both in art and literature. [Applause.] And we ought to do everything within our power to excite the ambition of men to do well; to excite the ambition of those who seek to excel either in art or in writing. And we can do it probably no better, so far as the General Government is concerned, than in permitting the creation of an organization which every young writer, which every young artist, will see before him all the time in the determination that, if possible, he shall reach the goal of his ambition by being admitted to membership, not because of wealth, not because of influence, but because of deeds done, works well executed. [Applause.]

Mr. SLAYDEN. Mr. Speaker, how much time did the gentleman use?

The SPEAKER. Four minutes.

Mr. SLAYDEN. The gentleman yields back one minute?

Mr. MANN. Yes.

Mr. CALDWELL rose.

The SPEAKER. For what purpose does the gentleman rise?

Mr. CALDWELL. I would like to ask the gentleman from Texas [Mr. SLAYDEN] a question.

Mr. SLAYDEN. Very well.

Mr. CALDWELL. I would like to know what scheme was used in placing in order the names of these gentlemen?

Mr. SLAYDEN. I will say to the gentleman that there seems to be a misconception in regard to the bill. We are not passing upon the relative merits of any painter, sculptor, or literary man. This is already an organization of the most distinguished living artists and writers. All that they ask of the American Congress is that they be incorporated; that they be granted a charter coming from the National Government. The association has been in existence for a number of years, and it is one of many institutions of like nature which have asked for charters from the Government.

I have here a list of 21 learned and scientific associations chartered by Congress, some of them—three of them—chartered within the last three years. I never heard the question of membership raised in regard to it, or the question of its succession. And I want to say in this connection that there is not a man of any literary or artistic worth who would accept membership of this kind if he were forced upon that body by an act of Congress.

Mr. Speaker, how much time have I used?

The SPEAKER. The gentleman has used two minutes.

Mr. SLAYDEN. Will the gentleman from Nebraska [Mr. SLOAN] use some of his time?

Mr. SLOAN. Mr. Speaker, I yield five minutes to the gentleman from Arkansas [Mr. CARAWAY].

The SPEAKER. The gentleman from Arkansas [Mr. CARAWAY] is recognized for five minutes.

[Mr. CARAWAY addressed the House. See Appendix.]

Mr. SLAYDEN. Mr. Speaker, I yield three minutes to the gentleman from Virginia [Mr. MONTAGUE].

Mr. MONTAGUE. Mr. Speaker, I did not anticipate saying anything upon this bill. I regret that some arguments have been advanced and have receive some applause in the House. The first argument advanced is of a sectional character—that some States have no incorporators and others have them in too great numbers. Talent and distinction can not be determined by State or geographical lines.

The next argument is rather arbitrary—that the incorporators and their successors are a body of "immortals." That is purely an arbitrary characterization. There are no facts to sustain any such argument or to support any such fanciful description. I shall support this bill for the reason that I believe the people of a Republic are entitled to all the agencies that make for art and literature that the subjects of an empire are entitled to. [Applause.] I believe that a democracy should have all the opportunities and benefits afforded by a monarchy; that no opportunities and facilities of culture are too good for the American people. [Applause.]

I may not know all of the incorporators, but this confession is rather a reflection upon my intelligence than upon the ability and fitness of the incorporators. [Applause.]

I should hope, gentlemen of the House, that our Republic in its development might stimulate art more than it has done. I would like much to see an appropriation made by Congress at some opportune time, not exceeding annually a certain sum, for the purchase of art for the benefit of all the people of this country who may visit this great Capital. All capitals of the world are doing it for their people; why should not we do it for our people?

Mr. CLINE. Will the gentleman yield?

Mr. MONTAGUE. I have only three minutes.

Mr. CLINE. They do not limit it to 50, do they; it is an open contest for everybody?

Mr. MONTAGUE. Of course, and I will say to the gentleman that I do not think this is limited to 50 incorporators. The associate members are not limited. I will say further that if any worthy man is rejected, his name will survive nevertheless. Some gentleman has suggested a similar organization in France. Some who have been rejected by that organization have written themselves high on the scroll of fame, and this Congress can make no incorporation capable of limiting the achievements of genius. [Applause.]

Mr. SLOAN. Mr. Speaker, how many more speeches has the gentleman from Texas?

Mr. SLAYDEN. I have 10 minutes remaining, and I expect to yield 3 to the gentleman from Iowa [Mr. GREEN] and use 7 myself.

The SPEAKER. The gentleman from Texas has 9 minutes and the gentleman from Nebraska 7 minutes.

Mr. SLOAN. I have only one speech.

Mr. SLAYDEN. Then I yield 3 minutes to the gentleman from Iowa [Mr. GREEN].

Mr. GREEN of Iowa. Mr. Speaker, after what has been already said on this bill, and especially the remarkable speech made by the most distinguished and venerable gentleman from Illinois, who so long presided over this House, I feel as if I ought not to ask the indulgence of the House even for three minutes, and yet I can not forego it because I have considerable interest in this bill. I profess to no special knowledge in art, and certainly I do not set myself up as having special qualification in literature. At the same time, I think the bill ought to be considered on its merits in all seriousness. When I listened to what was said by the gentleman from Texas [Mr. DIES] and the gentleman from Arkansas [Mr. CARAWAY] I could not but feel that if I attributed to them the ignorance that they profess with reference to the merits of the gentlemen who are named in this bill, I would have their delegations down on me at once as offering an insult to their States. If the Members of this House do not know the most of the men named in this bill it is time that they retired and went back to school. I do not believe it; I do not think it for a moment. These gentlemen have not been selected by themselves and they will not be selected by this House, but they have been selected temporarily by the men who work along with them in this particular line.

Mr. SLOAN. Will the gentleman yield?

Mr. GREEN of Iowa. No; I can not yield, I have only three minutes. I do not wish to yield to my facetious friend from Nebraska, for I want to say something serious about this matter. We may or may not incorporate this association, but we can not stifle their existence entirely. We can hinder them in the progress of arts and letters by preventing their association and preventing their receiving the funds for the promotion of arts and literature, but we can not stamp out of existence entirely their organization. They have asked simply for the privilege of being recognized as an American institution, an American organization, and this small boon ought to be granted.

The SPEAKER. The time of the gentleman from Iowa has expired.

Mr. ADAMSON. Mr. Speaker, will the gentleman from Nebraska [Mr. SLOAN] yield half a minute to answer a question, so as to give me a little information?

Mr. SLOAN. Yes; I yield.

Mr. ADAMSON. I have heard objections to this bill upon the ground of limitation to the number of immortals, and I want to ask the gentleman from Nebraska if the terms of the bill will not permit these immortal incorporators to establish branch offices in different parts of the country and thus meet that objection?

Mr. SLOAN. Mr. Speaker, I regret to answer the gentleman by saying that the bill does not allow the establishment of any branch offices. It is exclusive; it applies to the northeastern section of the United States, to 50 members, and no more. I regret the fact that gentleman pleading for art and literature here have come before this body and said this bill does not confine the membership to 50. It plainly does.

Mr. TILSON. Mr. Speaker, will the gentleman yield?

Mr. SLOAN. Yes.

Mr. TILSON. Is there anything to hinder 50 other gentlemen celebrated in art and letters from forming themselves into an association and asking for incorporation? Is there anything to prevent them from doing that?

Mr. SLOAN. I want to read what the bill says about how many members shall be selected. Section 3 says:

That the American Academy of Arts and Letters shall consist of not more than 50 regular members.

Yet gentlemen come before you and have said that it is not limited to 50 members. True, it does say something about associate members, but I trust that the gentlemen who talked about associate members will not attempt to insult the intelligence of anybody in this House by saying that an associate member is a member who enters on full equality, with power to vote and power to aid in filling vacanies, such as regular members have.

Now, then, I want to answer the gentleman from Connecticut [Mr. TILSON]. There is no reason why any body of men throughout the United States; or of women, or of men and women, if arts and letters are concerned, would not have the right to associate themselves together and call themselves any name they see fit, and any State in this Union could permit them to become incorporated. But if this Congress gives to these 50 men the right to the name "American Academy of Arts and Letters," then no other body of men in the North, in the East, the South, or the West, or in the Northeast, can establish an academy under that name. It gives the exclusive right to these people in one-sixteenth part of the area of this great Nation, and less than one-third of the population, to the sole use and control of the designation "American." If opportunity presents, I shall submit an amendment to call this "An Academy of Northeastern Americans."

Mr. TILSON. Could not a new group call themselves the American Institute of Arts and Letters?

Mr. SLOAN. They might say that, but I think a great deal of that word "American," and I think I am broad enough to understand that it covers everything from the Atlantic to the Pacific, that it includes not only Nebraska and California, but the nutmeg State, but that it should not be confined to a nutmeg community.

Mr. PLATT. Mr. Speaker, will the gentleman yield?

Mr. SLOAN. Yes.

Mr. PLATT. Does the gentleman think this bill ought to be founded on the principle of the Federal reserve act, and the country divided into 12 districts?

Mr. SLOAN. I do not, but I want it to be American. I want it to be open to men and women from every State in this Union. I should regret if the gentleman from Ohio [Mr. FESS] saw fit to say that the only woman entitled to be an immortal is dead, in view of the many living splendid intellectual genuises among the American womanhood of to-day, or that there is not one fit to associate herself with these 50.

Mr. MILLER of Minnesota. Mr. Speaker, will the gentleman yield?

Mr. SLAYDEN. Mr. Speaker, will the gentleman yield?

Mr. SLOAN. I yield to the gentleman from Minnesota.

Mr. MILLER of Minnesota. Mr. Speaker, the gentleman will admit that it is necessary to specify the names of some individuals if you are going to incorporate the society at all.

Mr. SLOAN. Yes.

Mr. MILLER of Minnesota. The same as it is necessary in the incorporation of any company to name certain specific incorporators.

Mr. SLOAN. Oh, yes; that is elementary.

Mr. MILLER of Minnesota. That seems to be the only objection the gentleman has to this.

Mr. SLOAN. Oh, no; I have been giving my objections during the afternoon. The gentleman evidently was not present all the time. I object principally to the fact that here are 50 men named in one-sixteenth part of the United States, representing less than one-third of the population of the United States, who ask us to give our sanction to their exclusive appropriation and control for all time of the name "American Academy of Arts and Letters."

Mr. SLAYDEN. Mr. Speaker, will the gentleman yield?

Mr. SLOAN. Yes.

Mr. SLAYDEN. The gentleman has just made a statement that they have never found a woman worthy to associate with this organization?

Mr. SLOAN. Oh, I made no such statement as that.

Mr. SLAYDEN. Well, that they had not associated one with it.

Mr. SLOAN. They have not associated any woman in the list embodied in this bill.

Mr. SLAYDEN. While living, Julia Ward Howe was a member.

Mr. SLOAN. She was, but is not now.

Mr. SLAYDEN. No; she is not. She is now in the choir of "Immortelles," as I have heard some one say.

Mr. SLOAN. And is it not a reflection upon the womanhood of America that Julia Ward Howe is left, so far as this list is concerned, without one successor in all the broad expanse of this country from the Atlantic to the Pacific?

The SPEAKER. The time of the gentleman from Nebraska has expired.

Mr. SLAYDEN. Mr. Speaker, how much time have I remaining?

The SPEAKER. Six minutes.

Mr. SLAYDEN. Mr. Speaker, in six minutes it is quite impossible for me to say what I had hoped to say.

Mr. FESS. Will the gentleman permit me to suggest to him that we have an American Academy of Sciences?

Mr. SLAYDEN. I have a list of all such chartered bodies, and I am going to call attention to that list. Mr. Speaker, I will say now in reply to the suggestion of the gentleman from Ohio, and I wish the gentleman from Nebraska [Mr. SLOAN] would give his attention to it, that Congress has chartered a number of bodies of scientific and learned men upon whom it has conferred the privilege of writing themselves down as of this or that American Society. There is, for example, the American Academy of Rome, the American Cross of Honor, the American Historical Association, and the American Numismatic Association——

Mr. MANN. We just incorporated a few years ago a sister association to this.

Mr. SLAYDEN. Exactly so.

Mr. CANNON. Will the gentleman permit me right there? Would it be possible to incorporate a society and suit these gentlemen with a similar bill to this without putting a hundred million names in it?

Mr. SLAYDEN. I think not.

The sectional idea as advanced here is not only absurd but untrue. Many of these gentlemen named in this bill had their birthplaces and former residences in the South, and some were born in the West. They came from across the continent—California, clean across, embracing Louisiana and Missouri and other States. They were not rich. Few artists and authors are; and so, when they had to make their living in the trade for which they were best suited, in which they had shown skill, they naturally went to the market for their services. Now, we may inveigh against the conditions as much as we please, but we know, as a matter of fact, that the bulk of the population is in the Northeast, that the publishers are there, that the market for the work that these gentlemen have to sell is to be found there. And the charge that it is an aristocratic body is too ridiculous to endure for a moment.

I believe, Mr. Speaker, that in the county of your residence was born one of the most eminent literary men ever produced, one of the strongest and ablest and most robustly American, Mr. Samuel Clemens, better known as "Mark Twain." [Applause.] William Dean Howells, the dean of this corps of literary men, was born the son of a country editor, in humble circumstances, in the State of Ohio, and never had the privilege of a college, never, perhaps, had the money to go to college to get the advantages of a thorough and systematic training. And yet, having genius, he has worked his way to the head of the profession. Augustus Thomas, also of Missouri, born in rather humble circumstances, once a page in the Senate, is perhaps the most distinguished dramatist in this country. St. Gaudens, the great sculptor, was the son of an Irish shoemaker in the city of New York. Aristocracy? Have gentlemen reached the conclusion deliberately that our democracy is to be obscured and that to be a democrat is to be denied the right to achieve greatness and acquire eminence? If so, gentlemen, then your democracy is not what I thought it to be; it is not the opportunity of the people born in humble walks of life. That is not democratic. That would be exclusive. That is intended to exclude some people and is most undemocratic. If the arguments of gentlemen against this bill mean anything, it means that one may be a democrat while ignorant and obscure, but that he becomes an aristocrat the moment he does a great work and his genius is recognized.

Mr. Speaker, there is a curious misconception in the mind of the gentleman from Nebraska [Mr. SLOAN] and my colleague [Mr. DIES] as to what the purpose of the bill is. They speak as if we were passing upon the relative merits of the painters, sculptors, architects, and book writers who are members of the academy. We are doing nothing of the sort. The only question we are called upon to consider is whether we shall grant this association, already in existence, composed of distinguished citizens, the right to be incorporated in this way.

These members of the Academy of Arts and Letters are workmen. They are creative artists. They serve the people as well and more enduringly, no doubt, than any Member of this House.

They are put in this position because of their distinction. They are not distinguished because they belong to this association, but they are in it because they were previously distinguished. They are, I repeat, workmen, the very greatest in their lines, and membership in this association is an inspiration to greater effort. [Applause.]

St. Gaudens, the genius of obscure origin, wrought wonderfully, but did not live long enough to enjoy the fruits of his fame. Yet, Mr. Speaker, he had recognition, for men of genius are not controlled by mean jealousies. They are not ungrateful to their fellow workmen, who, in the language of Dr. Henry Van Dyke, now minister from the United States to the Netherlands, "enrich the world by giving an enduring life to thoughts, emotions, ideals, characters, which are in themselves strong and clear and beautiful enough to be immortalized by art's immortal praise."

When Van Dyke uttered these eloquent words he was acting as spokesman for the National Institute of Arts and Letters, an association of men like unto those who ask a charter for the American Academy of Arts and Letters, and who are in some cases the same men.

St. Gaudens was dead, but his memory lived, and these gentlemen, who have been sneered at as "aristocrats," were honoring the son of the shoemaker by handing to his son their great medal.

Nothing can be so absurd as the talk of aristocracy about a body which is not sectional or partisan and which has no classes except those of brains and capacity for work. They propose to serve the people and will go on serving them, whether you grant or withhold the charter they ask.

The SPEAKER. The time of the gentleman has expired.

Mr. MANN. Debate is exhausted. The only question is on agreeing to amendments. Of course, they have a right to offer amendments, but not discuss them.

Mr. HUDDLESTON. Mr. Speaker, I have an amendment.

Mr. MANN. I suppose there is no objection to formal committee amendments.

Mr. SLAYDEN. The motion was to substitute a former Senate bill.

Mr. MANN. That is right.

The SPEAKER. The gentleman from Alabama [Mr. HUDDLESTON] will send his amendment up, and the Clerk will report the same.

The Clerk read as follows:

Page 1, line 3——

The SPEAKER. The Clerk says that the amendment ought read "line 2."

Mr. SLAYDEN. What is the amendment proposed?

The SPEAKER. The Clerk will report the amendment. We shall then find out where it belongs.

The Clerk read as follows:

Page 1, line 3, after the word "assembled," strike out all the remainder of said paragraph down to and including the word "Letters," on line 3 of page 3, being all the remainder of section 1 of the bill, and insert in lieu thereof the following: "That the American Academy of Arts and Letters is hereby incorporated; that the governor of each of the States of the United States shall be authorized to appoint one member on a board of control of said corporation, and his successor and successors."

The SPEAKER. The trouble probably is that the gentleman has one print of this bill, while we have got another here. Does this come in where the gentleman from Alabama wants it?

Mr. HUDDLESTON. Yes; that is correct.

Mr. HARRISON. Mr. Speaker, I move to lay that amendment on the table.

Mr. MANN. Oh, no.

Mr. HARRISON. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. HARRISON. If that amendment is laid on the table, that carries the bill with it?

The SPEAKER. Yes.

Mr. HUDDLESTON. Mr. Speaker, is the amendment not debatable?

Mr. MANN. The debate is exhausted on the bill.

The SPEAKER. The debate is exhausted, and the motion of the gentleman from Mississippi [Mr. HARRISON] is not debatable.

Mr. SLAYDEN. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. SLAYDEN. I was engaged in conversation here and did not catch the character of the amendment. What is the status if the amendment is laid on the table?

The SPEAKER. It kills the bill. The motion to table, if it carries, kills the bill. The question is on agreeing to the motion to lay on the table.

The question was taken, and the Speaker announced that the "noes" seemed to have it.

Mr. HUDDLESTON. I call for a division, Mr. Speaker.

The SPEAKER. A division is demanded.

The House divided; and there were—ayes 39, noes 78.

Mr. HUDDLESTON. Mr. Speaker, I make the point that a quorum is not present.

The SPEAKER. The gentleman will wait until the Chair has announced the result. The ayes are 39 on the motion to table and the noes are 78.

Mr. HUDDLESTON. I make the point, Mr. Speaker, that there is no quorum present.

The SPEAKER. The gentleman from Alabama [Mr. HUDDLESTON] makes the point that there is no quorum present. Evidently there is not. The Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll.

Mr. SLAYDEN. Mr. Speaker, does this vote now occur on the passage of the bill?

The SPEAKER. No; on the motion of the gentleman from Mississippi [Mr. HARRISON] to table the amendment offered by the gentleman from Alabama [Mr. HUDDLESTON], which is practically a vote on the bill—that is, it has the same effect if it carries.

Mr. MANN. It is a motion practically to put it to sleep forever.

The SPEAKER. The question is on agreeing to the motion made by the gentleman from Mississippi [Mr. HARRISON] to lay the amendment offered by the gentleman from Alabama [Mr. HUDDLESTON] on the table. The Clerk will call the roll.

The question was taken; and there were—yeas 82, nays 179, answered "present" 5, not voting 167, as follows:

So the motion to lay the amendment on the table was rejected.

The Clerk announced the following pairs:

For the session:

Mr. LIEBEL with Mr. ROWLAND.

Mr. DEWALT with Mr. MCFADDEN.

Mr. FIELDS with Mr. LANGLEY.

Until further notice:

Mr. HAMLIN with Mr. SNYDER.

Mr. O'SHAUNESSY with Mr. STINESS.

Mr. CASEY with Mr. ROBERTS of Nevada.

Mr. DALE of New York with Mr. MCKENZIE.

Mr. HOUSTON with Mr. GUERNSEY.

Mr. HENRY with Mr. HAYES.

Mr. PATTEN with Mr. FAIRCHILD.

Mr. MORRISON with Mr. HUMPHREY of Washington.

Mr. WM. ELZA WILLIAMS with Mr. GRIEST.

Mr. STEPHENS of Mississippi with Mr. SWIFT.

Mr. HILLIARD with Mr. EMERSON.

Mr. MCANDREWS with Mr. HILL.

Mr. BYRNS of Tennessee with Mr. KINKAID.

Mr. YOUNG of Texas with Mr. FARR.

Mr. WALKER with Mr. HASKELL.

Mr. GALLIVAN with Mr. ROBERTS of Massachusetts.

Mr. DENT with Mr. GOULD.

Mr. DUPRÉ with Mr. BACHARACH.

Mr. MAHER with Mr. MEEKER.

Mr. LEWIS with Mr. MOSS of West Virginia.

Mr. EAGAN with Mr. DUNN.

Mr. SCULLY with Mr. HAMILTON of New York.

Mr. MCDERMOTT with Mr. NICHOLS of Michigan.

Mr. ASWELL with Mr. POWERS.

Mr. LAZARO with Mr. PARKER of New York.

Mr. KITCHIN with Mr. SLEMP.

Mr. HART with Mr. MORIN.

Mr. WILSON of Florida with Mr. BENNET.

Mr. FITZGERALD with Mr. GARLAND.

Mr. GOODWIN of Arkansas with Mr. MOONEY.

Mr. WILSON of Louisiana with Mr. FREEMAN.

Mr. SMITH of New York with Mr. SCOTT of Pennsylvania.

Mr. STEDMAN with Mr. SELLS.

Mr. STEELE of Pennsylvania with Mr. SNELL.

Mr. STOUT with Mr. TIMBERLAKE.

Mr. TALBOTT with Mr. VARE.

Mr. TAYLOR of Colorado with Mr. WARD.

Mr. WATKINS with Mr. WILSON of Illinois.

Mr. WEBB with Mr. WOOD of Indiana.

Mr. SHERLEY with Mr. RUSSELL of Ohio.

Mr. SEARS with Mr. ROWE.

Mr. SAUNDERS with Mr. PARKER of New Jersey.

Mr. RAUCH with Mr. OAKEY.

Mr. RAGSDALE with Mr. NELSON.

Mr. PRICE with Mr. MOORE of Pennsylvania.

Mr. POU with Mr. MILLER of Pennsylvania.

Mr. OLIVER with Mr. MAGEE.

Mr. OGLESBY with Mr. MCCRACKEN.

Mr. MURRAY with Mr. LEHLBACH.

Mr. MORGAN of Louisiana with Mr. KIESS of Pennsylvania.

Mr. LOBECK with Mr. KELLEY.

Mr. LITTLEPAGE with Mr. HUSTED.

Mr. LEVER with Mr. HOPWOOD.

Mr. HAY with Mr. HEATON.

Mr. FLOOD with Mr. HAMILTON of Michigan.

Mr. EAGLE with Mr. GRAY of New Jersey.

Mr. DRISCOLL with Mr. GOOD.

Mr. DOOLING with Mr. GILLETT.

Mr. DECKER with Mr. FREAR.

Mr. DAVENPORT with Mr. FARR.

Mr. CULLOP with Mr. EDMONDS.

Mr. COLLIER with Mr. DRUKKER.

Mr. COADY with Mr. CRAGO.

Mr. CARTER of Oklahoma with Mr. COOPER of West Virginia.

Mr. CANTRILL with Mr. CHIPERFIELD.

Mr. CANDLER of Mississippi with Mr. CHANDLER of New York.

Mr. BYRNES of South Carolina with Mr. CARTER of Massachusetts.

Mr. BRUMBAUGH with Mr. CAMPBELL.

Mr. BRUCKNER with Mr. BUTLER.

Mr. BORLAND with Mr. BARCHFELD.

Mr. AYRES with Mr. ANTHONY.

Mr. ALLEN with Mr. ANDERSON.

Mr. BURNETT with Mr. COLEMAN.

Mr. SMALL with Mr. SANFORD.

Mr. JONES with Mr. BEALES.

Until April 15:

Mr. VAN DYKE with Mr. MUDD.

For two weeks:

Mr. SABATH with Mr. NORTH.

Mr. HUMPHREY of Washington. Mr. Speaker, I am paired with the gentleman from Indiana, Mr. MORRISON. I voted "nay," and I desire to change my vote to "present."

Mr. FIELDS. Mr. Speaker, I voted "nay," but I am paired with my colleague Mr. LANGLEY. I therefore desire to withdraw my vote and to answer "present."

The result of the vote was announced as above recorded.

The SPEAKER. A quorum is present. The Doorkeeper will unlock the doors.

Mr. SLAYDEN. Mr. Speaker, I move the previous question on the bill and amendments to the final passage.

Mr. HARRISON. I move to lay the bill on the table, and pending that I move that the House do now adjourn.

Mr. SLAYDEN. Mr. Speaker, was I not recognized in due form?

The SPEAKER. The Chair will read the section of the rule that applies.

Mr. HARRISON. The rule is section 765, on page 327, of the Manual.

The SPEAKER. The rule is:

When a question is under debate no motion shall be received but to adjourn, to lay on the table, for the previous question (which motions shall be decided without debate), to postpone to a day certain, to refer, or to amend, or postpone indefinitely, which several motions shall have precedence in the foregoing order.

The gentleman from Mississippi moves to table the bill.

Mr. HARRISON. And pending that I move that the House do now adjourn.

The SPEAKER. And pending that he moves that the House do now adjourn. The question is on the latter motion.

The question being taken, the Speaker announced that the noes appeared to have it.

Mr. HARRISON. Mr. Speaker, I ask for a division.

The House divided, and there were 63 ayes and 133 noes.

Mr. HARRISON. Mr. Speaker, I ask for tellers.

Mr. SLAYDEN and Mr. CANNON demanded the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 81, nays 174, answered "present" 3, not voting 175, as follows:

YEAS—81.

Dunn	Kiess, Pa.	Patten	Wilson, La.
Dupré	Kincheloe	Porter	Young, Tex.
Eagan	Kitchin	Pou	

So the motion to adjourn was lost.

The following additional pairs were announced:

Until further notice:

Mr. KONOP with Mr. DRUKKER.

Mr. CARTER of Oklahoma with Mr. FREAR.

Mr. CASEY with Mr. HAWLEY.

Mr. CONNELLY with Mr. LAFEAN.

Mr. HULBERT with Mr. LOUD.

Mr. KEY of Ohio with Mr. MONDELL.

Mr. LEE with Mr. MEEKER.

Mr. PADGETT with Mr. NORTON.

Mr. PAGE of North Carolina with Mr. PORTER.

Mr. RUCKER with Mr. SMITH of Idaho.

Mr. STOUT with Mr. STEENERSON.

Mr. WEBB with Mr. WARD.

Mr. BEAKES with Mr. CARTER of Massachusetts.

The result of the vote was then announced, as above recorded.

Mr. HARRISON. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. The gentleman will state it.

Mr. HARRISON. As I understood, the motion of the gentleman from Texas [Mr. SLAYDEN] was for the previous question on the bill and amendments to final passage.

The SPEAKER. Yes.

Mr. HARRISON. Is it permissible to ask for the previous question on the bill and all amendments thereto to final passage while an amendment is pending and when the amendment has not been separately considered?

The SPEAKER. The rule provides for it.

Mr. HARRISON. Mr. Speaker, I move to table the bill.

Mr. MANN. Mr. Speaker, I make the point of order that that motion is dilatory.

Mr. HARRISON. That point comes too late after a roll call.

The SPEAKER. We have not come to that yet, and we do not cross the bridge until we come to it.

Mr. MANN. Mr. Speaker, there has been no change whatever in the status of the bill since the House voted upon the question of laying the amendment on the table, which, under the parliamentary practice of the House, would have carried the bill with it, and precisely the same object would have been accomplished if the motion had prevailed as would be accomplished by the present motion. Hence the motion is dilatory.

The SPEAKER. Does the gentleman from Mississippi [Mr. HARRISON] desire to be heard?

Mr. HARRISON. I certainly do. This motion can not be construed as being dilatory. The motion just voted for is for adjournment, a separate and distinct proposition from the motion to table.

Mr. MANN. But I am not speaking of that motion to adjourn.

Mr. HARRISON. But I was getting to the other proposition, to answer the gentleman in a moment. There may be many gentlemen here who would vote for adjournment and vote against the motion to table. There may be other gentlemen who would vote against adjournment and yet vote to table the bill. They are clearly two distinct propositions.

The SPEAKER. The Chair will ask the gentleman from Mississippi a question. A few moments ago, an hour or so, the gentleman from Mississippi made the motion to table the amendment of the gentleman from Alabama [Mr. HUDDLESTON], and the parliamentary inquiry was made as to what would happen if that motion to table prevailed. The Chair answered, and answered correctly, that the tabling of the amendment carried with it the bill, and that it was the end of the whole matter. That motion was to table an amendment, but the effect of it was to kill the bill, if it carried. Now comes the gentleman from Mississippi [Mr. HARRISON] and moves to table the bill itself, which has precisely the same effect. There can not be any two opinions about that. Therefore the Chair holds this motion——

Mr. HARRISON. Mr. Speaker, before the Chair rules, while the effect of the two motions might be the same, because if the House had adjourned it is true the bill would be killed, and if the motion to table the amendment and the bill prevailed it would be killed——

The SPEAKER. It would not have killed the bill if the House had adjourned.

Mr. HARRISON. Oh, if the House had adjourned, this being the last day on which this committee could consider bills, the bill would have failed.

The SPEAKER. But the wheel goes around again, and this would be the unfinished business, if the House had adjourned before the previous question was ordered, when the call to the Committee on the Library came around again on Calendar Wednesday.

Mr. HARRISON. But that may not be, and probably will not be, during this session of Congress.

The SPEAKER. That is true.

Mr. MANN. But it may be in a very short time; next week, in fact.

The SPEAKER. The probabilities are that it will be this session the way we are going now.

Mr. HARRISON. If what the Speaker says is true, there may be gentlemen who would prefer to give this bill a decent burial in that way, who might not in the other way; that is, by a vote to table it.

Mr. MANN. But the gentleman is confusing the motion to adjourn with the motion to lay on the table.

The SPEAKER. The question the Chair has to decide is whether this motion the gentleman made to table the bill is practically the same motion he made a short time ago to table the amendment.

Mr. MANN. It is the same thing.

The SPEAKER. If the gentleman desires to be heard further, the Chair will hear him. If he does not, the Chair will rule.

Mr. HARRISON. If the Chair thinks the House would vote the same way on the two propositions, I have nothing further to say.

The SPEAKER. Then the Chair holds that the motion to table is dilatory. The question is on the motion for the previous question on the bill and amendments to final passage.

Mr. HARRISON. Mr. Speaker, is it permissible to get a separate vote on that amendment which is pending?

The SPEAKER. After the previous question is ordered, then the vote comes upon the amendment. The question is on ordering the previous question.

The question was taken; and on a division (demanded by Mr. HARRISON) there were—ayes 141, noes 61.

Mr. HARRISON. Mr. Speaker, I make the point of order that there is no quorum present. [Cries of "Yeas and nays!"] Very well, I will ask for the yeas and nays.

The SPEAKER. Does the gentleman withdraw his point of order of no quorum?

Mr. HARRISON. Yes, temporarily; and I ask for the yeas and nays.

The SPEAKER. Those in favor of ordering the yeas and nays will rise and stand until counted. [After counting.] Fifty-seven Members, a sufficient number; and the yeas and nays are ordered. The question is on ordering the previous question on the bill and amendments to final passage.

The question was taken; and there were—yeas 174, nays 75, answered "present" 5, not voting 179, as follows:

Drukker	Kitchin	Pou	Young, Tex.
Dunn	Konop	Powers	

So the previous question was ordered.

The Clerk announced the following additional pairs:

Until further notice:

Mr. TAGGART with Mr. KAHN.

Mr. SISSON with Mr. ADAMSON.

Mr. CHURCH with Mr. SHACKLEFORD.

Mr. BOOHER with Mr. AUSTIN.

Mr. HEFLIN with Mr. DAVIS of Minnesota.

Mr. STEPHENS of Nebraska with Mr. NELSON.

Mr. FLYNN with Mr. COOPER of West Virginia.

Mr. CASEY with Mr. ANTHONY.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills and joint resolution of the following titles, when the Speaker signed the same:

H. R. 9923. An act granting the consent of Congress to the county of Mitchell, or to the county of Baker, both of the State of Georgia, acting jointly or separately, and their successors and assigns, to construct a bridge across the Flint River;

H. R. 10139. An act to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia; and

H. J. Res. 171. Joint resolution to continue in effect the provisions of the act of March 9, 1906.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. SEARS, for 10 days, on account of important business.

To Mr. GOOD, for 10 days, on account of sickness of his father.

To Mr. DUPRÉ, for 10 days, on account of important business.

To Mr. KENT, for 5 days, on account of illness.

To Mr. MOONEY, for 1 week, on account of the death of his father.

ADJOURNMENT.

Mr. SLAYDEN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 42 minutes p. m.) the House, under its previous order, adjourned until Thursday, April 13, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of Withlacoochee River, Fla., including channel from Port Inglis to the anchorage in the Gulf of Mexico, and between Stokes Ferry and Panasoffkee (H. Doc. No. 1020); to the Committee on Rivers and Harbors and ordered to be printed.

2. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Mary E. Cowell, daughter and sole heir of William Glenny, deceased, *v.* The United States (H. Doc. No. 1021); to the Committee on War Claims and ordered to be printed.

3. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Louisa Y. Rhea, widow (remarried) of Henry Yates, deceased, *v.* The United States (H. Doc. No. 1022); to the Committee on War Claims and ordered to be printed.

4. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of John W. Taylor *v.* The United States (H. Doc. No. 1023); to the Committee on War Claims and ordered to be printed.

5. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Samuel H. Hanway *v.* The United States (H. Doc. No. 1024); to the Committee on War Claims and ordered to be printed.

6. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Jackson Elmer *v.* The United States (H. Doc. No. 1025); to the Committee on War Claims and ordered to be printed.

7. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of John H. Davis *v.* The United States (H. Doc. No. 1026); to the Committee on War Claims and ordered to be printed.

8. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Celso Pierucci *v.* The United States (H. Doc. No. 1027); to the Committee on War Claims and ordered to be printed.

9. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Libbie M. Nichols, widow of Horatio Nichols, deceased, *v.* The United States (H. Doc. No. 1028); to the Committee on War Claims and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. OGLESBY, from the Committee on Patents, to which was referred the bill (H. R. 13618) to amend section 4931 of the Revised Statutes of the United States, reported the same without amendment, accompanied by a report (No. 524), which said bill and report were referred to the House Calendar.

Mr. HERNANDEZ, from the Committee on Irrigation of Arid Lands, to which was referred the bill (S. 1843) to authorize the Secretary of the Interior to acquire certain right of way near Engle, N. Mex., reported the same with amendment, accompanied by a report (No. 525), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. HAYDEN, from the Committee on Indian Affairs, to which was referred the bill (H. R. 12426) to authorize mining for metalliferous minerals on Indian reservations in the State of Arizona, reported the same with amendment, accompanied by a report (No. 533), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. FOSTER, from the Committee on Claims, to which was referred the bill (H. R. 3238) for the relief of Sarah E. Elliott, reported the same without amendment, accompanied by a report (No. 526), which said bill and report were referred to the Private Calendar.

Mr. RUSSELL of Ohio, from the Committee on Claims, to which was referred the bill (H. R. 11984) for the relief of William E. Heffner, reported the same with amendment, accompanied by a report (No. 527), which said bill and report were referred to the Private Calendar.

Mr. CAPSTICK, from the Committee on Claims, to which was referred the bill (H. R. 6406) granting the sum of $480 to Clara Kane, dependent parent, by reason of the death of William A. Yenser, late civil employee, killed as a result of an accident at Philadelphia Navy Yard, reported the same with amendment, accompanied by a report (No. 528), which said bill and report were referred to the Private Calendar.

Mr. MILLER of Delaware, from the Committee on Claims, to which was referred the bill (H. R. 10858) for the relief of William A. Hutson, reported the same with amendment, accompanied by a report (No. 529), which said bill and report were referred to the Private Calendar.

He also, from the same committee, to which was referred the bill (H. R. 13027) authorizing and directing the Secretary of the Treasury to credit the stamp account of Isaac R. Strouse, collector for the seventh internal-revenue district, in the sum of $14,570.42, reported the same without amendment, accompanied by a report (No. 530), which said bill and report were referred to the Private Calendar.

ADVERSE REPORTS.

Under clause 2 of Rule XIII, adverse reports were delivered to the Clerk and laid on the table, as follows:

Mr. CAPSTICK, from the Committee on Claims, to which was referred the bill (H. R. 7757) for the relief of Frederick J. Fadner, reported the same adversely, accompanied by a report (No. 531), which said bill and report were laid on the table.

He also, from the same committee, to which was referred the bill (H. R. 10426) for the relief of B. S. Pearsall, reported the same adversely, accompanied by a report (No. 532), which said bill and report were laid on the table.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 14446) granting a pension to John L. Johnson; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 12877) granting an increase of pension to Jacob E. Keister; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills were introduced and severally referred as follows:

By Mr. CAREW: A bill (H. R. 14529) to extend to certain publications the privileges of third-class mail matter; to the Committee on the Post Office and Post Roads.

By Mr. CARY: A bill (H. R. 14530) to amend section 2 of an act entitled "An act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 14531) permitting persons whose employment or business necessitates their absence from their respective States at presidential elections to vote for presidential electors in such other State as they may be on election day; to the Committee on Election of President, Vice President, and Representatives in Congress.

Also, a bill (H. R. 14532) to provide for the retirement of employees in the civil service; to the Committee on Reform in the Civil Service.

By Mr. STEENERSON: A bill (H. R. 14533) to authorize the Secretary of the Interior to issue a patent in fee simple to the District School Board, No. 112, of White Earth Village, Becker County, Minn., for a certain tract of land, upon payment therefor to the United States in trust for the Chippewa Indians of Minnesota; to the Committee on Indian Affairs.

By Mr. STOUT: A bill (H. R. 14534) permitting the Missouri River Transportation Co. to construct, maintain, and operate a bridge across the Missouri River, in the State of Montana; to the Committee on Interstate and Foreign Commerce.

By Mr. JAMES: A bill (H. R. 14535) requiring all public-building bills to be submitted to the Secretary of the Treasury

for investigation and report as to whether proposed buildings and sites are needed and the expenditure justified, and as to the lowest cost at which buildings found necessary may be erected with economy and efficiency; to the Committee on Public Buildings and Grounds.

By Mr. SCULLY: A bill (H. R. 14536) for the extension of the Army remount system by the purchase of pure-bred stallions of a type and breed adaptable to military uses; to the Committee on Military Affairs.

By Mr. FAIRCHILD: A bill (H. R. 14537) authorizing the Secretary of War to donate to the New York State Women's Relief Corps Home, Oxford, Chenango County, N. Y., two bronze or brass cannon or fieldpieces; to the Committee on Military Affairs.

Also, a bill (H. R. 14538) to amend paragraph 207 of the act approved October 3, 1913, entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes"; to the Committee on Ways and Means.

By Mr. DOWELL: A bill (H. R. 14539) requiring the custodian of all public buildings of the United States and all buildings in which post offices are located to raise the American flag on all secular days; to the Committee on Public Buildings and Grounds.

By Mr. MILLER of Minnesota: A bill (H. R. 14575) for the relief of the Pillager Bands of the Chippewa Indians of Minnesota, and for other purposes; to the Committee on Indian Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. BARNHART: A bill (H. R. 14540) granting an increase of pension to Daniel W. Nye; to the Committee on Invalid Pensions.

By Mr. BEALES: A bill (H. R. 14541) granting a pension to Samuel M. Pitzer; to the Committee on Invalid Pensions.

By Mr. BROWNING: A bill (H. R. 14542) granting an increase of pension to Frederick M. Chamberlain; to the Committee on Invalid Pensions.

By Mr. COLLIER: A bill (H. R. 14543) for the relief of the estate of Jacob Ries; to the Committee on Claims.

By Mr. COOPER of Ohio: A bill (H. R. 14544) granting a pension to Mrs. Alice A. Ward; to the Committee on Invalid Pensions.

By Mr. COPLEY: A bill (H. R. 14545) granting an increase of pension to Emergene J. Mitchell; to the Committee on Invalid Pensions.

By Mr. CULLOP: A bill (H. R. 14546) granting a pension to Mary F. Buckles; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14547) granting an increase of pension to William Norman; to the Committee on Invalid Pensions.

By Mr. DAVIS of Minnesota: A bill (H. R. 14548) granting an increase of pension to William J. Culp; to the Committee on Invalid Pensions.

By Mr. DAVIS of Texas: A bill (H. R. 14549) granting a pension to John I. Temple; to the Committee on Pensions.

By Mr. DOWELL: A bill (H. R. 14550) granting an increase of pension to Julia P. Miller; to the Committee on Invalid Pensions.

By Mr. FOCHT: A bill (H. R. 14551) granting an increase of pension to David H. Walker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14552) granting a pension to Margaret Tyhurst McAlvey; to the Committee on Invalid Pensions.

By Mr. GRAHAM: A bill (H. R. 14553) for the relief of John S. Winslow; to the Committee on Naval Affairs.

By Mr. HASTINGS: A bill (H. R. 14554) granting a pension to Grover C. Montgomery; to the Committee on Pensions.

By Mr. HELM: A bill (H. R. 14555) granting an increase of pension to Eliza J. Minks; to the Committee on Invalid Pensions.

By Mr. HENSLEY: A bill (H. R. 14556) granting an increase of pension to Joseph Wigger; to the Committee on Invalid Pensions.

By Mr. JACOWAY: A bill (H. R. 14557) for the relief of the estate of Jeremiah Cockrell, late of White Oak, Fairfield County, S. C.; to the Committee on War Claims.

By Mr. LAFEAN: A bill (H. R. 14558) granting an increase of pension to Louisa J. Kottcamp; to the Committee on Invalid Pensions.

By Mr. LITTLEPAGE: A bill (H. R. 14559) granting an increase of pension to Pauline Williams; to the Committee on Invalid Pensions.

By Mr. PADGETT: A bill (H. R. 14560) granting an increase of pension to William H. Williams; to the Committee on Pensions.

By Mr. PORTER: A bill (H. R. 14561) granting an increase of pension to James Horton; to the Committee on Invalid Pensions.

By Mr. RANDALL: A bill (H. R. 14562) to remove the charge of desertion from the record of John D. Humphrey; to the Committee on Naval Affairs.

By Mr. SHOUSE: A bill (H. R. 14563) granting a pension to Eugene A. Gooden; to the Committee on Pensions.

Also, a bill (H. R. 14564) granting a pension to Herman R. Anthony; to the Committee on Pensions.

Also, a bill (H. R. 14565) granting a pension to Edward B. Williams; to the Committee on Pensions.

Also, a bill (H. R. 14566) granting an increase of pension to Joseph A. Hessler; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14567) granting an increase of pension to Henry Startzell; to the Committee on Invalid Pensions.

By Mr. SLEMP: A bill (H. R. 14568) granting a pension to Benjamin Burkett, Rural Retreat, Va.; to the Committee on Invalid Pensions.

By Mr. SNELL: A bill (H. R. 14569) for the relief of William L. Best; to the Committee on Claims.

By Mr. STEENERSON: A bill (H. R. 14570) for the relief of Cathrine Grace; to the Committee on Claims.

By Mr. STAFFORD: A bill (H. R. 14571) for the relief of the Milwaukee Bridge Co.; to the Committee on Claims.

Also, a bill (H. R. 14572) for the relief of Gertie Foss; to the Committee on Claims.

By Mr. TOWNER: A bill (H. R. 14573) granting an increase of pension to James Wilkins; to the Committee on Invalid Pensions.

By Mr. VARE: A bill (H. R. 14574) granting an increase of pension to James J. Scally; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Memorial of Japanese Association of Hawaii, against Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also (by request), memoral of Military Order of the Loyal Legion of the United States, Commandery of the District of Columbia, against the power plant near center of the park system in the District of Columbia; to the Committee on the District of Columbia.

By Mr. BAILEY: Petition of citizens of Portage, Pa., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of Altoona Real Estate Exchange, relative to location of Government power plant; to the Committee on the District of Columbia.

Also, protest of Roy Gaston, John E. S. Clinger, Harry Harbaugh, William Studebaker, Milton Himes, W. A. Netter, Walter E. Hampton, Lloyd Custer, Garfield Small, Milton H. Barley, O. C. Emerick, Moodey Paul, William E. Replogle, Humphrey F. Miller, and S. L. Gorden, all of Johnstown, Pa., against the passage of House bills 491 and 6468, denying the use of the mails to certain publications; to the Committee on the Post Office and Post Roads.

By Mr. BEAKES: Petition of A. F. Peters and 23 citizens of Pierson, Mich., protesting against the passage of House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petition of 226 members of the Methodist Episcopal Church of Tecumseh; 200 members of the Congregational Church of Hudson; 80 members of the United Brethren Sunday school of Jasper; and 65 members of Hudson Center Grange, of Hudson, all of the State of Michigan, in favor of national prohibition; to the Committee on the Judiciary.

By Mr. BEALES: Memorial of Cigar Makers' Union No. 316, of McSherrystown, Pa., against preparedness, etc.; to the Committee on Military Affairs.

Also, evidence in support of House bill 13352, granting a pension to Charles C. Cooper; to the Committee on Invalid Pensions.

By Mr. CHARLES: Memorial of Women's Congressional Union of Schenectady, N. Y., favoring a report on the Anthony suffrage amendment; to the Committee on the Judiciary.

Also, petition of sundry citizens of Schenectady, N. Y., favoring national prohibition; to the Committee on the Judiciary.

By Mr. CURRY: Petition of 63 business firms of the third California district, favoring tax on mail-order houses; to the Committee on Ways and Means.

By Mr. DANFORTH: Petition of Mr. O. J. Kane and 15 others, of Rochester, N. Y., against House bills 491 and 6468, to

amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. ELSTON: Memorial of California State Retail Hardware Association, in re certain measures; to the Committee on Interstate and Foreign Commerce.

Also, petition of citizens of Alameda County, Cal., protesting against House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petitions of citizens of Alameda County, Cal., protesting against House bill 652; to the Committee on the District of Columbia.

Also, petition of A. F. Baxter and other citizens of Alameda County, Cal., protesting against Senate bill 645, to provide for the closing of barber shops in the District of Columbia on Sunday; to the Committee on the District of Columbia.

By Mr. ESCH: Petition of New York Young Republican Club, against withdrawal of the United States from Philippine Islands; to the Committee on Insular Affairs.

Also, petition of New York Young Republican Club, against the Hay bill and favoring larger Army; to the Committee on Military Affairs.

Also, petition of Robert Crowley, T. D. Amidon, and 94 others, of Melrose, Wis., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. FOCHT: Evidence in support of House bill 7078, for the relief of John H. Martin; to the Committee on Invalid Pensions.

By Mr. GRAHAM: Petition of University of Pennsylvania Club of the District of Columbia, against placing power plant in Potomac Park; to the Committee on the District of Columbia.

By Mr. HADLEY: Petition of sundry citizens of the State of Washington, against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of sundry citizens of the State of Washington, against Sunday-observance bill in the District of Columbia; to the Committee on the District of Columbia.

By Mr. HAMILTON of New York: Papers to accompany House bill 13942, granting a pension to Josephus Gorton; to the Committee on Invalid Pensions.

Also, papers to accompany House bill 14098, granting a pension to Emma A. Ball; to the Committee on Invalid Pensions.

Also, papers to accompany House bill 13303, granting an increase of pension to Samuel Massey; to the Committee on Invalid Pensions.

By Mr. HENSLEY: Petition of Rev. Herman Hallerberg and others, of Farmington, Mo., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. HOOD: Petition of sundry citizens of Wallace, N. C., favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of the North Carolina Soldiers' Home, favoring bill to return moneys levied and collected as tax on raw cotton; to the Committee on Claims.

Also, petition of sundry citizens of Kenansville Township, N. C., opposing House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

By Mr. KEISTER: Petitions of sundry citizens and organizations of the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

Also, petition of sundry citizens of Butler County, Pa., favoring a Christian amendment to the Constitution of the United States; to the Committee on the Judiciary.

By Mr. LOUD: Petitions of John McLean, Adolph Cataline, and 34 others, of Whittemore, and Jennie Mills and 28 others, of Hope, both in the State of Michigan, favoring national prohibition; to the Committee on the Judiciary.

By Mr. McFADDEN: Petition of sundry citizens of Thompson, Pa., favoring national prohibition; to the Committee on the Judiciary.

By Mr. MAGEE: Petition of the Good Will Congregational Church, of Syracuse, and the Woman's Christian Temperance Union of Onondaga, both in the State of New York, favoring national prohibition; to the Committee on the Judiciary.

By Mr. MAPES: Petition of Grand River Union of Christian Endeavor, of Grand Rapids, Mich., favoring censorship of motion pictures; to the Committee on Education.

Also, petition of 22 citizens of Pierson, Mich., urging the House of Representatives not to pass House bill 652, to provide for the closing of barber shops in the District of Columbia on Sunday, or any other like religious measure; to the Committee on the District of Columbia.

By Mr. MOTT: Memorial of New York Young Republican Club, against the proposed withdrawal of the United States from the Philippine Islands; to the Committee on Insular Affairs.

Also, memorial of New York Republican Club, favoring adequate preparedness; to the Committee on Military Affairs.

By Mr. NOLAN: Petition of Alice Brown and sundry citizens of San Francisco, Cal., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. O'SHAUNESSY: Petition of L. H. Gage Lumber Co., of Providence, R. I., indorsing House bill 681; to the Committee on Interstate and Foreign Commerce.

Also, memorial of Rhode Island Antituberculosis Association, indorsing House bill 8552; to the Committee on Interstate and Foreign Commerce.

Also, memorial of Washington Park Yacht Club, of Providence, R. I., opposing House bills 5795, 6801, 9412, 11715, and 9411; to the Committee on the Merchant Marine and Fisheries.

Also, memorial of American Association of Woolen and Worsted Manufacturers, indorsing House bill 10496; to the Committee on Interstate and Foreign Commerce.

Also, memorial of United States Gutta Percha Paint Co., of Providence, R. I., in re the Kenyon bill; to the Committee on Interstate and Foreign Commerce.

Also, memorial of International Council for Patriotic Service, asking for amendment to the Constitution regulating polygamy; to the Committee on the Judiciary.

By Mr. STINESS: Petition of sundry citizens of Wakefield and Narragansett, R. I., favoring national prohibition; to the Committee on the Judiciary.

By Mr. TEMPLE: Petition of Mr. Raymond E. Whitfield in behalf of the Ginger Hill (Pa.) Grange, in support of Government ownership of the telephone and telegraph system; to the Committee on the Post Office and Post Roads.

Also, petition signed by J. A. Campbell in behalf of the members of the grange at New Sheffield, Pa., on postalizing the wires; to the Committee on the Post Office and Post Roads.

By Mr. TIMBERLAKE: Petitions of sundry citizens of Yuma, Boulder, Colo., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. TOWNER: Petition of N. R. Wood and other citizens of Creston, Iowa, against the passage of House bills 491 and 6468, being bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. VARE: Memorial of the Pennsylvania Commandery, Naval Order of the United States, favoring preparedness; to the Committee on Military Affairs.

SENATE.

THURSDAY, *April 13, 1916.*

(Legislative day of Wednesday, April 12, 1916.)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

REPORTS FROM COMMITTEE ON PUBLIC LANDS.

Mr. MYERS. Mr. President, I ask leave to submit two reports from the Committee on Public Lands.

The VICE PRESIDENT. Is there objection? The Chair hears none.

Mr. MYERS, from the Committee on Public Lands, to which was referred the bill (H. R. 407) to provide for stock-raising homesteads, and for other purposes, reported it with amendments and submitted a report (No. 348) thereon.

He also, from the same committee, to which was referred the bill (S. 3646) to amend the act of February 11, 1915 (38 Stat. L., p. 807), providing for the opening of the Fort Assinniboine Military Reservation, reported it with amendments and submitted a report (No. 347) thereon.

A WATERWAYS SYSTEM.

Mr. JAMES. Mr. President, I ask to have printed in the RECORD an open letter to Congress on the subject of a waterways system, by Charles C. Grassham, of Paducah, Ky., a very able lawyer and an expert on waterway problems.

The VICE PRESIDENT. Without objection, it is so ordered.

The letter referred to is as follows:

WANTED—A WATERWAYS SYSTEM.

[By Charles C. Grassham, Paducah, Ky., Mar. 8, 1916.]

(An open letter to the United States Congress.)

In the January Munsey, Hon. Theodore E. Burton, under "The truth about our waterways," made a most vigorous assault upon the indiscriminate method of their improvement. It is apparent that his attitude not only is, but has for some time been, adverse to waterways improvement and development. Among other things he says:

"The other method of carriage is more convenient, more prompt, less dangerous, and is rapidly becoming more economical."

The main facts of his article are those depended upon and asserted by Hon. JAMES A. FREAR, of Wisconsin, in the House of Representatives Monday, January 10.

In order that it may be understood that I do not wholly disagree with the position taken by Mr. FREAR and ex-Senator Burton, I wish to say that I agree that we should have an impartial commission and a well-defined system marked out by Congress for its procedure.

THERE HAS BEEN EXTRAVAGANCE.

I am further satisfied from the evidence offered that there has been extravagance in appropriations and waste in expenditures unnecessary and inexcusable in the improvement of the rivers of this country for the last quarter of a century. I further agree, and think any reasonable-minded man would, that there is too much authority for the apportionment of these moneys reposed in the Chief Engineer. I also agree that the indications are that there has been much logrolling and too much "help for help" policy employed by some of the country's representatives in order to give them a strong pull "back home."

I will also agree that the tonnage shown by the statistics offered is not very encouraging to those who would favor any particular river in asking for its improvement, if the particular river alone is to be looked to for returns upon the money invested; but I do not agree with the able Representative from Wisconsin, Mr. FREAR, in some of his inferences set forth in his speech; and because of this, and for the sake of full discussion, I have concluded to express my views and make some suggestions in order that the public may read some reasons why river development should not be discontinued.

I have no doubt that Mr. FREAR would say that this is not his position or the position of Mr. Burton, for on page 1118 of the CONGRESSIONAL RECORD he says:

"It is needless to repeat what was stated last session—that I have no conscious prejudice against any individual nor against any waterway project other than may be justified by the official engineer's report."

Despite the fact that Mr. Burton used the language first above credited to him, I am of the opinion that he entertains less prejudice, conscious or unconscious, about the subject than Mr. FREAR, though his disavowals as to prejudice were not so explicitly stated as Mr. FREAR has set forth in the language last quoted above.

FREAR OPPOSES ALL WATERWAYS.

I can find nothing in the speech of the Congressman from Wisconsin that would indicate his favor or friendship in any way for any sort of an inland stream. I am inclined to believe that since he and Mr. Burton and Senator KENYON voted together for the defeat of the $92,000,000 bill at the last session of Congress that he, too, really feels that "the reason for the recent decadence of waterway traffic is that the other method of carriage is more convenient, more prompt, less dangerous, and is rapidly becoming more economical."

However, Mr. Burton says:

"There are, moreover, two inland waterways in the United States that should have a thorough trial; one of these is the Ohio River, which is so situated that it ought to develop the commerce to enormous magnitude if conditions in this country warrant it; the other is the Barge Canal, now under construction by the State of New York, to connect the Great Lakes with the Hudson River and New York City."

This is the feature of waterways improvement to which I wish to call attention. I would not assume to enter this discussion were it not that I am of the earnest conviction that because a basket of eggs contains a few rotten ones, is no good reason for destroying all the eggs without trying them out. If money has been uselessly appropriated and wastefully spent, and it can be ascertained where, then this should be stopped. Find the portion of the limb that should be removed, and remove it; but this is no excuse for intentionally destroying the entire body.

MR. BURTON'S SUGGESTION SOUND.

Therefore, I think the suggestion of Mr. Burton should be emphasized, and if we should agree with Mr. FREAR that all other projects should stand still or be for the present abandoned, we should at least for the purpose of experiment and for the purpose of determining fully and finally whether the country should expend its money in this way, advocate the suggestion made by Mr. Burton and help the 13,000,000 of people in the great Ohio Valley demonstrate, if possible, that this great river and this great canal to be can be made, and will be, one of the greatest inland watercourses of the world.

It is not a sectional question; it is a national one. And while our friends, especially Mr. FREAR, endeavor to show that the Northern States, of the $34,000,000 bill that passed the House in 1915, had appropriated to them $997,120 less than the Southern States, and while he continually insists that the Northern States pay or contribute approximately 95 per cent of all taxes and Government revenues, compared with the Southern States, he nevertheless says, on page 1119 of CONGRESSIONAL RECORD:

"If any river or canal enjoys State or interstate traffic sufficient to make it a real artery of commerce instead of a shriveled useless vein, it surely is equally entitled to Government aid, whether situated among Southern or Northern States, because a broad policy of internal improvements is of national benefit when of national importance."

In spite of this admission, on the same page of the RECORD he quotes 13 Southern States by which he shows a total corporation and individual income tax collected of $5,359,982.93 and 5 Northern States which pay a total of $51,224,119.89. On page 1120 he further says—referring to the $20,000,000 substitute amendment passed in place of the 1914 bill defeated in the Senate—as follows:

"It is also familiar history that most of that amount, according to statements on the floor by members of the Rivers and Harbors Committee, was given to Southern States that boasted little actual waterway commerce."

Thus keeping to the forefront all the while that southern Congressmen are seeking local benefits for useless projects at the expense and to the detriment of the Northern States and the Federal Treasury.

NORTH SHARES BENEFITS, TOO.

I should here call attention to the fact that in the 5 Northern States named as furnishing the excess of revenue over the 13 Southern States named, that Mr. FREAR includes the States of New York, Illinois, Pennsylvania, and Ohio. Now, if Mr. Burton is correct in his position that the two projects mentioned should be developed by the Government, then the argument of Mr. FREAR would not apply, for these four States and

their commerce and their resources and their great citizenry would all be benefited, leaving only Massachusetts of the five States named, and it is probable that it would also be benefited thereby. But Mr. FREAR differs with his compeer, Mr. Burton, in his opinion. Quoting him:

"The chairman of Southern States, sitting in judgment over the deliberations of 27 of the most important committees of the House, with a large majority of the Democratic majority that controls national legislation hailing from the Southern States" suggests to his mind that the appropriations of Congress are squandered on private projects, and he takes to task Mr. SWITZER, of Ohio, and declares, on page 1151, as follows:

"Let me say in response to that, the Army engineers have recomended what purports to be $100,000,000 for the Ohio River project, which is one of the most wasteful projects of all."

I do not care to discuss the proposition in this paper as to whether the integrity of southern Congressmen and southern Senators and southern officials generally is of the weak and vacillating sort that is indicated, if not expressly charged against them. I think it is sufficient to state generally, and I take pleasure in so doing, that the history of the Army and Navy, as well as the councils and courts of the Nation, from an unknown ensign who gave his life for his country, to the great Chief Justice of the greatest court in the country, will forever show that southern gentlemen give life and service in an honorable cause with the same unimpeachable motives as their northern brothers, whose honor they have no desire to question.

OHIO SHOULD BE DEVELOPED.

This is not a question for bickerings or criticisms of individuals. It is apparent that the two great opponents of waterways improvement do not agree and that the greater of them, if not the greatest in the country, Mr. Burton, believes it feasible and proper that the Ohio River and the canal spoken of be satisfactorily and properly developed and improved.

If it is admitted that the project is worthy of undertaking, then it must follow that in spite of the statistics quoted by Mr. FREAR it has not yet been proven that waterways or inland rivers are failures as highways for commerce. If they have not been that success that business men have the right to expect, following the expenditures made upon them, then there is some reason therefor.

The intimations by both Mr. FEAR and Mr. Burton are that highways and waterways have virtually been abandoned for railways. If I misconceive their meaning, then I will say that their statement is that waterways have virtually been abandoned for railways, and they rightfully charge that certain harbors where the ships land and where the railroads have their terminals show wonderful excess of tonnage over the commerce of those inland waterways; but if they intend to intimate that the highways are abandoned, they are in error as to this, for the highways of the country, in spite of the great billions of tonnage handled by the railways, handle fully 85 per cent of the products going from forests, field, and mine and returning from the great factories thereof; and, therefore, as great as the railways may be or become, the highway will never lose its importance. It is true the railways traverse the country and go from place to place as directed or desired, but why is it that the railway is such a factor in transportation? It is certainly not because of the reasonable charge or its willingness to fix satisfactory rates without compulsion, for it is admitted by both of these distinguished gentlemen that railroad commissions are necessary and desirable for controlling intrastate and interstate freight rates. It must be because of their great systems connecting and reaching forth wherever commerce or trade invites them.

Now, if the rivers have not been the success expected, is it not because they have not yet been improved to the point that they can be considered as a system of waterways?

EUROPEAN COUNTRIES SET EXAMPLE.

Suppose the Federal Government would take the interest in waterways development that Germany and France and Austria-Hungary and Belgium have done; what would it mean, if anything, in the reduction of freight rates? Facilities for transportation not only increase commerce, but they develop the resources of a country in order that commerce may be increased. If inland waterways are justified as a means of transportation, then to the admitted advantage of competition with railways, may be added the further advantage attributed to railways, of developing resources and creating wealth.

Germany, through Prince Bismarck, undertook the modernizing and extension of the German waterway system following the German-Franco war, and has highly developed the Rhine, Weser, Elbe, Oder and Fistual, and they each carry an enormus and constantly increasing tonnage. The German Rhine is said to be commercially the most important stream in the world; it is only surpassed by the Great Lakes in the United States in its volume of traffic; because of it and the other natural and artificial water courses constituting a system, Berlin with its 2,000,000 of inhabitants and vast industries has become the great city it is. Without this it would have been denied the easy and cheap transportation for fuel, building and other raw materials.

The French Government is said to have spent $25,000,000 on the Seine alone. The river Loire, between Havre and Paris, a distance of 231 miles, connects the fertile portions of interior France as well as Paris, giving the advantage of combination river and canal. The Rhone in southern France, originally nonnavigable, has been converted by waterways engineers, in spite of its rapid and swift currents, into an improved waterway.

Austria-Hungary in the last 50 years has spent something like $100,000,000 on waterways improvements, and has by creating a waterway system succeeded in doubling its water tonnage.

Belgium has 2,600 miles of railroad, mostly owned by the Government, yet the principal means of transportation in Belgium is its canal system, the total length of which together with the navigable waterways amounts to 1,370 miles, 85 per cent of which is owned by the State. It is said to have the most complete natural and artificial waterway system in the world. It has seven water routes by which commerce can be transported from Belgium to France, and traffic is mainly carried on barges without transshipment into the interior of France and Germany. It has connected the rivers Scheldt, Sambre, Meuse, and Lys by a system of canals, having direct touch with the seaboard, thereby giving to Belgium an international as well as a national importance.

FOREIGNERS PROTECT THEIR WATERWAYS.

Germany has sought to parallel its waterways and railways.

The thought, effort, and experience of these countries has justified the establishment of waterways systems, yet it is doubtful whether the location of their waterways is nearly so good as that of ours for the purpose of creating a great waterways system.

It may be that their Governments have judiciously protected their waterways system against unreasonable competition of railways. If necessary to do, it should be done not only in those countries but in ours. There is no complaint against the lawful and proper operation of railways, but they are matters of private investment while the waterways of the country are of common interest, open for profit to the rightful use of every citizen.

Mr. Herbert Knox Smith, commissioner of corporations, in the August Outlook, 1909, volume 92, said there are 290 streams in this country used to a substantial degree for navigation, with an approximate navigable length of 26,400 miles. He further represents that we transport in bulk an overwhelming amount of coal, ore, wheat, corn, and oil, and that neither swiftness or very special care is necessary in the proper handling of these commodities.

There are in the United States 5,000 miles of canals, with these waterways and canals created into a great waterway system we would have something like thirty-odd thousand miles of waterway navigation—a very small mileage compared to the great railway mileage of the country—but since these railways are interstate and far-reaching with their great systems, it is not reasonable to suppose that they or their connecting lines would be directly affected with such a competitor as the waterway system would make if developed as has been done in the European countries.

IMPROVE RIVERS TO DEVELOP TRAFFIC.

How can we expect a river only partly improved, tributary to another river that is not at all improved and then another that is poorly and partly improved, to be of any force or efficacy as a highway in competition with well-developed, well-connected railway systems? Of what use is it, except locally, to improve the upper Cumberland if the lower is to remain unimproved, or if the mouth of the Ohio River, into which it flows, is to be closed for want of development five months each year? And so is this true of the Tennessee River, Green River, and the Wabash, all within very close distance of the Ohio's mouth.

Much money has been spent upon the Cumberland River; more, perhaps, upon the Tennessee; a considerable sum upon the Green, and quite a little, no doubt, on the Wabash. Great sums of money have been spent upon the Ohio River, and even more upon the Mississippi and Missouri Rivers, but what does all this mean when it has not yet been perfected or developed into a system of waterways transportation that would insure to the shipper or the buyer prompt, certain, cheap, speedy, and safe delivery?

Suppose the Cumberland is completed and the Wabash, Green, and Tennessee are completed, but the mouth of the Ohio River, into which they flow, is closed; of what use are the rivers as highways for transportation except perhaps seven months in the year? But with all these waterways developed, who is it that can say that those who buy and sell would not seek out this means of transportation for the coarse and heavy traffic, and when once found that the waterway system of the country could handle the 40 per cent or more, or at least the coarse and heavy part of it, of the traffic that the railroads are really not provided for handling without delay and congestion of cars upon their lines, would not give to it this tonnage, because of its cheapness and desirability, for in the end it is not the distance that counts, but it is the cost of carriage.

I do not wish to unnecessarily prolong this article, but wish to emphasize the fact that with the improvement of the Ohio River and the Barge Canal suggested by Mr. Burton, we would have the beginning of the greatest waterway system in the world, according to my best judgment. The Barge Canal reaching out across New York, connecting the Great Lakes with the Hudson and New York City, and the improvement of the Ohio River to its mouth would simply mean that the States of New York, Ohio, and West Virginia, Indiana, Illinois, and Kentucky would be directly benefited, and this would mean that four of the five States that are said to pay 95 per cent of the Federal tax, to wit, New York, Illinois, Pennsylvania, and Ohio, would get four-fifths of the benefit of this project, while the 13,000,000 of people in the Ohio Valley would all likewise be directly benefited; and surely if it is of national concern to build such great dams as the Arrow Rock and Roosevelt, it is of equal concern to benefit such a great number of people and so many rich and imperial Commonwealths.

WHY OHIO MAKES POOR SHOWING.

Why is it that the Ohio River with all the expenditure of money along its way has not made a better showing? Five months of the year it is not susceptible to ordinary navigation. All of the money that has been spent upon it has been spent from near Evansville, Ind., north to Pittsburgh; most of the money that has ever been spent upon it has been spent from Cincinnati to Pittsburgh, and most of that nearest unto Pittsburgh.

Wherever the Ohio has been properly improved with locks and dams it has not only been a conserver of wealth but a creator of wealth. Where it is most improved mills and factories line its banks, and if it were improved throughout its length not only would it be an invitation to capital to cast its lot but it would develop usable ores and other things susceptible of production and development that are absolutely idle and worthless, possessing no present value because inaccessible, and the marketing of which is prohibitive because of excessive freight rates.

The Ohio River has not been so, and is not so, it can say to the shipper of coal, grain, lead, zinc or flourspar, iron ore, tobacco, or other commodities that we can offer to you sure and certain transportation when asked for. It is, as presently constituted, nothing more than a poor partial canal for five months in the year; but suppose, for instance, that it is developed—New York, Pittsburgh, Cincinnati, Louisville, Evansville, Paducah, Cairo, Memphis, and New Orleans would have a direct and unequaled transportation through a territory possessing the greatest number of diversified products to be found in any other section of the country. It is admitted that there is a 9-foot stage of water from Cairo to New Orleans; why not have the 9-foot stage of water from New York to New Orleans by the way of Pittsburgh along the route named?

With this greatest highway and its tributaries offering a transportation of the kind desired, not only would commerce seek that way to the Gulf but it would seek the markets of the world along this route, and capital would seize the opportunity offered for new enterprises, and then the coal from the coal fields of southern Illinois that now have no outlet, and lead, zinc, coal, and fluorspar of Kentucky would be marketable, and not less than 150,000,000 pounds of tobacco from the Black Patch, or 100,000 hogsheads yearly, now crossing the country by rail, would remain in storage and seek this route to New Orleans for export, for most of this tobacco goes to Italy, and is generally shipped in June in order to get the benefit of the southern sea sweat.

Most of the export products used by the 10 leading export nations of the world are produced along the Ohio Valley, or can be; it does or can lead in the production and transportation of tobacco, coal, iron, steel, mineral oils, hardwood timber, zinc, fluorspar, etc.

Pennsylvania, Ohio, and Illinois, three of the leading manufacturing States of the country, could not help but feel the direct benefits resulting therefrom. These States are also the three leading pig-iron States, and with the State of New York lead in the manufacture of iron. They are alike three of the wealthiest States in the Union.

Everything that goes to the building of a country is offered in the improvement of the Ohio River; for this reason is it not only practical but desirable that it be used as a model stream for determining whether the Government should spend its money in this way. It will afford the best test for the very reasons that the wealthiest States, the manufacturing States, the coal and ore producing States named are all direcly involved, and it will likewise better serve as a test, because it accommodates the other rivers of Green, Cumberland, and Tennessee, upon which the Government has spent so much money.

Why not then urge upon Congress that when it creates its commission and marks out its plan of development that it keep in mind that it is not so much a river, a waterway, as a waterway system, that is needed; and that no man can quit the race before it is finished and say whether it is worth while; and why not urge that Congress and the commission fix its eye upon these projects mentioned by Mr. Burton—the New York Canal and the Ohio River—as the important ones for early undertaking; and why not insist that before a river is condemned for not bearing upon its bosom the desired or expected tonnage; that it be made more than a pond or unfinished canal; that it be made a river; and that some of the money that goes to the Ohio River be applied by engineers or those in charge of apportionment and expenditure to the immediate building of Locks and Dams Nos. 54, 53, and 52, which were long ago recommended to the Government as necessary, and all of which are near its mouth, and without which, complete and in use, the mouth of the Ohio River is and will continue to be closed five months in the year.

THE SECRETARY OF THE NAVY.

Mr. THOMAS. Mr. President, the proceedings of the recent meeting of the Navy League in this city were chiefly devoted to manifestations of hostility toward the Secretary of the Navy. I therefore ask leave to have printed in the RECORD an article appearing in the New York World of the 26th ultimo from the pen of George Creel, giving an account of the Secretary's work, together with an approving letter from John R. Dunlap, editor of the Engineering Magazine.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

SECRETARY OF THE NAVY DANIELS TAKES THE FIELD AGAINST HIS ENEMIES—HOW HE HAS SMASHED RINGS AND DEFEATED GRAFTERS TOLD IN A FRANK AND ENLIGHTENING INTERVIEW.

(George Creel's name is familiar to readers of periodicals and newspapers as that of a writer who devotes himself to causes that need assistance. With fights for good government in various parts of the country he has identified himself as a type of journalistic knight errant. His valiant support of Judge Ben Lindsey and his defense of the miners made him a conspicuous figure in Colorado. Mr. Creel had never met Secretary Daniels up to the time he secured this interview.)

[By George Creel.]

Josephus Daniels, Secretary of the Navy, is at once the most maligned and most misunderstood man in the United States to-day. To wade through the lies that have been told about him, to discover the truths that have been hidden or distorted, is to come to a new loathing of the greed that poisons when thwarted and to an added contempt for the public that takes no larger interest in a public servant than to swallow every slander circulated about him.

Ask the average citizen about Josephus Daniels and he'll wag his head and mouth something about mountebank and demagogue. Press him for details and he can cite none more definite than vague generalizations that Daniels has "let the Navy run down" and has "made us a laughingstock."

This derision is the price that Josephus Daniels has been made to pay for saving millions of the people's money from the traffickers in armor plate and munitions; for breaking up the armchair clique that ruled the Navy for years; for making merit the test of promotion rather than "social pull"; for opening the doors of advancement to the enlisted man. He has given us a Navy that, according to Admiral George Dewey, "is not excelled, except in size, by the fleet of any nation in the world." Facts and figures entitle him to rank with the greatest Secretaries of history, and yet so well have his enemies wrought that many of the people for whom he has labored grin at his name.

Practically all of this ridicule has flowed from his abolition of the wine mess. Back in 1899 Secretary Long issued an order forbidding the sale or issue of liquor to enlisted men on board ship, and all that Mr. Daniels did was to extend the rule to officers, taking the step upon the official recommendation of the Surgeon General of the Navy. This policy, that was to make the United States the "laughingstock" of the nations, was followed within the year by all other world powers. Russia and France first, then Lord Charles Beresford scored the use of liquor in the British Navy, and after that Emperor Wilhelm, addressing the German naval cadets, uttered these words:

HOW HE HAS EARNED HATRED.

"The next war and the next sea battle demand sound nerves of you. Nerves will decide. These become undermined through alcohol. * * * The nation which consumes the least alcohol wins, and that should be you, my gentlemen, and through you an example should be given the crews. And in consequence of this I expect of you * * * that you take heed thereto and provide that indulgence in alcohol be not counted as belonging to your privileges."

In the Hearst papers, most active in ridiculing the "grape-juice" order, pages are devoted to proving that all of the great businesses of the country are refusing to employ men who drink. Yet for the foresight that enabled Josephus Daniels to point a way to the nations he is denounced.

Such attacks, of course, are mere blinds. The real causes of the campaign of hatred against Secretary Daniels are not to be found on the surface, but deep down in the mud of human greed. The Powder Trust hates him because he is manufacturing smokeless powder for 34 cents a pound as against the 50 to 80 cents that used to be paid to the monopoly. In 1915 alone $1,115,733 was saved, and this year the capacity is doubled. The projectile makers hate him because he cut out $1,077,210 on one bid alone and is asking Congress for money to build his own plant. The grafters hate him because his economies have effected a reduction of fifteen-odd millions on public works at shore stations. The armor-plate monopoly hates him because he made them lop off $1,110,084 that was headed for its pockets, and has caused a bill to be introduced for a Government plant where armor can be manufactured for $250 a ton as against the $440 exacted by the trust. Back in 1900 Congress appropriated $4,000,000 for a Government armor plant unless contracts could be made at "a reasonable and equitable figure," but Secretaries Moody, Morton, Bonaparte, and Meyer closed their eyes to the expert reports that proved the gross extortions of the monopoly and paid out over $76,000,000 in high prices.

When Josephus Daniels took office he found an investment of millions in navy yards going to waste. Many stations were closed, and the others were used for petty repairing, so as not to infringe upon the profits of private companies. Secretary Daniels opened them up for real business, and to-day every one is aiding naval construction and saving millions. Two dreadnaughts are building at New York, and the keel of a third will be laid this summer; manufacture of torpedoes has reduced the cost over $1,000 per torpedo; airships are building at Washington; Charleston is manufacturing clothing stores and torpedo-boat destroyers; mines are being turned out at Norfolk at a saving of $170 per mine; submarines are under construction at Portsmouth, N. H., and at Puget Sound; a transport at League Island; a supply ship at Boston; a battleship, two fuel ships, and a destroyer at San Francisco; and the $7,000,000 investment at Pensacola, abandoned by Meyer, is being used as an all-year-around aviation school.

Everything that is being manufactured by the Government is produced at from 20 to 60 per cent less than the old private purchase price. Every dollar saved has been an addition to the hate felt for Josephus Daniels; but since these thwarted traffickers do not dare to come out in the open, they make their appeal to the laughter of fools by "grape-juice" witticisms and a multitude of silly lies.

The first sight of Joseph Daniels makes many things quite clear. He is not a large man, and the average person finds it difficult to conceive brains without beef. Also he keeps no one waiting in his antechamber, and his extreme simplicity and courtesy convey an impression of humility. The average person loves affectation, and gains no large appreciation of power unless he is made to wait or is treated rudely. For the larger part of his life Abraham Lincoln was regarded by many as a bumpkin advanced by lucky accidents.

For an hour Josephus Daniels sat at his desk and answered questions, rarely pausing for answers, revealing the most amazing grasp of his position, never evading, refusing to disparage, and defending at every point the honor of the Navy, although he must have known in his own heart that much of the malicious gossip was due to the venom of disappointed officers.

EIGHTY-FIVE PER CENT REENLISTING.

"They charge that the Navy is going down hill, that enlisted men hate the service, and that my brand of democratization has spelled the demoralization of the service. What is my brand of democratization? I have established schools on board ship, attempting to let every enlisted man have an opportunity for academic and technical education, and I have opened certain doors of promotion to these men. What demoralization has resulted? When I took office only 52 per cent of the men discharged in good standing were reenlisting, while to-day the percentage is 85 per cent.

"I found a Navy 5,000 men short of the number allowed by law. In my three years 6,365 men have been added. There was an average of 1,800 men in prison, while to-day there are less than 700, permitting us to restore two prison ships and two disciplinary barracks to normal uses. During the Taft administration there were over 10,000 desertions. A decrease of 17 per cent has been achieved already, and every day sees the number lessening. Do these figures indicate discontent, hatred of the service, and destroyed discipline?

"I stand by my schools, and, if necessary, I am willing to fall with them. No man believes more firmly in discipline than I do; never in spoken speech or written have I questioned the absolute necessity in all military service of instant and implicit obedience to a superior; I will have no mercy on insolence or insubordination, be it from seaman to his petty officer or junior lieutenant to his captain, but I do not hold that discipline is dependent upon ignorance or the denial of an American's right to rise as high as his ability will carry him.

"Time and again it has been declared to me that education does not better fit a man for deck washing or coal heaving, and the contemptuous snobbery of it has never failed to offend. If 85 per cent of discharged men are reenlisting, and if more than 6,000 men, that the Navy called for in vain until 1912, have entered the Navy, may it not be that the cause is to be found in a policy that holds out the bright prospects of education and advancement? If sensitive feelings are being hurt by simple recognition of plain democratic principles it is a matter for their shame, not mine.

"Of course there is a shortage of officers, but it must be remembered that it takes 10 years to educate and train an officer. I secured a six years' extension of the law permitting each Congressman to appoint 2 midshipmen to Annapolis, and followed that up with the law that raised the number to 3, which will mean an increase of 531 appointees. Aside from this, I have gained the right to appoint 15 each year from the ranks of enlisted men, with the understanding, to be sure, that they pass the usual examinations. Last year 8 of the 15 went in as the result of the ship schools.

THE NEW NAVY PROGRAM.

"If the Navy itself is not as large as the experts recommend, it should be borne in mind that navies are not built in a day. For the first time in history I have caused the reports of the general board to be made public, and any citizen may see for himself the Navy's growth from year to year. From 1903 to 1912 the recommendations of the general board, with Admiral Dewey at its head, were disregarded steadily, and it was as a consequence of this continued disregard that Germany passed us as a naval power in 1909, several years before I became Secretary of the Navy.

"Throughout those years the general board urged a program of continuous building rather than a slipshod, annual affair, and had their advice been heeded there would have been no excuse for the hysterical activities of to-day. Of the 34 dreadnaughts recommended, 15 were authorized; 40 cruisers were recommended and 5 were built. I found the Navy without a single sea-going submarine and just four aviators;

one mine-laying ship, an inadequate and outworn system of wireless, and on every hand a variety of lacks.

"I say this in no spirit of criticism. With the world at war to-day we are bending a new and more enthusiastic eye upon our Navy, while in years gone by peace seemed such a permanence that every Navy increase was attended by outcry. I mention it merely to show that this administration has been called upon to face tremendous naval problems and tremendous naval tasks.

"An appropriation of $1,000,000 has already been made for aviation, we have 15 machines on hand, 15 are being constructed, 18 aviators are in the service, and the Pensacola school is turning out new batches as fast as the courses can be completed.

"Three new seagoing submarines, of the latest and largest model, have been authorized. A separate submarine flotilla has been organized, and assigned to the command of a rear admiral, and the establishment of submarine shore bases has changed the absurd condition that necessitated 1,928 men on 14 ships to care for 29 submarines carrying 831 men.

"We have had to design antiaircraft guns and manufacture them, and the same course has had to be followed with nets and mines and entanglements. Radio has been installed on every submarine and 75 ships, and 8 new shore stations have been added to our chain; we now have three mine-laying ships, with more in view, and until construction can catch up I have equipped a fleet of seagoing tugs and a fleet of torpedo boats with mine-sweeping equipment.

"We have 31 mines to-day for every mine possessed two years ago; the supply of torpedoes has been more than doubled, and manufacture continues steadily; and my adoption of a continuous building program for the next five years, if authorized by Congress, will give the United States a strong, well-balanced Navy.

"It is true enough that gunnery efficiency had decreased, but under date of October, 1915, Admiral Fletcher made the cheering report that the scores made at long-range practice were the highest ever made in the open sea. Ninety per cent of the shots, at longest range, would have hit an enemy ship. Yet in spite of this report, that upholds the best traditions of the American Navy, the report persists that our men are less than eager, less than able.

"I can understand the spirit of honest criticism, but I can not understand the vileness that revels in the slime of a base un-American detraction. In order to enlist the best thought of the Nation in science and invention, I asked Thomas A. Edison to serve as the head of an advisory board composed of two representatives from each of the 11 great engineering and scientific societies of the United States. Germany, France, and England place major reliance upon such boards and provide great laboratories for their use. Mr. Edison and his associates serve without salary, paying their own expenses, yet even this devotion has not been able to protect them against slander. It has been charged in open print that Mr. Edison and his associates have no higher motive than a mean hope of selling something to the Government.

"It has been said repeatedly that I made an order for officers and men to mess together, and that I gave up the idea only when informed that black men and white might be brought together at the same table. There was never a more infamous falsehood. No such order was ever made or contemplated. Some snapshots were being taken on board ship, and as I had left my hat below an officer loaned me his cap. I made some laughing remark about its shape, and this has been twisted into personal derision of the naval uniform. Once I spoke at a Young Men's Christian Association meeting of the men, and at its close I was asked to have my picture taken with two of the youngsters. It is this picture that has since been used to show my passion for posing as a friend of the bluejacket.

NO LIE TOO MALICIOUS.

"It is asserted that I have deprived the kin of an enlisted man of the customary death gratuity should he lose his life while on liberty. The law on this subject was passed in 1912, and states specifically that the only cause for withholding payment shall be when death is due to the misconduct of the deceased. We bought eight searchlights from a German inventor and tendered him a second order for 12 more at $3,960 apiece, as set down in his bid. The manufacturers did not desire the contract, requesting a new award at $5,200 apiece, but I awarded the contract to the inventor, who, by reason of getting it, will be paid $25,000 under his contract with the manufacturers. This transaction constitutes the base of the charge that the United States Navy robbed a stranger and took advantage of him. Nothing seems to be too low, too mean, or too vicious to be said, and the attacks do not stop at me, but soil Nation, Navy, and officials.

"I do not care about these pettinesses as far as I personally am concerned, but I do resent the extension of this enmity to others. The people are asked to believe, for instance, that I appointed some inefficient underling to be Chief of the Bureau of Navigation. Victor Blue, the man attacked by inference, has his name in the Naval Register with the notation 'advanced for extraordinary heroism during the War with Spain.' His daring expeditions to locate the Spanish fleet at Santiago, however, were no less brilliant than his action in penetrating the Spanish gunboat blockade in an armed ship's boat, meeting Gen. Gomez, and then capturing two Spanish patrol sloops as he ran out of the harbor. He has filled every office on a modern man-of-war, served on Admiral Kempff's staff during the Philippine insurrection, and was a member of the first relief expedition which marched from the sea to Tientsin. After that he was chief of staff of the Pacific Fleet, was appointed by Secretary Meyer to the General Board, and it was there I found him.

"The same malice has attempted to discredit the splendid men gathered about me as heads of the various bureaus. Rear Admiral Griffin, Chief of the Bureau of Steam Engineering; Rear Admiral Strauss, of the Bureau of Ordnance; David Watson Taylor, of the Bureau of Construction and Repair; and Rear Admiral Benson, Chief of the Bureau of Naval Operations, were chosen for their preeminent ability, and their records should constitute an answer to base insinuation.

NO ONE HAS BEEN MUZZLED.

"When I came into office I found a system of aids, each one standing as a buffer between the Secretary and his bureaus, a plan that resulted in delay, confusion, red tape, and a tremendous amount of correspondence carried on between men in adjoining rooms. This system had been refused sanction by Congress time and again.

"I ended the system, because it had no legal status and because I desired direct contact with my bureaus. No doubt this aroused personal resentment, and likely enough the irritation has been fanned by my insistent recommendations to Congress that promotion by seniority be discarded in favor of promotion by merit.

"I have been criticized also for refusing to permit naval officers to deliver public addresses and otherwise seek to influence legislation. This has been the unbroken policy of the Navy from time immemorial; and President Roosevelt, in 1902 and President Taft, in 1909, reenforced the rule by Executive orders that established dismissal as a penalty for violation. But even while I did not make this regulation, I gave it the usual enforcement. Congress has called before it many officers of the Navy regarded as authorities, and the testimony of these gentlemen has been available to the press, and, to supplement publicity, I have made public the reports of the General Board. No one has been muzzled; simply the law has been enforced that forbids officers from running about the country for purposes of propaganda, a practice in which 99 per cent had no desire to indulge.

"The people of the United States have never had cause to be ashamed of their Navy, and never more than to-day has there been cause for pride. Testifying before the House committee the other day Capt. J. S. McKean said that we had made more progress in the last two years than in any previous five-year period, and that he had never known a time when everybody in the service was working as hard with their heads and hands.

"Two Hospital Corps training schools have been established, the Naval Pay Officers' School has been reopened, likewise the Fuel Oil School, where firemen, oilers, and water tenders are prepared for service on board the oil-burning vessels of the Navy. On every hand, in every department of the Navy, there is a generous enthusiasm that is finding effective expression in efficient and devoted service; and I say to you, and I say to the people of the United States, that even while we are urging the expenditure of $500,000,000 in construction during the next five years, the Navy to-day is a finer, better balanced, and more effective first arm of defense than ever before in its history."

ONE MORE CAUSE OF HATE.

There is another matter that may be mentioned in explanation of the campaign of hate that is being waged against Josephus Daniels. In alliance with Secretary of the Treasury McAdoo he is urging upon Congress a plan to build ships for commercial purposes so constructed and manned as to constitute auxiliary craft for the Navy in time of war. During the War with Spain the United States paid out over $21,000,000 for auxiliary craft and had to sell them afterwards at an 80 per cent loss. The Daniels-McAdoo plan contemplates the formation of a private company, with the Government holding 51 per cent of the stock, or all of it, if necessary, and the leasing of the ships for commercial purposes, or else Government operation of them. A twofold benefit would be secured by the commencement of a merchant marine and the provision of the Navy with the auxiliary craft that are absolutely indispensable in time of war.

Taken from his entrance into office, viewed from every angle, and subjected to every scrutiny, Josephus Daniels shows bigger than any Secretary of the Navy in past years. He has not been content to be a rubber stamp for the use of any Navy clique or coterie; he has kept greedy hands out of the people's money. Wherever he has violated tradition it has been in the interests of common sense and greater efficiency; he has fought for justice; and he has given the United States a great Navy and the high promise of a greater.

It is not our naval preparedness that is being attacked, but the honesty, sincerity, keen intelligence, splendid vision, and unfaltering courage that have enabled Josephus Daniels to smash rings and defeat graft and rapacity.

"I REGARD THE PUBLICATION OF THIS INTERVIEW AS NOTHING SHORT OF A PATRIOTIC PUBLIC SERVICE."

[John R. Dunlap, editor of the Engineering Magazine.]

NEW YORK, *March 22, 1916.*

TO THE EDITOR OF THE WORLD:

Thank you very much for submitting the proofs of Mr. Creel's stirring interview with Secretary Daniels; and let me say at once that I regard the publication as nothing short of a timely, needed, and patriotic public service.

As an engineering editor it has recently become necessary for me to thoroughly investigate precisely what is happening in the Navy Department, and the information I have gathered from the lips of the highest commissioned officers in charge of the Navy and also from the individual members of the Naval Consulting Board enables me to unqualifiedly indorse every word Mr. Creel has written in his strong introductory and every statement he has attributed to Secretary Daniels.

Indeed, I have been both surprised and gratified to discover how much Secretary Daniels has actually accomplished for the Navy, especially because of his potent personal influence with radical and unreasoning little-navy men of his own party in Congress. Thus during the first two years of his administration he secured appropriations for the chief fighting force of the Navy amounting to $70,000,000, as against $26,000,000 during the last two years of the Meyer administration; and thereby he got what Navy officers have been striving to get ever since the fleet sailed around the world in 1906, when President Roosevelt reversed and halted our progressive naval program by boastfully announcing in his message to Congress: "I do not ask that we continue to increase our Navy."

Secretary Daniel's master stroke in technical efficiency was the creation and appointment of the Naval Consulting Board, a body of distinguished engineers and inventors who represent the best brains and organized capacity of all our great engineering, chemical, and mechanical professions. I could write a page telling of the activities and potentialities of this great body of professional experts who have volunteered for public service without pay; but it will suffice to say here that they already have 15 different committees, all actively at work in their special fields, and they have summoned no less than 240 of their engineering associates (5 for each State), who are cooperating in the fundamentally important work of tabulating the equipment and resources of all our vast mechanical industries, so that they can be instantly mobilized in aid of both the Army and Navy should occasion call.

In the light of this record of actual achievement, is it not about time to call upon Secretary Daniels's busy critics for facts, rather than the partisan, puerile, and grossly unjust merely personal abuse which they have been handing out?

JOHN R. DUNLAP,
Editor of the Engineering Magazine.

Mr. THOMAS. Mr. President, when the naval appropriation bill comes from the House for consideration I shall avail myself of the opportunity to pay my respects to some of the mem-

bers of this league and some of the proceedings of its recent sessions.

FRED WHITE.

Mr. BRADY. On March 11 I introduced a joint resolution (S. J. Res. 113) for the relief of Fred White, which was referred to the Committee on Claims. The Committee on Public Lands considered a similar bill a year ago, and I ask unanimous consent that the Committee on Claims be discharged from the further consideration of the joint resolution and that it be referred to the Committee on Public Lands.

The VICE PRESIDENT. Without objection, the change of reference will be made.

CONDITION OF NATIONAL BANKS.

Mr. MARTINE of New Jersey. I ask to have printed a letter from the Comptroller of the Currency stating a most phenomenal condition and one that makes our Nation almost impregnable.

There being no objection, the letter referred to was ordered to be printed in the RECORD, as follows:

The Comptroller of the Currency, in making public to-day the figures relating to the condition of all national banks on the date of the last call, March 7, 1916, said:

"The total resources of the national banks of the United States on March 7, 1916, amounted to $13,838,000,000, exceeding by $370,000,000 the greatest resources ever shown in the history of the national-banking system, and exceeded by $2,271,000,000 the resources of these banks as shown in the March 4 statement a year ago.

"The increase which has taken place in the resources of the national banks of this country in the past 12 months exceeds in amount the entire resources of the Reichsbank of Germany as reported in its statement of February 15, 1916. The aggregate resources of the national banks of the United States at this time exceed by approximately $3,000,000,000 the aggregate resources of the Bank of England, the Bank of France, the Bank of Russia, the Reichsbank of Germany, the Bank of the Netherlands, the Swiss National Bank, and the Bank of Japan.

"The increase in the loans and discounts of our national banks March 7, 1916, was $132,000,000 as compared with December 31, 1915, and $990,000,000 as compared with March 4 a year ago.

"The total deposits on March 7, 1916, amounted to $10,790,000,000, an increase since December 31, 1915, of $411,000,000, and an increase of $2,198,000,000 as compared with March 4 a year ago.

"Of the $411,000,000 increase in deposits since December 31, 1915, $335,000,000 were from banks and bankers, and $78,000,000 were reported as time deposits, while demand deposits for this period showed a decrease of $2,000,000. Of the $2,198,000,000 increase in total deposits since March 4, 1915, however, the principal increase was in demand deposits, which increased $1,072,000,000, against an increase in time deposits of $296,000,000, and an increase in the balances due to banks and bankers of $830,000,000.

"Bills payable and rediscounts amounted, March 7, 1916, to only $61,956,000, a decrease since December 31, 1915, of $36,460,000, and a reduction as compared with March 4 a year ago of $33,704,000.

"Specie holdings amounted on March 1, 1916, to $708,780,000, an increase since December 31, 1915, of $19,018,000, and an increase as compared with March 4, 1915, of $116,928,000.

"The holdings of United States bonds amounted March 7, 1916, to $754,000,000, a decrease of $20,000,000 as compared with December 31, 1915, and of $27,000,000 as compared with March 4, 1915.

"The holdings of bonds, securities, etc., other than United States Government bonds, amounted on March 7, 1916, to $1,464,000,000, an increase since December 31, 1915, of $89,638,000, and an increase as compared with March 4, 1915, of $364,000,000.

"It should be noted that while the national banks of the country reduced their holdings of Government bonds between March 4, 1915, and March 7, 1916, to the extent of $27,000,000, the Federal reserve banks have, between March 5, 1915, and March 10, 1916, increased their holdings of Government bonds from $5,000,000 to $34,000,000. In the past 30 days the Government bonds held by the Federal reserve banks have increased approximately $11,000,000 more. The Federal reserve banks now own over $45,000,000 of Government bonds.

"The 12 Federal reserve banks get the same returns from their holdings of Government twos as are obtained by the national banks. Federal reserve banks as well as national banks are permitted to issue circulation against Government twos, and upon this circulation they are subject to a tax of one-half of 1 per cent; so that any bank, whether national or Federal reserve, investing in Government twos and then reimbursing itself for the outlay by issuing circulation against its bonds, gets a net profit of approximately 1½ per cent without reducing its cash resources except as to the 5 per cent redemption fund deposited with the United States Treasurer.

"The circulation of national banks March 7, 1916, was $695,000,000, a decrease of $17,000,000 since December 31, 1915, and a reduction of $50,000,000 since March 4, 1915, but this reduction of $50,000,000 since March 4, 1915, included $29,000,000 of emergency currency retired subsequent to the latter date.

"On March 7, 1916, there were 7,586 national banks with a capital of $1,067,289,000, as compared with 7,599 national banks on March 4, 1915, with a capital of $1,066,589,000, an increase for the year of $700,000. This slight reduction in the number of national banks was due to the liquidation of a number of national banks for the purpose of consolidating with other national banks. The new national banks chartered during the past 12 months largely exceeded the number of banks going into voluntary liquidation for purposes other than consolidation with other national banks.

"The surplus and undivided profits of national banks March 7, 1916, amounted to $1,031,278,000, an increase as compared with the previous year of $18,288,000."

NATIONAL-BANK RESERVES.

The total reserve held by all national banks on March 7, 1916, was $2,287,000,000, making a surplus of $993,000,000 over and above the amount legally required. This exceeds by more than $100,000,000 the greatest surplus reserve ever shown in any previous statement.

Of the above reserve, the national banks in the central reserve cities held $631,000,000, or 22.88 per cent of their deposits, the reserve they are required to hold being 18 per cent of demand and 5 per cent of time deposits; the national banks in the 52 reserve cities held a legal reserve of $693,000,000, or 27.84 per cent of deposits, against a requirement of 15 per cent on demand and 5 per cent on time deposits, while the country banks, which under the provisions of the Federal reserve act need hold only 12 per cent of demand and 5 per cent of time deposits, held on March 7, 1916, a reserve of 27.24 per cent of all deposits, or $962,000,000.

The reserve held by national banks October 31, 1914, the time of the last statement prior to the inauguration of the Federal reserve system, amounted to $1,559,000,000, against a required reserve of $1,433,000,000, making the surplus reserve at that time $126,000,000. It is thus seen that the surplus reserve of the national banks of the country has increased during the operation of the Federal reserve system from $126,000,000 on October 31, 1914, to nearly $1,000,000,000 at the present time.

It is conservatively estimated that the surplus reserve now held by the national banks would be sufficient to give a further loaning power of $3,000,000,000 or $4,000,000,000, should the growth and development of commerce, agriculture, or industry call for so huge an enlargement of credit.

Notwithstanding the Anglo-French loan of $500,000,000 and the loans made to other foreign powers, amounting to several hundred million dollars additional, in which our banks have to a greater or less extent participated, directly or indirectly, there are no indications of unsound inflation or excessive loans, and the national banks of the country have never been in a stronger position than they are at this time.

EXTRAORDINARY GROWTH OF NATIONAL-BANK DEPOSITS.

Perhaps the most striking feature of this bank statement is the fact that this increase which has taken place in deposits in the past 12 months amounts to more than the sum total of all deposits in all the national banks of the country as late as the year 1896, just 20 years ago. The deposits of national banks of the United States have, as these figures show, increased since February 28, 1896, over 500 per cent, against an increase in the number of banks of 100 per cent.

As indicative of the prosperity of our national banks, attention is called to figures which show that during this same 20-year period the capital of the national banks increased $413,000,000, or 63 per cent, while their surplus and undivided profits for the same period increased $697,000,000, or 210 per cent, after distributing over $1,650,000,000 in cash dividends to shareholders.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. BRANDEGEE. Mr. President, I suggest the absence of a quorum.

Mr. JONES. I hope the Senator will not do that.

Mr. BRANDEGEE. I do. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Bankhead	Hardwick	Norris	Smith, Mich.
Beckham	Hollis	Oliver	Smith, S. C.
Borah	Hughes	Overman	Sterling
Brady	Husting	Page	Stone
Brandegee	James	Pittman	Sutherland
Broussard	Johnson, Me.	Poindexter	Swanson
Bryan	Jones	Pomerene	Thomas
Burleigh	Kenyon	Ransdell	Tillman
Chamberlain	Kern	Saulsbury	Underwood
Clark, Wyo.	La Follette	Shafroth	Vardaman
Culberson	Lane	Sheppard	Wadsworth
Cummins	Lippitt	Sherman	Warren
Curtis	Lodge	Simmons	Weeks
Dillingham	Martin, Va.	Smith, Ariz.	Williams
Gallinger	Myers	Smith, Ga.	Works
Gronna	Nelson	Smith, Md.	

Mr. KERN. I wish to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER], the junior Senator from Maryland [Mr. LEE], the junior Senator from Indiana [Mr. TAGGART], and the senior Senator from West Virginia [Mr. CHILTON], all of whom are paired. This announcement may stand for the day.

The VICE PRESIDENT. Sixty-three Senators have answered to the roll call. A quorum is present.

Mr. JONES. Mr. President, I regret that the call for a quorum was made. I desire to say to Senators who are here and who I know are very busy, those especially who are interested in the amendment pending, that I shall probably take the time of the Senate for an hour and a half, and Senators can govern themselves accordingly.

Mr. UNDERWOOD. Mr. President, I should like to have a vote on the pending amendment, if it can be done, as I understand the Senator from Washington does not expect to address his remarks to that amendment.

Mr. JONES. I do not; and, of course, if the Senate is ready to vote upon it, I would be perfectly willing to yield for that purpose, but I anticipate that there will be considerable debate on that amendment even yet.

Mr. UNDERWOOD. I have no desire to debate the amendment, and would like to ask for a vote upon the amendment that I had pending yesterday afternoon, if no other Senator desires to speak upon it.

Mr. JONES. Of course, there can be no assurance that there will not be further debate upon it, and I think probably I had better go on and get through with what I have to say, and then the Senator can proceed with his amendment.

Mr. UNDERWOOD. Very well.

Mr. JONES. Mr. President, the world seems to be very much out of joint. Public and personal sentiment are in an abnormal condition. Men's minds seem to be warped and distorted. We are intolerant of views not in accord with our own. The patriotism of those who antagonize us is questioned. Those who most loudly proclaim their loyalty to the country most vehemently charge disloyalty to those who differ from them in the interest of their country's peace.

A day or two ago I received a letter from a friend of mine in my State inclosing a letter which he had received from some one in the East who, I am informed, is the treasurer of the Houghton Mifflin Co., 4 Park Street, Boston, Mass. I desire to read this letter without putting in the RECORD the name of the party to whom it was sent. He says:

> No doubt you have already seen the attitude which Senator JONES, of Washington, has taken on the question of preparedness and the maintenance of our national prestige abroad. I might say quite frankly that his remarks in Congress a few weeks ago annoyed me almost more than anything else that has been said, and if you felt the same way about it I hope that you may take steps to call his attention to the matter. The East wants full preparation made for any trouble that may occur, and it will not help appropriations for Alaska and other things which the Northwest may be interested in to have Mr. JONES take the position which he does. Lowman and Hanford wrote us recently urging the Alaskan appropriation. I replied that Alaska was an important issue which ought to be promoted, but that I thought that it would help to muzzle JONES.
>
> Trusting that you are having a pleasant winter, I am,
>
> Yours, very truly,
>
> JAMES DUNN PHILLIPS.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Colorado?

Mr. JONES. For a question.

Mr. THOMAS. That is all I wish to ask the Senator. From what place was the letter mailed to the Senator?

Mr. JONES. From Boston, Mass.

Mr. THOMAS. Not from the State of Washington?

Mr. JONES. No. I dictated a letter to my secretary concerning this communication and then tore it up. I thought of some pretty sharp things to say concerning Mr. Phillips, but have decided not to do so. He is no doubt a pretty good man. He is probably as patriotic as I am. On reflection he will conceive the littleness of his statements and his position. Surely the cause of preparedness is not so lacking in merit that Senators must be browbeaten to support it. Questions affecting Alaska and my State rest upon their own merits, and my people do not favor the "you tickle me and I will tickle you" pork-barrel method which Mr. Phillips seems to favor but which, I am glad to say, the Senators from Massachusetts are not controlled by.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Colorado?

Mr. JONES. For a question.

Mr. THOMAS. I merely wish to remind the Senator that I am his companion in misfortune, because I received a letter some time ago threatening the country with the Presidency of Mr. Roosevelt if an ammunition plant was not established in his city.

Mr. JONES. I expect a great many Senators will be threatened in different ways if they express their real sentiments with reference to this matter.

Mr. THOMAS. The letter to which I referred was not from my State.

Mr. JONES. Neither is the man who wrote the letter I read from my State.

Mr. REED. Mr. President, I desire to inquire whether, under the rule, the Senator from Washington has not now forfeited the floor.

Mr. JONES. I did not yield to the Senator from Missouri, and I will ask the Chair not to recognize anyone to interrupt me hereafter. I have a few things that I want to say. I myself am always glad to yield, but I do not want to consume unnecessary time. I have some things that I wish to say, and so I do not want to be taken from the floor.

Mr. REED (to Mr. JONES). I did not say it seriously.

Mr. JONES. Some things not said seriously might be taken seriously.

As we look at it, the East is no more interested in preparedness than the West. Any attack upon or danger to one section of the country we consider an attack upon and a danger to all sections of the country. We consider patriotism national, not sectional. The farmer, the laborer, the clerk, and the business man of every section of the country can be depended upon to respond with equal patriotism at the call of the country.

I am sorry that any words of mine should have ruffled the sensitive and esthetic feelings of Mr. Phillips. What they were, I do not know. I have not spoken in this body on preparedness. I have appealed to Americans to refrain from traveling on armed belligerent ships in these times of international conflict and danger in the interest of our own country and its peace. I hope Mr. Phillips is not one of those careless, reckless, selfish, inconsiderate Americans who are so lacking in patriotism as to be unwilling to refrain from gratifying their desires for pleasure or profit that their country may have peace. I wonder if he is so unpatriotic as to endanger the peace of a hundred million people to gratify the desire for the thrill that comes through danger? I hope he is not one of those who would denounce as cowardly and unpatriotic the man who refuses to offer his life in defense of his country in case of war, and yet himself is not patriotic enough to be willing to waive the exercise of a doubtful right to travel on armed belligerent ships that his country may continue in peace.

Would it ruffle Mr. Phillips's feelings, Mr. President, to suggest to him that one of the best preparations for peace is to take into account the world conditions of to-day, and instead of going around with a chip on our shoulder each individual citizen should be willing to show his patriotism by making personal sacrifices? I do not know what Mr. Phillips thinks about it, but my conviction is that the honor of our country rests in the keeping of those peace-loving but truly patriotic citizens who stay at home rather than in the keeping of those reckless and inconsiderate bravados who insist upon traveling regardless of their country's interests. I do not know whether he is one of those who places his country's peace above the pelf and pleasure of self, or whether he belongs to that class of whom the leader of the majority on this floor, immediately after the country thought he had voted to sustain the President in his contention that the honor of the country rests in the keeping of these bravados, said what I shall now read. I read from the CONGRESSIONAL RECORD of this session, at page 3482, from the remarks of the senior Senator from Indiana [Mr. KERN], made just after the vote to table the resolution over which such excitement occurred. The Senator from Indiana spoke as follows:

> I have said, and I repeat, that I favored such official warning, principally for the protection of the thoughtless and weak-minded, who might not appreciate the danger, and to the end that a hundred millions of peaceful and peace-loving people might not be plunged into war as the price of the stupendous folly of a handful of travelers. I had no thought for the personal safety of intelligent men who, out of a spirit of bravado or foolhardiness or to promote their own selfish interests, would risk their lives on such vessels; for, in my judgment, such a man, with such a treasonable bent of mind as to be indifferent to the danger of involving his country in war and wrecking the happiness of hundreds of thousands of American homes, has a life so valueless to his country as to be scarcely worth the saving.

Mr. President, if this ruffles Mr. Phillips's sensitive nature, I am sorry.

For a year and a half preparedness has been dinned into our ears day and night. Men have not been able to address any sort of a meeting anywhere, upon any occasion, without urging preparedness. Newspaper columns have been filled with it and editorials have appeared almost daily urging it. Magazine pages have been devoted to it and Army and Navy journals have helped to swell the cry for greater armies and navies. Lurid, blood-curdling, awe-inspiring picture films have been used to show foreign armies of blood-thirsty soldiers marching down our streets, breaking into our houses, ravishing our women, and laying waste our cities. Our navies have been destroyed, our armies dispersed, and our people enslaved.

The people have been threatened with subjugation and their Government with disruption unless immediate military preparation should be begun. Conventions have been held, orations delivered, and resolutions passed to arouse the people to their danger. Campaigns have been inaugurated and multitudes of speeches sent out, and Congress has been told that the people are demanding preparedness in order that they may be able to repel attack from abroad.

I noticed in one of the newspapers of Philadelphia the other morning a statement that a great wave of sentiment was coming up from the people for preparedness and that they were going to send out from Philadelphia the next day 150 speakers to different parts and sections to tell the people of the country of the great necessity for preparedness. That is where the wave has been coming from.

The President of the United States has been apparently converted and has gone to and fro telling the people that conflagrations are raging, that sparks are flying, that our house is not

fireproof, that no one knows what a day may bring forth, and that the danger to our country is real and immediate. Our military experts have gotten together and assumed that our Navy is at the bottom of the sea; that our coast defenses are worthless; that the men who have passed through the Army, the militia, the training of our military schools, and the War with Spain would refuse to volunteer if their country should be in danger and called for them, and, therefore, they have said that we need a standing army of 500,000 men trained and ready for immediate conflict, with 500,000 more to back them up in three months, and with another 500,000 to be called for soon. They have figured the expense of this to be too great, and, although they think we ought to have it, they do not think we are willing to pay for it.

Mr. President, a sufficient army and navy is not a matter of dollars and cents. Any increase that is necessary for the safety of the Nation and the peace of the Nation the people will cheerfully pay for. An unnecessary burden, however, they are not willing to bear.

Do we need a large increase in our military forces? If we do, there can be no difference of opinion as to having it. Should we prepare now; and if so, for what? These are the questions that we ought to decide before any so-called preparedness increase is begun.

If there is immediate danger or reasonable probability of immediate danger, prompt preparation should be made to meet it in a sufficient way. If there is no reasonable probability of immediate danger, why should we proceed in fear and haste? Why not act calmly, deliberately, and with a full knowledge of all the conditions that are to be met? If we are to be attacked upon the close of this war, or soon thereafter, we can not begin our preparation too soon. If there is no reasonable probability of being attacked, then there can be no excuse for not waiting until the close of the war to formulate a permanent system of defense and act upon the conditions then existing.

On December 8, 1914, after the war in Europe had been raging for several months, the President of the United States appeared in person before Congress and delivered his annual message. After discussing various matters he said he desired to say a few words upon two topics "much discussed out of doors, upon which it is highly important that our judgments should be clear, definite, and steadfast." One of these subjects was that of national defense, and upon this the President said:

> Allow me to speak with great plainness and directness upon this great matter and to avow my convictions with deep earnestness. * * *
>
> We are at peace with all the world. No one who speaks counsel based on fact or drawn from a just and candid interpretation of realities can say there is reason to fear that from any quarter our independence or the integrity of our territory is threatened. Dread of the power of other nations we are incapable of. * * * This is the time above all others when we should wish and resolve to keep our strength by self-possession, our influence by preserving our ancient principles of action. * * *
>
> If asked, Are you ready to defend yourselves, we reply, Most assuredly, to the utmost; * * *. And especially when half the world is on fire we shall be careful to make our moral insurance against the spread of conflagration very definite and certain and adequate, indeed.

After reminding us that our dependence in the past had not been in our standing army but upon the National Guard and Volunteers, he said:

> More than this carries with it a reversal of the whole history and character of our policy. More than this, proposed at this time, permit me to say, would mean that we had lost our self-possession, that we had been thrown off our balance by a war with which we have nothing to do, whose causes can not touch us, whose very existence affords us opportunities of friendship and disinterested service which should make us ashamed of any thought of hostility or fearful preparation for trouble. This is assuredly the opportunity for which a people and a Government like ours were raised up, the opportunity not only to speak but actually to embody and exemplify the counsels of peace and amity and the lasting concord which is based on justice and fair and generous dealing.

This was said under conditions no different from what they are now and if it was true then it is all the more true now.

But—

Said the President—

> I turn away from the subject. It is not new; there is no need to discuss it.

And here those of you who care to look back at the newspapers of the next day will see the suggestion that the President turned his face toward one side of the Joint Assembly especially to where sat the gentleman from Massachusetts who had been as "a voice crying in the wilderness" in behalf of preparation, and that laughter spread over the assembly, because everybody seemed to recognize to whom the President was looking, and what he had in mind. Then the President continued:

> There is no new need to discuss it. We shall not alter our attitude toward it because some amongst us are nervous and excited. We shall easily and sensibly agree upon a policy of defense. The question has not changed its aspects because the times are not normal. Our policy will not be for an occasion. It will be conceived as a permanent and settled thing, which we shall pursue at all seasons, without haste and after a fashion perfectly consistent with the peace of the world, the abiding friendship of States and the unhampered freedom of all with whom we deal. Let there be no misconception. The country has been misinformed. We have not been negligent of national defense. We are not unmindful of the great responsibility resting upon us. We shall learn and profit by the lesson of every experience and every new circumstance; and what is needed will be adequately done.

These were high and lofty sentiments, beautifully expressed, and were greeted with loud applause, especially on the Democratic side.

Congress continued in session until March, 1915. No suggestion of danger was made, although the European war continued with increased intensity.

On December 7, 1915, the President again appeared in person before Congress. His theme this time was national preparedness. He seemed to think that we are in danger and that immediate steps should be taken to prepare for such danger, and after suggesting what should be done he said that such preparation for defense seemed to him "to be absolutely imperative now." The President was heralded everywhere as a convert to preparedness. He joined the ranks of those who he said in his message of December 8, 1914, were "nervous and excited." The President himself in a speech some time ago admitted that he had changed his mind and placed himself in the ranks of the "nervous and excited" people.

Mr. REED. Mr. President, will the Senator yield for a question?

Mr. JONES. I think I shall have to decline to yield.

The VICE PRESIDENT. The Senator has requested not to be interrupted.

Mr. REED. Oh, I did not understand that.

Mr. JONES. I am sorry; I should like to yield, but I am afraid that by doing so I might lose the floor, and I am not quite through as yet.

After the President's message the cry for preparation became louder; our danger seemed more imminent. Some of my good newspaper friends saw visions of armies invading our shores, our cities laid waste, and our people enslaved. Letters began to come in urging preparedness and urging support of the President and his program. In all these urgings there was a dearth of reasons given or dangers pointed out. They were all like the President's message—lacking in any reason for special haste. The President's program seemed to me to mean very little. He had apparently placed himself in the ranks of those who feared immediate danger and who sought to prepare for it, while the plan he proposed amounted to nothing and would meet no immediate emergency and go but a little way toward preparing for the future.

Most of the expressions in the papers, whether editorially or through interviews, and most of the letters which came to me were general in character. No particular danger was pointed out. No particular preparation was suggested. It seemed to be enough to say that we should prepare, and prepare without limit. Everybody seemed to think that the President had joined the ranks of the "nervous and excited," and therefore we should prepare for something in a large and indefinite way. When I was home in the summer and fall I had found no great fears among our people. No special preparation was urged upon me. I met all classes of people; they talked of the situation and were all for peace, but few of them feared any trouble, and there was little demand for increases in the Army. In view of the increased agitation and the general indefinite, though excited, character of the letters that began to come in, it occurred to me that it might be instructive and helpful to get the views of my constituents upon some particular propositions, and especially get their reasons as to why they thought we should prepare and their views as to what we should prepare to meet. This would give me a good idea as to what kind of preparation they wanted and would help me in reaching a conclusion upon this question which had become of such importance. Certain questions had arisen in my mind upon the answers to which it seemed to me rested largely the determination of what action we should take for the present and what action should be taken for the future. Some of these were suggested by the recommendations of the President in his message. I had reached certain tentative conclusions upon them myself, but I knew I was not infallible. My judgment might be at fault. I wanted to know how my constituents looked at them. This would enable me to represent them more fully and more intelligently. If my judgment was a mistaken one, it might be corrected. Editorial expressions, I knew, represented very largely the views of the individuals writing them rather than the thoughtful views of the people generally. There was no way to get the people's views

except to ask for them. So I decided to ask the people for their views as directly as I could. I prepared a letter submitting certain questions which I sent to every paper in the State, daily and weekly, and asked that it be published. I think every paper kindly did so. In this letter every man and woman was asked to read carefully the questions and "after considering them from every angle sit down and write me his or her views thereon." At the same time my own personal views were frankly stated.

Mr. President, I ask leave at this point to insert that letter in my remarks. I will not take the time to read it.

The VICE PRESIDENT. Without objection, it is so ordered.

The letter referred to is as follows:

AN OPEN LETTER OF INQUIRY TO THE PEOPLE OF THE STATE.

To each individual in the State of Washington:

I earnestly ask that every man and woman will read carefully the questions below and, after considering them from every angle, sit down and write me his or her views thereon. I have frankly stated my personal views, but as the representative of our people I desire in a matter of this kind to reflect their views as nearly as I can ascertain what they are, and it is to get this information that I am submitting these inquiries.

Do we need a larger standing army than we now have for purely peace purposes and domestic duties? I think not.

Whatever may be the final outcome of the present war in Europe, do you think that any of the countries involved will want to go to war with us at once or very soon after it comes to a close? I do not think so.

If you think any country now involved will desire to go immediately or very soon into war with us, kindly say why you think so.

Do you think it most probable that there will be at least several years of general peace when the war closes? I do.

If we are likely to be attacked by a strong power, do you think that an increase in our standing army by 40,000 men will enable us to make an effective defense? I do not.

If we should prepare now to meet an attack by a strong power in the near future, don't you think we should make adequate and prompt preparations by organizing a standing army of 250,000 or 500,000 men, as urged by the war experts? I do.

If trouble is to come soon, should we take four or five years to prepare to meet it, either in military or naval preparation? I think not.

If early trouble is not probable, would it not be wiser to wait until the war closes and determine our policies by the conditions then existing? I do.

Don't you think the wisest preparedness now would be the construction of interstate highways along our coast lines, so that in case of the landing of a hostile force we could mobilize quickly our defense where needed? I think so.

We are excited over preparedness. There is a disposition to rush immediately into some scheme or plan for increasing our military and naval power, regardless of the cost and without waiting to see what the conditions may be that will confront us at the close of this war. If we conduct ourselves in a neutral way none of the countries engaged in it will want to get into a contest with us. Conditions resulting from the final treaty of peace may make the future actions of nations in regard to military armaments entirely different from what they are now. Because of the very great importance of this subject and of what increased military and naval armaments mean in the way of increased taxes, I am anxious to know the individual views of as many of our people as I can secure on the questions submitted. To me it looks like we are unduly excited and that the wise course to take would be to give our attention to preparing to meet the commercial contest that we are sure to face, and when war closes determine our military and naval policy upon conditions then existing among the great nations of the world.

Most respectfully, W. L. JONES.

Mr. JONES. Mr. President, my experience has been most interesting and instructive. My action was construed in all sorts of ways. Some said I would be pleased to receive only answers in accord with my own. Some thought those who were in accord with me would be the only ones to write. Others suggested that those who were in accord with me would not think it necessary to write, and that only those who were against my views would take the trouble to write. Some expressed the belief that those only would write who were strongly for preparedness, and others expressed just the opposite view. Some thought people would write me agreeing with me in order to get my good will. Some thought it was unfair that I had stated my own views, while others thought this was a very fair thing to do. Some seemed to think that a representative of the people should conceal from them his views and opinions, while it always seemed to me that of all men he should be frank and open with his constituents and let them know his views and opinions. If wrong, they might be corrected; and if not corrected a new representative might be gotten. Some at once saw politics in it, though this had never entered my mind. Some seemed to think it impossible for a Senator or Representative to seek advice from his constituents without having some political advantage in mind. I note this morning in a great newspaper in the city of New York an editorial which suggests that people who do not agree with its views have formulated their views by taking into consideration what they might gain by getting the votes of this or that class or nationality throughout the country. It is an unfortunate state of affairs, Mr. President, when questions of patriotism, questions of great national import, must be discussed or considered on that low plane. The question of preparedness is, and should be, above and beyond politics. It is an American question solely, and what I could hope to gain politically I do not know. Nevertheless, some very intelligent men could see only politics in my action. Some also thought others would not write because they were too busy; others thought some would not write because "JONES ought to do as he pleases"; others said that their letter was the first they had ever written to a public official, and especially to a Senator or Representative, and thought it commendable in a Senator to ask the views of his constituents. A surprising number expressed the view that the people ought not to be asked their views, because they are not competent to say what should be done, and that they should not be consulted. I can not agree with such suggestions, and believe that upon the fundamentals of this question the aggregate judgment of the people will be the best criterion to follow. Others expressed surprise that I should ask the advice of the people rather than the opinion of the experts, overlooking the fact that very seldom do two experts agree upon any question, and also that the basis of any system of preparedness is not a question for the experts at all, but one that must be determined by their Senators and Representatives.

Some of my good newspaper friends who were advocating a very radical program of preparedness entirely misconstrued my letter, and at once charged me with being for peace at any price, and declared I was wholly opposed to any preparedness whatever; some of them seemed to think that it was an overpowering argument to say "JONES has joined with Bryan." I can not believe that they intentionally did this; but nevertheless, by glaring headlines, editorial miscomment, and putting in my mouth statements which I never made and never thought of, they conveyed this idea, and a great campaign to impress me with the fact that the people of the State of Washington are strongly for preparedness was inaugurated.

One of the papers printed a coupon (see coupon) addressed to me, saying "Washington is for preparedness. Vote for it," with a place for signature and a request to "send to JONES."

I have a copy of one of the coupons here, which I will ask leave to insert in the RECORD. It happens to be that on this coupon the person who signed it wrote the word "not" three times, where it was not expected.

The VICE PRESIDENT. Without objection, it is so ordered.

The coupon referred to is as follows:

SEND IT TO JONES.

Senator WESLEY L. JONES, of Washington, has announced himself as opposed to preparedness, and recently urged his constituents to write him their views on the subject. Now, he is being "deluged with letters in support of his attitude," according to word from Washington, D. C.

This is what he expected, for, being a good politician, he knows the "crank" is the busiest little letter writer in the world, while the man of affairs doesn't take the time to be.

But because the "crank" is so very busy assuring Senator JONES that he is right, it is absolutely necessary for the man (or woman) of affairs to get busy. The "crank" doesn't believe in insurance; the men and women of affairs do.

Therefore, if you are in favor of preparedness, clip out this blank and sign your name. Then, leave it at the Times office, or put it in the mail and send it to JONES.

SEATTLE, WASH., *January 15, 1916.*

Senator WESLEY L. JONES,
Care United States Senate, Washington, D. C.

DEAR SIR: Washington is for preparedness. Vote for it!

Name ——— ———,
Address ——— ———.

Mr. JONES. Persons were hired to stand at the entrances of theaters where "The Battle Cry of Peace" was being shown, to urge the people who came out to sign these coupons and send them to me. Advertisements were placed in the paper urging the people to come in and sign a petition to me urging preparedness, and get a beautiful flag in the form of a bow, and another advertisement offered a badge pin if they would sign a petition to this effect. This was kept up for weeks. Some of the smaller papers also prepared coupons, which their readers were asked to sign and send to me. What was the result?

There seems to be a feeling among Senators and Representatives that the people of this country are very much excited over this preparedness proposition; that they are getting worked up over it. What was the result of this campaign and the result of my writing these letters and asking for opinions and expressions from the people and having them published in every paper, big and little, in the State?

We have almost a million and a half of people in our State; 4,300 coupons were sent to me, of which 68 were changed to read against preparedness instead of for it. Petitions were sent in with 2,884 names. This was the result of this feverish campaign for preparedness in a State which, of all States, should be interested in it. Not much evidence that the people are excited or that any special wave of sentiment for special preparation is sweeping over the country. I admit I was mistaken in my letter when I suggested that the people are excited. They are not, but some are.

My letter, which was printed in all of the papers, inviting the people to write me their views brought me 665 letters for preparedness and 1,093 letters against any unusual preparation. Quite a good many were opposed to any preparation at all. I wrote a general letter to all those who sent in printed coupons or signed petitions asking them for their particular views. Remember, they simply sent in this coupon, "Washington is for preparedness; vote for it"; that is all. I wrote a general letter to all those who sent in printed coupons or signed petitions asking them for their particular views as to what sort of preparedness they were in favor of, stating my own views, and suggesting that if they wanted anything different I would be glad to hear from them. To these 7,184 letters I received 109 answers, and there were returned, uncalled for, 295. The rest of these people either agreed with me in my suggestions as to what preparation we ought to make or else they were so indifferent to it—they probably had gotten their bows; they had probably gotten their pins—that they took no further interest in it.

In my letter to those sending me coupons saying the State of Washington "is for preparedness" I stated that this expression meant nothing; that I assumed that everybody was for preparedness of some kind, and I asked them to tell me what kind of preparedness they were in favor of, and preparedness for what. Mr. President, I have that letter here and I ask to insert it in the RECORD, as a part of my remarks, at this point.

The VICE PRESIDENT. Without objection, it will be so ordered.

The letter referred to is as follows:

DEAR SIR (or MADAM): I have a coupon taken from the Seattle Times, or a petition, signed by you, saying, "Washington is for preparedness. Vote for it." That is all. With the greatest respect, I will say that this means nothing to me. It gives me no facts and no information I did not already have. I am for preparedness, and I assume that everybody is for preparedness; but what kind of preparedness? How much preparedness, and what are the facts and conditions upon which you would have preparedness? Do you think we are not prepared now? Many seem to think we are wholly unprepared. That is not so. During the last 16 years we have spent over four billion of dollars for naval, military, and coast defenses. It has not been wasted, as some seem to think. We have a Navy which, according to the experts, is not surpassed, if equaled, by the navy of any other nation except one. Assuming that the English fleet will be intact at the end of this war, the English nation is the only one that would dare attack us, because no nation would be so foolish as to try to transport a large army across the ocean in the face of a superior or an equal fleet.

From my viewpoint I am in favor of about the following preparedness in addition to what we have now: Largely increase the number of trained officers, so that in case of emergency we will have the men to drill those we will call to the colors; encourage military training in the schools and insist upon it in the land-grant colleges; increase largely the number and efficiency of our National Guard; keep on hand a large supply of ammunition and guns, although that is largely taken care of by the tremendous plants that have developed since the beginning of the present war, and the question of the Government taking over their manufacture is a matter of detail to be worked out later; encourage by liberal appropriation the development of the flying machine and the training of more men to operate them; construct without delay a large flotilla of submarines, swift torpedo boats, and torpedo-boat destroyers, and some of the swiftest scout cruisers; put our navy yards in good shape; some additions may be needed to our coast defenses, although, in my judgment, the submarine is the most effective coast defense we can have. I believe this will amply and safely take care of the situation to the close of this war, and then we can determine what further preparation we need.

If you can add to this plan, I would be very glad if you would tell me what additions you would make to it and the reasons therefor. My views are not unchangeable, and I want to consider all phases of the situation and take the action that will best promote the safety of our country and the welfare of our people.

With very highest esteem, I am,

Very sincerely, yours, W. L. JONES.

Mr. JONES. Also, at this point, I desire to insert a letter which I wrote to my friend Mr. Blethen, the editor of the paper in Seattle that had taken such an active part in this campaign, because that letter will show some things with reference to my position that I am not going to take the time to say here. I ask that that may be printed at this point as a part of my remarks.

The VICE PRESIDENT. Without objection, it will be so ordered.

The letter referred to is as follows:

JANUARY 12, 1916.

HON. C. B. BLETHEN,
Editor The Seattle Times, Seattle, Wash.

DEAR MR. BLETHEN: You have asked your readers to clip a coupon from your paper and send to me with reference to preparedness. You state that I have announced myself as opposed to preparedness. I know you do not intend to misrepresent my position. I have never made any such announcement. I have, in fact, stated frequently what I am in favor of in the way of additional preparedness, and I will state it again in this letter.

What I have done is to ask the individuals of my State not for their views with reference to preparedness but for their ideas of what the facts are upon which an opinion relative to preparedness should be based. You state that I expect to be flooded with letters in support of my attitude, "because he is a good politician and knows that cranks are the busiest little letter writers in the world."

It is strange that a man in public life can not ask his constituents for an honest expression of their views upon matters in which they are interested without being charged with doing it for political purposes. I never thought of such a thing when I sent this letter. This is a nonpartisan question and ought to be considered entirely free from politics, and that is the way I propose to consider it. Nor shall I be influenced by the number on one side or another, but by which appeals to me as best. My views now are not unchangeable, and if I am convinced I am wrong, they will be changed.

I have received many letters urging preparedness. I have seen many statements in favor of preparedness, but few of them give the reasons for it or just what preparedness they were in favor of. I thought by submitting these inquiries I would get some information that would give me an idea as to the character of preparedness that our people might be in favor of. I hardly think you would characterize as cranks those from whom I have received letters answering my inquiries in detail.

You ask your readers to write me that Washington is for preparedness. That means nothing, and I say this most respectfully. Everybody is for preparedness. I have always assumed that, but what kind of preparedness? How much preparedness? Preparedness along what lines? How much more preparedness than we now have? What is reasonable and adequate preparedness? Why more preparedness? These are the questions that I want to get answers to, and the sending to me of clipped-out coupons simply saying that "I am for preparedness" does not assist me in determining the proper course to take with reference to the question now confronting us.

We are already prepared to a certain extent; in fact, to a very large extent. During the last 16 years we have spent $4,000,000,000 in the way of military, naval, and coast defense preparation. This money has not been wasted either, as some persons think. To-day we have a Navy equal to, if not superior to that of any navy in the world, except one, if our naval experts can be believed. We have coast defenses which were thought a short while ago to be adequate. We have a Military Establishment that has proved itself entirely capable of taking care of peace conditions, and has already taken care of the troublous situation with reference to Mexico.

When the war closes in Europe there will be only one nation prepared to attack us with any prospect of success, assuming that her navy suffered no serious loss, and that is England. Does anyone think that she is going to seek a quarrel and attack us? No other nation would dare do it, because she could not risk the destruction of her fleet by an equal, if not superior, fleet, which would at the same time involve the loss of any army it might be convoying to our shores.

This, in brief, is my view of the situation, and I think it is sustained by the views of the experts. Let me say here that many say follow the views of the Army and Navy experts as to what should be done. That is all right when we arrive at the facts upon which we should prepare. Our Army and Navy experts do not pretend to say that we are in danger of attack, that we will be attacked, or that this country or that country will attack us. They simply assume facts, saying what we should do if certain facts and conditions exist. That is all right, but we want to first determine the facts upon which to get the experts' opinion, and that is what I am trying to do.

Now, what additional preparedness do I believe in from my viewpoint? We should provide, as soon as possible, for a large increase in our force of trained officers, so that in case of emergency we will have men who can drill men that are called to the colors. We should increase largely the number and efficiency of our National Guard. We should encourage military training and instruction in our schools and insist upon it in our land-grant colleges and universities.

This not only for the military preparation that it would give us, but also for the benefit that it would surely bring to our young men. A large supply of ammunition and guns should be kept on hand. This condition to a great extent is met by the tremendous ammunition plants that have been developed since the war began. Many urge that the manufacture of ammunition and guns should be taken charge of entirely by the Government. That is a matter of detail that can be worked out later.

The development of the flying machine and the training of men to operate it should be greatly encouraged. The development of the submarine should be encouraged and a large flotilla of submarines should be constructed without delay. Several swift torpedo boats and torpedo-boat destroyers should be provided, as well as several of the swiftest scout cruisers. Our navy yards should be put in ample condition, especially by way of the construction of dry docks, to care for any possible or probable fleet that we may provide. Some additions should probably be made in our coast defenses by placing at some points more modern and up-to-date guns, although, in my judgment, the submarine is the most efficient instrument for coast defense.

With these additions to the existing preparedness I believe that we will have made ample provision for any emergency that may arise prior to or soon after the close of the present war. When the war closes we should then survey the situation promptly and decide what, if any, further preparation should be made that the conditions demand. It does not seem to me that this is such a modest program of additional preparedness, and yet I think it can be carried out without adding very much to the annual appropriations for our naval and military establishments.

In addition to these naval and military preparations, the greatest military preparation that we can make is to prepare for the commercial contests that are to come after this war closes. We should revise our tariff and insure protection to our labor and industries and in some way begin the development of a merchant marine of our own.

I have thus written frankly my views as they are now formed with reference to this matter. I am getting many valuable suggestions from the letters that I have received discussing preparedness from both standpoints. I am not trying to find out how many are for preparedness or how many are against it, but I am trying to ascertain the facts upon which action can be taken and action that will promote the safety of our country and the well-being of our people.

Will it be asking too much of you to publish this letter in your valuable paper in order that your readers may know in detail my position? And if there is anyone who has fault to find or has any suggestion that he desires to make I shall be very glad to hear from him.

With highest esteem, believe me to be,

Most sincerely, yours, W. L. JONES.

P. S.—I have taken the liberty of sending a copy of this letter to some of the papers of the State.

W. L. J.

Mr. JONES. This suggestion seemed to be surprising to some of my good friends. They seemed to think that only one meaning could be put to the word "preparedness." For the benefit of those who think the word "preparedness" may mean only one thing I will give the words of some of the experts:

Gen. Bliss says—and I quote him in full, because he discusses this matter so clearly and succinctly from almost every angle and suggests the various questions that come to a man who is trying to consider this question fully and arrive at a wise conclusion:

Finally, there is one other matter on which I do not think too much light can be thrown—it is a blind subject at the best—with a view to clearing the approaches to the determination of the question, as far as they can be cleared, of what constitutes adequacy in any policy or plan that may be proposed to you. The question has already been asked in this committee, "Do you believe that this or that plan is adequate?" I do not know of any more difficult question to accurately answer. It is not susceptible of mathematical demonstration. It is a matter of opinion, and the most that can be said in advance of the event is that that opinion is probably the soundest which is supported by apparently the soundest reasons. Every day in the war now going on in Europe the lives and limbs of thousands of men are staked, as though on the throw of dice, on this question. Every day at some place or another the commander of some force, large or small, advances to an attack in the execution of a plan which he must be supposed to believe to be adequate for his ultimate purpose. He determines as accurately as he can the number of his opponents, the strength of their position, the power of their artillery, and other adjuncts of the defense, the probable amount of their ammunition, the courage and tenacity of their men as previously demonstrated in his own experience or in that of others communicated to him. With all of these assumptions in mind he gathers what he believes to be the necessary force of his own; he brings up his reserves; he perhaps borrows artillery and reserve ammunition from troops on his right and left. Meanwhile the commander of the defense, with more or less knowledge of what his opponent is contemplating, makes his own assumptions and corresponding plans. The commanders are of equal intelligence. They are assisted by equally intelligent staffs. Each knows that the lives of his men, his own reputation, possibly the very life of his nation, depends upon the adequacy of his plans. Every human available agency has been employed to guarantee that adequacy. You and I, with the complete foreknowledge of these plans and of the means for executing them, may be unable to pick a flaw in either of them; each plan is apparently perfect. Yet it is a foregone conclusion that the event can not be a draw. Either the attack or the defense must win. And a few hours after the execution of the two plans has begun the event, with its terrible loss to both sides, will prove that one plan is adequate and the other inadequate.

Whenever, at the present time, you hear a group of men hotly discussing the question as to whether a certain proposed plan for national defense is adequate or inadequate, you will find latent in the mind of each one a different idea as to what the plan is intended to accomplish. Perhaps the plan calls for 500,000 trained men to be available at the end of three years. Another attacks it, and you will find perhaps that his underlying reason is that he does not believe we can await three years for such a force. Another, who attacks it on the ground of inadequacy, does so because he believes a force of 350,000 or 400,000 fully equipped enemy troops may be landed at some point on either of our coasts within 15 days from an unknown initial point of time, and that therefore our proposed force can not be assembled for resistance in time. The one who proposes the plan assumes that such a force would not attempt to leave the enemy's country until our naval force was driven from the seas and that this, even if possible, would require a minimum of six months. One man attacks the plan because he assumes that the enemy can not be held off long enough to permit us to raise and train the great citizen army which he assumes to be necessary for final success; another man defends it because he believes that the enemy, which he assumes, could be held off for a sufficient time for that purpose. One man proposes a plan and maintains its adequacy because he assumes that we will be attacked by only one certain enemy; another attacks it for its inadequacy because he assumes a coalition against us of several powers. One man assumes an attack by a great naval power with a small army, and another assumes an attack for a great military power with a small navy. One man makes a plan believed to be adequate for the defense of an important outlying possession on the assumption that our Navy will arrive within six weeks to drive away the attacking naval force; another assumes that our Navy can not arrive till the lapse of six months, and declares the plan inadequate. The best any nation can do and the most nearly it can come to guaranteeing the adequacy of its plans for defense would be to prepare to the extent of its ability for any contingency. Nothing but the most rare physical combination of circumstances, as shown in the geographical relation of such a nation to not only its possible but its probable and even almost certain enemies on all sides of it, would justify such a course. Nothing would justify it except the certainty that its very life depends upon it and that it must take its choice between that course or voluntary suicide. As for us, I think we are justified in accepting the adequacy of any plan, to be carried out in time of peace, which gives reasonable hope that it will hold off whatever enemy we assume as probable and as the most probable long enough for us to organize the resources of the country, after war threatens, to such a degree as will reasonably assure our ultimate success. In other words, it is a plan which confines, as far as possible, the burden of war to the time of war. In such a plan the Regular Army and the Organized Militia and the trained citizen army will have well, and equally well, performed their part if they loyally work together to bring about this result.

Congressman KAHN, a member of the Military Affairs Committee of the House, and who may be considered an expert, said while Miss Jane Addams was discussing the question of preparation before that committee:

Mark you, I have a great deal of respect for what you have said, and while I hope we may never have any war, I do believe that this country ought to be prepared. How far it ought to be prepared is a question. How far we ought to go is a matter of discussion.

Gen. Miles's qualifications as an expert can not be questioned by anybody. Gen. Miles says:

The word "preparedness," which is heralded from one end of the country to the other, implies nothing. It may be extravagant or inefficient.

This testimony was given February 8th and long after I wrote my letter in which I said substantially the same thing, and I congratulate myself that my ideas are so much in line with those of real expert knowledge.

The President recommended an increase in the standing army. Why? To meet an immediate danger or an emergency likely to be met at the close of the war? No. This increase is solely for peace and peace duties. In his message of December 7, 1915, he said:

We will not maintain a standing army except for uses which are as necessary in times of peace as in times of war.

Referring to the additions which he proposed, said:

These are the additions necessary to render the Army adequate for its present duties.

Mr. SMITH of Michigan. From what is the Senator quoting?

Mr. JONES. From the President's message of December 7, 1915, when he got nervous and excited.

It is perfectly clear that the President did not recommend any additions to the standing army for the purposes of war. It is recommended as a permanent increase and as necessary solely in times of peace. He reiterated this in many of his speeches on the famous trip he made some time ago. At Pittsburgh he said:

We do not intend—we never intend—to have a standing army greater than is necessary for the ordinary uses of peace.

At Chicago he said:

The increase in the Regular Army that is being proposed to the present Congress is intended only to bring the Regular Army up to an adequate peace establishment.

It is not to meet an emergency. It is not to meet a sudden danger. It is not to meet an attack. It is a permanent system for peace duties.

In Kansas City he said:

And now, if you please, because I am asking the Congress to give the Government an army adequate to the uses of peace, to the uses of the moment, some gentlemen go about and prate of Military Establishment.

I am sure the people did not understand the President's position. They thought the President was urging preparation to meet danger rather than to discharge the duties of peace. Nothing had appeared showing needed enlargement of our Regular Army for purely peace purposes and domestic duties. We have maintained order in the Philippines, guarded the Panama Canal, maintained details at Nicaragua and over in Haiti, and for three years maintained a patrol along the border between this country and Mexico without any increase in the standing army and without any request from the President for any such increase. Why, then, do we need an increase for purely peace purposes? We are not a troublous, riotous people, and if we do not need a standing army for any other than peace purposes we do not need any very great increase for peace purposes. I am, however, willing to accept the judgment of our experts as to our needs for peace, and if they deem an increase necessary I am willing to vote for it. I am sure we should have some increase to man our coast defenses, and the Mexican situation justifies the increase proposed in this bill. I shall refer to that a little bit later.

The President has been heralded as a convert to preparedness. He admitted it himself, and yet the plan which he submitted and urges is not a preparedness program at all which will meet any entanglement or emergency at the same time arising out of the present war. He has again shown his wonderful facility in riding two horses going in opposite directions. He leads the shouting hosts of preparedness and at the same time stands upon a program of peace. He is simply taking advantage of the excitement to secure what the military authorities have not been able to secure in times past. Secretary Garrison frankly expressed the real purpose of this program now and the reasons why there is hope of success. He was asked by Senator SHEPPARD a few questions, to which he gave very frank answers:

Senator SHEPPARD. If there had been no European war, would these suggestions which you have just gone through with have been made at all?

Secretary GARRISON. Oh, my, yes. They have been made from Gen. Washington on down. There never has been any student of military affairs in this country, who has not tried to get a national military system based upon national force. They have all realized that we are building and continuing a situation founded upon quicksand.

Senator SHEPPARD. Has not the European war created a public sentiment in this country?

Secretary GARRISON. Oh, yes; that is the valuable thing that has happened to this country, if anything valuable has come out of that tragedy.

Senator SHEPPARD. That is what I want to get at. What is the relation of the European war to the question of preparedness?

Secretary GARRISON. The relation is that it has concentrated public opinion for the first time almost in the lifetime of those who are now living so that the public will accept and will listen and will be gratified by any wise, sensible settlement of the subject, because they are thinking about it.

Senator SHEPPARD. Has not the fact that nothing has been done in that direction up to date been due to the fact that public opinion had not been sufficiently awakened?

Secretary GARRISON. I think there is no doubt of that. I do not think you will find, Senator SHEPPARD, enough disagreement to make it worth while considering between the treatment of this subject from the military standpoint at any time in our history by the people who have studied it, mutatus matandis, the changed situation of the country as to population, and things of that sort, which are necessary changes; but, excepting for that, the conclusions are singularly identical. Of course the state of the public mind has everything to do with what was accomplished, and the opportunity that this Congress has to accomplish something is just because of what we are speaking of, namely, that public attention is absolutely concentrated upon this and that the President of the United States, voicing the sentiment of the Nation, has laid it before Congress as the one primary, exclusive subject for their immediate consideration.

In other words, Mr. President, the military authorities and the administration are taking advantage of the war and the excitement and fear produced by it to establish a military system, not to meet any emergency or danger growing out of present conditions but to meet a possible contingency that may arise some time, somehow, in the future. They are taking advantage of this excitement to fasten a system and a burden upon the people which they would not assume under ordinary normal conditions. It is for this purpose the President has forsaken the "clear, definite, and steadfast" judgment which he had in 1914 upon the question of national defense. It is for this purpose that he left Washington City while Congress was in session and made a tour throughout the East and out to the Middle West, exciting the people and filling them with fears of national conflagrations and disturbances. If we work it out well, well and good, but the people should not understand that we are preparing to meet an emergency or a danger that is likely to confront us at the close of this war.

I am not saying that we ought not to overhaul our military system. I am not saying that we ought not to have a reorganization of our military force. I am not saying that we ought not to have an increase in it; but I am simply calling attention to the fact that what is proposed is not proposed as an emergency proposition or to meet any feared danger, but is a permanent system, and intended to be such, and not being inaugurated under the influence of fear and "war's alarms."

The action of the President is peculiar, strange, unusual, and unprecedented. Never before has a President gone out while Congress was in session in a campaign in behalf of a public sentiment for proposed legislation.

After declaring to Congress on December 8, 1914, that there were some people who were "nervous and excited," but that there were very few of such people, and that we expected to go on in the even tenor of our ways, the President himself finally became "nervous and excited." He in effect admitted this himself. After his message of December 7, 1915, he watched to see if the people became duly excited or not. They did not seem to come up to his expectations, and, with the fervor and zeal of a new convert, he left his duties at Washington City and took a tour through the East and away out through the Middle West in order to impress the people with the new cause which he had so suddenly espoused. While telling the people that he did not wish to excite them, but that it was his desire to quiet their judgment. He said in his speech at Kansas City:

I do not wish you to be any more excited than I am.

That is it. He became excited and nervous, and he simply wanted the rest of the people to become excited and nervous also.

These speeches are wonderful productions. The more they are studied the more remarkable they appear. They are inconsistent from beginning to end. Professing to be nonpartisan, the spirit of partisanship appears all through them, and the constant reference to nonpartisanship shows the President to be fully conscious of the partisan spirit of the trip and the speeches. Self-gratification and self-glorification are so apparent as to be repellant. He seems to fear that the people would not appreciate him, and he wants to show them that they ought to do so. He fears that they will not realize the tremendous burden that he is bearing, and so he must call them to their attention over and over again. He fears that they will not sympathize with his anxiety, and so he must seek their pity. In one sentence he urges them to peace and in the next he excites to war. In one breath he tells them there is no danger, in the next he warns of terrible conflagrations which may come immediately. He points out the necessity for immediate preparation and then proposes a plan which will take years to bring to any state of perfection. These speeches show the visionary, uncertain, hesitating, vacillating, hit-or-miss policy of the entire administration and its Micawberlike way of looking and hoping for something to turn up to help us out of difficulties. Above all, however, he wanted to impress upon the people that "I have kept you out of war," when they have not been trying to get into war, and their only fear is that they may be led into war.

In his speech at New York City before the Railway Business Association, he said:

Nobody seriously supposes generally that the United States needs to fear an invasion of its own territory.

This must have sounded strangely to those who have hailed the President as a convert to and a leader of the cause of preparedness as generally understood. I commend this statement to the thoughtful consideration of those who see navies demolishing our cities and armies quartered upon our homes. The President surely did not make that statement without knowledge. He surely did not make that statement without considering the expert advice which he has. It is all available to him, both naval and military, and that must be the final conclusion reached by them, or the President would not have made this statement. Keep it in mind when you hear his pleadings for armies of trained men. If we are not to be invaded what use are we to put these men to? Are we to invade other countries? Is that what our military training is to be for? The people of this country may be for military training; they may be for military preparation, but they are not for offensive warfare. Of course, if we were to get into war with Mexico, we would expect to invade her territory. Is that what the President has in mind? If we are to get into war with South American countries we would invade their territory. Is that what the President has in mind? If we should war with Great Britain, of course we would promptly invade her territory. Is that what the President has in mind? I think not. I believe that he, in this sentence, states exactly what he believes and what the great majority of the experts believe, and that is that the United States need have no fear of an invasion of its own territory by any power on earth. In this address he said:

What I am trying to impress upon you now is that the circumstances of the world to-day are not what they were yesterday, or even were in any of our yesterdays, and it is not certain what they will be to-morrow. I can not tell you what the international relations of this country will be to-morrow, and I use the word literally; and I would not dare keep silent and let the country suppose that to-morrow was certain to be as bright as to-day.

There is no information given here except what everybody already knows, but coming from the President under the circumstances, it was very suggestive of danger. And it is suggested that this danger is becoming more imminent each day, but what does the President propose to do? He says:

We ought to have in this country a great system of industrial and vocational education under Federal guidance, and with Federal aid from which a very large percentage of the youth of this country will be given training in the skillful use and application of the principles of science in manufacture and business, and it will be perfectly feasible and highly desirable to add to that and combine with it such a training in the mechanism and care and use of arms, in the sanitation of camps, in the simpler forms of maneuver and organization as will make these same men at one and the same time industrially efficient and immediately serviceable for national defense.

That this is very desirable legislation no one doubts; it is wise preparation, but it is not a preparation adequate to meet an immediate situation in the country which is getting darker every day. It will take years to accomplish in any measurable degree these things, and surely will not meet an emergency. This is legislation which we have been urging for some time and should have regardless of threatened dangers, and what a Republican Senate and a Republican President sought to pass, but which was defeated by a Democratic House. In this same speech the President said:

What I am after, and what every American ought to insist upon, is a body of at least a half million trained citizens, who will serve under conditions of danger as an immediately available national reserve.

I will show later on how he expects them to become immediately available and what he means by this suggestion. If he means what he actually says, he should ask Congress for authority to call for 500,000 volunteers at once to serve until the dangers which he has in mind pass away. Let us enlist them immediately, begin their training, that they will be ready and available in case a dark day comes while this contest is on when they are needed. If there is the danger which he hints at, this is the only way to meet it and the only way to prepare for it, and if the President should say to Congress that he believes such a danger is imminent and such a force needed, Congress would respond unanimously.

In his speech at Pittsburgh he said:

We are not going to be stalked and daunted by ghosts or fancies.

He was then referring to the fears expressed by some with reference to the plan which he proposes, fears which I do not

entertain, because if there ever was a harmless, inefficient, inadequate, and useless proposal suggested to prepare us to meet an emergency or an absolutely inefficient means of defense or offense, none could compare with that proposed by the President. He recognizes the delay and inefficiency of the suggestion made with reference to education, and he says:

But we have to create the schools and develop the schools to do these things.

And now he gives hint that it is necessary for a more urgent preparation by saying:

And we can not at present wait for this slow process. We must get at once to the task of training a very considerable body of men to the use of arms and the life of camps.

That must have suggested to his hearers the presence of danger and the necessity of prompt preparation to meet it. He did not suggest, however, that these men were to be called on immediately. He suggested that this would be done by having the young men who are employed throughout the country volunteer to take up training, and that their volunteering would depend largely upon the willingness of their employers to see that no obstacle was put in their way—a very uncertain method, to say the least, of securing a well-trained fighting force which must be had "at once." Again he said:

I want you to realize just what is happening, not in America but in the rest of the world. It is very hard to describe it briefly. It is very hard to describe it in quiet phrases. The world is on fire and there is tinder everywhere, and sparks are liable to drop anywhere and somewhere there may be material which we can not prevent from bursting into flame.

These are significant words. Coming from the President they are doubly significant. They could have but one effect upon his hearers. They signify immediate, probable, and great danger. They would excite fear and arouse apprehension. What would be the natural impulse under such a condition of things? Immediate preparation to meet an immediate and impelling danger. If your house were threatened in this way, you would not talk for days and weeks and years of getting ready to meet it. You would begin immediately to form bucket brigades and station them at danger points and be ready to extinguish any spark that might threaten. Again he says:

I must tell you that the dangers are infinite and constant. I should feel that I was guilty of an unpardonable omission if I did not go out and tell my fellow countrymen that new circumstances have arisen which make it absolutely necessary that this country should prepare herself, not for war, not for anything that smacks in the least of aggression, but for adequate national defense.

What does he mean? Are we to be embroiled in this conflict? If so, does not that mean war, and is not that what any immediate preparation is for? Are we threatened with attack? If not, are we going to attack some one? Not at all. He has no real danger in mind. He just wants to get the people to do this, and this is what he is really out for:

I want you to make yourselves vocal. I want you to feel that everyone who comes within earshot of it knows that you are a partisan for the adequate preparation of the United States for national defense. I come to ask you not merely to go home and say, "The President seems to be a good fellow and to mean what he says"; I want you to go home determined that within the whole circle of your influence the President, not as a partisan but as a representative of the national honor, shall be backed up by the whole force that is in the Nation.

In his speech at Pittsburgh, at the overflow meeting at the Soldiers' Memorial Hall, the President said:

Nobody doubts, given time enough, we can assert any amount of force that may be necessary, but when the world is on fire how much time can you afford to take to be ready? When you know that there is combustible materials in the life of the world and in your own national life, and that the sky is full of floating sparks from a great conflagration, are you going to sit down and say it will be time when the fire begins to do something about it? I do not believe that the fire is going to begin, but I would be surer of it if we were ready for the fire. And I want to come as your responsible servant and tell you this, that we do not control the fire. We are under the influences of it, but we are not at the sources of it. We are where it, at any time, may affect us, and yet we can not govern its spread and progress.

Then he says:

If I am to maintain the honor of the United States, and it should be necessary to exert the force of the United States in order to do it, have you made the force ready? You know that you have not. * * * I want every man and woman of you to stand behind me in pressing a reasonable plan for national defense.

The President does not maintain the honor of the United States. He may assert its rights and the rights of its citizens, but the people themselves must maintain its honor. They are the final judges as to when its honor is impeached, and they must bear the burdens, suffer the sacrifices, and fight the battles necessary to maintain its honor. There need be no fear but that the people of this country will maintain the honor of the Nation with every drop of blood that flows in their veins; but they have reserved to themselves the right to determine when that honor is invaded, and they will not permit the national honor to be the shield of greed, commercialism, or individual self-gratification. If the honor of the Nation is threatened, if there is immediate danger to it, let the President say so and tell us what it is and what is needed, and the people will respond promptly. The President says that he is not going to expound any particular plan, but—

The important part is that it is imperatively necessary that we should have a plan, have it early, and put it into execution at the earliest possible moment, by which we will have a great reserve of men sufficiently trained for any kind of military service and ready when they are called on.

Then he says:

And the facts of the world are such that it is my duty to counsel my fellow citizens that preparation for defense can not any longer be postponed.

How does this suggestion and this language compare with the plan which he proposes, which, as will appear a little later, is to take a hundred thousand, or a little more, men a year and train them two or three months of each year for about three years? How can such a plan, even if it could be carried out, prepare us to meet the conflagration, or put out the sparks, or face the immediate dangers that confront us in connection with this world conflagration? Does not it look like the President is trying to scare the people into doing something that they could not be gotten to do in a normal state? Does not it look like the President is trying to do just what Secretary Garrison frankly said is necessary? Then he said:

And so, my fellow citizens, what I am pleading for with the utmost confidence is the revival of that great spirit of patriotism for which a hall like this stands as a symbol.

Mr. President, there need be no fear about the spirit of patriotism dying in the hearts of our people. If that is what the President fears, he does not understand our people as he ought to understand them. If that is the danger that he fears; if that is what is making the days get darker and darker, then he should cease worrying.

In his speech at Cleveland, Ohio, the President said:

All the world outside of America is on fire.

That must have had anything but a calming effect upon the minds of the people of Cleveland. Referring to America, he said:

She not only, therefore, must play her part in keeping this conflagration from spreading to the people of the United States, she must also keep this conflagration from spreading on this side of the sea.

He followed this fear-inspiring statement with this suggestion as to how it should be met:

What we want is to associate in the training with the Army of the United States men who will volunteer for a sufficient length of time every year to get a rudimentary acquaintance with arms, a rudimentary skill in handling them, a rudimentary acquainance with camp life, a rudimentary acquaintance with military drill and discipline, and we ought to see to it that we have men of that sort in sufficient number to constitute an initial army when we need an army for the defense of the country.

This suggestion would have rather a sedative effect; no suggestion as to there being any immediate need for these men, and it is further suggested that they start out only with a rudimentary acquaintance of arms, rudimentary skill in handling them, and rudimentary acquaintance of camp life. This certainly would not be a force of the character to meet a conflagration started on this side of the sea from that now going on in Europe, or to meet the trained veterans of any nation.

After referring to the National Guard, and apparently thinking that the minds of his hearers had calmed a little bit, he said:

We are interested in making certain that there are men all over the United States prepared, equipped, and ready to go out at the call of the National Government upon the shortest possible notice.

This is a little different from the suggestion above.

He then continues:

You will ask me, "Why do you say the shortest possible notice?" Because, gentlemen, let me tell you very solemnly you can not afford to postpone this thing. I do not know what a single day may bring forth. I do not wish to leave you with the impression that I am thinking of some particular danger; I merely want to leave you with this solemn impression, that I know we are daily treading amidst the most intricate dangers, and that the dangers we are treading amongst are not of our making and are not under our control, and that no man in the United States knows what a single week or a single day or a single hour may bring forth. These are solemn things to say to you, but I would be unworthy of my office if I did not come out and tell you with absolute frankness just what I understand the situation to be.

Mr. President, if the President of the United States meant what he said and meant to convey the impression which his words would necessarily convey, he does not do his duty if he does not come to Congress and tell us that any day may bring to us tremendous dangers and involve us in the conflagration which is now raging across the sea, and urge us to prepare immediately to meet such a danger. He does not. He only refers in a general way in this address to the Cleveland people to his desire for men drilled only a sufficient length of time

during the year to give them a rudimentary acquaintance with arms, camp life, military drill, and discipline. The whole purpose of the speech seemed to be to arouse them to bring influence to bear upon Congress not for immediate preparation, not for effective preparation, not for preparation to meet an immediate danger, but to enact into law the suggestion which he has made for a permanent system for the future, and to do something that the people of the United States would not do under normal times and would not have thought of doing except for this war in Europe, and which is not intended, in fact, to meet any crisis growing out of the war in Europe, but which he hopes may cause those urging preparedness to think that their demands have been met.

In his speech at Milwaukee he said to his audience:

I want at the outset to remove a misapprehension that I fear may exist in your mind. There is no sudden crisis; nothing new has happened; I am not out upon this errand because of any unexpected situation.

He ended by saying that they must not think that something extraordinary had happened, or was about to happen, to compel him to leave his position in Washington City while Congress was in session. He no doubt knew that they had read his statement made at previous meetings, and he seemed to want to calm their minds; but when he has about brought peace to them, note this disquieting suggestion:

I have come to confer with you upon a matter upon which it would, in any circumstances, be necessary for us to confer when all the rest of the world is on fire and our own house is not fireproof. Everywhere the atmosphere of the world is thrilling with a passion of the disturbance such as the world has never seen before, and it is wise, in the words just uttered by your chairman, that we should see that our own house is set in order and that everything is done to make certain that we shall not suffer by the general conflagration.

It is easily understood what effect such a suggestion would have upon his hearers. There would be no thought of delay in setting our house in order. They would want prompt and immediate action and they would naturally think that was what the President wanted. Did he proceed to tell them that he proposed to call out at once a sufficient force and prepare it to put our house in order and make it fireproof, in order that we might not suffer from this conflagration? Not at all.

After some beautiful expressions calculated to do away with the sharp attack made in his annual message upon hyphenated Americans, and after calling attention to the fact that the honor of the United States must be maintained, and feeling, perhaps, that they had gotten into a little too peaceful frame of mind, he said:

Therefore there may at any moment come a time when I can not preserve both the honor and the peace of the United States. Do not expect of me an impossible and contradictory thing, but stand ready and insistent that everybody who represents you should stand ready to provide the necessary means for maintaining the honor of the United States.

Of course, they would do that. Everybody is in favor of maintaining the national honor, and he may have no fear that our people would not do it, and they are ready to furnish him any time anything necessary to do it. He says this may be necessary "at any moment." If so, why delay? Why spread preparation over three, four, or five years? He then very beautifully expresses his confidence in our people and his desires to have competent men to protect us, and points out what a small thing he is asking of our people. He probably thinks he has the people in too quiet a frame of mind to leave them, so he says:

We are working out American principles a little faster, because American pulses are beating a little faster, because the world is in a whirl, because there are incalculable elements of trouble abroad which we can not control or alter. I would be a derelict to the duty which you have laid upon me if I did not tell you that it was absolutely necessary to carry out our principles in this matter now and at once.

At Chicago he said:

Another year has been added and now no man can confidently say whether the United States will be drawn into the struggle or not.

Contrast this with his statement of only a short time before:

No one seriously thinks that the United States is to be invaded.

If that is true and we are likely to be drawn into this struggle, how is it to be? None of these nations now at war will come over here. Are we to go over there? Must we prepare to invade them? Is that what we are preparing for? Must we send our soldiers to die in the trenches and on the battle fields of Europe? Must our naval ships act as convoys for foreign merchantmen? Our people will not volunteer with any alacrity to do that. Neither our safety nor our honor can be involved in any undertaking of this character. If, however, we are in danger of being drawn in by no preparation and can avoid it, let us make whatever preparation is necessary to accomplish that very desirable end. It will be money well spent.

After discussing in a very beautiful way the high ideals of our people and our Government and the means which we have to protect ourselves, and of the pledges which we have made back of the Monroe doctrine, and of the drawing together of the Americas upon the handsome principle of reciprocal response and reciprocal defense, he says:

When I speak of preparation for national defense I am speaking of something intangible and visionary; I am looking at a vision of the mind.

What do the people think he means? This is what he says he means:

When I speak of preparation for national defense I am speaking of something intangible and visionary; I am looking at a vision of the mind.

Is it possible that all his warnings of conflagrations and dangers from across the sea and all the suggestions that we should have not only an increase in the standing Army and added efficiency to the National Guards, but that we should have an additional force of four or five hundred thousand men with rudimentary training is all intangible and visionary? Is all this a mere vision of his mind? That seems to be his idea of it. What kind of people did he think he was talking to in Chicago? He seemed to think they required a different sort of treatment from those in Cleveland and the other places that he had visited. What is the danger that he has been looking at? What is the danger that he expects to come to our people and to our country? He says, referring to America:

There is no immediate prospect that her material interests may be seriously affected, but there is constant danger, every day of the week, that her spiritual interests may suffer serious affront, and it is in order that they may be safeguarded, in order that America may show that the old conceptions of liberty are ready to translate themselves in her hands into conceptions and manifestations of power at any time that it is necessary so to transform them, that we must make ourselves ready. * * * I came merely in order that you might understand the spirit in which they are proposed, and also receive from my lips the assurance of the absolute necessity that they should be done thoroughly and done very soon.

That seemed to be all that he thought necessary to suggest to the people of Chicago.

At Des Moines he was very careful on the start to caution the people against excitement, and assured them that—

* * * It would be easy, if I permitted myself to do so, to draw a picture of the present situation of the world which would deeply stir your feelings and perhaps deeply excite your apprehension, but I would not think that it was right for your Chief Magistrate to speak any word of excitement whatever.

Having thus calmed them in an up-to-date Mark Antony way, and after referring to those preaching the doctrine of peace and the mistakes of out-and-out pacifists, he says:

I have come to tell you that there is danger to our national life from what other nations may do. * * * My fellow citizens, you may be called upon any day to stand behind me to maintain the honor of the United States.

What a shock this must have been to their pacified feelings and in what a bewildered state of mind these people must have gone away from the meeting. They must have wondered what their President meant, and it must have been difficult for them to reconcile his statements. I shall not try to do it, but I ask you to compare his statement at Des Moines with his statement at Topeka.

Among his first sentences were these:

You will ask me, "Is there some new crisis that has arisen?" I answer, "No; there is no special, new, critical situation which I have to discuss with you; but I want you to understand that the situation every day of the year is critical while this great contest continues in Europe."

And again:

It is easy to take fire where everything is hot. It is easy to start a flame when the air is full of floating sparks of a great conflagration. We have got to be on our guard, and it has been our hourly and daily anxiety in Washington to see that the exposed tinder was covered up and sparks were prevented from falling where there were magazines.

That looks serious; that could have but one meaning to the people to whom he was speaking, and their thoughts at once would go to war and the dangers of war, and the necessity of immediate and adequate preparedness to meet these hourly and daily threatening dangers. He evidently feared that they would get the idea that he wanted adequate preparation in the way of forces, either artillery or naval, to meet such a situation, and so to disabuse their minds of any such idea as that he says:

Why, of course, there are some men going about proposing great military establishments for America, but you have not heard anybody connected with the administration who did. You have not heard anybody in a responsible position who could carry his plan out who did. * * * Nobody in authority, nobody in a position to lead the policy of the country, has proposed great military armaments. * * *

If the dangers, however, are such as he would apparently have the people believe, the only adequate preparation would be an immediate great military force.

At Kansas City, after referring to what he had been doing, and what he thought the people expected him to do, and after referring to what force might be behind him, he says:

There may come a time—I pray God it may never come, but it may, in spite of everything we do, come upon us and come of a sudden—when I shall have to ask: "I have had my say; who stands back of me? Where is the force by which the majesty and right of the United States are to be maintained and asserted?" I take it that there may in your own conviction come a time when that might and force must be vindicated and asserted. You are not willing that what your Government says should be ignored.

If he thinks this, why does he not call for a force that will be ready and trained? Why does he not begin to train men to answer the call that he may protect us at any time? If those dangers confront us, this country can not afford to delay. From whence does he expect danger? There is no source except from the conflagration in Europe. Any force he may call for would be furnished. He must not forget that he is not all the Government of the United States. While our people are not willing that the decisions of our Government and its demands should be ignored, they want these decisions and these demands to be made by the Government and not by any one individual. After referring to the condition of our Navy and our Army for the first time does he say definitely what he is asking for in order to meet the great dangers which he has pointed out and suggested. No wonder he said that it is but a small thing that is proposed. No wonder he says that "It seems almost ridiculous to state how little the present administration is asking for." This is what he proposes to maintain the honor of the United States, to meet the trained armies of Europe, and to make fireproof our Nation against the sparks of the conflagration across the water:

It is asking that 500,000 men be asked to volunteer to take a little training every year for three years, not more than two or three months out of the year. * * * That is all that we are asking for at the present time. * * *

And that is all he is trying to scare the people into forcing Congress to enact.

Mr. SMITH of Michigan. And with the sparks flying all around.

Mr. JONES. Surely; and with tinder exposed, and our houses not fireproof.

Mr. President, if there is the danger which the President would have us think exists, that plan of defense which he suggests is absolutely ridiculous, and if there is no danger it is wholly unnecessary. What would he have us really believe? Does he really think there is any danger, or is he in fact having "visions"? After suggesting to these people this ridiculous plan of preparation and after pointing out to them the necessity for coordinating our material resources, and apparently thinking they will not be very much worked up and not very much interested in his plan, he says:

Did you ever hear more momentous things spoken of than these? * * * But suppose some morning I would have to turn to you and say: "Fellow citizens, I have done as much as I can; now I must ask you to back me up with the force of the Nation."

Of course there would be but one response to that request. We would have the whole Nation back of him; but he would not have very much of his prepared force through the plan which he suggests, and now he really discloses for the first time what he has really made his trip for. What is it? It has been to create a sentiment to compel Congress to enact legislation which he proposes, however inadequate or inefficient it may be. This is why he made the trip:

But there are times when I must come out and say, "Do not let the voice be too small and too still," when I must come out and say, "Fellow citizens, get up on your hind legs and talk and tell the people who represent you, wherever they are—in your State capital or in your National Capital—what it is the Nation desires and demands."

Thus in classic language does the President of the United States disclose the real purpose of his trip. He is "excited and nervous," and he wants to excite them:

I am anxious, my fellow citizens, that you should look at the hot stuff of war before you touch it; that you should be cool; that you should apply your hard business sense to the proposition, "Shall we be caught unawares and do a scientific job like tyros and ignoramuses or shall we be ready? Shall we know how to do it and when it is necessary to do it? Shall we do it to the queen's taste?" I know what the answer of America is, but I want it to be unmistakably uttered and I want it to be uttered now. Because, speaking with all solemnity, I assure you that there is not a day to be lost; not, understand me, because of any new or specially critical matter, but because I can not tell 24 hours at a time whether there is going to be trouble or not. * * * This month must not go by without something decisive done by the people of the United States by way of the preparation of the arms of self-vindication and defense.

And yet he proposes as a means of doing this the inadequate plan above outlined. For fear that he has gotten the people worked up a little bit too much he says:

I would be ashamed of myself if I tried to do anything but quiet your judgments. I do not wish you to be any more excited than I am.

At St. Louis, when he had about reached the close of his journey, and after assuring the people that he is one of the disciples of peace, he said:

But suppose that my neighbor's house was on fire and my roof is of combustible shingles, is it my fault if the fire eats into the wood, if the flame leaps from timber to timber? Is it my fault because I love peace and security that my doors are battered in and reckless men make light of the peace and security of my house? The danger is not from within, gentlemen, it is from without, and I am bound to tell you that that danger is constant and immediate.

If this is the situation, if this language properly conveys to us the conditions about us, how inadequate is his suggestion of preparation, and how can anyone reach any other conclusion than that the President is simply trying to arouse the people and bring a sentiment to bear upon Congress in favor of something under the guise of preparedness that is, in fact, no preparedness at all? It is hard to express what one really thinks of these various speeches of the President and of the many wholly inconsistent utterances and positions taken. They are hard to explain upon any theory whatever. I am inclined to think that he has given the best explanation himself when he says in the last speech which he made at St. Louis, when reference had been made to a speech which he had made there before. He says:

I was in hopes that you had forgotten it, because I had forgotten it myself until somebody unexpectedly produced a copy of it and cited opinions in it from some of which I had departed.

And here possibly is the explanation of the various inconsistencies in these different speeches, and now here possibly is the explanation of the various reasons why the President fell into these inconsistencies in these different speeches. He said:

It is just as well to shed your speeches as you go.

If anyone can find a series of speeches more inconsistent than those delivered by the President on this celebrated trip, it would be rare curiosity. If the subject were not so serious and momentous, his intellectual antics would be comical. He said he wanted to tell the people the facts, but he told them only two things which they did not know already. One was that he got his information about Mexico through talking with liars. He had talked with STONE, Lind, Hale, Bryan, and other Members of the House and Senate. All the other speeches were printed as a House Document, but this speech that was delivered in New York was not printed. I simply want to quote a little from it, so that it may be in the RECORD:

I found out what was going on in Mexico in a very singular way—by hearing a sufficiently large number of liars talk about it.

It is very tedious to hear men lie, particularly when you know they are lying. You feel like reminding them that really your time is important to you, and that you wish they would get down to business and tell you what is really so. But they don't. They want this adventure of their invention, they want to give an excursion to their minds before they get down to business. And what I particularly object to is a very able man with a lot of invention coming to me and lying to me, because then the interview is very tedious and long before we get down to business.

Mr. President, I never talked with the President about Mexico. [Laughter.] The other fact is that he deems it just as well to shed his speeches as he goes.

Now, Mr. President, I wish to return to the letter which I wrote my constituents, and I desire to notice some of the suggestions made in the answers received from them. In this connection I have some samples of those letters. I have, I think, three of each class, those for preparedness and those against; and I wish to print these letters in the RECORD as a part of my remarks, without the signatures. I know some of the men who wrote them; they are very high-class men on both sides of the question. One of them is a prominent engineer; another is one of the leading business men of Seattle; some of them are lawyers. There is nothing in the letters that reflects upon anybody, so far as that is concerned, and I ask that I may print these letters at the close of my remarks.

The PRESIDING OFFICER (Mr. POINDEXTER in the chair). Without objection, it will be so ordered.

[The letters referred to will be found as an appendix to the remarks by Mr. JONES].

Mr. JONES. The answers which I received to my letters were very interesting and very instructive. Many valuable suggestions were made and much information given. They showed the viewpoint from which our citizens looked at the important question which is now pressed upon us, and I want to notice briefly some of the suggestions made by those who urged special and additional preparedness.

Many express the fear that some of the countries now at war would seek to attack us after peace has been arranged. They seem to think that these countries, or some of them, would start out as national outlaws or bandits to pillage, rob, and conquer us in order that they might recoup themselves for their losses in the war and that they would do this with the tacit approval or

understanding of their late antagonists. This is inconceivable to me.

I have heard the suggestion on this floor, coming from the honorable Senator from Mississippi [Mr. WILLIAMS], for whom I have the highest respect and regard, that after this war there will be a bullying of us by these nations, and that we should prepare for that. Well, if that is true, then we should make the most adequate preparation possible, and make it just as promptly as possible, because this war is going to close; it is not going to last forever; and if we are going to be bullied by these nations, if we have to meet a bullying nation, why, then, the sooner we begin to prepare for it effectively the better. I doubt that myself. In the ordinary acceptation the verb "to bully" means to go around and assert yourself without any justice or regard for anybody else. I do not think these nations are going to do that. That we shall have controversies with them there is not any question; but that they are going purposely to assert unjust and unfair claims I do not believe. They will have to be treated considerately, fairly, and justly. I believe that there is not a question that can arise between us and any of these countries after the war is closed that can not be settled upon the principles of justice and international morality; but if we are going to meet that situation, then we should prepare to meet it in an adequate and efficient way; and if the majority of the Senate believe that that is what is going to confront us, I will join in any preparation which is deemed essential to repel the bullying of any nation on the face of the earth.

No matter what we may think of this terrific struggle, the people engaged in it have been and are at the very forefront of the world's civilization. They may not have much regard now for the principles of national or international morality, but when peace comes they will plant themselves upon the fundamental principles of justice and morality. The worst in men and nations comes to the surface in war, but in peace the best will show itself again. These people, saddened, purified, chastened, and exhausted by the terrible ordeal through which they have passed, will take up the duties and responsibilities of peace gladly and again resume their place in the line of advancement of the world's civilization. They will have had enough of war, slaughter, and suffering, and least of all will they think of entering into a contest with a nation like this, from which they can not hope to emerge as conquerors. The idea that the winners of this contest would look with favor upon recoupment by the defeated from us, it seems to me, is contrary to experience and common sense. They would only endanger their own future peace and safety.

To the suggestion that it is probable that there will be several years of general peace after the close of the war those for preparedness said "No one can tell; why run any risk?" That is true; no one can tell for a certainty. We must act upon the probabilities or else assume that we should prepare for everything and for any possible emergency. This carried to its necessary conclusion would mean the turning of this country immediately into an armed camp; and this even is not urged by the experts, and those who suggest it do not appreciate what it means. If we are to act upon the proposition to meet any possible attack, then we would have to prepare to meet any possible combination of nations, and some even suggest that nations are apt to combine against us. England, France, Russia, Italy, Japan, and Portugal are now fighting together. Are they likely to attack us when the war is over? No one can be assured they will not. They may do it. Shall we prepare to meet such an attack? If so, what should we do? What would be needed? Millions and millions of men and hundreds of thousands of tons of battleships, submarines, torpedo boats, and battle cruisers would be necessary. Billions of dollars should be expended, and that as quickly as possible. Surely there is no one, however, who would think we would be justified in acting upon any such a suggestion. It would be ridiculous; but, when you begin to limit, where will you end? Should we prepare to meet an attack by England and Russia acting together? If so, we would have to prepare to whip England's Navy or expect Russia's millions to be landed on our shores and again have to expend billions for navies and armies.

They say the largest navy and a great standing army is an insurance against war and we should have that insurance, just as the wise man insures his house. No one insures against every possible contingency. Men have been killed and houses have been burned by lightning in my State, and yet the lightning-rod vendor would stave to death there and none of these people has any protection against lightning. Houses have been unroofed by storms, and yet no one has a cyclone cellar. We must take into account as a Nation as well as individually the probable course of events and govern ourselves as best we may thereby. There can be honest and patriotic differences of opinion as to the course to be pursued.

Some think that we should join with the allies. If that is desirable, we should do it openly, but as long as we pretend to be neutral we should be neutral in fact as well as in law. Our citizens have furnished supplies, ammunition, guns, flying machines, submarines, and everything else that is necessary to carry on war, including the loan of millions of our capital, to assist the allies. We have furnished them everything except men to fight with and we are even insisting that our citizens should furnish bulwarks for their ships against submarine attacks. Supplies are furnished by our producers under an agreement prohibiting them from selling to Germany and her allies and those seeking to trade with Germany, although they may be neutrals and have a right to do so, are to be treated as enemies and boycotted. No wonder it is given out that Secretary Lansing is going to insist on a more nearly impartial treatment of all belligerents.

Many urge compulsory military service. Much can be said in favor of this, which is more properly universal service. The military authorities are practically all for it, and the burdens of the proposed system will be so great as to cause the people to consider it seriously. The people of this country, however, are generally strongly against it, and it is useless to consider any such proposition now. Many suggest military training in our schools, while some oppose it. It seems to me great good would come from it, not only in the way of a rudimentary preparation to meet any emergency that might come upon us but also for the good that it would bring individually in the way of exercise, physical development, and training in obedience and of all those elements of character which not only make a good soldier but also make a good citizen.

Some fear that Japan will attack us. I am not one of those. Japan is not seeking trouble with us. She prides herself on her standing amongst the advanced nations of the world and is seeking a reputation for fair dealing and honorable conduct. The constant talk in this country of probable trouble with Japan is more conducive to trouble than anything else. The constant suggestions of war and of attack can have no other result than mistrust and suspicion, and if we keep on showing our fears they may conclude some of these days that we are afraid of them, and if we keep up our hinting of trouble and our intimation of treachery on their part they may conclude that we might just as well have it out as to be constantly confronted with the specter which some of our people are holding up. They have not done anything to show enmity or insincerity. We can point to no act of theirs which indicates that they are seeking trouble. They have most scrupulously kept the informal agreement made between the two Governments respecting immigration to this country—something that we could not expect of any civilized nation of Europe. If we treat them fairly, justly, and considerately, there is nothing in her conduct to warrant the belief that they will not respond in kind.

Controversies may come up between the two governments. They should be settled amicably. The controversies arising on the Pacific coast can be settled by the two countries with justice to each, and they will be settled if approached in the right spirit. If we make our war preparation on the theory of forcing demands upon Japan, we may expect her to resent it. If we enter into a race with her in military armaments we may expect her to strike at the most favorable opportunity, because she will know that in the end she can not keep up the race. It is ridiculous to contemplate war between this country with all its strength and power and a nation like Japan, 7,000 miles away. She knows what the outcome would be. All she asks of us is open dealing and honorable confidence. If we do not give it to her she will assert her sovereignty and her self-respect regardless of the consequences. Any nation, no matter how weak, no matter how small, will resent encroachments upon its sovereignty and its national integrity, even though it knows that defeat must come to it in the end. Let us keep our professions of good faith, meet her openly and considerately upon any question of difference that may arise and go on in our accustomed way, making such increase in our Army and Navy as we deem necessary under normal conditions, and as the leader of the world's nations in behalf of peace among men and depend upon the justice of our position for the consideration which one nation owes another, and which our potential greatness necessarily will bring to us and continue true to the ideals of the past and the traditions of the fathers.

Some fear that Germany will attack us when the war is over, whether she wins or loses. Some men of great education and learning are so warped in their predictions and so inflamed in mind that they see Germany defeated and becoming an outlaw nation, with the tacit approval of her conquerors coming over

against us to recoup herself out of our wealth for the losses which they have inflicted upon her. Why they should permit Germany to strengthen herself in this way is not explained. Such suggestions as these are almost unbelievable and are contrary to all human experience except under conditions of savagery. They are no more reasonable than to suppose that England is sinking some of her ships and laying the act onto Germany in order to involve us on the side of the allies.

The German people are as highly civilized, as purely motived, and have as lofty aspirations and ideals as any people on earth. They have made an advancement in the science of governmental cooperation for the benefit, improvement, and happiness of their people which is the admiration of the world and the model for other governments and peoples.

Their so-called militarism is largely the acme of perfection of those principles of thoroughness and cooperation which they have applied in every business and avocation and largely made necessary by the conditions surrounding them. There is nothing in the conduct of Germany in the past or in the present to warrant the opinion that she desires or will desire trouble with us. She has never before warred beyond Europe. Historically she has been our friend in every hour of need. Her sons led our warriors to victory in behalf of independence, and Herkimer, Von Steuben, Barth von Heer, and De Kalb live in song and story. In the hours of our greatest peril Sigel, Schurz, Rosecrans, Osterhaus, Heinzelman, and many others, with the thousands they led, shed luster upon our Army and reflected glory upon German bravery in behalf of the Union, when others were seeking to destroy it; and to-day from hundreds of thousands of hearthstones there is going out to German homes mystic chords of love and sympathy to hold to us the ancient friendship of that great country and people.

In the terrific contest now raging, in which she is fighting for her very existence, surrounded upon all sides by great and powerful enemies, she has shown in a most unmistakable way her desire to be at peace with us. We have treated her in a most harsh and arbitrary way. She has not insulted us. She has shown no disrespect for our flag; she has not knowingly attacked our citizens; she has not sought trouble with us; she has shown no disrespect for us. On the contrary, she has yielded to our demands almost to the extent of humiliation, and has greatly diminished the effectiveness of her one available instrument of naval warfare in order to meet the demands and respect an alleged international law based upon conditions and principles long since obsolete and wholly inapplicable to present methods and instruments of warfare; and if our contention regarding the use of the submarine is effectually maintained, we have deprived ourselves of the most effective instrument of warfare in our hands and in our defense that we have or can ever hope to have. Why do people fear that Germany will want to attack us? Some do not fear this so much, but they rather want us to join the allies in the attack on Germany. Some fear it because of an accusing conscience, realizing, as they do, the unneutrality, in fact, of the shipment of ammunition and the curtailment of submarine effectiveness. Germany, however, does not seriously deny the right of our citizens to sell munitions of war to the allies, and will not and can not make it a cause of difference between the two Governments. Our punishment will come through the impairment of our ideals of justice and real neutrality, which we know we have plainly violated in the interest of gain and profit. That such a course would cause resentment on the part of some of our own people as well as upon theirs is not strange. Under the actual circumstances their forbearance has been remarkable.

I do not say this as a friend of Germany. I have simply stated a fact which all of our people in after years will admit. We have reached a strange position in our public opinion. One can not take an absolutely neutral position without being charged with being a friend of Germany. Now, Mr. President, I am not for Germany in this contest; I am not for the allies in this contest; I am for the United States, and every act that I have done and every word that I have uttered, and every vote that I have cast has been solely in the interest of the United States. I may be mistaken in my judgment, but I want to do everything that I can to insure the safety and promote the welfare of the United States. I want to see her kept out of this great conflagration, not only in our own interest and the interest of our people, but also in the hope that she may not only assist in an honorable and lasting peace, but that she may take the lead in the world's civilization and in the promotion of happiness for all mankind when peace does come.

No, Mr. President; neither Germany nor Japan desires anything but peace and friendship with us. Neither can gain anything by war with us, but will lose much. Let us enter into no race with them for naval supremacy. What we do let us do in a normal, reasonable way, commensurate with our needs of defense, the assertion of our just rights, and the maintenance of our honor and dignity. I appeal, however, to our own citizens, to our own people here at home, to assist our Government and our administration in keeping out of this trouble. I appeal to individual citizens to keep themselves away from danger and away from danger zones that involve not only danger to them but danger to their country. If they have no regard for their own lives and for their own safety, I appeal to them to have some regard for the safety of our country. Granting that they have the right to do what some of them insist upon doing, I appeal to them not to exercise this right when to do so might involve the country in such terrible consequences.

These two great nations, however, are going to contest with us in the battle for the world's trade and for our own markets. In this contest they will tax to the utmost our ingenuity, our energy, our skill, our resources, and our commercial power. Governmental power will join with individual initiative and energy, unhampered by written constitutional restrictions, and meet us with the mobile resources of individual and Nation in every market place in the world. That is the contest we should be preparing for with every means at our command. This is the time to do it. It is worth while to awaken the people to this need; this is something to which Congress should give its most thoughtful attention at once.

Some of those who write me say that we should have greatly increased military preparation, so as to not have a repetition of our course toward Mexico, which they designate as disgraceful, vacillating, and fearful. Our course regarding Mexico has been one of colossal blunders since this administration came into power. I say this administration, because the preceding one recognized the de facto government, in accordance with international law, and although it is criticized for not recognizing Huerta, in my judgment it did the only proper thing under the circumstances. Huerta became the President of Mexico only about 10 days before Taft's term expired, and it was the proper and patriotic course for him to take to leave the determination of the course to be followed to the incoming administration, which would have to deal with any situation arising by virtue of the circumstances under which he was elevated to the Presidency, and it was proper to leave it to adopt its own policy. I am not excusing what may have been done under the preceding administration; but that, in my judgment, was the wise course to take, so far as that situation is concerned.

Our course since then has been fearful, vacillating, blundering, and ridiculous. This has not been, however, because of a lack of preparedness. It has not been because of a lack of an Army or a Navy. We made war on Mexico—or, rather, we made war on a man. Our Navy and our Army were sent to Mexico to secure a salute to our flag by a man whom we considered a reprobate and an assassin. His salute would have disgraced the flag; and yet we killed the citizens of Mexico, lost the lives of our own, bombarded their cities, and took possession of their territory. We seemed to be amply prepared to do this. No increase was needed, none was asked. No, Mr. President, our policy toward Mexico has not been the result of nonpreparedness. If we had had a million men trained to arms and a thousand battleships manned to the guards, our policy toward Mexico would have been the same. Again our armies are called out, our ammunition trains are started, all our supply facilities are put in operation, our standing Army is increased by 20,000 men and recruits are being sought all over the country, war drums are beating, munitions of war are being rushed to the front, aeroplanes are scouting here and there and yonder—all for what? To get another man, our erstwhile friend, in Mexico. In seeking Villa we have abandoned all the methods of civilized warfare and have returned to extreme savagery. We are shooting men indiscriminately. We are killing Mexicans, regardless of whether they belonged to the party that raided Columbus or not. We are not stopping to inquire whether any bandit we come upon was engaged in the slaughter at Columbus; we shoot them down, regardless of whether they were part of that band or not. This is one page in our country's history which hereafter we will wish to conceal. Chaos, anarchy, and lawlessness have existed in Mexico for three years. There has been no respect for property, person, or life.

The cries of humanity have come to us from millions of people suffering more than the people of Cuba did under Spanish rule. We did not heed the cries. We said, let them fight it out; it is no concern of ours how much Mexican blood they spill. It is no business of ours if helpless women and children are robbed, ravished, and murdered. Bands of Mexicans have been and are

roving about over Mexico at will without punishment or restraint from the alleged government which we have recognized. Constant firing across our border, the killing of American citizens, caused no action by our Government. One night one of these bands, apparently under the leadership of the man who we at one time took to our bosom and treated as the savior of Mexico and as our beloved ally against Huerta, raided one of our towns and burned its buildings and killed its citizens without restraint by the de facto government of Mexico. We did not say we would hold the recognized government responsible. And now, Mr. President, our armies are marching down through Mexico seeking this man. We have apparently no cooperation on the part of the local or recognized government there. I am told that when our soldiers are sick and dying they can not be brought back to this country over the railroad, but must be carried over, the best way they may, through sandy plains and through that parching climate. There is no cooperation on the part of the local government, so far as anybody can see. They are watching and laughing at us.

Now, Mr. President, was the time for action. This raid on Columbus was the culmination of the years of anarchy in Mexico. Then, in my judgment, it was that forbearance should have ceased; then we should have said that these things must stop and the condition of anarchy must be brought to an end. We should have stated plainly that we did not want any territory, but that we were going to see to it that order was established in Mexico and a government set up and then withdraw.

The National Guard should have been called out and 500,000 volunteers put into training. Instead of this, we again started our Army after a man. If we were determined not to establish law and order in Mexico, if all that was necessary to get Villa, instead of calling our Army and sending it on this wild-goose chase over the plains and through the mountains of Mexico to catch a murderer and bandit, at the cost of millions of dollars and hundreds of lives, and eventually intervention, we should have set some detective agency to work. They would have gotten him soon and get him more quickly and well. My judgment is that at that time we should have intervened in Mexico. We should have called out the necessary volunteer force to establish order, and this also would be the best national defense we could make against any possible danger from the conflagration across the sea. It would provide an ample trained force for any emergency that might arise at the close of this war, and it would also do away with the great danger of trouble for us with any of the European countries, and it would show to the countries of this continent that disorder and anarchy can not go on indefinitely, and also that we have no designs whatever on their territory. We are going to have to do this in the end. I have become convinced of it.

Our waiting has been beyond endurance and the time for temporizing is over. The sooner we recognize this the better for us and the better for Mexico. This would be the greatest guard against trouble, too, with European countries. The great danger of our getting embroiled with them at the close of this war comes from the situation in Mexico rather than from anywhere else. When they are at peace with each other they will insist upon protection in Mexico to their citizens, and if we do not afford it they will take it upon themselves to have it; and how can we object? We will have to bring order ourselves, or else abandon the Monroe doctrine and say to these nations we will not interfere with your action in behalf of your own people.

Another chapter has lately been added to our vacillating policy in Mexico and to the uncertainty of our position. It was heralded abroad when we increased our Army by 20,000 men in order that they might go into Mexico that our Army would go into Mexico to get Villa, that it would never come back until he was gotten.

The President said:

> An adequate force will be sent at once in pursuit of Villa with the single object of capturing him and putting a stop to his forays.
> This can and will be done in entirely friendly aid of the constituted authorities in Mexico and with scrupulous respect for the sovereignty of that Republic. (President Wilson's statement when troops were ordered into Mexico.)

What were the orders sent to our troops? These were the orders:

> These troops will be withdrawn to American territory as soon as the de facto government of Mexico is able to relieve them of this work.
> In any event, the work of these troops will be regarded as finished as soon as Villa's band or bands are known to be broken up. (Extract from orders sent Gen. Funston as officially announced to-day.)
